service-ip attributes

action

Description 'enable': Enable this GSLB server; 'disable': Disable this GSLB server;

Type: string

Supported Values: enable, disable

Default: enable

external-ip

Description External IP address for NAT

Type: string

Format: ipv4-address

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6

Description IPv6 address Mapping

Type: string

Format: ipv6-address

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

node-name

```

site-list

site-list is **JSON List** of *site attributes*

site-list : [

{ *site attributes* },

{ *site attributes* },

...

]

site attributes

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *active-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/active-rdt*

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

bw-cost

Description Specify cost of band-width

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

controller

Description Specify the local controller for the GSLB site (Specify the hostname of the local controller)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

disable

Description Disable all servers in the GSLB site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

easy-rdt

Description: easy-rdt is a **JSON Block**. Please see below for *easy-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/easy-rdt*

ip-server-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/ip-server/{ip-server-name}*

limit

Description Specify the limit for bandwidth, default is unlimited

Type: number

Range: 0-2147483647

multiple-geo-locations

Type: List

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-aging-time

Description Specify GSLB Protocol aging time

Type: number

Range: 0-65535

Default: 0

site-name

Description Specify GSLB site name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

slb-dev-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}*

template

Description Specify template to collect site information (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/template/snmp*

threshold

Description Specify the threshold for limit

Type: number

Range: 0-100

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify a weight for the GSLB site (Weight, default is 1)

Type: number

Range: 1-100

Default: 1

ip-server-list

Specification	
Type	*list*
Block object keys	

ip-server-name

Description Specify the real server name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/service-ip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-dev-list

Specification	
Type	*list*
Block object keys	

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-server

Description: vip-server is a **JSON Block**. Please see below for *slb-dev-list_vip-server*

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits

multiple-geo-locations

Specification	
Type	*list*
Block object keys	

geo-location

Description Specify the geographic location of the GSLB site (Specify geo-location for this site)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

easy-rdt

Specification	
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.26 gslb site easy-rdt

Active RDT options

easy-rdt Specification

Type	*Configuration Resource*
Element Name	easy-rdt
Element URI	/axapi/v3/gslb/site/{site-name}/easy-rdt
Element Attributes	easy-rdt_attributes
Schema	`easy-rdt schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/site/{site-name}/easy-rdt

easy-rdt attributes

```
POST /axapi/v3/gslb/site/a/easy-rdt
Payload:
{
    "easy-rdt": {
        "aging-time": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/site/{site-name}/easy-rdt

easy-rdt attributes

```
GET /axapi/v3/gslb/site/a/easy-rdt
Reponse:

    }
}
```

Delete Object

DELETE

/axapi/v3/gslb/site/{site-name}/easy-rdt

easy-rdt attributes

```
DELETE /axapi/v3/gslb/site/a/easy-rdt
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

easy-rdt attributes

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.27 gslb site ip-server

Specify a real server for the GSLB site

ip-server Specification

Type	*Collection*
Object Key(s)	*ip-server-name*
Collection Name	*ip-server-list*
Collection URI	/axapi/v3/gslb/site/{site-name}/ip-server
Element Name	ip-server

slb-dev-list

Delete Object

DELETE

/axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}

slb-dev attributes

slb-dev-list

slb-dev-list is **JSON List** of *slb-dev attributes*

slb-dev-list : [

{ *slb-dev attributes* },

{ *slb-dev attributes* },

...

]

slb-dev attributes

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-server

Description: vip-server is a **JSON Block**. Please see below for *vip-server*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server*

system attributes

age-interval

Description Interval to age runtime statistics. 0: never age, default is 10 (Time, unit: sec, default is 10)

Type: number

Range: 0-120

Default: 10

geo-location-iana

Description Load built-in IANA table

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

gslb-group

Description GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-load-file-list

Type: List

gslb-service-ip

Description GSLB Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-site

Description GSLB Site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hostname

Description System's Network Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-ttl

Description TTL of IP packets, default is 0 (IP TTL value, default is 0)

Type: number

Range: 0-255

Default: 0

module

Description Specify Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-device

Description SLB Device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-server

Description SLB Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-virtual-server

Description SLB Virtual Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wait

Description Disable GSLB until timeout if system is not ready (Time, unit: sec, default is 0)

Type: number

Range: 0-16384

Default: 0

gslb-load-file-list

Specification	
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/template/csv*

2.40.35 gslb template

Specify a GSLB template

template Specification

Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/gslb/template
Element Attributes	template_attributes
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/gslb/template

template_attributes

template attributes

csv-list

Type: List

Refernce Object: */axapi/v3/gslb/template/csv/{csv-name}*

snmp-list

Type: List

Refernce Object: */axapi/v3/gslb/template/snmp/{snmp-name}*

snmp-list

Specification	
Type	*list*
Block object keys	

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description 'aes': AES; 'des': DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

csv-list

Specification	
Type	*list*
Block object keys	

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

csv-list_multiple-fields

Specification	
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

2.40.36 gslb template csv

Specify csv template

csv Specification

Type	*Collection*
Object Key(s)	*csv-name*

snmp attributes

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description 'aes': AES; 'des': DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

2.40.38 gslb zone

Specify the DNS zone name for which global SLB is provided

zone Specification

Type	*Collection*

dns-soa-record

Description: dns-soa-record is a **JSON Block**. Please see below for *dns-soa-record*

Type: Object

name

Description Specify the name for the DNS zone

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Specify the policy for this zone (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

sampling-enable

Type: List

service-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}*

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

ttl

Description Specify the zone ttl value (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-mx-record-list

Specification	
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-mx-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Total Number of DNS queries received for the zone; 'sent-response': Total Number of DNS replies sent to clients for the zone; 'proxy-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the zone; 'cache-mode-response': Total Number of cached DNS replies sent to clients by the ACOS device for the zone. (This statistic applies only if the DNS cac; 'server-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS server for the zone. (This statistic applies only if th; 'sticky-mode-response': Total Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies on; 'backup-mode-response': Total Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response

template

Specification	
Type	*object*

dnssec

Description Specify DNSSEC template (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dns-soa-record

Specification	
Type	*object*

ex-expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

ex-mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ex-refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

ex-retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

ex-serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

ex-soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

external

Description Specify External SOA Record (DNS Server Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

soa-name

Description DNS Server Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

service-list

Specification	
Type	*list*
Block object keys	

action

Description 'drop': Drop query; 'forward': Forward packet; 'ignore': Send empty response; 'reject': Send refuse response;

Type: string

Supported Values: drop, forward, ignore, reject

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record

Description: dns-a-record is a **JSON Block**. Please see below for *service-list_dns-a-record*

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record/{record-name}*

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-a-record

Specification	
Type	*object*

dns-a-record-ipv4-list

Type: List

service-list_dns-a-record_dns-a-record-ipv6-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_dns-a-record_dns-a-record-ipv4-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_dns-a-record_dns-a-record-srv-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

service-list_health-check-port

Specification	
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

service-list_dns-txt-record-list

Specification	
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-txt-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_dns-mx-record-list

Specification	
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-mx-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Specification	
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ns-record-list

Specification	
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ns-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response

service-list_dns-srv-record-list

Specification	
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

service-list_dns-srv-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_dns-ptr-record-list

Specification	
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-ptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

service-list_dns-cname-record-list

Specification	
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

service-list_dns-cname-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

service-list_geo-location-list

Specification	
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_geo-location-list_alias

Specification	
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

service-list_dns-naptr-record-list

Specification	
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-list_dns-naptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

stats data

	Counter	Size	Description

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-a-record

Specification

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record_dns-a-record-ipv4-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record_dns-a-record-srv-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/service-ip*

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

health-check-port

Specification	
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

dns-txt-record-list

Specification	
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-txt-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-mx-record-list

Specification	
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-mx-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-record-list

Specification	
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list

Specification	
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ns-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response

dns-srv-record-list

Specification	
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

dns-srv-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-ptr-record-list

Specification	
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-ptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

dns-cname-record-list

Specification	
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

dns-cname-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

geo-location-list

Specification	
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_alias

Specification	
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

dns-naptr-record-list

Specification	
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-naptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

stats data

	Counter	Size	Description
	received-query	8	Number of DNS queries received for the service

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

dns-a-record-ipv4-list

Specification

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

stats data

	Counter	Size	Description
	hits	8	Number of times the record has been used

]

dns-naptr-record attributes

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

dns-srv-record-list : [

{ *dns-srv-record attributes* },

{ *dns-srv-record attributes* },

...

]

dns-srv-record attributes

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

stats data

	Counter	Size	Description
	hits	8	Number of times the record has been used

2.40.53 gslb zone service dns-txt-record

Specify DNS TXT Record

dns-txt-record Specification

Type	*Collection*
Object Key(s)	*record-name*
Collection Name	*dns-txt-record-list*
Collection URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record

dns-txt-record attributes

dns-txt-record-list

dns-txt-record-list is **JSON List** of *dns-txt-record attributes*

dns-txt-record-list : [

{ *dns-txt-record attributes* },

{ *dns-txt-record attributes* },

...

]

dns-txt-record attributes

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

stats data

	Counter	Size	Description
	hits	8	Number of times the record has been used

2.40.54 gslb zone service geo-location

Geo location settings

geo-location Specification

Type	*Collection*
Object Key(s)	*geo-name*
Collection Name	*geo-location-list*
Collection URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location
Element Name	geo-location
Element URI	/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}
Element Attributes	geo-location_attributes
Schema	`geo-location schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location

geo-location attributes

Create List

POST

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location

geo-location attributes

geo-location-list

Delete Object

DELETE

/axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}

geo-location attributes

geo-location-list

geo-location-list is **JSON List** of *geo-location attributes*

```
geo-location-list : [
        { geo-location attributes },
        { geo-location attributes },
        ...
    ]
```

geo-location attributes

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alias

Specification	
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

2.41 harmony-controller

Objects:

2.41.1 harmony-controller

Harmony controller information

harmony-controller Specification

Type	*Intermediate Resource*
Element Name	harmony-controller
Element URI	/axapi/v3/harmony-controller
Element Attributes	harmony-controller_attributes
Schema	`harmony-controller schema`

Operations Allowed:

Get Object

GET

/axapi/v3/harmony-controller

harmony-controller_attributes

harmony-controller attributes

config-replace

Description: config-replace is a **JSON Block**. Please see below for *config-replace*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/config-replace*

partition-tenant-info

Description: partition-tenant-info is a **JSON Block**. Please see below for *partition-tenant-info*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/partition-tenant-info*

profile

Description: profile is a **JSON Block**. Please see below for *profile*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile*

telemetry

Description: telemetry is a **JSON Block**. Please see below for *telemetry*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/telemetry*

tunnel-stats

Description: tunnel-stats is a **JSON Block**. Please see below for *tunnel-stats*

Type: Object

Refernce Object: /axapi/v3/harmony-controller/tunnel-stats

profile

Specification	
Type	*object*

action

Description 'enable': Register the device to the controller; 'disable': Deregister the device from controller;

Type: string

Supported Values: register, deregister

auto-restart-action

Description 'enable': enable auto analytics bus restart, default behavior is enable; 'disable': disable auto analytics bus restart;

Type: string

Supported Values: enable, disable

Default: enable

availability-zone

Description availablity zone of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-id

Description cluster-id for the controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-name

Description name of cluster in harmony controller that this device is a member of

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

host

Description Set harmony controller host adddress

Type: string

Format: host

Mutual Exclusion: host and host-ipv6 are mutually exclusive

host-ipv6

Description IPV6 address or FQDN for the host

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: host-ipv6 and host are mutually exclusive

interval

Description auto analytics bus restart time interval in mins, default is 3 mins

Type: number

Range: 1-15

Default: 3

password-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port

Description Set port for remote Harmony Controller

Type: number

Range: 1-32767

provider

Description provider for the harmony-controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

re-sync

Description: re-sync is a **JSON Block**. Please see below for *profile_re-sync*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/re-sync*

region

Description region of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

secret-value

Description The controller tenant password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Description: thunder-mgmt-ip is a **JSON Block**. Please see below for *profile_thunder-mgmt-ip*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/thunder-mgmt-ip*

tunnel

Description: tunnel is a **JSON Block**. Please see below for *profile_tunnel*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/tunnel*

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-name

Description user-name for the tenant

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

profile_re-sync

Specification	
Type	*object*

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

profile_tunnel

Specification	
Type	*object*

action

Description 'enable': Tunnel Enable; 'disable': Tunnel Disable;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

profile_thunder-mgmt-ip

Specification	
Type	*object*

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and ipv6-addr are mutually exclusive

ipv6-addr

Description IPV6 address for the host

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-stats

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

config-replace

Specification	
Type	*object*

status

Description 'enable': enable config replace mode; 'disable': disable config replace mode;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry

Specification	
Type	*object*

log-rate

Description Max number of session logs sent by the partition per second

Type: number

Range: 0-10000

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

partition-tenant-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.41.2 harmony-controller config-replace

Enable config-replace-mode

config-replace Specification

Type	*Configuration Resource*
Element Name	config-replace
Element URI	/axapi/v3/harmony-controller/config-replace
Element Attributes	config-replace_attributes
Schema	`config-replace schema`

Operations Allowed:

Delete Object

DELETE

/axapi/v3/harmony-controller/profile

profile attributes

profile attributes

action

Description 'enable': Register the device to the controller; 'disable': Deregister the device from controller;

Type: string

Supported Values: register, deregister

auto-restart-action

Description 'enable': enable auto analytics bus restart, default behavior is enable; 'disable': disable auto analytics bus restart;

Type: string

Supported Values: enable, disable

Default: enable

availability-zone

Description availablity zone of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-id

Description cluster-id for the controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

cluster-name

Description name of cluster in harmony controller that this device is a member of

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

host

Description Set harmony controller host adddress

Type: string

Format: host

Mutual Exclusion: host and host-ipv6 are mutually exclusive

host-ipv6

Description IPV6 address or FQDN for the host

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: host-ipv6 and host are mutually exclusive

interval

Description auto analytics bus restart time interval in mins, default is 3 mins

Type: number

Range: 1-15

Default: 3

password-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port

Description Set port for remote Harmony Controller

Type: number

Range: 1-32767

provider

Description provider for the harmony-controller

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

re-sync

Description: re-sync is a **JSON Block**. Please see below for *re-sync*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/re-sync*

region

Description region of the thunder-device

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

secret-value

Description The controller tenant password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Description: thunder-mgmt-ip is a **JSON Block**. Please see below for *thunder-mgmt-ip*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/thunder-mgmt-ip*

tunnel

Description: tunnel is a **JSON Block**. Please see below for *tunnel*

Type: Object

Refernce Object: */axapi/v3/harmony-controller/profile/tunnel*

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-name

Description user-name for the tenant

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

re-sync

Specification	
Type	*object*

analytics-bus

Description re-sync analtyics bus connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

schema-registry

Description re-sync the schema registry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel

Specification	
Type	*object*

action

Description 'enable': Tunnel Enable; 'disable': Tunnel Disable;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thunder-mgmt-ip

Specification	
Type	*object*

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and ipv6-addr are mutually exclusive

ipv6-addr

Description IPV6 address for the host

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	deregistration-error-message	string	deregistration-error-message
	service-registry	string	service-registry
	overall-status	string	overall-status
	Number-of-tenant-unmapped-partitions	number	Number-of-tenant-unmapped-partitions

2.41.5 harmony-controller profile thunder-mgmt-ip

thunder management ip address

thunder-mgmt-ip Specification

Type	*Configuration Resource*
Element Name	thunder-mgmt-ip
Element URI	/axapi/v3/harmony-controller/profile/thunder-mgmt-ip
Element Attributes	thunder-mgmt-ip_attributes
Schema	`thunder-mgmt-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/harmony-controller/profile/thunder-mgmt-ip

thunder-mgmt-ip attributes

Get Object

GET

/axapi/v3/harmony-controller/profile/thunder-mgmt-ip

thunder-mgmt-ip attributes

Modify Object

POST

/axapi/v3/harmony-controller/profile/thunder-mgmt-ip

thunder-mgmt-ip attributes

Replace Object

PUT

/axapi/v3/harmony-controller/profile/thunder-mgmt-ip

thunder-mgmt-ip attributes

Delete Object

DELETE

/axapi/v3/harmony-controller/profile/thunder-mgmt-ip

thunder-mgmt-ip attributes

thunder-mgmt-ip attributes

ip-address

Description IP address (IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address and ipv6-addr are mutually exclusive

ipv6-addr

Description IPV6 address for the host

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr and ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.41.6 harmony-controller profile tunnel

tunnel status

tunnel Specification

Type	*Configuration Resource*
Element Name	tunnel
Element URI	/axapi/v3/harmony-controller/profile/tunnel
Element Attributes	tunnel_attributes
Schema	`tunnel schema`

Operations Allowed:

Create Object

POST

/axapi/v3/harmony-controller/profile/tunnel

tunnel attributes

Get Object

GET

/axapi/v3/harmony-controller/profile/tunnel

tunnel attributes

Modify Object

POST

/axapi/v3/harmony-controller/profile/tunnel

tunnel attributes

Replace Object

PUT

/axapi/v3/harmony-controller/profile/tunnel

tunnel attributes

Delete Object

DELETE

/axapi/v3/harmony-controller/profile/tunnel

tunnel attributes

tunnel attributes

action

Description 'enable': Tunnel Enable; 'disable': Tunnel Disable;

Type: string

Supported Values: enable, disable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.41.7 harmony-controller telemetry

Harmony controller telemetry config

telemetry Specification

Type	*Configuration Resource*
Element Name	telemetry
Element URI	/axapi/v3/harmony-controller/telemetry
Element Attributes	telemetry_attributes
Schema	`telemetry schema`

Operations Allowed:

Create Object

POST

/axapi/v3/harmony-controller/telemetry

telemetry attributes

Get Object

GET

/axapi/v3/harmony-controller/telemetry

telemetry attributes

Modify Object

POST

/axapi/v3/harmony-controller/telemetry

telemetry attributes

Replace Object

PUT

/axapi/v3/harmony-controller/telemetry

telemetry attributes

Delete Object

DELETE

/axapi/v3/harmony-controller/telemetry

telemetry attributes

telemetry attributes

log-rate

Description Max number of session logs sent by the partition per second

Type: number

Range: 0-10000

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.42 hd-monitor

Objects:

2.42.1 hd-monitor

Enable HD monitoring

hd-monitor Specification

Type	*Configuration Resource*
Element Name	hd-monitor
Element URI	/axapi/v3/hd-monitor
Element Attributes	hd-monitor_attributes
Schema	`hd-monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/hd-monitor

hd-monitor attributes

```
POST /axapi/v3/hd-monitor
Payload:
{
    "hd-monitor": {
        "enable": 1
    }
}
```

Get Object

GET

/axapi/v3/hd-monitor

hd-monitor attributes

```
GET /axapi/v3/hd-monitor
Reponse:
{
    "hd-monitor": {
        "enable": 1,
        "uuid": "d8e3537e-5bef-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/hd-monitor"
    }
}
```

Modify Object

POST

/axapi/v3/hd-monitor

hd-monitor attributes

Replace Object

PUT

/axapi/v3/hd-monitor

hd-monitor attributes

```
PUT /axapi/v3/hd-monitor
Payload:
{
    "hd-monitor": {
        "enable": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/hd-monitor

hd-monitor attributes

```
DELETE /axapi/v3/hd-monitor
Reponse:
{
    "response": {
        "status": "OK",
        "msg": "Harddisk monitoring turned off.\n"
    }
}
```

hd-monitor attributes

enable

Description Enable Hard disk monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43 health

Objects:

2.43.1 health

Configure health monitoring

health Specification

Type	*Intermediate Resource*
Element Name	health
Element URI	/axapi/v3/health
Element Attributes	health_attributes
Schema	`health schema`

Operations Allowed:

Get Object

GET

/axapi/v3/health

health_attributes

health attributes

external

Description: external is a **JSON Block**. Please see below for *external*

Type: Object

Refernce Object: */axapi/v3/health/external*

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Refernce Object: */axapi/v3/health/global*

monitor-list

Type: List

Refernce Object: */axapi/v3/health/monitor/{name}*

global

Specification	
Type	*object*

check-rate

Description Health Check Rate per 500ms (default 1000)

Type: number

Range: 1-50000

Default: 1000

disable-auto-adjust

Description Disable the Health Check Rate Auto Adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-rate

Description Define the External Health Check Rate (Number of External Script Programs (default 2))

Type: number

Range: 1-999

Default: 2

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

multi-process

Description Start Health Monitoring in Multi-Process Mode (Specify the number of multiple processes (default 1))

Type: number

Range: 1-20

Default: 1

per

Description Specify the Unit Time for the rate (Specify the Unit Time, multiple of 100ms)

Type: number

Range: 1-20

Default: 2

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

Default: 3

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds (default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

Default: 5

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external

Specification	
Type	*object*

copy

Description: copy is a **JSON Block**. Please see below for *external_copy*

Type: Object

Refernce Object: */axapi/v3/health/external/copy*

create

Description: create is a **JSON Block**. Please see below for *external_create*

Type: Object

Refernce Object: */axapi/v3/health/external/create*

delete

Description: delete is a **JSON Block**. Please see below for *external_delete*

Type: Object

Refernce Object: */axapi/v3/health/external/delete*

edit

Description: edit is a **JSON Block**. Please see below for *external_edit*

Type: Object

Refernce Object: */axapi/v3/health/external/edit*

rename

Description: rename is a **JSON Block**. Please see below for *external_rename*

Type: Object

Refernce Object: */axapi/v3/health/external/rename*

external_edit

Specification	
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_rename

Specification	
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_create

Specification	
Type	*object*

description

Description Describe health external monitor script briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_copy

Specification	
Type	*object*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external_delete

Specification	
Type	*object*

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

monitor-list

Specification	
Type	*list*
Block object keys	

disable-after-down

Description Disable the target if health check failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-l2-strict

Description Enable strict L2dsr health-check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

method

Description: method is a **JSON Block**. Please see below for *monitor-list_method*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method*

name

Description Monitor Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: ping

override-ipv4

Description Override implicitly inherited IPv4 address from target

Type: string

Format: ipv4-address

override-ipv6

Description Override implicitly inherited IPv6 address from target

Type: string

Format: ipv6-address

override-port

Description Override implicitly inherited port from target (Port number (1-65534))

Type: number

Range: 1-65534

passive

Description Specify passive mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-interval

Description Interval to do manual health checking while in passive mode (Specify value in seconds (Default is 10 s))

Type: number

Range: 1-180

Default: 10

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

sample-threshold

Description Number of samples in one epoch above which passive HC is enabled. If below or equal to the threshold, passive HC is disabled (Specify number of samples in one second (Default is 50). If the number of samples is 0, no action is taken)

Type: number

Range: 1-10000

Default: 50

ssl-ciphers

Description Specify the SSL Cipher Suite in Health check

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: DEFAULT

ssl-dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 31-34

Default: 31

ssl-ticket

Description Enable SSL-Ticket Session Resumption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ticket-lifetime

Description SSL-Ticket lifetime (seconds)

Type: number

Range: 1-604800

ssl-version

Description TLS/SSL version (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 34

status-code

Description 'status-code-2xx': Enable passive mode with 2xx http status code; 'status-code-non-5xx': Enable passive mode with non-5xx http status code;

Type: string

Supported Values: status-code-2xx, status-code-non-5xx

strict-retry-on-server-err-resp

Description Require strictly retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Threshold percentage above which passive mode is enabled (Specify percentage (Default is 75%))

Type: number

Range: 0-100

Default: 75

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds(default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method

Specification	
Type	*object*

compound

Description: compound is a **JSON Block**. Please see below for *monitor-list_method_compound*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/compound*

database

Description: database is a **JSON Block**. Please see below for *monitor-list_method_database*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/database*

dns

Description: dns is a **JSON Block**. Please see below for *monitor-list_method_dns*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/dns*

external

Description: external is a **JSON Block**. Please see below for *monitor-list_method_external*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/external*

ftp

Description: ftp is a **JSON Block**. Please see below for *monitor-list_method_ftp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/ftp*

http

Description: http is a **JSON Block**. Please see below for *monitor-list_method_http*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/http*

https

Description: https is a **JSON Block**. Please see below for *monitor-list_method_https*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/https*

icmp

Description: icmp is a **JSON Block**. Please see below for *monitor-list_method_icmp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/icmp*

imap

Description: imap is a **JSON Block**. Please see below for *monitor-list_method_imap*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/imap*

kerberos-kdc

Description: kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_kerberos-kdc*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/kerberos-kdc*

ldap

Description: ldap is a **JSON Block**. Please see below for *monitor-list_method_ldap*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/ldap*

ntp

Description: ntp is a **JSON Block**. Please see below for *monitor-list_method_ntp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/ntp*

pop3

Description: pop3 is a **JSON Block**. Please see below for *monitor-list_method_pop3*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/pop3*

radius

Description: radius is a **JSON Block**. Please see below for *monitor-list_method_radius*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/radius*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *monitor-list_method_rtsp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *monitor-list_method_sip*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/sip*

smtp

Description: smtp is a **JSON Block**. Please see below for *monitor-list_method_smtp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/smtp*

snmp

Description: snmp is a **JSON Block**. Please see below for *monitor-list_method_snmp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/snmp*

tacplus

Description: tacplus is a **JSON Block**. Please see below for *monitor-list_method_tacplus*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/tacplus*

tcp

Description: tcp is a **JSON Block**. Please see below for *monitor-list_method_tcp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *monitor-list_method_udp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/udp*

monitor-list_method_ftp

Specification	
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_udp

Specification	
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_sip

Specification	
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_http

Specification	
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text http-response-code and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_http_http-kerberos-kdc

Specification	
Type	*object*

http-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

monitor-list_method_https

Specification	
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *monitor-list_method_https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text https-response-code and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

monitor-list_method_https_https-kerberos-kdc

Specification	
Type	*object*

https-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

monitor-list_method_compound

Specification	
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_database

Specification	
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_smtp

Specification	
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_ntp

Specification	
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_rtsp

Specification	
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_snmp

Specification	
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *monitor-list_method_snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *monitor-list_method_snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_snmp_oid

Specification	
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

monitor-list_method_snmp_operation

Specification	
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

monitor-list_method_tcp

Specification	
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *monitor-list_method_tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_tcp_port-resp

Specification	
Type	*object*

port-contains

Description Mark server up if response string contains another string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

monitor-list_method_pop3

Specification	
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_tacplus

Specification	
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description ‘inbound-ascii-login’: Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_radius

Specification	
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Specify the shared secret of RADIUS server (Shared Crypto Key)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

secret-encrypted

Description

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_external

Specification	
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_dns

Specification	
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *monitor-list_method_dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_dns_dns-domain-expect

Specification	
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdndns-domain-response, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4dns-domain-response, dns-domain-fqdn and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6dns-domain-response, dns-domain-fqdn and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-responsedns-domain-fqdn, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

monitor-list_method_dns_dns-ipv6-expect

Specification	
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

monitor-list_method_dns_dns-ipv4-expect

Specification	
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

monitor-list_method_ldap

Specification	
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description ‘overssl’: Set LDAP over SSL; ‘StartTLS’: LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_icmp

Specification	
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_kerberos-kdc

Specification	
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *monitor-list_method_kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_method_kerberos-kdc_kerberos-cfg

Specification	
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin kinit and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit kadmin and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd kinit and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list_method_imap

Specification	
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.2 health external

Address the External Script Program

external Specification

Type	*Intermediate Resource*
Element Name	external
Element URI	/axapi/v3/health/external
Element Attributes	external_attributes
Schema	`external schema`

Operations Allowed:

Get Object

GET

/axapi/v3/health/external

external_attributes

external attributes

copy

Description: copy is a **JSON Block**. Please see below for *copy*

Type: Object

Refernce Object: */axapi/v3/health/external/copy*

create

Description: create is a **JSON Block**. Please see below for *create*

Type: Object

Refernce Object: */axapi/v3/health/external/create*

delete

Description: delete is a **JSON Block**. Please see below for *delete*

dst-file

Description Destination external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

src-file

Description Source external health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

delete

Specification	
Type	*object*

file-name

Description External health monitor script file name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

2.43.3 health global

Define the Health Monitor global default

global Specification

Type	*Configuration Resource*
Element Name	global
Element URI	/axapi/v3/health/global
Element Attributes	global_attributes
Schema	`global schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/global

global attributes

```
POST /axapi/v3/health/global
Payload:
{
    "global": {
        "multi-process": 1
    }
}
```

Get Object

GET

/axapi/v3/health/global

global attributes

```
GET /axapi/v3/health/global
Reponse:
{
    "global": {
        "multi-process": 1,
        "disable-auto-adjust": 0,
        "check-rate": 1000,
        "external-rate": 2,
        "per": 2,
        "retry": 3,
        "up-retry": 1,
        "interval": 5,
        "timeout": 5,
        "uuid": "8255f1e4-6052-11d9-80d7-001fa00680a0",
        "a10-url": "/axapi/v3/health/global"
    }
}
```

Modify Object

POST

/axapi/v3/health/global

global attributes

Replace Object

PUT

/axapi/v3/health/global

global attributes

```
PUT /axapi/v3/health/global
Payload:
{
    "global": {
        "multi-process": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/health/global

global attributes

```
DELETE /axapi/v3/health/global
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

global attributes

check-rate

Description Health Check Rate per 500ms (default 1000)

Type: number

Range: 1-50000

Default: 1000

disable-auto-adjust

Description Disable the Health Check Rate Auto Adjustment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-rate

Description Define the External Health Check Rate (Number of External Script Programs (default 2))

Type: number

Range: 1-999

Default: 2

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

multi-process

Description Start Health Monitoring in Multi-Process Mode (Specify the number of multiple processes (default 1))

Type: number

Range: 1-20

Default: 1

per

Description Specify the Unit Time for the rate (Specify the Unit Time, multiple of 100ms)

Type: number

Range: 1-20

Default: 2

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

Default: 3

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds (default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

Default: 5

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.4 health monitor

Define the Health Monitor object

monitor Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*monitor-list*
Collection URI	/axapi/v3/health/monitor
Element Name	monitor
Element URI	/axapi/v3/health/monitor/{name}
Element Attributes	monitor_attributes
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor

monitor attributes

```
POST /axapi/v3/health/monitor/
Payload:
{
    "monitor": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/health/monitor

monitor attributes

Get Object

GET

/axapi/v3/health/monitor/{name}

monitor attributes

```
GET /axapi/v3/health/monitor/a
Reponse:
{
    "monitor": {
        "name": "a",
        "dsr-l2-strict": 0,
        "retry": 3,
        "up-retry": 1,
        "passive": 0,
        "strict-retry-on-server-err-resp": 0,
        "disable-after-down": 0,
        "interval": 5,
        "timeout": 5,
        "ssl-ciphers": "DEFAULT",
        "uuid": "a8b11bc0-6052-11d9-80d7-001fa00680a0",
        "user-tag": "a",
        "method": {
            "icmp": {
                "icmp": 1,
                "transparent": 0,
                "uuid": "a8b12c32-6052-11d9-80d7-001fa00680a0",
                "a10-url": "/axapi/v3/health/monitor/a/method/icmp"
            },
            "a10-url": "/axapi/v3/health/monitor/a/method"
        },
        "a10-url": "/axapi/v3/health/monitor/a"
    }
}
```

Get List

GET

/axapi/v3/health/monitor

monitor-list

Modify Object

POST

/axapi/v3/health/monitor/{name}

monitor attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}

monitor attributes

```
PUT /axapi/v3/health/monitor/a
Payload:
{
    "monitor": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/health/monitor

monitor-list

Delete Object

DELETE

/axapi/v3/health/monitor/{name}

monitor attributes

```
DELETE /axapi/v3/health/monitor/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

monitor-list

monitor-list is **JSON List** of *monitor attributes*

monitor-list : [

{ *monitor attributes* },

{ *monitor attributes* },

...

]

monitor attributes

disable-after-down

Description Disable the target if health check failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-l2-strict

Description Enable strict L2dsr health-check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify the Healthcheck Interval (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

method

Description: method is a **JSON Block**. Please see below for *method*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method*

name

Description Monitor Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: ping

override-ipv4

Description Override implicitly inherited IPv4 address from target

Type: string

Format: ipv4-address

override-ipv6

Description Override implicitly inherited IPv6 address from target

Type: string

Format: ipv6-address

override-port

Description Override implicitly inherited port from target (Port number (1-65534))

Type: number

Range: 1-65534

passive

Description Specify passive mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-interval

Description Interval to do manual health checking while in passive mode (Specify value in seconds (Default is 10 s))

Type: number

Range: 1-180

Default: 10

retry

Description Specify the Healthcheck Retries (Retry Count (default 3))

Type: number

Range: 1-10

sample-threshold

Description Number of samples in one epoch above which passive HC is enabled. If below or equal to the threshold, passive HC is disabled (Specify number of samples in one second (Default is 50). If the number of samples is 0, no action is taken)

Type: number

Range: 1-10000

Default: 50

ssl-ciphers

Description Specify the SSL Cipher Suite in Health check

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: DEFAULT

ssl-dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 31-34

Default: 31

ssl-ticket

Description Enable SSL-Ticket Session Resumption

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-ticket-lifetime

Description SSL-Ticket lifetime (seconds)

Type: number

Range: 1-604800

ssl-version

Description TLS/SSL version (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1, 33-TLSv1.2 and 34-TLSv1.3)

Type: number

Range: 31-34

Default: 34

status-code

Description 'status-code-2xx': Enable passive mode with 2xx http status code; 'status-code-non-5xx': Enable passive mode with non-5xx http status code;

Type: string

Supported Values: status-code-2xx, status-code-non-5xx

strict-retry-on-server-err-resp

Description Require strictly retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Threshold percentage above which passive mode is enabled (Specify percentage (Default is 75%))

Type: number

Range: 0-100

Default: 75

timeout

Description Specify the Healthcheck Timeout (Timeout Value, in seconds(default 5), Timeout should be less than or equal to interval)

Type: number

Range: 1-180

up-retry

Description Specify the Healthcheck Retries before declaring target up (Up-retry count (default 1))

Type: number

Range: 1-10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method

Specification	
Type	*object*

compound

Description: compound is a **JSON Block**. Please see below for *method_compound*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/compound*

database

Description: database is a **JSON Block**. Please see below for *method_database*

Refernce Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *method_udp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/udp*

method_ftp

Specification	
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_udp

Specification	
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_sip

Specification	
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_http

Specification	
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *method_http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text http-response-code and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_http_http-kerberos-kdc

Specification	
Type	*object*

http-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

method_https

Specification	
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *method_https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text https-response-code and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

method_https_https-kerberos-kdc

Specification	
Type	*object*

https-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

method_compound

Specification	
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_database

Specification	
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_smtp

Specification	
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_ntp

Specification	
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_rtsp

Specification	
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_snmp

Specification	
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *method_snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *method_snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_snmp_oid

Specification	
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

method_snmp_operation

Specification	
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

method_tcp

Specification	
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *method_tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_tcp_port-resp

Specification	
Type	*object*

port-contains

Description Mark server up if response string contains another string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method_pop3

Specification	
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_tacplus

Specification	
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description ‘inbound-ascii-login’: Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_radius

Specification	
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Specify the shared secret of RADIUS server (Shared Crypto Key)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

secret-encrypted

Description

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_external

Specification	
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_dns

Specification	
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *method_dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *method_dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *method_dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_dns_dns-domain-expect

Specification	
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdndns-domain-response, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4dns-domain-response, dns-domain-fqdn and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6dns-domain-response, dns-domain-fqdn and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-responsedns-domain-fqdn, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

method_dns_dns-ipv6-expect

Specification	
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

method_dns_dns-ipv4-expect

Specification	
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

method_ldap

Specification	
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_icmp

Specification	
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_kerberos-kdc

Specification	
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *method_kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method_kerberos-kdc_kerberos-cfg

Specification	
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin kinit and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit kadmin and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd kinit and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method_imap

Specification	
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.5 health monitor method

Define the health method object, default is ICMP

method Specification

Type	*Intermediate Resource*
Element Name	method
Element URI	/axapi/v3/health/monitor/{name}/method
Element Attributes	method_attributes
Schema	`method schema`

Operations Allowed:

Get Object

GET

/axapi/v3/health/monitor/{name}/method

method_attributes

method attributes

compound

Description: compound is a **JSON Block**. Please see below for *compound*

Description: kerberos-kdc is a **JSON Block**. Please see below for *kerberos-kdc*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/kerberos-kdc*

ldap

Description: ldap is a **JSON Block**. Please see below for *ldap*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/ldap*

ntp

Description: ntp is a **JSON Block**. Please see below for *ntp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/ntp*

pop3

Description: pop3 is a **JSON Block**. Please see below for *pop3*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/pop3*

radius

Description: radius is a **JSON Block**. Please see below for *radius*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/radius*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *rtsp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *sip*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/sip*

smtp

Description: smtp is a **JSON Block**. Please see below for *smtp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/smtp*

snmp

Description: snmp is a **JSON Block**. Please see below for *snmp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/snmp*

tacplus

Description: tacplus is a **JSON Block**. Please see below for *tacplus*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/tacplus*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *udp*

Type: Object

Refernce Object: */axapi/v3/health/monitor/{name}/method/udp*

ftp

Specification	
Type	*object*

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp

Specification	
Type	*object*

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip

Specification	
Type	*object*

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http

Specification	
Type	*object*

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *http_http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text http-response-code and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http_http-kerberos-kdc

Specification	
Type	*object*

http-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

https

Specification	
Type	*object*

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *https_https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text https-response-code and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

https_https-kerberos-kdc

Specification	
Type	*object*

https-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

compound

Specification	
Type	*object*

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

database

Specification	
Type	*object*

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp

Specification	
Type	*object*

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ntp

Specification	
Type	*object*

ntp

Description NTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntp-port

Description Specify the NTP port, default is 123 (Port Number (default 123))

Type: number

Range: 1-65534

Default: 123

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rtsp

Specification	
Type	*object*

rtsp

Description RTSP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rtsp-port

Description Specify RTSP port, default is 554 (Port Number (default 554))

Type: number

Range: 1-65534

Default: 554

rtspurl

Description Specify URL string (Specify the path on the server)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp

Specification	
Type	*object*

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *snmp_oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *snmp_operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp_oid

Specification	
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

snmp_operation

Specification	
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

tcp

Specification	
Type	*object*

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *tcp_port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_port-resp

Specification	
Type	*object*

port-contains

Description Mark server up if response string contains another string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pop3

Specification	
Type	*object*

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tacplus

Specification	
Type	*object*

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius

Specification	
Type	*object*

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Specify the shared secret of RADIUS server (Shared Crypto Key)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

secret-encrypted

Description

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external

Specification	
Type	*object*

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns

Specification	
Type	*object*

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *dns_dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *dns_dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *dns_dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_dns-domain-expect

Specification	
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdndns-domain-response, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4dns-domain-response, dns-domain-fqdn and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6dns-domain-response, dns-domain-fqdn and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-responsedns-domain-fqdn, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns_dns-ipv6-expect

Specification	
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

dns_dns-ipv4-expect

Specification	
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

ldap

Specification	
Type	*object*

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description 'overssl': Set LDAP over SSL; 'StartTLS': LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	
Type	*object*

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-kdc

Specification	
Type	*object*

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *kerberos-kdc_kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-kdc_kerberos-cfg

Specification	
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin kinit and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit kadmin and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd kinit and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap

Specification	
Type	*object*

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.6 health monitor method compound

Compound type

compound Specification

Type	*Configuration Resource*
Element Name	compound
Element URI	/axapi/v3/health/monitor/{name}/method/compound
Element Attributes	compound_attributes
Schema	`compound schema`

Operations Allowed:

Create Object

POST

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
POST /axapi/v3/health/monitor/a/method/compound
Payload:
{
    "compound": {
        "rpn-string": "sub a1 sub a2 and",
        "compound": 1
    }
}
```

Get Object

GET

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
GET /axapi/v3/health/monitor/a/method/compound
Reponse:
{
    "compound": {
        "compound": 1,
        "rpn-string": "sub a1 sub a2 and",
        "uuid": "f24dc33c-6052-11d9-80d7-001fa00680a0",
        "a10-url": "/axapi/v3/health/monitor/a/method/compound"
    }
}
```

Modify Object

POST

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

Replace Object

PUT

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
PUT /axapi/v3/health/monitor/a/method/compound
Payload:
{
    "compound": {
        "rpn-string": "sub a1 sub a3 or",
        "compound": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/health/monitor/{name}/method/compound

compound attributes

```
DELETE /axapi/v3/health/monitor/a/method/compound
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

compound attributes

compound

Description Compound type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpn-string

Description Enter Reverse Polish Notation, example: sub hm1 sub hm2 and

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.7 health monitor method database

DATABASE type

database Specification

Type	*Configuration Resource*
Element Name	database
Element URI	/axapi/v3/health/monitor/{name}/method/database
Element Attributes	database_attributes
Schema	`database schema`

Operations Allowed:

database attributes

database

Description DATABASE type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

database-name

Description 'mssql': Specify MSSQL database; 'mysql': Specify MySQL database; 'oracle': Specify Oracle database; 'postgresql': Specify PostgreSQL database;

Type: string

Supported Values: mssql, mysql, oracle, postgresql

db-column

Description Specify the column number for receiving

Type: number

Range: 1-10

db-column-integer

Description Specify the column number for receiving

Type: number

Range: 1-10

db-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

db-name

Description Specify the database name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

db-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

db-password-str

Description Configure password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

db-receive

Description Specify the response string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: db-receive and db-receive-integer are mutually exclusive

db-receive-integer

Description Specify the response integer

Type: number

Range: 0-2147483647

Mutual Exclusion: db-receive-integer and db-receive are mutually exclusive

db-row

Description Specify the row number for receiving

Type: number

Range: 1-10

db-row-integer

Description Specify the row number for receiving

Type: number

Range: 1-10

db-send

Description Specify the SQL query

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

db-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

dns attributes

dns

Description DNS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain

Description Specify fully qualified domain name of the host

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain and dns-ip-key are mutually exclusive

dns-domain-expect

Description: dns-domain-expect is a **JSON Block**. Please see below for *dns-domain-expect*

Type: Object

dns-domain-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-domain-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-domain-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-domain-type

Description 'A': Used for storing Ipv4 address (default); 'CNAME': Canonical name for a DNS alias; 'SOA': Start of authority; 'PTR': Domain name pointer; 'MX': Mail exchanger; 'TXT': Text string; 'AAAA': Used for storing Ipv6 128-bits address;

Type: string

Supported Values: A, CNAME, SOA, PTR, MX, TXT, AAAA

Default: A

dns-ip-key

Description Reverse DNS lookup (Specify IPv4 or IPv6 address)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dns-ip-key and dns-domain are mutually exclusive

dns-ipv4-addr

Description Specify IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-ipv4-addr and dns-ipv6-addr are mutually exclusive

dns-ipv4-expect

Description: dns-ipv4-expect is a **JSON Block**. Please see below for *dns-ipv4-expect*

Type: Object

dns-ipv4-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv4-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv4-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-ipv6-addr

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-ipv6-addr and dns-ipv4-addr are mutually exclusive

dns-ipv6-expect

Description: dns-ipv6-expect is a **JSON Block**. Please see below for *dns-ipv6-expect*

Type: Object

dns-ipv6-port

Description Specify DNS port, default is 53 (DNS Port(default 53))

Type: number

Range: 1-65534

Default: 53

dns-ipv6-recurse

Description 'enabled': Set the recursion bit; 'disabled': Clear the recursion bit;

Type: string

Supported Values: enabled, disabled

Default: enabled

dns-ipv6-tcp

Description Configure DNS transport over TCP, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-domain-expect

Specification	
Type	*object*

dns-domain-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-fqdndns-domain-response, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv4

Description Specify expected resolved IPv4 address

Type: string

Format: ipv4-address

Mutual Exclusion: dns-domain-ipv4dns-domain-response, dns-domain-fqdn and dns-domain-ipv6 are mutually exclusive

dns-domain-ipv6

Description Specify expected resolved IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: dns-domain-ipv6dns-domain-response, dns-domain-fqdn and dns-domain-ipv4 are mutually exclusive

dns-domain-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-domain-responsedns-domain-fqdn, dns-domain-ipv4 and dns-domain-ipv6 are mutually exclusive

dns-ipv6-expect

Specification	
Type	*object*

dns-ipv6-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-fqdn and dns-ipv6-response are mutually exclusive

dns-ipv6-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv6-response and dns-ipv6-fqdn are mutually exclusive

dns-ipv4-expect

Specification	
Type	*object*

dns-ipv4-fqdn

Description Specify fully qualified domain name expected in DNS response answer

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-fqdn and dns-ipv4-response are mutually exclusive

dns-ipv4-response

Description Specify response code range (e.g. 0,1-5) (Format is xx,xx-xx (xx between [0,15]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: dns-ipv4-response and dns-ipv4-fqdn are mutually exclusive

2.43.9 health monitor method external

EXTERNAL type

        "status": "OK"
    }
}
```

external attributes

ext-arguments

Description Specify external application's arguments (Application arguments)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ext-port

Description Specify the server port (Port Number)

Type: number

Range: 1-65534

ext-preference

Description Get server's perference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ext-program

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ext-program-shared

Description Specify external application (Program name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

external

Description EXTERNAL type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-program

Description external application from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp attributes

ftp

Description FTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ftp-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ftp-password-string

Description Specify the user password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ftp-port

Description Specify FTP port (Specify port number, default is 21)

Type: number

Range: 1-65534

Default: 21

ftp-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

http attributes

http

Description HTTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

http-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-kerberos-auth

Description Http Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-kerberos-kdc

Description: http-kerberos-kdc is a **JSON Block**. Please see below for *http-kerberos-kdc*

Type: Object

http-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-password-string

Description Specify password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

http-port

Description Specify HTTP Port (Specify port number (default 80))

Type: number

Range: 1-65534

Default: 80

http-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-response-code and http-text are mutually exclusive

http-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: http-text http-response-code and text-regex are mutually exclusive

http-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and http-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-kerberos-kdc

Specification	
Type	*object*

http-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: http-kerberos-hostip and http-kerberos-hostipv6 are mutually exclusive

http-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: http-kerberos-hostipv6 and http-kerberos-hostip are mutually exclusive

http-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

http-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

https attributes

cert

Description Specify client certificate (Certificate name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

cert-key-shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv2hello

Description Disable SSLv2Hello for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https

Description HTTPS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-host

Description Specify "Host:" header used in request (enclose IPv6 address in [])

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-kerberos-auth

Description Https Kerberos Auth

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-kerberos-kdc

Description: https-kerberos-kdc is a **JSON Block**. Please see below for *https-kerberos-kdc*

Type: Object

https-kerberos-realm

Description Specify realm of Kerberos server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

https-maintenance-code

Description Specify response code for maintenance (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

https-postdata

Description Specify the HTTP post data (Input post data here)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

https-postfile

Description Specify the HTTP post data (Input post data file name here)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

https-response-code

Description Specify response code range (e.g. 200,400-430) (Format is xx,xx-xx (xx between [100, 899])

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-response-code and https-text are mutually exclusive

https-server-cert-name

Description Expect Server Cert commonName

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

https-text

Description Specify text expected

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: https-text https-response-code and text-regex are mutually exclusive

https-url

Description Specify URL string, default is GET /

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

https-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

key

Description Specify client private key (Key name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

key-pass-phrase

Description Client private key password phrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-phrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text and maintenance-text-regex are mutually exclusive

maintenance-text-regex

Description Specify Regex text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: maintenance-text-regex and maintenance-text are mutually exclusive

post-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

post-type

Description 'postdata': Specify the HTTP post data; 'postfile': Specify the HTTP post data;

Type: string

Supported Values: postdata, postfile

response-code-regex

Description Specify response code range with Regex (code with Regex, such as [2-5][0-9][0-9])

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sni

Description Server Name Indication for HTTPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

text-regex

Description Specify text expected with Regex

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: text-regex and https-text are mutually exclusive

url-path

Description Specify URL path, default is "/"

Type: string

Format: string-rlx

Maximum Length: 500 characters

Maximum Length: 1 characters

url-type

Description 'GET': HTTP GET method; 'POST': HTTP POST method; 'HEAD': HTTP HEAD method;

Type: string

Supported Values: GET, POST, HEAD

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-port

Description Specify HTTPS port (Port Number (default 443))

Type: number

Range: 1-65534

Default: 443

https-kerberos-kdc

Specification	
Type	*object*

https-kerberos-hostip

Description Kdc's hostname or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: https-kerberos-hostip and https-kerberos-hostipv6 are mutually exclusive

https-kerberos-hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: https-kerberos-hostipv6 and https-kerberos-hostip are mutually exclusive

https-kerberos-port

Description Specify the kdc port

Type: number

Range: 1-65535

https-kerberos-portv6

Description Specify the kdc port

Type: number

Range: 1-65535

2.43.13 health monitor method icmp

ICMP type

icmp Specification

        "status": "OK"
    }
}
```

icmp attributes

icmp

Description ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

ip

Description Specify IPv4 address of destination behind monitored node

Type: string

Format: ipv4-address

Mutual Exclusion: ip and ipv6 are mutually exclusive

ipv6

Description Specify IPv6 address of destination behind monitored node

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

transparent

Description Apply transparent mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.14 health monitor method imap

IMAP type

imap Specification

Type	*Configuration Resource*
Element Name	imap
Element URI	/axapi/v3/health/monitor/{name}/method/imap

Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

imap attributes

imap

Description IMAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-cram-md5

Description Challenge-response authentication mechanism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

imap-login

Description Simple login

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

imap-plain

Description Plain text

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imap-port

Description Specify the IMAP port, default is 143 (Port Number (default 143))

Type: number

Range: 1-65534

Default: 143

imap-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

pwd-auth

Description Specify the Authentication method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.15 health monitor method kerberos-kdc

Kerberos KDC type

kerberos-kdc Specification

Type	*Configuration Resource*
Element Name	kerberos-kdc

Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

kerberos-kdc attributes

kerberos-cfg

Description: kerberos-cfg is a **JSON Block**. Please see below for *kerberos-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos-cfg

Specification	
Type	*object*

kadmin

Description Kerberos admin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kadmin kinit and kpasswd are mutually exclusive

kadmin-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kadmin-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kadmin-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kadmin-realm

Description Specify the realm

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kadmin-server

Description Specify the admin server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit

Description Kerberos KDC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kinit kadmin and kpasswd are mutually exclusive

kinit-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kinit-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kinit-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kinit-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd

Description Kerberos change passwd

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kpasswd kinit and kadmin are mutually exclusive

kpasswd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

kpasswd-kdc

Description Specify the kdc server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

kpasswd-password

Description Password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

kpasswd-pricipal-name

Description Specify the principal name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kpasswd-server

Description Specify the Kerberos password server, hostlip [:port]

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-only

Description Specify the kerberos tcp only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.43.16 health monitor method ldap

LDAP type

ldap Specification

Type	*Configuration Resource*
Element Name	ldap

    }
}
```

ldap attributes

AcceptNotFound

Description Mark server up on receiving a not-found response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

AcceptResRef

Description Mark server up on receiving a search result reference response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BaseDN

Description Specify LDAP DN distinguished name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap

Description LDAP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-binddn

Description Specify the distinguished name for bindRequest (LDAP DN distinguished name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ldap-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

ldap-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap-port

Description Specify the LDAP port (Speciry port number, default is 389, or 636 if LDAP over SSL)

Type: number

Range: 1-65534

Default: 389

ldap-query

Description LDAP query to be excuted

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ldap-run-search

Description Specify a query to be executed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-security

Description ‘overssl’: Set LDAP over SSL; ‘StartTLS’: LDAP switch to TLS;

Type: string

Supported Values: overssl, StartTLS

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.17 health monitor method ntp

NTP type

ntp Specification

pop3 attributes

pop3

Description POP3 type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

pop3-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-password-string

Description Specify the user password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

pop3-port

Description Specify the POP3 port, default is 110 (Port Number (default 110))

Type: number

Range: 1-65534

Default: 110

pop3-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.19 health monitor method radius

RADIUS type

radius Specification

}
```

radius attributes

radius

Description RADIUS type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

radius-expect

Description Specify what you expect from the response message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

radius-password-string

Description Configure password, ‘’ means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-port

Description Specify the RADIUS port, default is 1812 (Port number (default 1812))

Type: number

Range: 1-65534

Default: 1812

radius-response-code

Description Specify response code range (e.g. 2,4-7) (Format is xx,xx-xx (xx between [1, 13]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-secret

Description Specify the shared secret of RADIUS server (Shared Crypto Key)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

radius-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

secret-encrypted

Description

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

}
```

sip attributes

expect-response-code

Description Specify accepted response codes (e.g. 200, 400-430, any) (Format is xxx,xxx-xxx,any (xxx between [100,899]))

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

register

Description Send SIP REGISTER message, default is to send OPTION message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Description SIP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip-port

Description Specify the SIP port, default is 5060 (Port Number)

Type: number

Range: 1-65534

Default: 5060

sip-tcp

Description Use TCP for transmission, default is UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

smtp attributes

mail-from

Description Specify SMTP Sender

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rcpt-to

Description Specify SMTP Receiver

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

smtp

Description SMTP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smtp-domain

Description Specify domain name of 'helo' command

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

smtp-port

Description Specify SMTP port, default is 25 (Port Number (default 25))

Type: number

Range: 1-65534

Default: 25

smtp-starttls

Description Check the STARTTLS support at helo response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.23 health monitor method snmp

SNMP type

    }
}
```

snmp attributes

community

Description Specify SNMP community, default is "public" (Community String)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: public

oid

Description: oid is a **JSON Block**. Please see below for *oid*

Type: Object

operation

Description: operation is a **JSON Block**. Please see below for *operation*

Type: Object

snmp

Description SNMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp-port

Description Specify SNMP port, default is 161 (Port Number)

Type: number

Range: 1-65534

Default: 161

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oid

Specification	
Type	*object*

asn

Description Specify the format in ASN.1 style

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: asn and mib are mutually exclusive

mib

Description 'sysDescr': The MIB-2 OID of system description, 1.1.0; 'sysUpTime': The MIB-2 OID of system up time, 1.3.0; 'sysName': The MIB-2 OID of system nume, 1.5.0;

Type: string

Supported Values: sysDescr, sysUpTime, sysName

Mutual Exclusion: mib and asn are mutually exclusive

operation

Specification	
Type	*object*

oper-type

Description 'getnext': Get-Next-Request command; 'get': Get-Request command;

Type: string

Supported Values: getnext, get

2.43.24 health monitor method tacplus

TACACS+ type

tacplus Specification

secret-encrypted

Description

tacplus

Description TACACS+ type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

tacplus-password

Description Specify the user password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-password-string

Description Configure password, '' means empty password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-port

Description Specify the TACACS+ port, default 49 (Port number (default 49))

Type: number

Range: 1-65534

Default: 49

tacplus-secret

Description Specify the shared secret of TACACS+ server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus-secret-string

Description Shared Crypto Key

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

tacplus-type

Description 'inbound-ascii-login': Specify Inbound ASCII Login type;

Type: string

Supported Values: inbound-ascii-login

Default: inbound-ascii-login

tacplus-username

Description Specify the username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.43.25 health monitor method tcp

TCP type

tcp attributes

maintenance

Description Specify response text for maintenance

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maintenance-text

Description Specify text for maintenance

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method-tcp

Description TCP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-halfopen

Description Set TCP SYN check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-halfopen and port-send are mutually exclusive

port-resp

Description: port-resp is a **JSON Block**. Please see below for *port-resp*

Type: Object

port-send

Description Send a string to server (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

Mutual Exclusion: port-send and port-halfopen are mutually exclusive

tcp-port

Description Specify TCP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-resp

Specification	
Type	*object*

port-contains

Description Mark server up if response string contains another string (Specify the string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

udp attributes

force-up-with-single-healthcheck

Description Force Up with no response at the first time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description UDP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp-port

Description Specify UDP port (Specify port number)

Type: number

Range: 1-65534

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.44 hostname

Objects:

2.44.1 hostname

Set system's network name

hostname Specification

Type	*Configuration Resource*
Element Name	hostname
Element URI	/axapi/v3/hostname
Element Attributes	hostname_attributes
Schema	`hostname schema`

Operations Allowed:

Create Object

POST

/axapi/v3/hostname

hostname attributes

Get Object

GET

/axapi/v3/hostname

hostname attributes

Modify Object

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description This System's Network Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

2.45 hsm

Objects:

2.45.1 hsm

Hardware Security Module commands

hsm Specification

Type	*Intermediate Resource*
Element Name	hsm
Element URI	/axapi/v3/hsm
Element Attributes	hsm_attributes
Schema	`hsm schema`

Operations Allowed:

Get Object

GET

/axapi/v3/hsm

hsm_attributes

hsm attributes

template-list

Type: List

Refernce Object: */axapi/v3/hsm/template/{template-name}*

template-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually (This is an A10 reserved keyword) (The ENCRYPTED password string)

enroll-timeout

Description Specify Enroll Timeout

Type: number

Range: 10-1024

health-check-interval

Description Specify Thales HSM Health Check Interval

Type: number

Range: 3-60

hsm-dev

Type: List

password

Description Specify HSM Passphrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-string

Description Password (minimum 4 characters)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 4 characters

protection

Description Specify Protection Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protection-module

Description Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-module protection-ocs and softcard are mutually exclusive

protection-ocs

Description Operator Card Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-ocs protection-module and softcard are mutually exclusive

protection-softcard-hash

Description Hash

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

rfs-ip

Description Specify Thales Remote File System

Type: string

Format: ipv4-address

rfs-port

Description Specify Port

Type: number

Range: 1-65535

sec-world

Description Security World Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

softcard

Description Softcard

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softcard protection-module and protection-ocs are mutually exclusive

softhsm-enum

Description 'softHSM': software implementation of a cryptographic store; 'thalesHSM': Thales HSM;

Type: string

Supported Values: softHSM, thalesHSM

template-name

Description Specify Template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

worker

Description Specify number of workers for each data CPU

Type: number

Range: 1-31

template-list_hsm-dev

Specification	
Type	*list*
Block object keys	

hsm-ip

Description Specify HSM Device IP Address

Type: string

Format: ipv4-address

hsm-port

Description Specify Port

Type: number

Range: 1-65535

hsm-priority

Description Specify Priority

Type: number

Range: 1-100

2.45.2 hsm rfs-sync

Sync with RFS server

rfs-sync Specification

Type	*Configuration Resource*
Element Name	rfs-sync
Element URI	/axapi/v3/hsm/rfs-sync
Element Attributes	rfs-sync_attributes
Schema	`rfs-sync schema`

Operations Allowed:

Create Object

POST

/axapi/v3/hsm/rfs-sync

rfs-sync attributes

Get Object

GET

/axapi/v3/hsm/rfs-sync

rfs-sync attributes

Modify Object

POST

}
```

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

encrypted

Description Do NOT use this option manually (This is an A10 reserved keyword) (The ENCRYPTED password string)

enroll-timeout

Description Specify Enroll Timeout

Type: number

Range: 10-1024

health-check-interval

Description Specify Thales HSM Health Check Interval

Type: number

Range: 3-60

hsm-dev

Type: List

password

Description Specify HSM Passphrase

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-string

Description Password (minimum 4 characters)

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 4 characters

protection

Description Specify Protection Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protection-module

Description Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-module protection-ocs and softcard are mutually exclusive

protection-ocs

Description Operator Card Set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: protection-ocs protection-module and softcard are mutually exclusive

protection-softcard-hash

Description Hash

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

rfs-ip

Description Specify Thales Remote File System

Type: string

Format: ipv4-address

rfs-port

Description Specify Port

Type: number

Range: 1-65535

sec-world

Description Security World Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

softcard

Description Softcard

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softcard protection-module and protection-ocs are mutually exclusive

softhsm-enum

Description 'softHSM': software implementation of a cryptographic store; 'thalesHSM': Thales HSM;

Type: string

Supported Values: softHSM, thalesHSM

template-name

Description Specify Template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

worker

Description Specify number of workers for each data CPU

Type: number

Range: 1-31

hsm-dev

Specification	
Type	*list*
Block object keys	

hsm-ip

Description Specify HSM Device IP Address

Type: string

Format: ipv4-address

hsm-port

Description Specify Port

Type: number

Range: 1-65535

hsm-priority

Description Specify Priority

Type: number

Range: 1-100

2.46 import-periodic

Objects:

2.46.1 import-periodic

Get files from remote site periodically

import-periodic Specification

Type	*Intermediate Resource*

ssl-key-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

secured

Description Mark as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-key

Description SSL Key File(enter bulk when import an archive file)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-uri-file-list

Specification	
Type	*list*
Block object keys	

local-uri-file

Description Local URI files for http response

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-cert-list

Specification	
Type	*list*
Block object keys	

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

period

Description Specify the period in second

Type: number

Range: 60-31536000

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

ssl-cert

Description SSL Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-ds-list

Specification	
Type	*list*
Block object keys	

dnssec-ds

Description DNSSEC DS file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xml-schema-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xml-schema

Description XML-Schema File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-list

Specification	
Type	*list*
Block object keys	

aflex

Description aFleX Script Source File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-dnskey-list

Specification	
Type	*list*
Block object keys	

dnssec-dnskey

Description DNSSEC DNSKEY(KSK) file for child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list

Specification	
Type	*list*
Block object keys	

geo-location

Description Geo-location CSV File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

policy

Description WAF policy File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list-list

Specification	
Type	*list*
Block object keys	

class-list

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wsdl-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wsdl

Description Web Services Definition Language File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

bw-list-list

Specification	
Type	*list*
Block object keys	

bw-list

Description Black white List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-jwks-list

Specification	
Type	*list*
Block object keys	

auth-jwks

Description JSON web key

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thales-secworld-list

Specification	
Type	*list*
Block object keys	

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

thales-secworld

Description import Thales security world files - in .tgz format that has all files needed by AX

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-crl-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

ssl-crl

Description SSL Crl File

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

rpz

Description Response Policy Zone File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-cert-key-list

Specification	
Type	*list*
Block object keys	

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

secured

Description Mark keys as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-key

Description 'bulk': import an archive file;

Type: string

Supported Values: bulk

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

thales-kmdata-list

Specification	
Type	*list*
Block object keys	

overwrite

Description Overwrite existing file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

thales-kmdata

Description import Thales Kmdata files - in .tgz format that has all files needed by AX

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ca-cert-list

Specification	
Type	*list*
Block object keys	

ca-cert

Description SSL CA Cert File(enter bulk when import an archive file)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

period

Description Specify the period in second

Type: number

Range: 60-31536000

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-portal-list

Specification	
Type	*list*
Block object keys	

auth-portal

Description Portal file for http authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list-convert-list

Specification	
Type	*list*
Block object keys	

class-list-convert

Description Class List File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list-type

Description 'ac': ac; 'ipv4': ipv4; 'ipv6': ipv6; 'string': string; 'string-case-insensitive': string-case-insensitive;

Type: string

Supported Values: ac, ipv4, ipv6, string, string-case-insensitive

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.46.2 import-periodic aflex

aFleX Script Source File

aflex Specification

Type	*Collection*
Object Key(s)	*aflex*
Collection Name	*aflex-list*
Collection URI	/axapi/v3/import-periodic/aflex
Element Name	aflex
Element URI	/axapi/v3/import-periodic/aflex/{aflex}
Element Attributes	aflex_attributes
Schema	`aflex schema`

Operations Allowed:

Create Object

POST

/axapi/v3/import-periodic/aflex

aflex attributes

```
POST /axapi/v3/import-periodic/aflex/
Payload:
{
    "aflex": {
        "aflex": "a",
        "period": 60,
        "remote-file": "http://example.com/axapi/v3health/postfile_url/stats4"
    }
}
```

Create List

POST

/axapi/v3/import-periodic/aflex

aflex attributes

↪Sdk_Test/sample-xml-schema.xml",
        "xml-schema": "a",
        "use-mgmt-port": 1
    }
}
```

Replace List

PUT

/axapi/v3/import-periodic/xml-schema

xml-schema-list

Delete Object

DELETE

/axapi/v3/import-periodic/xml-schema/{xml-schema}

xml-schema attributes

```
DELETE /axapi/v3/import-periodic/xml-schema/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

xml-schema-list

xml-schema-list is **JSON List** of *xml-schema attributes*

xml-schema-list : [

{ *xml-schema attributes* },

{ *xml-schema attributes* },

...

]

xml-schema attributes

period

Description Specify the period in second

Type: number

Range: 60-31536000

remote-file

Description profile name for remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xml-schema

Description XML-Schema File

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

2.47 interface

Objects:

2.47.1 interface

Select an interface to configure

interface Specification

Type	*Intermediate Resource*
Element Name	interface
Element URI	/axapi/v3/interface
Element Attributes	interface_attributes
Schema	`interface schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface

interface_attributes

interface attributes

available-eth-list

Description: available-eth-list is a **JSON Block**. Please see below for *available-eth-list*

Type: Object

Refernce Object: */axapi/v3/interface/available-eth-list*

brief

Description: brief is a **JSON Block**. Please see below for *brief*

Type: Object

Refernce Object: */axapi/v3/interface/brief*

common

Description: common is a **JSON Block**. Please see below for *common*

Type: Object

Refernce Object: */axapi/v3/interface/common*

ethernet-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}*

lif-list

Type: List

Refernce Object: */axapi/v3/interface/lif/{ifname}*

loopback-list

Type: List

Refernce Object: */axapi/v3/interface/loopback/{ifnum}*

management

Description: management is a **JSON Block**. Please see below for *management*

Type: Object

Refernce Object: */axapi/v3/interface/management*

packet-size-bucket

Description: packet-size-bucket is a **JSON Block**. Please see below for *packet-size-bucket*

Type: Object

Refernce Object: */axapi/v3/interface/packet-size-bucket*

switch-drop-reason

Description: switch-drop-reason is a **JSON Block**. Please see below for *switch-drop-reason*

Type: Object

Refernce Object: */axapi/v3/interface/switch-drop-reason*

trunk-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}*

tunnel-list

Type: List

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}*

ve-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}*

tunnel-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

ifnum

Description Tunnel interface number

Type: number

Range: 1-128

ip

Description: ip is a **JSON Block**. Please see below for *tunnel-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *tunnel-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

speed

Description Speed in Gbit/Sec (Default 10 Gbps)

Type: number

Range: 1-200

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip

Specification	
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *tunnel-list_ip_address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *tunnel-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

tunnel-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

tunnel-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *tunnel-list_ip_rip_authentication_str*

Type: Object

tunnel-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

tunnel-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

tunnel-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

tunnel-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

tunnel-list_ip_address

Specification	
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

tunnel-list_ip_address_ip-cfg

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

tunnel-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

tunnel-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

tunnel-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

tunnel-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

tunnel-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

tunnel-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *tunnel-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

tunnel-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

tunnel-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-rx-pkts': received packets; 'num-total-rx-bytes': received bytes; 'num-tx-pkts': sent packets; 'num-total-tx-bytes': sent bytes; 'num-rx-err-pkts': received error packets; 'num-tx-err-pkts': sent error packets; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec;

Type: string

Supported Values: all, num-rx-pkts, num-total-rx-bytes, num-tx-pkts, num-total-tx-bytes, num-rx-err-pkts, num-tx-err-pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd

tunnel-list_ipv6

Specification	
Type	*object*

address-cfg

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/ospf*

router

Description: router is a **JSON Block**. Please see below for *tunnel-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_router

Specification	
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *tunnel-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *tunnel-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

tunnel-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tunnel-list_ipv6_address-cfg

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

tunnel-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

tunnel-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

tunnel-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

tunnel-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

tunnel-list_ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

tunnel-list_ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

tunnel-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

management

Specification	
Type	*object*

access-list

Description: access-list is a **JSON Block**. Please see below for *management_access-list*

Type: Object

action

Description 'enable': Enable Management Port; 'disable': Disable Management Port;

Type: string

Supported Values: enable, disable

broadcast-rate-limit

Description: broadcast-rate-limit is a **JSON Block**. Please see below for *management_broadcast-rate-limit*

Type: Object

duplexity

Description 'Full': Full; 'Half': Half; 'auto': Auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *management_ip*

Type: Object

ipv6

Type: List

lldp

Description: lldp is a **JSON Block**. Please see below for *management_lldp*

Type: Object

Refernce Object: */axapi/v3/interface/management/lldp*

sampling-enable

Type: List

secondary-ip

Description: secondary-ip is a **JSON Block**. Please see below for *management_secondary-ip*

Type: Object

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management_lldp

Specification	
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *management_lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *management_lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *management_lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *management_lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management_lldp_tx-dot1-cfg

Specification	
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_notification-cfg

Specification	
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_tx-tlvs-cfg

Specification	
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_lldp_enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_broadcast-rate-limit

Specification	
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

management_ipv6

Specification	
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

management_secondary-ip

Specification	
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

secondary-ip

Description Global IP configuration subcommands

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

management_ip

Specification	
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

management_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *trunk-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *trunk-list_bfd*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *trunk-list_ddos*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ddos*

do-auto-recovery

Description (Only for LACP trunks) Attempt auto-recovery after ports-treshold is triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *trunk-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *trunk-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Trunk interface number

Type: number

Range: 1-4096

ip

Description: ip is a **JSON Block**. Please see below for *trunk-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *trunk-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *trunk-list_lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *trunk-list_map*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *trunk-list_nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/nptv6*

ports-threshold

Description Threshold for the minimum number of ports that need to be UP for the trunk to remain UP

Type: number

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *trunk-list_spanning-tree*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/spanning-tree*

sync-modify-disable

Description Disable SYNC bit modify for ports-threshold do-auto-recovery

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description Timer to re-check the threshold under certain conditions (Time in seconds (Default: 10))

Type: number

Range: 1-300

Default: 10

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-hw-hash

Description Enable HW based load balacing decision rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark trunk as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

trunk-list_map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *trunk-list_ip_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *trunk-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *trunk-list_ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *trunk-list_ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

trunk-list_ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *trunk-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

trunk-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

trunk-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *trunk-list_ip_rip_authentication_str*

Type: Object

trunk-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

trunk-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

trunk-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

trunk-list_ip_nat

Specification	
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

trunk-list_ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

trunk-list_ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

trunk-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

trunk-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

trunk-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

trunk-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

trunk-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *trunk-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

trunk-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *trunk-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

trunk-list_bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

trunk-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': num_pkts; 'num_total_bytes': num_total_bytes; 'num_unicast_pkts': num_unicast_pkts; 'num_broadcast_pkts': num_broadcast_pkts; 'num_multicast_pkts': num_multicast_pkts; 'num_tx_pkts': num_tx_pkts; 'num_total_tx_bytes': num_total_tx_bytes; 'num_unicast_tx_pkts': num_unicast_tx_pkts; 'num_broadcast_tx_pkts': num_broadcast_tx_pkts; 'num_multicast_tx_pkts': num_multicast_tx_pkts; 'dropped_dis_rx_pkts': dropped_dis_rx_pkts; 'dropped_rx_pkts': dropped_rx_pkts; 'dropped_dis_tx_pkts': dropped_dis_tx_pkts; 'dropped_tx_pkts': dropped_tx_pkts;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts

trunk-list_ipv6

Specification	
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *trunk-list_ipv6_access-list-cfg*

Type: Object

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat

Description: nat is a **JSON Block**. Please see below for *trunk-list_ipv6_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *trunk-list_ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *trunk-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *trunk-list_ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

trunk-list_ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *trunk-list_ipv6_router-adver_vrid*

Type: Object

trunk-list_ipv6_router-adver_vrid

Specification	
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

trunk-list_ipv6_router-adver_mtu

Specification	
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

trunk-list_ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *trunk-list_ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *trunk-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *trunk-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

trunk-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk-list_ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *trunk-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

trunk-list_ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_nat

Specification	
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

trunk-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

trunk-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

trunk-list_ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

trunk-list_ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

trunk-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

trunk-list_spanning-tree

Specification	
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_spanning-tree_instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

trunk-list_nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

trunk-list_nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *trunk-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *trunk-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *trunk-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

trunk-list_isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

trunk-list_isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

trunk-list_isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

trunk-list_isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

trunk-list_isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

trunk-list_isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-list_isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

trunk-list_isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

trunk-list_isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

trunk-list_isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

trunk-list_icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

trunk-list_lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-list_icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

available-eth-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *ve-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *ve-list_bfd*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *ve-list_ddos*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ddos*

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *ve-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *ve-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Virtual ethernet interface number

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

ip

Description: ip is a **JSON Block**. Please see below for *ve-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ve-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs for incoming packets on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *ve-list_lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *ve-list_map*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *ve-list_nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/nptv6*

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

sampling-enable

Type: List

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ve-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ve-list_ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ve-list_ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ve-list_ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

ve-list_ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ve-list_ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ve-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ve-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ve-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ve-list_ip_rip_authentication_str*

Type: Object

ve-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ve-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ve-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ve-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ve-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ve-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ve-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ve-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ve-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ve-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ve-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *ve-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ve-list_bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ve-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': Input packets; 'num_total_bytes': Input bytes; 'num_unicast_pkts': Received unicasts; 'num_broadcast_pkts': Received braodcasts; 'num_multicast_pkts': Received multicasts; 'num_tx_pkts': Transmitted packtes; 'num_total_tx_bytes': Transmitte bytes; 'num_unicast_tx_pkts': Trasnmitted unicasts; 'num_broadcast_tx_pkts': Transmitted broadcasts; 'num_multicast_tx_pkts': Transmitted multicasts; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

ve-list_ipv6

Specification	
Type	*object*

address-list

Type: List

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/ospf*

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ve-list_ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ve-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ve-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ve-list_ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ve-list_ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ve-list_ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ve-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ve-list_ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ve-list_ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ve-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ve-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ripng*

ve-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ve-list_ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ve-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ve-list_ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ve-list_ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ve-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ve-list_ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ve-list_map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

ve-list_nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ve-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ve-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *ve-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

ve-list_isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

ve-list_isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

ve-list_isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

ve-list_isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

ve-list_isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

ve-list_isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ve-list_isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

ve-list_isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ve-list_isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

ve-list_isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

ve-list_icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ve-list_lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-list_icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

brief

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *ethernet-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: disable

auto-neg-enable

Description enable auto-negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description: bfd is a **JSON Block**. Please see below for *ethernet-list_bfd*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/bfd*

cpu-process

Description All Packets to this port are processed by CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-process-dir

Description 'primary': Primary board; 'blade': blade board; 'hash-dip': Hash based on the Destination IP; 'hash-sip': Hash based on the Source IP; 'hash-dmac': Hash based on the Destination MAC; 'hash-smac': Hash based on the Source MAC;

Type: string

Supported Values: primary, blade, hash-dip, hash-sip, hash-dmac, hash-smac

ddos

Description: ddos is a **JSON Block**. Please see below for *ethernet-list_ddos*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ddos*

duplexity

Description 'Full': Full; 'Half': Half; 'auto': auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

fec-forced-off

Description turn off the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-off and fec-forced-on are mutually exclusive

fec-forced-on

Description turn on the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-on and fec-forced-off are mutually exclusive

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *ethernet-list_icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *ethernet-list_icmpv6-rate-limit*

Type: Object

ifnum

Description Ethernet interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ethernet-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip*

ipg-bit-time

Description Set Inter-packet-gap interval in bit timing, default is 96

Type: number

Range: 64-120

Default: 96

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ethernet-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/isis*

l3-vlan-fwd-disable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp

Description: lldp is a **JSON Block**. Please see below for *ethernet-list_lldp*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/lldp*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *ethernet-list_lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *ethernet-list_map*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/map*

media-type-copper

Description Set the media type to copper

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *ethernet-list_nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/interface-ethernet-tmpl*

ping-sweep-detection

Description 'enable': Enabl ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-breakout

Description enable breaking out a port into 4 logical ones

Type: string

Supported Values: 4x10G, 4x25G, 2x50G

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

remove-vlan-tag

Description Remove the vlan tag for egressing packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *ethernet-list_spanning-tree*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/spanning-tree*

speed

Description '10': 10; '100': 100; '1000': 1000; 'auto': auto;

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

speed-forced-10g

Description force the speed to be 10G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-10g and speed-forced-1g are mutually exclusive

speed-forced-1g

Description force the speed to be 1G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-1g and speed-forced-10g are mutually exclusive

speed-forced-40g

Description force the speed to be 40G on 100G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-distribution-mode

Description 'sip': sip; 'dip': dip; 'primary': primary; 'blade': blade; 'l4-src-port': l4-src-port; 'l4-dst-port': l4-dst-port;

Type: string

Supported Values: sip, dip, primary, blade, l4-src-port, l4-dst-port

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}*

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark ethernet as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

ethernet-list_map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ethernet-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ethernet-list_ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ethernet-list_ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

ethernet-list_ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ethernet-list_ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ethernet-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ethernet-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ethernet-list_ip_rip_authentication_str*

Type: Object

ethernet-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ethernet-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ethernet-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ethernet-list_ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ethernet-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ethernet-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ethernet-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ethernet-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ethernet-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ethernet-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ethernet-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ethernet-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *ethernet-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ethernet-list_bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ethernet-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'runts': Runts; 'giants': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted braodcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, runts, giants, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions, giants_output, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

ethernet-list_monitor-list

Specification	
Type	*list*
Block object keys	

mirror-index

Description Mirror index

Type: number

Range: 1-4

Refernce Object: */axapi/v3/mirror-port*

monitor

Description 'input': Incoming packets; 'output': Outgoing packets; 'both': Both incoming and outgoing packets;

Type: string

Supported Values: input, output, both

monitor-vlan

Description VLAN number

Type: number

Range: 2-4094

ethernet-list_spanning-tree

Specification	
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_spanning-tree_instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

ethernet-list_lldp

Specification	
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *ethernet-list_lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_lldp_tx-dot1-cfg

Specification	
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_notification-cfg

Specification	
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_tx-tlvs-cfg

Specification	
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_lldp_enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_trunk-group-list

Specification	
Type	*list*
Block object keys	

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *ethernet-list_trunk-group-list_udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_trunk-group-list_udld-timeout-cfg

Specification	
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

ethernet-list_nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

ethernet-list_nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ethernet-list_isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ethernet-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ethernet-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *ethernet-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

ethernet-list_isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

ethernet-list_isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

ethernet-list_isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

ethernet-list_isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

ethernet-list_isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

ethernet-list_isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

ethernet-list_isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

ethernet-list_isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

ethernet-list_isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

ethernet-list_icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ethernet-list_ipv6

Specification	
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ethernet-list_ipv6_access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ethernet-list_ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ethernet-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ethernet-list_ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ethernet-list_ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ethernet-list_ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ethernet-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

ethernet-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet-list_ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ethernet-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ethernet-list_ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ethernet-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ethernet-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ethernet-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ethernet-list_ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ethernet-list_ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ethernet-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ethernet-list_ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet-list_ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ethernet-list_lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

switch-drop-reason

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *lif-list_access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *lif-list_bfd*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/bfd*

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

ip

Description: ip is a **JSON Block**. Please see below for *lif-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *lif-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/isis*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *lif-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *lif-list_isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

lif-list_isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

lif-list_isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

lif-list_isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

lif-list_isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

lif-list_isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

lif-list_isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

lif-list_isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

lif-list_isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

lif-list_isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

lif-list_bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *lif-list_bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

lif-list_ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *lif-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *lif-list_ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router/isis*

lif-list_ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *lif-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

lif-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

lif-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *lif-list_ip_rip_authentication_str*

Type: Object

lif-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

lif-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

lif-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

lif-list_ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

lif-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

lif-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

lif-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

lif-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

lif-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

lif-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *lif-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

lif-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

lif-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': num_pkts; 'num_total_bytes': num_total_bytes; 'num_unicast_pkts': num_unicast_pkts; 'num_broadcast_pkts': num_broadcast_pkts; 'num_multicast_pkts': num_multicast_pkts; 'num_tx_pkts': num_tx_pkts; 'num_total_tx_bytes': num_total_tx_bytes; 'num_unicast_tx_pkts': num_unicast_tx_pkts; 'num_broadcast_tx_pkts': num_broadcast_tx_pkts; 'num_multicast_tx_pkts': num_multicast_tx_pkts; 'dropped_dis_rx_pkts': dropped_dis_rx_pkts; 'dropped_rx_pkts': dropped_rx_pkts; 'dropped_dis_tx_pkts': dropped_dis_tx_pkts; 'dropped_tx_pkts': dropped_tx_pkts;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts, dropped_rx_pkts_gre_key

lif-list_ipv6

Specification	
Type	*object*

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *lif-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_address-list

Specification	
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *lif-list_ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *lif-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *lif-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ripng*

lif-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

lif-list_ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lif-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

lif-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

lif-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

lif-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

lif-list_ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

lif-list_ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

lif-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

packet-size-bucket

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list

Specification	
Type	*list*
Block object keys	

ifnum

Description Loopback interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *loopback-list_ip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *loopback-list_ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/isis*

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

snmp-server

Description: snmp-server is a **JSON Block**. Please see below for *loopback-list_snmp-server*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *loopback-list_isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *loopback-list_isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *loopback-list_isis_mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

loopback-list_isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

loopback-list_isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

loopback-list_isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

loopback-list_isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

loopback-list_isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

loopback-list_isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

loopback-list_isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

loopback-list_isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

loopback-list_isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

loopback-list_snmp-server

Specification	
Type	*object*

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip

Specification	
Type	*object*

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *loopback-list_ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *loopback-list_ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

loopback-list_ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

loopback-list_ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

loopback-list_ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

loopback-list_ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

loopback-list_ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *loopback-list_ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

loopback-list_ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

loopback-list_ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *loopback-list_ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

loopback-list_ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

loopback-list_ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *loopback-list_ip_rip_authentication_str*

Type: Object

loopback-list_ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

loopback-list_ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

loopback-list_ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

loopback-list_ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

loopback-list_ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

loopback-list_ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6

Specification	
Type	*object*

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *loopback-list_ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *loopback-list_ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_address-list

Specification	
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *loopback-list_ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

loopback-list_ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *loopback-list_ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *loopback-list_ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *loopback-list_ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng*

loopback-list_ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

loopback-list_ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

loopback-list_ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

loopback-list_ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

loopback-list_ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

loopback-list_ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

loopback-list_ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

loopback-list_ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

loopback-list_ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.47.2 interface available-eth-list

List of ethernet interfaces available in a partition

available-eth-list Specification

Type	*Configuration Resource*
Element Name	available-eth-list
Element URI	/axapi/v3/interface/available-eth-list
Element Attributes	available-eth-list_attributes
Operational Data URI	/axapi/v3/interface/available-eth-list/oper
Schema	`available-eth-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/available-eth-list

available-eth-list attributes

Get Object

GET

/axapi/v3/interface/available-eth-list

available-eth-list attributes

Modify Object

POST

/axapi/v3/interface/available-eth-list

available-eth-list attributes

Replace Object

PUT

/axapi/v3/interface/available-eth-list

available-eth-list attributes

Delete Object

DELETE

/axapi/v3/interface/available-eth-list

available-eth-list attributes

available-eth-list attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	if-list		if-list
	tot_num_of_ports	number	tot_num_of_ports

2.47.3 interface brief

Interface statistics information

brief Specification

Type	*Configuration Resource*
Element Name	brief
Element URI	/axapi/v3/interface/brief
Element Attributes	brief_attributes
Operational Data URI	/axapi/v3/interface/brief/oper
Schema	`brief schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/brief

brief attributes

Get Object

GET

/axapi/v3/interface/brief

brief attributes

Modify Object

POST

/axapi/v3/interface/brief

brief attributes

Replace Object

PUT

/axapi/v3/interface/brief

brief attributes

Delete Object

DELETE

/axapi/v3/interface/brief

brief attributes

brief attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	interfaces		interfaces

2.47.4 interface common

Interface statistics information

common Specification

Type	*Configuration Resource*
Element Name	common
Element URI	/axapi/v3/interface/common
Element Attributes	common_attributes
Operational Data URI	/axapi/v3/interface/common/oper
Schema	`common schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/common

common attributes

Get Object

GET

/axapi/v3/interface/common

common attributes

Modify Object

POST

/axapi/v3/interface/common

common attributes

Replace Object

PUT

/axapi/v3/interface/common

common attributes

Delete Object

DELETE

/axapi/v3/interface/common

common attributes

common attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	interfaces		interfaces
	interval	number	interval
	tot_num_phy_intf	number	tot_num_phy_intf
	vnp_id	number	vnp_id
	time	string	time

2.47.5 interface ethernet

Ethernet interface

ethernet Specification

Type	*Collection*
Object Key(s)	*ifnum*
Collection Name	*ethernet-list*
Collection URI	/axapi/v3/interface/ethernet
Element Name	ethernet
Element URI	/axapi/v3/interface/ethernet/{ifnum}
Element Attributes	ethernet_attributes
Statistics Data URI	/axapi/v3/interface/ethernet/{ifnum}/stats
Operational Data URI	/axapi/v3/interface/ethernet/{ifnum}/oper
Schema	`ethernet schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet

ethernet attributes

```
POST /axapi/v3/interface/ethernet/1
Payload:
{
    "ethernet": {
        "ifnum": 1,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/interface/ethernet

ethernet attributes

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}

ethernet attributes

```
GET /axapi/v3/interface/ethernet/1
Reponse:
{
```

(continues on next page)

(continued from previous page)

```
    "ethernet": {
        "ifnum": 1,
        "port-scan-detection": "disable",
        "ping-sweep-detection": "disable",
        "l3-vlan-fwd-disable": 0,
        "load-interval": 300,
        "media-type-copper": 0,

    }
}
```

Get List

GET

/axapi/v3/interface/ethernet

ethernet-list

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}

ethernet attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}

ethernet attributes

```
PUT /axapi/v3/interface/ethernet/1
Payload:
{
    "ethernet": {
        "ifnum": 1,
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/interface/ethernet

ethernet-list

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}

ethernet attributes

```
DELETE /axapi/v3/interface/ethernet/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ethernet-list

ethernet-list is **JSON List** of *ethernet attributes*

ethernet-list : [

{ *ethernet attributes* },

{ *ethernet attributes* },

...

]

ethernet attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: disable

auto-neg-enable

Description enable auto-negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/bfd*

cpu-process

Description All Packets to this port are processed by CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpu-process-dir

Description 'primary': Primary board; 'blade': blade board; 'hash-dip': Hash based on the Destination IP; 'hash-sip': Hash based on the Source IP; 'hash-dmac': Hash based on the Destination MAC; 'hash-smac': Hash based on the Source MAC;

Type: string

Supported Values: primary, blade, hash-dip, hash-sip, hash-dmac, hash-smac

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ddos*

duplexity

Description 'Full': Full; 'Half': Half; 'auto': auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

fec-forced-off

Description turn off the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-off and fec-forced-on are mutually exclusive

fec-forced-on

Description turn on the FEC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fec-forced-on and fec-forced-off are mutually exclusive

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

ifnum

Description Ethernet interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip*

ipg-bit-time

Description Set Inter-packet-gap interval in bit timing, default is 96

Type: number

Range: 64-120

Default: 96

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/isis*

l3-vlan-fwd-disable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp

Description: lldp is a **JSON Block**. Please see below for *lldp*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/lldp*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/map*

media-type-copper

Description Set the media type to copper

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

monitor-list

Type: List

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/interface-ethernet-tmpl*

ping-sweep-detection

Description 'enable': Enabl ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-breakout

Description '4x10G': Breakout 100G/40G ports into 4x10G ports; '4x25G': Breakout 100G ports into 4x25G ports; '2x50G': Breakout 100G ports into 2x50G ports;

Type: string

Supported Values: 4x10G, 4x25G, 2x50G

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

remove-vlan-tag

Description Remove the vlan tag for egressing packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *spanning-tree*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/spanning-tree*

speed

Description '10': 10; '100': 100; '1000': 1000; 'auto': auto;

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

speed-forced-10g

Description force the speed to be 10G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-10g and speed-forced-1g are mutually exclusive

speed-forced-1g

Description force the speed to be 1G on 25G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: speed-forced-1g and speed-forced-10g are mutually exclusive

speed-forced-40g

Description force the speed to be 40G on 100G link

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-distribution-mode

Description 'sip': sip; 'dip': dip; 'primary': primary; 'blade': blade; 'l4-src-port': l4-src-port; 'l4-dst-port': l4-dst-port;

Type: string

Supported Values: sip, dip, primary, blade, l4-src-port, l4-dst-port

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}*

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark ethernet as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'runts': Runts; 'giants': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted braodcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, runts, giants, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions, giants_output, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

monitor-list

Specification	
Type	*list*
Block object keys	

mirror-index

Description Mirror index

Type: number

Range: 1-4

Refernce Object: */axapi/v3/mirror-port*

monitor

Description 'input': Incoming packets; 'output': Outgoing packets; 'both': Both incoming and outgoing packets;

Type: string

Supported Values: input, output, both

monitor-vlan

Description VLAN number

Type: number

Range: 2-4094

spanning-tree

Specification	
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

lldp

Specification	
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_tx-dot1-cfg

Specification	
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_notification-cfg

Specification	
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-tlvs-cfg

Specification	
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk-group-list

Specification	
Type	*list*
Block object keys	

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *trunk-group-list_udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-group-list_udld-timeout-cfg

Specification	
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

ipv6

Specification	
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ipv6_access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	frame	8	Frames
	rate_byte_sent	8	Byte sent rate bits/sec
	runts	8	Runts
	bytes_output	8	Output bytes
	input_errors	8	Input errors
	bytes_input	8	Input bytes
	load_interval	8	Load Interval
	transmit-ted_multicasts	8	Transmitted multicasts
	pack-ets_input	8	Input packets
	re-ceived_multicasts	8	Received multicasts
	pack-ets_output	8	Output packets
	transmit-ted_unicasts	8	Transmitted unicasts
	collisions	8	Collisions
	re-ceived_unicasts	8	Received unicasts
	rate_pkt_sent	8	Packet sent rate packets/sec
	giants	8	Giants
	re-ceived_broadcasts	8	Received broadcasts
	rate_byte_rcvd	8	Byte received rate bits/sec
	rate_pkt_rcvd	8	Packet received rate packets/sec
	transmit-ted_broadcasts	8	Transmitted braodcasts
	crc	8	CRC
	giants_output	8	Output Giants
	output_errors	8	Output errors

operational data

	Counter	Size	Description
	last_count_clear_at	string	last_count_clear_at
	line_protocol	enum	Output contains one of the following values: - up, down
	span_mode	string	span_mode
	icmp6-rate-over-limit-drop	number	icmp6-rate-over-limit-drop
	outgo-ing_pkts_mirrored	number	outgoing_pkts_mirrored
	rate_byte_sent	number	rate_byte_sent

continues on next page

Table 2.17 – continued from previous page

	Counter	Size	Description
	ipv6-link-local-type	string	ipv6-link-local-type
	vlan-id	number	vlan-id
	ip_unnumbered_oper	number	ip_unnumbered_oper
	ipv4-address	ipv4-address	IP address
	ipv4_list		ipv4_list
	input_utilization	number	input_utilization
	config_speed	enum	Output contains one of the following values: - 10Mbit, 100Mbit, 1Gbit, 10Gbit, 40Gbit, auto
	ipv4-netmask	ipv4-netmask	IP subnet mask
	output_utilization	number	output_utilization
	incoming_pkts_mirrored	number	incoming_pkts_mirrored
	state	enum	Output contains one of the following values: - up, disabled, down
	tagged-vlan-list	string	tagged-vlan-list
	ip_unnumbered_peer_lla	ipv6-address	ip_unnumbered_peer_lla
	last_down_event_at	string	last_down_event_at
	is_device_transparent	number	is_device_transparent
	media_type	enum	Output contains one of the following values: - Copper, Fiber
	port_vnp_id	number	port_vnp_id
	link_type	enum	Output contains one of the following values: - GigabitEthernet, 10Gig, 40Gig
	ip_unnumbered_mac_learned	number	ip_unnumbered_mac_learned
	rate_pkt_rcvd	number	rate_pkt_rcvd
	current_vnp_id	number	current_vnp_id
	outgoing_pkts_monitored	number	outgoing_pkts_monitored
	ipv4_addr_count	number	ipv4_addr_count
	span_port_state	string	span_port_state
	ipv6-link-local-scope	string	ipv6-link-local-scope
	actual_duplexity	enum	Output contains one of the following values: - Full, fdx, Half, hdx, auto
	icmp-rate-over-limit-drop	number	icmp-rate-over-limit-drop
	is_blocked	number	is_blocked
	incoming_pkts_monitored	number	incoming_pkts_monitored
	rate_byte_rcvd	number	rate_byte_rcvd
	ipv6_list		ipv6_list
	is-tagged	number	is-tagged
	last_up_event_at	string	last_up_event_at

2.47.6 interface ethernet bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/ethernet/{ifnum}/bfd
Element Attributes	bfd_attributes
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
POST /axapi/v3/interface/ethernet/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
```

(continues on next page)

(continued from previous page)

```
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
GET /axapi/v3/interface/ethernet/1/bfd
Reponse:
{
    "bfd": {
        "authentication": {
            "key-id": 0,
            "method": "md5",
            "encrypted": "XXXXX"
        },
        "echo": 0,
        "uuid": "d06711a8-6064-11d9-9a56-001fa00680a0",
        "a10-url": "/axapi/v3/interface/ethernet/1/bfd"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
PUT /axapi/v3/interface/ethernet/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "meticulous-md5",
            "key-id": 1,
            "password": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/bfd

bfd attributes

```
DELETE /axapi/v3/interface/ethernet/1/bfd
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.47.7 interface ethernet ip

Global IP configuration subcommands

ip Specification

Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ip
Element Attributes	ip_attributes
Schema	`ip schema`

Operations Allowed:

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Configure Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/router/isis*

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.8 interface ethernet ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Type	*Intermediate Resource*

ospf-global attributes

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.10 interface ethernet ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ipv6 attributes

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *access-list-cfg*

Type: Object

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet before sending out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

2.47.16 interface ethernet ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.47.17 interface ethernet ipv6 rip

RIP

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.19 interface ethernet ipv6 router isis

IS-IS Routing for IP

isis Specification

Type	*Configuration Resource*
Element Name	isis
Element URI	/axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis
Element Attributes	isis_attributes
Schema	`isis schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis

isis attributes

```
POST /axapi/v3/interface/ethernet/1/ipv6/router/isis
Payload:
{
    "isis": {
        "tag": "a"
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/ipv6/router/isis

isis attributes

```
GET /axapi/v3/interface/ethernet/1/ipv6/router/isis
Reponse:
{
    "isis": {

    }
}
```

stateful-firewall attributes

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.47.25 interface ethernet lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Type	*Configuration Resource*
Element Name	lw-4o6
Element URI	/axapi/v3/interface/ethernet/{ifnum}/lw-4o6
Element Attributes	lw-4o6_attributes
Schema	`lw-4o6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/lw-4o6

lw-4o6 attributes

```
POST /axapi/v3/interface/ethernet/1/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/lw-4o6

lw-4o6 attributes

```
GET /axapi/v3/interface/ethernet/1/lw-4o6
Reponse:
{
    "lw-4o6": {
        "outside": 1,
        "inside": 0,
        "uuid": "9933b52e-6069-11d9-9a56-001fa00680a0",
        "a10-url": "/axapi/v3/interface/ethernet/1/lw-4o6"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/lw-4o6

lw-4o6 attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/lw-4o6

lw-4o6 attributes

```
PUT /axapi/v3/interface/ethernet/1/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/lw-4o6

lw-4o6 attributes

```
DELETE /axapi/v3/interface/ethernet/1/lw-4o6
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

lw-4o6 attributes

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.26 interface ethernet map

Configure MAP on this interface

map Specification

Type	*Configuration Resource*
Element Name	map
Element URI	/axapi/v3/interface/ethernet/{ifnum}/map
Element Attributes	map_attributes
Schema	`map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/map

map attributes

map attributes

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.27 interface ethernet nptv6

Configure NPTv6 on this interface

nptv6 Specification

Type	*Intermediate Resource*
Element Name	nptv6
Element URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6
Element Attributes	nptv6_attributes
Schema	`nptv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/nptv6

nptv6_attributes

nptv6 attributes

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.28 interface ethernet nptv6 domain

Apply NPTv6 translation domain on interface

domain Specification

Type	*Collection*
Object Key(s)	*domain-name, bind-type*
Collection Name	*domain-list*
Collection URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain
Element Name	domain
Element URI	/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}
Element Attributes	domain_attributes
Schema	`domain schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain

domain attributes

Create List

POST

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain

domain attributes

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Get List

GET

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain

domain-list

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Replace List

PUT

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain

domain-list

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

domain-list

domain-list is **JSON List** of *domain attributes*

domain-list : [

{ *domain attributes* },

{ *domain attributes* },

...

]

domain attributes

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.29 interface ethernet spanning-tree

Spanning tree port configuration

spanning-tree Specification

Type	*Configuration Resource*
Element Name	spanning-tree
Element URI	/axapi/v3/interface/ethernet/{ifnum}/spanning-tree
Element Attributes	spanning-tree_attributes
Schema	`spanning-tree schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/spanning-tree

spanning-tree attributes

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/spanning-tree

spanning-tree attributes

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/spanning-tree

spanning-tree attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/spanning-tree

spanning-tree attributes

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/spanning-tree

spanning-tree attributes

spanning-tree attributes

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

2.47.30 interface ethernet trunk-group

Trunk Group Settings

trunk-group Specification

Type	*Collection*
Object Key(s)	*trunk-number*
Collection Name	*trunk-group-list*
Collection URI	/axapi/v3/interface/ethernet/{ifnum}/trunk-group
Element Name	trunk-group
Element URI	/axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}
Element Attributes	trunk-group_attributes
Schema	`trunk-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ethernet/{ifnum}/trunk-group

trunk-group attributes

Create List

POST

/axapi/v3/interface/ethernet/{ifnum}/trunk-group

trunk-group attributes

Get Object

GET

/axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}

trunk-group attributes

Get List

GET

/axapi/v3/interface/ethernet/{ifnum}/trunk-group

trunk-group-list

Modify Object

POST

/axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}

trunk-group attributes

Replace Object

PUT

/axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}

trunk-group attributes

Replace List

PUT

/axapi/v3/interface/ethernet/{ifnum}/trunk-group

trunk-group-list

Delete Object

DELETE

/axapi/v3/interface/ethernet/{ifnum}/trunk-group/{trunk-number}

trunk-group attributes

trunk-group-list

trunk-group-list is **JSON List** of *trunk-group attributes*

trunk-group-list : [

{ *trunk-group attributes* },

{ *trunk-group attributes* },

...

]

trunk-group attributes

admin-key

Description LACP admin key (Admin key value)

Type: number

Range: 10000-65535

mode

Description 'active': enable initiation of LACP negotiation on a port(default); 'passive': disable initiation of LACP negotiation on a port;

Type: string

Supported Values: active, passive

Default: active

port-priority

Description Set LACP priority for a port (LACP port priority)

Type: number

Range: 1-65535

timeout

Description 'long': Set LACP long timeout (default); 'short': Set LACP short timeout;

Type: string

Supported Values: long, short

Default: long

trunk-number

Description Trunk Number

Type: number

Range: 1-4096

type

Description 'static': Static (default); 'lacp': lacp; 'lacp-udld': lacp-udld;

Type: string

Supported Values: static, lacp, lacp-udld

Default: static

udld-timeout-cfg

Description: udld-timeout-cfg is a **JSON Block**. Please see below for *udld-timeout-cfg*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udld-timeout-cfg

Specification	
Type	*object*

fast

Description fast timeout in unit of milli-seconds(default 1000)

Type: number

Range: 100-1000

Default: 1000

Mutual Exclusion: fast and slow are mutually exclusive

slow

Description slow timeout in unit of seconds

Type: number

Range: 1-60

Mutual Exclusion: slow and fast are mutually exclusive

2.47.31 interface lif

Logical interface

lif Specification

Type	*Collection*
Object Key(s)	*ifname*
Collection Name	*lif-list*
Collection URI	/axapi/v3/interface/lif
Element Name	lif
Element URI	/axapi/v3/interface/lif/{ifname}
Element Attributes	lif_attributes
Statistics Data URI	/axapi/v3/interface/lif/{ifname}/stats
Operational Data URI	/axapi/v3/interface/lif/{ifname}/oper
Schema	`lif schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif

lif attributes

```
POST /axapi/v3/interface/lif/
Payload:
{
    "lif": {
        "ifname": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/interface/lif

lif attributes

Get Object

GET

/axapi/v3/interface/lif/{ifname}

lif attributes

```
GET /axapi/v3/interface/lif/a
Reponse:
{
```

(continues on next page)

(continued from previous page)

```
    "lif": {
        "ifname": "a",
        "mtu": 1500,
        "action": "enable",
        "uuid": "8f0e2e1e-606c-11d9-9a56-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/interface/lif/a"
    }
}
```

Get List

GET

/axapi/v3/interface/lif

lif-list

Modify Object

POST

/axapi/v3/interface/lif/{ifname}

lif attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}

lif attributes

```
PUT /axapi/v3/interface/lif/a
Payload:
{
    "lif": {
        "ifname": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/interface/lif

lif-list

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}

lif attributes

```
DELETE /axapi/v3/interface/lif/a
Reponse:
```

(continues on next page)

(continued from previous page)

```
{
    "response": {
        "status": "OK"
    }
}
```

lif-list

lif-list is **JSON List** of *lif attributes*

lif-list : [

{ *lif attributes* },

{ *lif attributes* },

...

]

lif attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/bfd*

ifname

Description Lif interface name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/isis*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router/isis*

ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': num_pkts; 'num_total_bytes': num_total_bytes; 'num_unicast_pkts': num_unicast_pkts; 'num_broadcast_pkts': num_broadcast_pkts; 'num_multicast_pkts': num_multicast_pkts; 'num_tx_pkts': num_tx_pkts; 'num_total_tx_bytes': num_total_tx_bytes; 'num_unicast_tx_pkts': num_unicast_tx_pkts; 'num_broadcast_tx_pkts': num_broadcast_tx_pkts; 'num_multicast_tx_pkts': num_multicast_tx_pkts; 'dropped_dis_rx_pkts': dropped_dis_rx_pkts; 'dropped_rx_pkts': dropped_rx_pkts; 'dropped_dis_tx_pkts': dropped_dis_tx_pkts; 'dropped_tx_pkts': dropped_tx_pkts;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts,

num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts, dropped_rx_pkts_gre_key

ipv6

Specification	
Type	*object*

address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

stats data

	Counter	Size	Description
	num_tx_pkts	8	num_tx_pkts
	dropped_dis_tx_pkts	8	dropped_dis_tx_pkts

2.47.32 interface lif bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/lif/{ifname}/bfd
Element Attributes	bfd_attributes
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
POST /axapi/v3/interface/lif/{ifname}/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
GET /axapi/v3/interface/lif/1/bfd
Reponse:
{
    "bfd": {
        "authentication": {
            "key-id": 0,
            "method": "md5",
            "encrypted":
↪"48GdldXBUxk8EIy41dsA5zwQjLjV2wDnPBCMuNXbAOc8EIy41dsA5zwQjLjV2wDn"
        },
        "echo": 0,
        "uuid": "71660a0c-4f5a-11e9-a0b3-000c2940c949",
        "a10-url": "/axapi/v3/interface/lif/1/bfd"
    }
}
```

Modify Object

POST

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
PUT /axapi/v3/interface/lif/1/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "meticulous-md5",
            "key-id": 1,
            "password": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}/bfd

bfd attributes

```
DELETE /axapi/v3/interface/lif/1/bfd
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.47.33 interface lif ip

Global IP configuration subcommands

ip Specification

Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/lif/{ifname}/ip
Element Attributes	ip_attributes
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/lif/{ifname}/ip

ip attributes

```
POST /axapi/v3/interface/lif/{ifname}/ip
Payload:
{
    "ip": {
```

(continues on next page)

(continued from previous page)

```
        "router": {
            "isis": {
                "tag": "a"
            }
        },
        "address-list": [
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/interface/lif/{ifname}/ip

ip attributes

```
GET /axapi/v3/interface/lif/1/ip
Reponse:
{
    "ip": {
        "dhcp": 0,
        "address-list": [
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ],
        "allow-promiscuous-vip": 0,
        "cache-spoofing-port": 0,
        "inside": 0,
        "outside": 0,
        "generate-membership-query": 0,
        "uuid": "8b1f756e-4f5a-11e9-a0b3-000c2940c949",
        "router": {
            "isis": {
                "tag": "a",
                "uuid": "8b2125b2-4f5a-11e9-a0b3-000c2940c949",
                "a10-url": "/axapi/v3/interface/lif/1/ip/router/isis"

        },
        "a10-url": "/axapi/v3/interface/lif/1/ip"
    }
}
```

Modify Object

POST

/axapi/v3/interface/lif/{ifname}/ip

ip attributes

Replace Object

PUT

/axapi/v3/interface/lif/{ifname}/ip

ip attributes

```
PUT /axapi/v3/interface/lif/1/ip
Payload:
{
    "ip": {
        "router": {
            "isis": {
                "tag": "a"
            }
        },
        "address-list": [
            {
                "ipv4-address": "3.3.3.4",
                "ipv4-netmask": "255.255.255.0"
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/lif/{ifname}/ip

ip attributes

```
DELETE /axapi/v3/interface/lif/1/ip
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/router/isis*

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.35 interface lif ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Type	*Configuration Resource*
Element Name	ospf-global
Element URI	/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-global
Element Attributes	ospf-global_attributes
Schema	`ospf-global schema`

Operations Allowed:

Create Object

POST

ospf-global attributes

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.36 interface lif ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Type	*Collection*
Object Key(s)	*ip-addr*

/axapi/v3/interface/lif/{ifname}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

ospf-ip-list

ospf-ip-list is **JSON List** of *ospf-ip attributes*

ospf-ip-list : [

{ *ospf-ip attributes* },

{ *ospf-ip attributes* },

...

]

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

2.47.37 interface lif ip rip

RIP

rip Specification

Type	*Configuration Resource*
Element Name	rip

```

rip attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

loopback-list

loopback-list is **JSON List** of *loopback attributes*

loopback-list : [

{ *loopback attributes* },

{ *loopback attributes* },

...

]

loopback attributes

ifnum

Description Loopback interface number

Type: number

Format: interface

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/isis*

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

snmp-server

Description: snmp-server is a **JSON Block**. Please see below for *snmp-server*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

snmp-server

Specification	
Type	*object*

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Specification	
Type	*object*

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6

Specification	
Type	*object*

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

operational data

	Counter	Size	Description
	ipv6_list		ipv6_list
	line_protocol	string	line_protocol
	ipv4-netmask	ipv4-netmask	IP subnet mask

2.47.48 interface loopback ip

Global IP configuration subcommands

ip Specification

Type	*Configuration Resource*
Element Name	ip
Element URI	/axapi/v3/interface/loopback/{ifnum}/ip
Element Attributes	ip_attributes
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
POST /axapi/v3/interface/loopback/1/ip
Payload:
{
    "ip": {
        "address-list": [
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
GET /axapi/v3/interface/loopback/1/ip
Reponse:
{
    "ip": {
        "address-list": [
            {
                "ipv4-address": "3.3.3.3",
                "ipv4-netmask": "255.255.0.0"
            }
        ],
        "uuid": "e74edc24-6083-11d9-9a56-001fa00680a0",
```

(continues on next page)

(continued from previous page)

```
        "a10-url": "/axapi/v3/interface/loopback/1/ip"
    }
}
```

Modify Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

Replace Object

PUT

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
PUT /axapi/v3/interface/loopback/1/ip
Payload:
{
    "ip": {
        "address-list": [
            {
                "ipv4-address": "3.3.3.4",
                "ipv4-netmask": "255.255.255.0"
            }
        ]
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/loopback/{ifnum}/ip

ip attributes

```
DELETE /axapi/v3/interface/loopback/1/ip
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ip attributes

address-list

Type: List

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ip/router/isis*

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.49 interface loopback ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/loopback/{ifnum}/ip/ospf

ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.51 interface loopback ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Type	*Collection*
Object Key(s)	*ip-addr*
Collection Name	*ospf-ip-list*
Collection URI	/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip
Element Name	ospf-ip
Element URI	/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}
Element Attributes	ospf-ip_attributes
Schema	`ospf-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip

ospf-ip attributes

Create List

POST

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip

ospf-ip attributes

Get Object

GET

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Get List

GET

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip

ospf-ip-list

Modify Object

POST

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

ospf-ip attributes

Replace List

PUT

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip

ospf-ip-list

Delete Object

DELETE

/axapi/v3/interface/loopback/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

ospf-ip-list

ospf-ip-list is **JSON List** of *ospf-ip attributes*

ospf-ip-list : [

{ *ospf-ip attributes* },

{ *ospf-ip attributes* },

...

]

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

2.47.52 interface loopback ip rip

RIP

rip Specification

Type	*Configuration Resource*
Element Name	rip

        "status": "OK"
    }
}
```

rip attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

2.47.53 interface loopback ip router

Router

router Specification

Type	*Intermediate Resource*
Element Name	router

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	
Type	*list*
Block object keys	

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

router

Specification	
Type	*object*

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/loopback/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.47.63 interface management

Management interface

management Specification

Type	*Configuration Resource*
Element Name	management
Element URI	/axapi/v3/interface/management
Element Attributes	management_attributes
Statistics Data URI	/axapi/v3/interface/management/stats
Operational Data URI	/axapi/v3/interface/management/oper
Schema	`management schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/management

management attributes

Get Object

GET

/axapi/v3/interface/management

management attributes

Modify Object

POST

/axapi/v3/interface/management

management attributes

Replace Object

PUT

/axapi/v3/interface/management

management attributes

management attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable Management Port; 'disable': Disable Management Port;

Type: string

Supported Values: enable, disable

broadcast-rate-limit

Description: broadcast-rate-limit is a **JSON Block**. Please see below for *broadcast-rate-limit*

Type: Object

duplexity

Description 'Full': Full; 'Half': Half; 'auto': Auto;

Type: string

Supported Values: Full, Half, auto

Default: auto

flow-control

Description Enable 802.3x flow control on full duplex port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Type: List

lldp

Description: lldp is a **JSON Block**. Please see below for *lldp*

Type: Object

Refernce Object: */axapi/v3/interface/management/lldp*

sampling-enable

Type: List

secondary-ip

Description: secondary-ip is a **JSON Block**. Please see below for *secondary-ip*

Type: Object

speed

Description '10': 10 Mbs/sec; '100': 100 Mbs/sec; '1000': 1 Gb/sec; 'auto': Auto Negotiate Speed; (Interface Speed)

Type: string

Supported Values: 10, 100, 1000, auto

Default: auto

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp

Specification	
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *lldp_tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *lldp_tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_tx-dot1-cfg

Specification	
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_notification-cfg

Specification	
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-tlvs-cfg

Specification	
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

broadcast-rate-limit

Specification	
Type	*object*

bcast-rate-limit-enable

Description Rate limit the l2 broadcast packet on mgmt port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate

Description packets per second. Default is 500. (packets per second. Please specify an even number. Default is 500)

Type: number

Range: 50-5000

Default: 500

ipv6

Specification	
Type	*list*
Block object keys	

address-type

Description 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: link-local

default-ipv6-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv6-address

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

secondary-ip

Specification	
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

secondary-ip

Description Global IP configuration subcommands

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets_input': Input packets; 'bytes_input': Input bytes; 'received_broadcasts': Received broadcasts; 'received_multicasts': Received multicasts; 'received_unicasts': Received unicasts; 'input_errors': Input errors; 'crc': CRC; 'frame': Frames; 'input_err_short': Runts; 'input_err_long': Giants; 'packets_output': Output packets; 'bytes_output': Output bytes; 'transmitted_broadcasts': Transmitted broadcasts; 'transmitted_multicasts': Transmitted multicasts; 'transmitted_unicasts': Transmitted unicasts; 'output_errors': Output errors; 'collisions': Collisions;

Type: string

Supported Values: all, packets_input, bytes_input, received_broadcasts, received_multicasts, received_unicasts, input_errors, crc, frame, input_err_short, input_err_long, packets_output, bytes_output, transmitted_broadcasts, transmitted_multicasts, transmitted_unicasts, output_errors, collisions

ip

Specification	
Type	*object*

control-apps-use-mgmt-port

Description Control applications use management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-gateway

Description Set default gateway (Default gateway address)

Type: string

Format: ipv4-address

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dhcp and ipv4-address are mutually exclusive

ipv4-address

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address and dhcp are mutually exclusive

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

stats data

	Counter	Size	Description
	transmit-ted_multicasts	8	Transmitted multicasts
	re-ceived_broadcasts	8	Received broadcasts

tx-dot1-cfg

Description: tx-dot1-cfg is a **JSON Block**. Please see below for *tx-dot1-cfg*

Type: Object

tx-tlvs-cfg

Description: tx-tlvs-cfg is a **JSON Block**. Please see below for *tx-tlvs-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tx-dot1-cfg

Specification	
Type	*object*

link-aggregation

Description Interface link aggregation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-dot1-tlvs

Description Interface lldp tx IEEE 802.1 Organizationally specific TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan

Description Interface vlan information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification-cfg

Specification	
Type	*object*

notif-enable

Description Interface lldp notification enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notification

Description Interface lldp notification configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs-cfg

Specification	
Type	*object*

exclude

Description Configure which TLVs excluded. All basic TLVs will be included by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

management-address

Description Interface lldp management address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-description

Description Interface lldp port description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-capabilities

Description Interface lldp system capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-description

Description Interface lldp system description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-name

Description Interface lldp system name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx-tlvs

Description Interface lldp tx TLVs configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cfg

Specification	
Type	*object*

rt-enable

Description Interface lldp enable/disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.47.65 interface trunk

Trunk interface

trunk Specification

Type	*Collection*

}
```

trunk-list

trunk-list is **JSON List** of *trunk attributes*

trunk-list : [

{ *trunk attributes* },

{ *trunk attributes* },

...

]

trunk attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ddos*

do-auto-recovery

Description (Only for LACP trunks) Attempt auto-recovery after ports-treshold is triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

ifnum

Description Trunk interface number

Type: number

Range: 1-4096

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/lw-4o6*

mac-learning

Description 'enable': Enable MAC learning; 'disable': Disable MAC learning; 'dmac-only': Enable destination MAC learning only;

Type: string

Supported Values: enable, disable, dmac-only

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/nptv6*

ports-threshold

Description Threshold for the minimum number of ports that need to be UP for the trunk to remain UP

Type: number

sampling-enable

Type: List

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *spanning-tree*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/spanning-tree*

sync-modify-disable

Description Disable SYNC bit modify for ports-threshold do-auto-recovery

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description Timer to re-check the threshold under certain conditions (Time in seconds (Default: 10))

Type: number

Range: 1-300

Default: 10

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-l2-info

Description Update and use received L2 information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-hw-hash

Description Enable HW based load balacing decision rule

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire

Description Mark trunk as a virtual wire interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vlan-learning

Description 'enable': Enable VLAN learning; 'disable': Disable VLAN learning;

Type: string

Supported Values: enable, disable

map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *ip_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_nat

Specification	
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': num_pkts; 'num_total_bytes': num_total_bytes; 'num_unicast_pkts': num_unicast_pkts; 'num_broadcast_pkts': num_broadcast_pkts; 'num_multicast_pkts': num_multicast_pkts; 'num_tx_pkts': num_tx_pkts; 'num_total_tx_bytes': num_total_tx_bytes; 'num_unicast_tx_pkts': num_unicast_tx_pkts; 'num_broadcast_tx_pkts': num_broadcast_tx_pkts; 'num_multicast_tx_pkts': num_multicast_tx_pkts; 'dropped_dis_rx_pkts': dropped_dis_rx_pkts; 'dropped_rx_pkts': dropped_rx_pkts; 'dropped_dis_tx_pkts': dropped_dis_tx_pkts; 'dropped_tx_pkts': dropped_tx_pkts;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, dropped_dis_rx_pkts, dropped_rx_pkts, dropped_dis_tx_pkts, dropped_tx_pkts

ipv6

Specification	
Type	*object*

access-list-cfg

Description: access-list-cfg is a **JSON Block**. Please see below for *ipv6_access-list-cfg*

Type: Object

address-list

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat

Description: nat is a **JSON Block**. Please see below for *ipv6_nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *ipv6_router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *ipv6_router-adver_vrid*

Type: Object

ipv6_router-adver_vrid

Specification	
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

ipv6_router-adver_mtu

Specification	
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_nat

Specification	
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

spanning-tree

Specification	
Type	*object*

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spanning-tree_instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

stats data

	Counter	Size	Description

```
DELETE /axapi/v3/interface/trunk/1/bfd
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 3-50

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.47.67 interface trunk ip

Global IP configuration subcommands

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-spoofing-port

Description This interface connects to spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf*

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

nat

Specification	
Type	*object*

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.68 interface trunk ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/ospf
Element Attributes	ospf_attributes
Schema	`ospf schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ip/ospf

ospf_attributes

```
GET /axapi/v3/interface/trunk/1/ip/ospf
Reponse:
{

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.69 interface trunk ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

Type	*Configuration Resource*
Element Name	ospf-global
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global
Element Attributes	ospf-global_attributes
Schema	`ospf-global schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-global

ospf-global attributes

```
POST /axapi/v3/interface/trunk/1/ip/ospf/ospf-global
Payload:
{
    "ospf-global": {
        "authentication-cfg": {

    }
}
```

ospf-global attributes

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.70 interface trunk ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Type	*Collection*
Object Key(s)	*ip-addr*
Collection Name	*ospf-ip-list*
Collection URI	/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip
Element Name	ospf-ip
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}
Element Attributes	ospf-ip_attributes
Schema	`ospf-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip

ospf-ip attributes

Create List

POST

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip

ospf-ip attributes

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Get List

GET

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip

ospf-ip-list

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

Replace List

PUT

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip

ospf-ip-list

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/ip/ospf/ospf-ip/{ip-addr}

ospf-ip attributes

ospf-ip-list

ospf-ip-list is **JSON List** of *ospf-ip attributes*

ospf-ip-list : [

{ *ospf-ip attributes* },

{ *ospf-ip attributes* },

...

]

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

2.47.71 interface trunk ip rip

RIP

rip Specification

Type	*Configuration Resource*
Element Name	rip
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/rip
Element Attributes	rip_attributes
Schema	`rip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip/rip

rip attributes

```
POST /axapi/v3/interface/trunk/1/ip/rip
Payload:
{
    "rip": {
        "authentication": {
            "str": {
                "string": "a"
            }
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ip/rip

rip attributes

```
GET /axapi/v3/interface/trunk/1/ip/rip
Reponse:

        "status": "OK"
    }
}
```

rip attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

2.47.72 interface trunk ip router

Router

router Specification

Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/router
Element Attributes	router_attributes
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ip/router

router_attributes

router attributes

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ip/router/isis*

isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.73 interface trunk ip router isis

IS-IS Routing for IP

isis Specification

Type	*Configuration Resource*
Element Name	isis
Element URI	/axapi/v3/interface/trunk/{ifnum}/ip/router/isis
Element Attributes	isis_attributes
Schema	`isis schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ip/router/isis

isis attributes

```
POST /axapi/v3/interface/trunk/1/ip/router/isis
Payload:

Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

stateful-firewall attributes

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.75 interface trunk ipv6

Global IPv6 configuration subcommands

ipv6 Specification

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

hop-limit

Description Set Router Advertisement Hop Limit (default: 255) (Max Router Advertisement Interval (seconds))

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Min Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Max Number of Router Solicitations to process per second)

Type: number

Range: 3-1350

Default: 200

mtu

Description: mtu is a **JSON Block**. Please see below for *router-adver_mtu*

Type: Object

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

vrid

Description: vrid is a **JSON Block**. Please see below for *router-adver_vrid*

Type: Object

router-adver_vrid

Specification	
Type	*object*

adver-vrid

Description Specify ha VRRP-A vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

router-adver_mtu

Specification	
Type	*object*

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/trunk/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat

Specification	
Type	*object*

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

access-list-cfg

Specification	
Type	*object*

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.47.76 interface trunk ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Type	*Configuration Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/trunk/{ifnum}/ipv6/ospf
Element Attributes	ospf_attributes
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/ipv6/ospf

ospf attributes

```
POST /axapi/v3/interface/trunk/1/ipv6/ospf
Payload:
{
    "ospf": {
        "network-list": [
            {
                "broadcast-type": "point-to-multipoint"
            }
        ]
    }
}
```

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/ipv6/ospf

ospf attributes

```
GET /axapi/v3/interface/trunk/1/ipv6/ospf
Reponse:
{
    "ospf": {
        "network-list": [
            {
                "broadcast-type": "point-to-multipoint",
                "p2mp-nbma": 0,
                "network-instance-id": 0
            }
        ],

DELETE /axapi/v3/interface/trunk/1/ipv6/ospf
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.47.84 interface trunk lw-4o6

Configure LW-4over6 interface

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.88 interface trunk spanning-tree

help Spanning tree port configuration

spanning-tree Specification

Type	*Configuration Resource*
Element Name	spanning-tree
Element URI	/axapi/v3/interface/trunk/{ifnum}/spanning-tree
Element Attributes	spanning-tree_attributes
Schema	`spanning-tree schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/trunk/{ifnum}/spanning-tree

spanning-tree attributes

Get Object

GET

/axapi/v3/interface/trunk/{ifnum}/spanning-tree

spanning-tree attributes

Modify Object

POST

/axapi/v3/interface/trunk/{ifnum}/spanning-tree

spanning-tree attributes

Replace Object

PUT

/axapi/v3/interface/trunk/{ifnum}/spanning-tree

spanning-tree attributes

Delete Object

DELETE

/axapi/v3/interface/trunk/{ifnum}/spanning-tree

spanning-tree attributes

spanning-tree attributes

admin-edge

Description Enable admin-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-edge

Description Enable auto-edge

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

instance-list

Type: List

path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list

Specification	
Type	*list*
Block object keys	

instance-start

Description Instance ID

Type: number

Range: 0-4094

mstp-path-cost

Description Path cost (Limit)

Type: number

Range: 1-200000

2.47.89 interface tunnel

Tunnel interface

tunnel Specification

Type	*Collection*
Object Key(s)	*ifnum*
Collection Name	*tunnel-list*
Collection URI	/axapi/v3/interface/tunnel
Element Name	tunnel
Element URI	/axapi/v3/interface/tunnel/{ifnum}
Element Attributes	tunnel_attributes
Statistics Data URI	/axapi/v3/interface/tunnel/{ifnum}/stats
Operational Data URI	/axapi/v3/interface/tunnel/{ifnum}/oper
Schema	`tunnel schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel

tunnel attributes

```
POST /axapi/v3/interface/tunnel/
Payload:
{
    "tunnel": {
        "ifnum": 1,
        "user-tag": "a",
        "mtu": 1000
    }
}
```

Create List

POST

/axapi/v3/interface/tunnel

tunnel attributes

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

```
GET /axapi/v3/interface/tunnel/1
Reponse:
```

(continues on next page)

(continued from previous page)

```
{
    "tunnel": {
        "ifnum": 1,
        "mtu": 1000,
        "action": "enable",
        "speed": 10,
        "load-interval": 300,
        "uuid": "db249674-60af-11d9-9a56-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/interface/tunnel/1"
    }
}
```

Get List

GET

/axapi/v3/interface/tunnel

tunnel-list

Modify Object

POST

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

Replace Object

PUT

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

```
PUT /axapi/v3/interface/tunnel/1
Payload:
{
    "tunnel": {
        "ifnum": 1,
        "user-tag": "abcd",
        "mtu": 1000
    }
}
```

Replace List

PUT

/axapi/v3/interface/tunnel

tunnel-list

Delete Object

DELETE

/axapi/v3/interface/tunnel/{ifnum}

tunnel attributes

```
DELETE /axapi/v3/interface/tunnel/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

tunnel-list

tunnel-list is **JSON List** of *tunnel attributes*

tunnel-list : [

{ *tunnel attributes* },

{ *tunnel attributes* },

...

]

tunnel attributes

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

ifnum

Description Tunnel interface number

Type: number

Range: 1-128

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6*

load-interval

Description Configure Load Interval (Seconds (5-300, Multiple of 5), default 300)

Type: number

Range: 5-300

Default: 300

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

speed

Description Speed in Gbit/Sec (Default 10 Gbps)

Type: number

Range: 1-200

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *ip_address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

ip_address

Specification	
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

ip_address_ip-cfg

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-rx-pkts': received packets; 'num-total-rx-bytes': received bytes; 'num-tx-pkts': sent packets; 'num-total-tx-bytes': sent bytes; 'num-rx-err-pkts': received error packets; 'num-tx-err-pkts': sent error packets; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec;

Type: string

Supported Values: all, num-rx-pkts, num-total-rx-bytes, num-tx-pkts, num-total-tx-bytes, num-rx-err-pkts, num-tx-err-pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd

ipv6

Specification	
Type	*object*

address-cfg

Type: List

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/ospf*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router

Specification	
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_address-cfg

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

stats data

	Counter	Size	Description
	num-tx-err-pkts	8	sent error packets
	rate_pkt_rcvd	8	Packet received rate packets/sec
	num-rx-err-pkts	8	received error packets
	num-total-rx-bytes	8	received bytes
	rate_byte_sent	8	Byte sent rate bits/sec
	rate_byte_rcvd	8	Byte received rate bits/sec
	rate_pkt_sent	8	Packet sent rate packets/sec
	num-tx-pkts	8	sent packets
	num-total-tx-bytes	8	sent bytes
	num-rx-pkts	8	received packets

operational data

	Counter	Size	Description
	config-speed	number	config-speed
	ipv6_list		ipv6_list
	ipv4-netmask	ipv4-netmask	IPv4 subnet mask
	ipv6-link-local	ipv6-address	ipv6-link-local
	link-type	string	link-type
	state	enum	Output contains one of the following values: - up, disabled, down
	ipv6-link-local-prefix	string	ipv6-link-local-prefix
	ipv4_addr_count	number	ipv4_addr_count
	mac	mac-address	mac
	ipv6-link-local-type	string	ipv6-link-local-type
	ipv6-link-local-scope	string	ipv6-link-local-scope
	ipv6_addr_count	number	ipv6_addr_count
	line-protocol	enum	Output contains one of the following values: - up, down

    }
}
```

ip attributes

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query-val

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

max-resp-time

Description Max Response Time (Default is 100)

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/rip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

address

Specification	
Type	*object*

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-cfg

Type: List

address_ip-cfg

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.91 interface tunnel ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf Specification

Type	*Intermediate Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ip/ospf

Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.92 interface tunnel ip ospf ospf-global

Global setting for Open Shortest Path First for IPv4 (OSPF)

ospf-global Specification

ospf-global attributes

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.93 interface tunnel ip ospf ospf-ip

IP address configuration for Open Shortest Path First for IPv4 (OSPF)

ospf-ip Specification

Type	*Collection*
Object Key(s)	*ip-addr*
Collection Name	*ospf-ip-list*
Collection URI	/axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip
Element Name	ospf-ip
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ip/ospf/ospf-ip/{ip-addr}
Element Attributes	ospf-ip_attributes
Schema	`ospf-ip schema`

ospf-ip-list : [

{ *ospf-ip attributes* },

{ *ospf-ip attributes* },

...

]

ospf-ip attributes

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

2.47.94 interface tunnel ip rip

RIP

rip Specification

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *authentication_str*

Type: Object

authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '2': RIP version 2;

Type: string

Supported Values: 2

router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-cfg

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

2.47.98 interface tunnel ipv6 router

Router

router Specification

Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ipv6/router
Element Attributes	router_attributes
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router

router_attributes

router attributes

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ripng*

Type: Object

Refernce Object: */axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng*

ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.47.99 interface tunnel ipv6 router ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

Type	*Configuration Resource*
Element Name	ospf
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf
Element Attributes	ospf_attributes
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

Get Object

GET

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

Modify Object

POST

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

Replace Object

PUT

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

Delete Object

DELETE

/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ospf

ospf attributes

ospf attributes

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

2.47.100 interface tunnel ipv6 router ripng

ripng

ripng Specification

Type	*Configuration Resource*
Element Name	ripng
Element URI	/axapi/v3/interface/tunnel/{ifnum}/ipv6/router/ripng
Element Attributes	ripng_attributes
Schema	`ripng schema`

Operations Allowed:

ripng attributes

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.101 interface ve

Virtual ethernet interface

ve Specification

Type	*Collection*
Object Key(s)	*ifnum*
Collection Name	*ve-list*
Collection URI	/axapi/v3/interface/ve
Element Name	ve
Element URI	/axapi/v3/interface/ve/{ifnum}
Element Attributes	ve_attributes
Statistics Data URI	/axapi/v3/interface/ve/{ifnum}/stats
Operational Data URI	/axapi/v3/interface/ve/{ifnum}/oper
Schema	`ve schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve

ve attributes

```
POST /axapi/v3/interface/ve/
Payload:
{
    "ve": {
        "ifnum": 2,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/interface/ve

ve attributes

Get Object

GET

/axapi/v3/interface/ve/{ifnum}

ve attributes

```
GET /axapi/v3/interface/ve/2
Reponse:
{
    "ve": {
        "ifnum": 2,
        "port-scan-detection": "disable",
        "ping-sweep-detection": "disable",
        "l3-vlan-fwd-disable": 0,
        "mtu": 1500,
        "trap-source": 0,
        "action": "enable",
        "uuid": "a9fa26e6-60b3-11d9-9a56-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/interface/ve/2"
    }
}
```

Get List

GET

/axapi/v3/interface/ve

ve-list

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}

ve attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}

ve attributes

```
PUT /axapi/v3/interface/ve/2
Payload:
{
    "ve": {
        "ifnum": 2,
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/interface/ve

ve-list

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}

ve attributes

```
DELETE /axapi/v3/interface/ve/2
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ve-list

ve-list is **JSON List** of *ve attributes*

ve-list : [

{ *ve attributes* },

{ *ve attributes* },

...

]

ve attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/bfd*

ddos

Description: ddos is a **JSON Block**. Please see below for *ddos*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ddos*

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

ifnum

Description Virtual ethernet interface number

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/isis*

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs for incoming packets on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6

Description: lw-4o6 is a **JSON Block**. Please see below for *lw-4o6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/lw-4o6*

map

Description: map is a **JSON Block**. Please see below for *map*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/map*

mtu

Description Interface mtu (Interface MTU, default 1 (min MTU is 1280 for IPv6))

Type: number

name

Description Name for the interface

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nptv6

Description: nptv6 is a **JSON Block**. Please see below for *nptv6*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/nptv6*

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

sampling-enable

Type: List

trap-source

Description The trap source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	
Type	*object*

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ip_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *ip_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *ip_router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ip_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ip_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ip_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

ip_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

ip_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *ip_rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *ip_rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *ip_rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ip_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

ip_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ip_rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *ip_rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *ip_rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *ip_rip_authentication_str*

Type: Object

ip_rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

ip_rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

ip_rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

ip_rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ip_ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ip_ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ip_ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ip_ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ip_ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip_ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ip_ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ip_ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip_ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ip_ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ip_ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

ddos

Specification	
Type	*object*

inside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description DDoS inside (trusted) or outside (untrusted) interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

bfd

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *bfd_authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num_pkts': Input packets; 'num_total_bytes': Input bytes; 'num_unicast_pkts': Received unicasts; 'num_broadcast_pkts': Received braodcasts; 'num_multicast_pkts': Received multicasts; 'num_tx_pkts': Transmitted packtes; 'num_total_tx_bytes': Transmitte bytes; 'num_unicast_tx_pkts': Trasnmitted unicasts; 'num_broadcast_tx_pkts': Transmitted broadcasts; 'num_multicast_tx_pkts': Transmitted multicasts; 'rate_pkt_sent': Packet sent rate packets/sec; 'rate_byte_sent': Byte sent rate bits/sec; 'rate_pkt_rcvd': Packet received rate packets/sec; 'rate_byte_rcvd': Byte received rate bits/sec; 'load_interval': Load Interval;

Type: string

Supported Values: all, num_pkts, num_total_bytes, num_unicast_pkts, num_broadcast_pkts, num_multicast_pkts, num_tx_pkts, num_total_tx_bytes, num_unicast_tx_pkts, num_broadcast_tx_pkts, num_multicast_tx_pkts, rate_pkt_sent, rate_byte_sent, rate_pkt_rcvd, rate_byte_rcvd, load_interval

ipv6

Specification	
Type	*object*

address-list

Type: List

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/ospf*

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *ipv6_router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *ipv6_router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *ipv6_stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6_address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

ipv6_rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *ipv6_rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

ipv6_stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *ipv6_router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *ipv6_router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ripng*

ipv6_router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ipv6_ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ipv6_ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ipv6_ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ipv6_ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ipv6_router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

map

Specification	
Type	*object*

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

nptv6_domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *isis_authentication*

Type: Object

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *isis_bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *isis_mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

isis_priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

isis_hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

isis_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

isis_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

isis_hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

isis_metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

isis_csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

icmpv6-rate-limit

Specification	
Type	*object*

lockup-period-v6

Description Lockup period (second)

Type: number

Range: 1-16383

lockup-v6

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

normal-v6

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

lw-4o6

Specification	
Type	*object*

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-rate-limit

Specification	
Type	*object*

lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

normal

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

stats data

	Counter	Size	Description
	num_tx_pkts	8	Transmitted packtes
	rate_byte_rcvd	8	Byte received rate bits/sec
	num_total_tx_bytes	8	Transmitte bytes
	rate_pkt_rcvd	8	Packet received rate packets/sec
	num_multicast_pkts	8	Received multicasts
	num_unicast_pkts	8	Received unicasts
	num_broadcast_tx_pkts	8	Transmitted broadcasts
	num_broadcast_pkts	8	Received braodcasts
	num_multicast_tx_pkts	8	Transmitted multicasts
	rate_byte_sent	8	Byte sent rate bits/sec
	num_unicast_tx_pkts	8	Trasnmitted unicasts
	num_total_bytes	8	Input bytes
	load_interval	8	Load Interval
	num_pkts	8	Input packets
	rate_pkt_sent	8	Packet sent rate packets/sec

operational data

	Counter	Size	Description
	ip_unnumbered_oper	number	ip_unnumbered_oper
	icmp6-rate-over-limit-drop	number	icmp6-rate-over-limit-drop
	ipv6-link-local-type	string	ipv6-link-local-type
	ip_unnumbered_peer_lla	ipv6-address	ip_unnumbered_peer_lla
	line_protocol	enum	Output contains one of the following values: - up, down
	ipv4-address	ipv4-address	IP address
	ipv4_list		ipv4_list
	user-trunk-id	number	user-trunk-id
	ipv4-netmask	ipv4-netmask	IP subnet mask
	state	enum	Output contains one of the following values: - up, disabled, down
	link_type	string	link_type
	ip_unnumbered_mac_learned	mac-address	ip_unnumbered_mac_learned
	ipv4_addr_count	number	ipv4_addr_count
	ipv6-link-local-scope	string	ipv6-link-local-scope
	icmp-rate-over-limit-drop	number	icmp-rate-over-limit-drop
	ipv6_list		ipv6_list
	ipv6-link-local	ipv6-address	ipv6-link-local
	mac	mac-address	mac
	icmp6-rate-limit-current	number	icmp6-rate-limit-current
	icmp-rate-limit-current	number	icmp-rate-limit-current
	igmp-query-sent	number	igmp-query-sent
	ipv6_addr_count	number	ipv6_addr_count
	ip_unnumbered_enabled	number	ip_unnumbered_enabled
	ipv6-link-local-prefix	string	ipv6-link-local-prefix

2.47.102 interface ve bfd

Configure BFD (Bidirectional Forwarding Detection)

bfd Specification

Type	*Configuration Resource*
Element Name	bfd
Element URI	/axapi/v3/interface/ve/{ifnum}/bfd
Element Attributes	bfd_attributes
Schema	`bfd schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
POST /axapi/v3/interface/ve/2/bfd
Payload:
{
    "bfd": {
        "authentication": {
            "method": "md5",
            "key-id": 0,
            "password": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
GET /axapi/v3/interface/ve/2/bfd
Reponse:
{

            "method": "meticulous-md5",
            "key-id": 1,
            "password": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/bfd

bfd attributes

```
DELETE /axapi/v3/interface/ve/2/bfd
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

bfd attributes

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

demand

Description Demand mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key-id

Description Key ID

Type: number

Range: 0-255

method

Description 'md5': Keyed MD5; 'meticulous-md5': Meticulous Keyed MD5; 'meticulous-sha1': Meticulous Keyed SHA1; 'sha1': Keyed SHA1; 'simple': Simple Password;

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

password

Description Key String

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

2.47.103 interface ve ip

Global IP configuration subcommands

ip Specification

    }
}
```

ip attributes

address-list

Type: List

allow-promiscuous-vip

Description Allow traffic to be associated with promiscuous VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client

Description Client facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dhcp

Description Use DHCP to configure IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

generate-membership-query

Description Enable Membership Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

helper-address-list

Type: List

inside

Description Configure interface as inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-resp-time

Description Maximum Response Time (Max Response Time (Default is 100))

Type: number

Range: 1-255

Default: 100

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf*

outside

Description Configure interface as outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-interval

Description 1 - 255 (Default is 125)

Type: number

Range: 1-255

Default: 125

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router*

server

Description Server facing interface for IPv4/v6 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-partition-redirect

Description Redirect SLB traffic across partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall*

syn-cookie

Description Enable SYN-cookie on the interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-list

Specification	
Type	*list*
Block object keys	

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

helper-address-list

Specification	
Type	*list*
Block object keys	

helper-address

Description Helper address for DHCP packets (IP address)

Type: string

Format: ipv4-address

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

authentication

Description: authentication is a **JSON Block**. Please see below for *rip_authentication*

Type: Object

receive-cfg

Description: receive-cfg is a **JSON Block**. Please see below for *rip_receive-cfg*

Type: Object

receive-packet

Description Enable receiving packet through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-cfg

Description: send-cfg is a **JSON Block**. Please see below for *rip_send-cfg*

Type: Object

send-packet

Description Enable sending packets through the specified interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_receive-cfg

Specification	
Type	*object*

receive

Description Advertisement reception

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-2

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

rip_authentication

Specification	
Type	*object*

key-chain

Description: key-chain is a **JSON Block**. Please see below for *rip_authentication_key-chain*

Type: Object

mode

Description: mode is a **JSON Block**. Please see below for *rip_authentication_mode*

Type: Object

str

Description: str is a **JSON Block**. Please see below for *rip_authentication_str*

Type: Object

rip_authentication_key-chain

Specification	
Type	*object*

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Format: string-rlx

rip_authentication_mode

Specification	
Type	*object*

mode

Description 'md5': Keyed message digest; 'text': Clear text authentication;

Type: string

Supported Values: md5, text

Default: text

rip_authentication_str

Specification	
Type	*object*

string

Description The RIP authentication string

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

rip_send-cfg

Specification	
Type	*object*

send

Description Advertisement transmission

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

version

Description '1': RIP version 1; '2': RIP version 2; '1-compatible': RIPv1-compatible; '1-2': RIP version 1 & 2;

Type: string

Supported Values: 1, 2, 1-compatible, 1-2

ospf

Specification	
Type	*object*

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf_ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf_ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf_ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf_ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf_ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf_ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf_ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf_ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

2.47.104 interface ve ip ospf

Open Shortest Path First for IPv4 (OSPF)

ospf attributes

ospf-global

Description: ospf-global is a **JSON Block**. Please see below for *ospf-global*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-global*

ospf-ip-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/ospf/ospf-ip/{ip-addr}*

ospf-ip-list

Specification	
Type	*list*
Block object keys	

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

ip-addr

Description Address of interface

Type: string

Format: ipv4-address

message-digest-cfg

Type: List

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-ip-list_message-digest-cfg

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global

Specification	
Type	*object*

authentication-cfg

Description: authentication-cfg is a **JSON Block**. Please see below for *ospf-global_authentication-cfg*

Type: Object

authentication-key

Description Authentication password (key) (The OSPF password (key))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd-cfg

Description: bfd-cfg is a **JSON Block**. Please see below for *ospf-global_bfd-cfg*

Type: Object

cost

Description Interface cost

Type: number

Range: 1-65535

database-filter-cfg

Description: database-filter-cfg is a **JSON Block**. Please see below for *ospf-global_database-filter-cfg*

Type: Object

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

disable

Description 'all': All functionality;

Type: string

Supported Values: all

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

message-digest-cfg

Type: List

mtu

Description OSPF interface MTU (MTU size)

Type: number

Range: 576-65535

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Description: network is a **JSON Block**. Please see below for *ospf-global_network*

Type: Object

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-global_network

Specification	
Type	*object*

broadcast

Description Specify OSPF broadcast multi-access network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: broadcastnon-broadcast, point-to-point and point-to-multipoint are mutually exclusive

non-broadcast

Description Specify OSPF NBMA network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: non-broadcastbroadcast, point-to-point and point-to-multipoint are mutually exclusive

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

point-to-multipoint

Description Specify OSPF point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-multipointbroadcast, non-broadcast and point-to-point are mutually exclusive

point-to-point

Description Specify OSPF point-to-point network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: point-to-pointbroadcast, non-broadcast and point-to-multipoint are mutually exclusive

ospf-global_authentication-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

value

Description 'message-digest': Use message-digest authentication; 'null': Use no authentication;

Type: string

Supported Values: message-digest, null

ospf-global_database-filter-cfg

Specification	
Type	*object*

database-filter

Description 'all': Filter all LSA;

Type: string

Supported Values: all

out

Description Outgoing LSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-global_message-digest-cfg

Specification	
Type	*list*
Block object keys	

md5

Description: md5 is a **JSON Block**. Please see below for *ospf-global_message-digest-cfg_md5*

Type: Object

message-digest-key

Description Message digest authentication password (key) (Key id)

Type: number

Range: 1-255

ospf-global_message-digest-cfg_md5

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

md5-value

Description The OSPF password (1-16)

Type: string

Format: password

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ip/router/isis*

isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.109 interface ve ip router isis

IS-IS Routing for IP

isis Specification

Type	*Configuration Resource*
Element Name	isis
Element URI	/axapi/v3/interface/ve/{ifnum}/ip/router/isis
Element Attributes	isis_attributes
Schema	`isis schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/ip/router/isis

isis attributes

```
POST /axapi/v3/interface/ve/2/ip/router/isis
Payload:
{
    "isis": {
        "tag": "a"
    }
}
```

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/ip/router/isis

isis attributes

```
GET /axapi/v3/interface/ve/2/ip/router/isis
Reponse:
{
    "isis": {
        "tag": "a",
        "uuid": "3bfeeba6-60b6-11d9-9a56-001fa00680a0",
        "a10-url": "/axapi/v3/interface/ve/2/ip/router/isis"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/ip/router/isis

isis attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/ip/router/isis

isis attributes

```
PUT /axapi/v3/interface/ve/2/ip/router/isis
Payload:
{
    "isis": {
        "tag": "abcd"
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/ip/router/isis

isis attributes

```
DELETE /axapi/v3/interface/ve/2/ip/router/isis
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

isis attributes

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

        "a10-url": "/axapi/v3/interface/ve/2/ip/stateful-firewall"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall

stateful-firewall attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall

stateful-firewall attributes

```
PUT /axapi/v3/interface/ve/2/ip/stateful-firewall
Payload:
{
    "stateful-firewall": {
        "inside": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/ip/stateful-firewall

stateful-firewall attributes

```
DELETE /axapi/v3/interface/ve/2/ip/stateful-firewall
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

stateful-firewall attributes

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-id

Description ACL id

Type: number

Range: 1-199

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.111 interface ve ipv6

```

ipv6 attributes

address-list

Type: List

inbound

Description ACL applied on incoming packets to this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inside

Description Configure interface as NAT inside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-enable

Description Enable IPv6 processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/ospf*

outside

Description Configure interface as NAT outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/rip*

router

Description: router is a **JSON Block**. Please see below for *router*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router*

router-adver

Description: router-adver is a **JSON Block**. Please see below for *router-adver*

Type: Object

stateful-firewall

Description: stateful-firewall is a **JSON Block**. Please see below for *stateful-firewall*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/stateful-firewall*

ttl-ignore

Description Ignore TTL decrement for a received packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply ACL rules to incoming packets on this interface (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

address-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'anycast': Configure an IPv6 anycast address; 'link-local': Configure an IPv6 link local address;

Type: string

Supported Values: anycast, link-local

ipv6-addr

Description Set the IPv6 address of an interface

Type: string

Format: ipv6-address-plen

rip

Specification	
Type	*object*

split-horizon-cfg

Description: split-horizon-cfg is a **JSON Block**. Please see below for *rip_split-horizon-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_split-horizon-cfg

Specification	
Type	*object*

state

Description 'poisoned': Perform split horizon with poisoned reverse; 'disable': Disable split horizon; 'enable': Perform split horizon without poisoned reverse;

Type: string

Supported Values: poisoned, disable, enable

Default: poisoned

stateful-firewall

Specification	
Type	*object*

access-list

Description Access-list for traffic from the outside

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

acl-name

Description Access-list Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

inside

Description Inside (private) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Outside (public) interface for stateful firewall

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *router_isis*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *router_ospf*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ospf*

ripng

Description: ripng is a **JSON Block**. Please see below for *router_ripng*

Type: Object

Refernce Object: */axapi/v3/interface/ve/{ifnum}/ipv6/router/ripng*

router_ripng

Specification	
Type	*object*

rip

Description RIP Routing for IPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf

Specification	
Type	*object*

area-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

router_ospf_area-list

Specification	
Type	*list*
Block object keys	

area-id-addr

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-id-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

instance-id

Description Set the interface instance ID

Type: number

Range: 0-255

Default: 0

tag

Description Set the OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router_isis

Specification	
Type	*object*

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

ospf_priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

ospf_mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

ospf_network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

ospf_neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf_dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

router-adver

Specification	
Type	*object*

action

Description 'enable': Enable Router Advertisements on this interface; 'disable': Disable Router Advertisements on this interface;

Type: string

Supported Values: enable, disable

Default: disable

adver-mtu

Description Set Router Advertisement MTU Option

Type: number

Mutual Exclusion: adver-mtu and adver-mtu-disable are mutually exclusive

adver-mtu-disable

Description Disable Router Advertisement MTU Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

Mutual Exclusion: adver-mtu-disable and adver-mtu are mutually exclusive

adver-vrid

Description Vrid

Type: number

Range: 1-31

Mutual Exclusion: adver-vrid and adver-vrid-default are mutually exclusive

adver-vrid-default

Description Default VRRP-A vrid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: adver-vrid-default and adver-vrid are mutually exclusive

default-lifetime

Description Set Router Advertisement Default Lifetime (default: 1800) (Default Lifetime (seconds))

Type: number

Range: 0-9000

Default: 1800

floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: string

Format: ipv6-address

hop-limit

Description Set Router Advertisement Hop Limit (default: 255)

Type: number

Range: 0-255

Default: 255

managed-config-action

Description 'enable': Enable the Managed Address Configuration flag; 'disable': Disable the Managed Address Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

max-interval

Description Set Router Advertisement Max Interval (default: 600) (Max Router Advertisement Interval (seconds))

Type: number

Range: 4-1800

Default: 600

min-interval

Description Set Router Advertisement Min Interval (default: 200) (Min Router Advertisement Interval (seconds))

Type: number

Range: 3-1350

Default: 200

other-config-action

Description 'enable': Enable the Other Stateful Configuration flag; 'disable': Disable the Other Stateful Configuration flag (default);

Type: string

Supported Values: enable, disable

Default: disable

prefix-list

Type: List

rate-limit

Description Rate Limit the processing of incoming Router Solicitations (Max Number of Router Solicitations to process per second)

Type: number

Range: 1-100000

Default: 100000

reachable-time

Description Set Router Advertisement Reachable ime (default: 0) (Reachable Time (milliseconds))

Type: number

Range: 0-3600000

Default: 0

retransmit-timer

Description Set Router Advertisement Retransmit Timer (default: 0)

Type: number

Range: 0-4294967295

Default: 0

use-floating-ip

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-floating-ip-default-vrid

Description Use a floating IP as the source address for Router advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-adver_prefix-list

Specification	
Type	*list*
Block object keys	

not-autonomous

Description Specify that the Prefix is not usable for autoconfiguration (default:autonomous)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

not-on-link

Description Specify that the Prefix is not On-Link (default: on-link)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

preferred-lifetime

Description Specify Prefix Preferred Lifetime (default:604800) (Prefix Advertised Preferred Lifetime (default: 604800))

Type: number

Range: 0-4294967295

Default: 604800

prefix

Description Set Router Advertisement On-Link Prefix (IPv6 On-Link Prefix)

Type: string

Format: ipv6-address-plen

valid-lifetime

Description Specify Valid Lifetime (default:2592000) (Prefix Advertised Valid Lifetime (default: 2592000))

Type: number

Range: 0-4294967295

Default: 2592000

2.47.112 interface ve ipv6 ospf

Open Shortest Path First for IPv6 (OSPFv3)

ospf Specification

ospf attributes

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cost-cfg

Type: List

dead-interval-cfg

Type: List

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello-interval-cfg

Type: List

mtu-ignore-cfg

Type: List

neighbor-cfg

Type: List

network-list

Type: List

priority-cfg

Type: List

retransmit-interval-cfg

Type: List

transmit-delay-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cost-cfg

Specification	
Type	*list*
Block object keys	

cost

Description Interface cost

Type: number

Range: 1-65535

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

hello-interval-cfg

Specification	
Type	*list*
Block object keys	

hello-interval

Description Time between HELLO packets (Seconds)

Type: number

Range: 1-65535

Default: 10

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

priority

Description Router priority

Type: number

Range: 0-255

Default: 1

mtu-ignore-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

mtu-ignore

Description Ignores the MTU in DBD packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-interval-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description Time between retransmitting lost link state advertisements (Seconds)

Type: number

Range: 1-65535

Default: 5

network-list

Specification	
Type	*list*
Block object keys	

broadcast-type

Description 'broadcast': Specify OSPF broadcast multi-access network; 'non-broadcast': Specify OSPF NBMA network; 'point-to-point': Specify OSPF point-to-point network; 'point-to-multipoint': Specify OSPF point-to-multipoint network;

Type: string

Supported Values: broadcast, non-broadcast, point-to-point, point-to-multipoint

network-instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

p2mp-nbma

Description Specify non-broadcast point-to-multipoint network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transmit-delay-cfg

Specification	
Type	*list*
Block object keys	

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

transmit-delay

Description Link state transmit delay (Seconds)

Type: number

Range: 1-65535

Default: 1

neighbor-cfg

Specification	
Type	*list*
Block object keys	

neig-inst

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

neighbor

Description OSPFv3 neighbor (Neighbor IPv6 address)

Type: string

Format: ipv6-address

Default: ::

neighbor-cost

Description OSPF cost for point-to-multipoint neighbor (metric)

Type: number

Range: 1-65535

neighbor-poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 0-4294967295

neighbor-priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

dead-interval-cfg

Specification	
Type	*list*
Block object keys	

dead-interval

Description Interval after which a neighbor is declared dead (Seconds)

Type: number

Range: 1-65535

Default: 40

instance-id

Description Specify the interface instance ID

Type: number

Range: 0-255

Default: 0

Description: bfd-cfg is a **JSON Block**. Please see below for *bfd-cfg*

Type: Object

circuit-type

Description 'level-1': Level-1 only adjacencies are formed; 'level-1-2': Level-1-2 adjacencies are formed; 'level-2-only': Level-2 only adjacencies are formed;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1-2

csnp-interval-list

Type: List

hello-interval-list

Type: List

hello-interval-minimal-list

Type: List

hello-multiplier-list

Type: List

lsp-interval

Description Set LSP transmission interval (LSP transmission interval (milliseconds))

Type: number

Range: 1-4294967295

Default: 33

mesh-group

Description: mesh-group is a **JSON Block**. Please see below for *mesh-group*

Type: Object

metric-list

Type: List

network

Description 'broadcast': Specify IS-IS broadcast multi-access network; 'point-to-point': Specify IS-IS point-to-point network;

Type: string

Supported Values: broadcast, point-to-point

padding

Description Add padding to IS-IS hello packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

password-list

Type: List

priority-list

Type: List

retransmit-interval

Description Set per-LSP retransmission interval (Interval between retransmissions of the same LSP (seconds))

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wide-metric-list

Type: List

priority-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify priority for level-1 routing; 'level-2': Specify priority for level-2 routing;

Type: string

Supported Values: level-1, level-2

priority

Description Set priority for Designated Router election (Priority value)

Type: number

Range: 0-127

Default: 64

hello-interval-minimal-list

Specification	
Type	*list*
Block object keys	

hello-interval-minimal

Description Set Hello holdtime 1 second, interval depends on multiplier

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

mesh-group

Specification	
Type	*object*

blocked

Description Block LSPs on this interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: blocked and value are mutually exclusive

value

Description Mesh group number

Type: number

Range: 1-4294967295

Mutual Exclusion: value and blocked are mutually exclusive

bfd-cfg

Specification	
Type	*object*

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify password for level-1 PDUs; 'level-2': Specify password for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

password

Description Configure the authentication password for interface

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Keyed message digest;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

wide-metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

wide-metric

Description Configure the wide metric for interface

Type: number

Range: 1-16777214

Default: 10

hello-interval-list

Specification	
Type	*list*
Block object keys	

hello-interval

Description Set Hello interval in seconds (Hello interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Specify hello-interval for level-1 IIHs; 'level-2': Specify hello-interval for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

hello-multiplier-list

Specification	
Type	*list*
Block object keys	

hello-multiplier

Description Set multiplier for Hello holding time (Hello multiplier value)

Type: number

Range: 2-100

Default: 3

level

Description 'level-1': Specify hello multiplier for level-1 IIHs; 'level-2': Specify hello multiplier for level-2 IIHs;

Type: string

Supported Values: level-1, level-2

metric-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Apply metric to level-1 links; 'level-2': Apply metric to level-2 links;

Type: string

Supported Values: level-1, level-2

metric

Description Configure the metric for interface (Default metric)

Type: number

Range: 1-63

Default: 10

csnp-interval-list

Specification	
Type	*list*
Block object keys	

csnp-interval

Description Set CSNP interval in seconds (CSNP interval value)

Type: number

Range: 1-65535

Default: 10

level

Description 'level-1': Speficy interval for level-1 CSNPs; 'level-2': Specify interval for level-2 CSNPs;

Type: string

Supported Values: level-1, level-2

2.47.120 interface ve lw-4o6

Configure LW-4over6 interface

lw-4o6 Specification

Type	*Configuration Resource*
Element Name	lw-4o6
Element URI	/axapi/v3/interface/ve/{ifnum}/lw-4o6
Element Attributes	lw-4o6_attributes
Schema	`lw-4o6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/lw-4o6

lw-4o6 attributes

```
POST /axapi/v3/interface/ve/2/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 1
    }
}
```

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/lw-4o6

lw-4o6 attributes

```
GET /axapi/v3/interface/ve/2/lw-4o6
Reponse:
{
    "lw-4o6": {
        "outside": 1,
        "inside": 0,
        "uuid": "881ffe54-60ba-11d9-9a56-001fa00680a0",
        "a10-url": "/axapi/v3/interface/ve/2/lw-4o6"
    }
}
```

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/lw-4o6

lw-4o6 attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/lw-4o6

lw-4o6 attributes

```
PUT /axapi/v3/interface/ve/2/lw-4o6
Payload:
{
    "lw-4o6": {
        "outside": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/lw-4o6

lw-4o6 attributes

```
DELETE /axapi/v3/interface/ve/2/lw-4o6
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

lw-4o6 attributes

inside

Description Configure LW-4over6 outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure LW-4over6 inside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.121 interface ve map

Configure MAP on this interface

map Specification

Type	*Configuration Resource*
Element Name	map
Element URI	/axapi/v3/interface/ve/{ifnum}/map
Element Attributes	map_attributes
Schema	`map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/map

map attributes

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/map

map attributes

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/map

map attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/map

map attributes

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/map

map attributes

map attributes

inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-inside

Description Configure MAP inside interface (connected to MAP domains)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map-t-outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outside

Description Configure MAP outside interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.122 interface ve nptv6

Configure NPTv6 on this interface

nptv6 Specification

Type	*Intermediate Resource*
Element Name	nptv6
Element URI	/axapi/v3/interface/ve/{ifnum}/nptv6
Element Attributes	nptv6_attributes
Schema	`nptv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/nptv6

nptv6_attributes

nptv6 attributes

domain-list

Type: List

Refernce Object: */axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}*

domain-list

Specification	
Type	*list*
Block object keys	

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.47.123 interface ve nptv6 domain

Apply NPTv6 translation domain on interface

domain Specification

Type	*Collection*
Object Key(s)	*domain-name, bind-type*
Collection Name	*domain-list*
Collection URI	/axapi/v3/interface/ve/{ifnum}/nptv6/domain
Element Name	domain
Element URI	/axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}
Element Attributes	domain_attributes
Schema	`domain schema`

Operations Allowed:

Create Object

POST

/axapi/v3/interface/ve/{ifnum}/nptv6/domain

domain attributes

Create List

POST

/axapi/v3/interface/ve/{ifnum}/nptv6/domain

domain attributes

Get Object

GET

/axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Get List

GET

/axapi/v3/interface/ve/{ifnum}/nptv6/domain

domain-list

Modify Object

POST

/axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Replace Object

PUT

/axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

Replace List

PUT

/axapi/v3/interface/ve/{ifnum}/nptv6/domain

domain-list

Delete Object

DELETE

/axapi/v3/interface/ve/{ifnum}/nptv6/domain/{domain-name}+{bind-type}

domain attributes

domain-list

domain-list is **JSON List** of *domain attributes*

domain-list : [

{ *domain attributes* },

{ *domain attributes* },

...

]

domain attributes

bind-type

Description 'inside': This interface is connected to NPTv6 inside networks; 'outside': This interface is connected to NPTv6 outside networks;

Type: string

Supported Values: inside, outside

domain-name

Description NPTv6 domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.48 ip

Objects:

2.48.1 ip

Global IP configuration subcommands

ip Specification

Type	*Intermediate Resource*
Element Name	ip
Element URI	/axapi/v3/ip
Element Attributes	ip_attributes
Schema	`ip schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ip

ip_attributes

ip attributes

access-list-list

Type: List

Refernce Object: */axapi/v3/ip/access-list/{name}*

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

Refernce Object: */axapi/v3/ip/address*

anomaly-drop

Description: anomaly-drop is a **JSON Block**. Please see below for *anomaly-drop*

Type: Object

Refernce Object: */axapi/v3/ip/anomaly-drop*

app-protocol-port

Description: app-protocol-port is a **JSON Block**. Please see below for *app-protocol-port*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port*

as-path-list

Type: List

Refernce Object: */axapi/v3/ip/as-path/{access-list}+{action}+{value}*

community-list

Description: community-list is a **JSON Block**. Please see below for *community-list*

Type: Object

Refernce Object: */axapi/v3/ip/community-list*

default-gateway

Description: default-gateway is a **JSON Block**. Please see below for *default-gateway*

Type: Object

Refernce Object: */axapi/v3/ip/default-gateway*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Refernce Object: */axapi/v3/ip/dns*

extcommunity-list

Description: extcommunity-list is a **JSON Block**. Please see below for *extcommunity-list*

Type: Object

Refernce Object: */axapi/v3/ip/extcommunity-list*

fib

Description: fib is a **JSON Block**. Please see below for *fib*

Type: Object

Refernce Object: */axapi/v3/ip/fib*

fib-summary

Description: fib-summary is a **JSON Block**. Please see below for *fib-summary*

Type: Object

Refernce Object: */axapi/v3/ip/fib-summary*

frag

Description: frag is a **JSON Block**. Please see below for *frag*

Type: Object

Refernce Object: */axapi/v3/ip/frag*

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

Refernce Object: */axapi/v3/ip/icmp*

map-list-list

Type: List

Refernce Object: */axapi/v3/ip/map-list/{name}*

mgmt-traffic-list

Type: List

Refernce Object: */axapi/v3/ip/mgmt-traffic/{traffic-type}*

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

Refernce Object: */axapi/v3/ip/nat*

nat-global

Description: nat-global is a **JSON Block**. Please see below for *nat-global*

Type: Object

Refernce Object: */axapi/v3/ip/nat-global*

prefix-list-list

Type: List

Refernce Object: */axapi/v3/ip/prefix-list/{name}*

reroute

Description: reroute is a **JSON Block**. Please see below for *reroute*

Type: Object

Refernce Object: */axapi/v3/ip/reroute*

rib

Description: rib is a **JSON Block**. Please see below for *rib*

Type: Object

Refernce Object: */axapi/v3/ip/rib*

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

Refernce Object: */axapi/v3/ip/route*

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

Refernce Object: */axapi/v3/ip/tcp*

unnumbered

Description: unnumbered is a **JSON Block**. Please see below for *unnumbered*

Type: Object

Refernce Object: */axapi/v3/ip/unnumbered*

fib-summary

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *tcp_syn-cookie*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_syn-cookie

Specification	
Type	*object*

sack-enable

Description Enable HW Syn-Cookie SACK support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description SYN cookie expire threshold (seconds (default is 4))

Type: number

Range: 1-100

Default: 4

mgmt-traffic-list

Specification	
Type	*list*
Block object keys	

source-interface

Description: source-interface is a **JSON Block**. Please see below for *mgmt-traffic-list_source-interface*

Type: Object

traffic-type

Description 'all': All; 'ftp': FTP; 'ntp': NTP; 'rcp': RCP; 'snmp': SNMP; 'ssh': SSH and SCP; 'syslog': SYSLOG; 'telnet': Telnet; 'tftp': TFTP; 'web': Web - HTTP and HTTPS;

Type: string

Supported Values: all, ftp, ntp, snmp-trap, ssh, syslog, telnet, tftp, web

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mgmt-traffic-list_source-interface

Specification	
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface number)

Type: number

Range: 1-128

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

app-protocol-port

Specification	
Type	*object*

monitor

Description: monitor is a **JSON Block**. Please see below for *app-protocol-port_monitor*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/monitor*

tcp

Description: tcp is a **JSON Block**. Please see below for *app-protocol-port_tcp*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *app-protocol-port_udp*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/udp*

app-protocol-port_udp

Specification	
Type	*object*

passthrough

Description: passthrough is a **JSON Block**. Please see below for *app-protocol-port_udp_passthrough*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/passthrough*

port

Description: port is a **JSON Block**. Please see below for *app-protocol-port_udp_port*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port*

app-protocol-port_udp_passthrough

Specification	
Type	*object*

disable

Description Disable global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enables global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-protocol-port_udp_port

Specification	
Type	*object*

add-list

Type: List

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}*

app-protocol-port_tcp_port_disable-list

Specification	
Type	*list*
Block object keys	

interface

Description: interface is a **JSON Block**. Please see below for *app-protocol-port_tcp_port_disable-list_interface*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/tcp/port/disable/{port}/interface*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-protocol-port_tcp_port_disable-list_interface

Specification	
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

app-protocol-port_tcp_port_disable-list_interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

app-protocol-port_tcp_port_disable-list_interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

rib

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_expanded-num-list

Specification	
Type	*list*
Block object keys	

ext-list-num

Description Extended Community list number (expanded)

Type: number

Range: 100-199

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_expanded-num-list_rules-list

Specification	
Type	*list*
Block object keys	

ext-list-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

ext-list-value

Description An ordered list as a regular-expression

Type: string

Format: string-rlx

extcommunity-list_expanded-list

Specification	
Type	*list*
Block object keys	

expanded

Description Add an expanded extcommunity-list entry (Extended Community list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_expanded-list_rules-list

Specification	
Type	*list*
Block object keys	

expanded-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

expanded-value

Description An ordered list as a regular-expression

Type: string

Format: string-rlx

extcommunity-list_standard-num-list

Specification	
Type	*list*
Block object keys	

rules-list

Type: List

std-list-num

Description Extended Community list number (standard)

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_standard-num-list_rules-list

Specification	
Type	*list*
Block object keys	

std-list-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

std-list-value

Description rt Route Target extended community in aa:nn or IPaddr:nn format OR soo Site-of-Origin extended community in aa:nn or IPaddr:nn

Type: string

Format: string-rlx

extcommunity-list_standard-list

Specification	
Type	*list*
Block object keys	

rules-list

Type: List

standard

Description Add a standard extcommunity-list entry (Extended Community list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity-list_standard-list_rules-list

Specification	
Type	*list*
Block object keys	

standard-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

standard-value

Description rt Route Target extended community in aa:nn or IPaddr:nn format OR soo Site-of-Origin extended community in aa:nn or IPaddr:nn

Type: string

Format: string-rlx

icmp

Specification	
Type	*object*

redirect

Description Disable outbound ICMP redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMP unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

anomaly-drop

Specification	
Type	*object*

bad-content

Description bad content threshold (threshold value)

Type: number

Range: 1-127

drop-all

Description drop all IP anomaly packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

frag

Description drop all fragmented packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-option

Description drop packets with IP options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

land-attack

Description drop IP packets with the same source and destination addresses

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-sequence

Description out of sequence packet threshold (threshold value)

Type: number

Range: 1-127

packet-deformity

Description: packet-deformity is a **JSON Block**. Please see below for *anomaly-drop_packet-deformity*

Type: Object

ping-of-death

Description drop oversize ICMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

security-attack

Description: security-attack is a **JSON Block**. Please see below for *anomaly-drop_security-attack*

Type: Object

tcp-no-flag

Description drop TCP packets with no flag

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-fin

Description drop TCP packets with both syn and fin flags set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-frag

Description drop fragmented TCP packets with syn flag set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zero-window

Description zero window size threshold (threshold value)

Type: number

Range: 1-127

anomaly-drop_security-attack

Specification	
Type	*object*

security-attack-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

security-attack-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

anomaly-drop_packet-deformity

Specification	
Type	*object*

packet-deformity-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-deformity-layer-4

Description drop packets with layer 4 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

anomaly-drop_sampling-enable

Specification	
Type	*list*

Specification	
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

global-start-ipv6-addr

Description Global Start IPv6 Address of this list

Type: string

Format: ipv6-address-plen

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-start-ipv6-addr

Description Local Start IPv6 Address of this list

Type: string

Format: ipv6-address-plen

name

Description Name for this Static List

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-acl-id

Description Access list ID

Type: number

Range: 1-199

v4-acl-name

Description Access list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-rip-rport

Description Include the IP and port of real server in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *nat_template_logging-list_log*

Type: Object

name

Description NAT logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

severity

Description: severity is a **JSON Block**. Please see below for *nat_template_logging-list_severity*

Maximum Length: 1 characters

nat_template_logging-list_severity

Specification	
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

nat_template_logging-list_log

Specification	
Type	*object*

port-mappings

Description 'creation': Log creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable

nat_template_logging-list_source-port

Specification	
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

nat_translation

Specification	
Type	*object*

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *nat_translation_icmp-timeout*

Type: Object

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-timeout-list

Type: List

Refernce Object: */axapi/v3/ip/nat/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_translation_service-timeout-list

Specification	
Type	*list*
Block object keys	

port

Description Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-type

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_translation_icmp-timeout

Specification	
Type	*object*

icmp-timeout

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

Default: fast

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

nat_icmp

Specification	
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat_inside_source*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source*

nat_inside_source

Specification	
Type	*object*

class-list

Description: class-list is a **JSON Block**. Please see below for *nat_inside_source_class-list*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source/class-list*

list

Description: list is a **JSON Block**. Please see below for *nat_inside_source_list*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source/list*

static-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/static/{src-address}+{nat-address}*

nat_inside_source_static-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable static mapping (default); 'disable': Disable static mapping;

Type: string

Supported Values: enable, disable

Default: enable

nat-address

Description NAT Address

Type: string

Format: ipv4-address

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

nat_inside_source_list

Specification	
Type	*object*

acl-id-list-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/list/acl-id-list/{acl-id}*

acl-name-list-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/list/acl-name-list/{name}*

nat_inside_source_list_acl-id-list-list

Specification	
Type	*list*
Block object keys	

acl-id

Description Acl id

Type: number

Range: 1-199

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

pool

Description Pool or Pool Group (Pool or Pool Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside_source_list_acl-name-list-list

Specification	
Type	*list*
Block object keys	

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

name

Description Apply an access list

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

pool

Description Pool or Pool Group (Pool or Pool Group Nam)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside_source_class-list

Specification	
Type	*object*

name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-list

Specification	
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

prefix-list-list

Specification	
Type	*list*
Block object keys	

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list_rules

Specification	
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "0.0.0.0/0 le 32"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-32

ipaddr

Description IP prefix, e.g., 35.0.0.0/8

Type: string

Format: ipv4-cidr

le

Description Maximum prefix length to be matched

Type: number

Range: 0-32

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

frag

Specification	
Type	*object*

buff

Description Max buff used for fragmentation (Buffer Value(10000-3000000))

Type: number

Range: 10000-3000000

cpu-threshold

Description: cpu-threshold is a **JSON Block**. Please see below for *frag_cpu-threshold*

Type: Object

max-packets-per-reassembly

Description Max number of fragmented packets allowed per reassembly(0 is unlimited) (default 0)

Type: number

Range: 2-16

max-reassembly-sessions

Description Max number of pending reassembly sessions allowed (default 100000)

Type: number

Range: 1-200000

sampling-enable

Type: List

timeout

Description Fragmentation timeout (in milliseconds 4 - 16000 (default is 1000))

Type: number

Range: 4-65535

Default: 60000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

frag_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory;

'fast-aging-set': Fragmentation Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

frag_cpu-threshold

Specification	
Type	*object*

high

Description When CPU usage reaches this value, it will stop processing fragments (default: 75%)

Type: number

Range: 0-100

Default: 75

low

Description When CPU usage remains under this value, it will resume processing fragments (default: 60%)

Type: number

Range: 0-100

Default: 60

dns

Specification	
Type	*object*

primary

Description: primary is a **JSON Block**. Please see below for *dns_primary*

Type: Object

Refernce Object: */axapi/v3/ip/dns/primary*

secondary

Description: secondary is a **JSON Block**. Please see below for *dns_secondary*

Type: Object

Refernce Object: */axapi/v3/ip/dns/secondary*

suffix

Description: suffix is a **JSON Block**. Please see below for *dns_suffix*

Type: Object

Refernce Object: */axapi/v3/ip/dns/suffix*

dns_suffix

Specification	
Type	*object*

domain-name

Description DNS suffix

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_primary

Specification	
Type	*object*

ip-v4-addr

Description DNS server address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-v4-addr and ip-v6-addr are mutually exclusive

ip-v6-addr

Description DNS server address

Type: string

Format: ipv6-address

Mutual Exclusion: ip-v6-addr and ip-v4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_secondary

Specification	
Type	*object*

ip-v4-addr

Description DNS server address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-v4-addr and ip-v6-addr are mutually exclusive

ip-v6-addr

Description DNS server address

Type: string

Format: ipv6-address

Mutual Exclusion: ip-v6-addr and ip-v4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list

Specification	
Type	*list*
Block object keys	

name

Description IP Access List Name. Does not support name as digits or start with digit.

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list_rules

Specification	
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ip and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipicmp, tcp, udp and service-obj-group are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ip and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ip and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

map-list-list

Specification	
Type	*list*
Block object keys	

file

Description Create/Edit a IP Map List stored as a file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mapping-list

Type: List

name

Description Specify name of the IP Map List

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map-list-list_mapping-list

Specification	
Type	*list*
Block object keys	

count

Description Number of addresses to be translated in this range

Type: number

Range: 1-16777216

global-start-ip

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-start-ip

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

address

Specification	
Type	*object*

ip-addr

Description IP address

Type: string

Format: ipv4-address

ip-mask

Description IP subnet mask

Type: string

Format: ipv4-netmask

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered

Specification	
Type	*object*

use-source-ip

Description: use-source-ip is a **JSON Block**. Please see below for *unnumbered_use-source-ip*

Type: Object

Refernce Object: */axapi/v3/ip/unnumbered/use-source-ip*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered_use-source-ip

Specification	
Type	*object*

update-source-ip

Description IP address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

as-path-list

Specification	
Type	*list*
Block object keys	

access-list

Description Specify an access list name (Regular expression access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description A regular-expression to match the BGP AS paths

Type: string

Format: string-rlx

route

Specification	
Type	*object*

rib-list

Type: List

Refernce Object: */axapi/v3/ip/route/rib/{ip-dest-addr}+{ip-mask}*

static

Description: static is a **JSON Block**. Please see below for *route_static*

Type: Object

Refernce Object: */axapi/v3/ip/route/static*

route_rib-list

Specification	
Type	*list*
Block object keys	

ip-dest-addr

Description Destination prefix

Type: string

Format: ipv4-address

ip-mask

Description Destination prefix mask

Type: string

Format: ipv4-netmask-brief

ip-nexthop-ipv4

Type: List

ip-nexthop-lif

Type: List

ip-nexthop-partition

Type: List

ip-nexthop-tunnel

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_rib-list_ip-nexthop-lif

Specification	
Type	*list*
Block object keys	

description-nexthop-lif

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lif

Description LIF Interface (Logical tunnel interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

route_rib-list_ip-nexthop-ipv4

Specification	
Type	*list*
Block object keys	

description-nexthop-ip

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-ip

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ip-next-hop

Description Forwarding router's address

Type: string

Format: ipv4-address

route_rib-list_ip-nexthop-tunnel

Specification	
Type	*list*
Block object keys	

description-nexthop-tunnel

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-tunnel

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ip-next-hop-tunnel

Description Forwarding router's address

Type: string

Format: ipv4-address

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

route_rib-list_ip-nexthop-partition

Specification	
Type	*list*
Block object keys	

description-nexthop-partition

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

description-partition-vrid

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition-name

Description Name of network partition

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

vrid-num-in-partition

Description Specify ha VRRP-A vrid

Type: number

Range: 0-31

route_static

Specification	
Type	*object*

bfd-list

Type: List

Refernce Object: */axapi/v3/ip/route/static/bfd/{local-ip}+{nexthop-ip}*

route_static_bfd-list

Specification	
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

local-ip

Description Local IP address

Type: string

Format: ipv4-address

nexthop-ip

Description Nexthop IP address

Type: string

Format: ipv4-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat-global

Specification	
Type	*object*

reset-idle-tcp-conn

Description Reset Idle TCP Connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute

Specification	
Type	*object*

suppress-protocols

Description: suppress-protocols is a **JSON Block**. Please see below for *reroute_suppress-protocols*

Type: Object

Refernce Object: */axapi/v3/ip/reroute/suppress-protocols*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute_suppress-protocols

Specification	
Type	*object*

connected

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp

Description EBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ibgp

Description IBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis

Description ISIS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description OSPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description RIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.48.2 ip access-list

Configure Access List

access-list Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*access-list-list*

DELETE

/axapi/v3/ip/access-list/{name}

access-list attributes

access-list-list

access-list-list is **JSON List** of *access-list attributes*

access-list-list : [

{ *access-list attributes* },

{ *access-list attributes* },

...

]

access-list attributes

name

Description IP Access List Name. Does not support name as digits or start with digit.

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ip and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipicmp, tcp, udp and service-obj-group are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ip and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ip and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

2.48.3 ip address

Transparent mode IP Address

address Specification

Type	*Configuration Resource*

    }
}
```

anomaly-drop attributes

bad-content

Description bad content threshold (threshold value)

Type: number

Range: 1-127

drop-all

Description drop all IP anomaly packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

frag

Description drop all fragmented packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-option

Description drop packets with IP options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

land-attack

Description drop IP packets with the same source and destination addresses

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out-of-sequence

Description out of sequence packet threshold (threshold value)

Type: number

Range: 1-127

packet-deformity

Description: packet-deformity is a **JSON Block**. Please see below for *packet-deformity*

Type: Object

ping-of-death

Description drop oversize ICMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

security-attack

Description: security-attack is a **JSON Block**. Please see below for *security-attack*

Type: Object

tcp-no-flag

Description drop TCP packets with no flag

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-fin

Description drop TCP packets with both syn and fin flags set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-syn-frag

Description drop fragmented TCP packets with syn flag set

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zero-window

Description zero window size threshold (threshold value)

Type: number

Range: 1-127

security-attack

Specification	
Type	*object*

security-attack-layer-3

Description drop packets with layer 3 anomaly

Type: boolean

Supported Values: true, false, 1, 0

Type	*object*

add-list

Type: List

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}*

disable-list

Type: List

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/disable/{port}*

udp_port_add-list

Specification	
Type	*list*
Block object keys	

app-name-list

Type: List

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}/app-name/{name}*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp_port_add-list_app-name-list

Specification	
Type	*list*
Block object keys	

interface

Description: interface is a **JSON Block**. Please see below for *udp_port_add-list_app-name-list_interface*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/add/{port}/app-name/{name}/interface*

name

Description Application Protocol Port Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp_port_add-list_app-name-list_interface

Specification	
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

udp_port_add-list_app-name-list_interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

udp_port_add-list_app-name-list_interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/disable/{port}/interface*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp_port_disable-list_interface

Specification	
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

udp_port_disable-list_interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

udp_port_disable-list_interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

monitor

Specification	
Type	*object*

disable

Description Enables global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enables global port processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

passthrough

Description: passthrough is a **JSON Block**. Please see below for *tcp_passthrough*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/tcp/passthrough*

Description: interface is a **JSON Block**. Please see below for *interface*

Type: Object

Refernce Object: */axapi/v3/ip/app-protocol-port/udp/port/disable/{port}/interface*

port

Description Port Number

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

interface

Specification	
Type	*object*

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

2.48.22 ip app-protocol-port udp port disable interface

Disable a port from an interface

interface Specification

Type	*Configuration Resource*
Element Name	interface
Element URI	/axapi/v3/ip/app-protocol-port/udp/port/disable/{port}/interface
Element Attributes	interface_attributes
Schema	`interface schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ip/app-protocol-port/udp/port/disable/{port}/interface

interface attributes

Get Object

GET

/axapi/v3/ip/app-protocol-port/udp/port/disable/{port}/interface

interface attributes

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

2.48.23 ip as-path

Configure an AS-path list for BGP

as-path Specification

Type	*Collection*
Object Key(s)	*access-list, action, value*
Collection Name	*as-path-list*
Collection URI	/axapi/v3/ip/as-path
Element Name	as-path
Element URI	/axapi/v3/ip/as-path/{access-list}+{action}+{value}
Element Attributes	as-path_attributes
Schema	`as-path schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ip/as-path

as-path attributes

```
POST /axapi/v3/ip/as-path/
Payload:
{
    "as-path": {
        "access-list": "a",
        "action": "deny",
        "value": "a"
    }
}
```

Create List

POST

/axapi/v3/ip/as-path

as-path attributes

Get Object

GET

/axapi/v3/ip/as-path/{access-list}+{action}+{value}

as-path attributes

```
GET /axapi/v3/ip/as-path/a+deny+a
Reponse:
{
    "as-path": {
```

(continues on next page)

(continued from previous page)

```
        "access-list": "a",

    "response": {
        "status": "OK"
    }
}
```

as-path-list

as-path-list is **JSON List** of *as-path attributes*

as-path-list : [

{ *as-path attributes* },

{ *as-path attributes* },

...

]

as-path attributes

access-list

Description Specify an access list name (Regular expression access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description A regular-expression to match the BGP AS paths

Type: string

Format: string-rlx

2.48.24 ip community-list

standard-num-list : [

{ *standard-num attributes* },

{ *standard-num attributes* },

...

]

standard-num attributes

rules-list

Type: List

std-list-num

Description Community list number (standard)

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules-list

Specification	
Type	*list*
Block object keys	

std-list-action

Description 'deny': Specify community to reject; 'permit': Specify community to accept;

Type: string

Supported Values: deny, permit

std-list-comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

2.48.29 ip default-gateway

Transparent mode gateway

default-gateway Specification

Type	*Configuration Resource*
Element Name	default-gateway

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

cpu-threshold

Specification	
Type	*object*

high

Description When CPU usage reaches this value, it will stop processing fragments (default: 75%)

Type: number

Range: 0-100

Default: 75

low

Description When CPU usage remains under this value, it will resume processing fragments (default: 60%)

Type: number

Range: 0-100

Default: 60

stats data

	Counter	Size	Description
	cpu-threshold-drop	8	High CPU Drop
	icmpv6-rcv	8	ICMPv6 Received
	tcp-rcv	8	TCP Received
	other-rcv	8	Other Received
	udp-dropped	8	UDP Dropped
	bad-ip-len	8	Bad IP Length
	first-l4-too-small	8	First L4 Fragment Too Small Drop
	no-session-memory	8	Out of Session Memory

continues on next page

Table 2.19 – continued from previous page

	Counter	Size	Description
	unaligned-len	8	Payload Length Unaligned
	icmp-dropped	8	ICMP Dropped
	udp-rcv	8	UDP Received
	exceeded-len	8	Payload Length Out of Bounds
	fragment-queue-success	8	Fragment Queue Success
	first-gtp-packet-too-small	8	First GTP Fragment Too Small Drop
	fragment-queue-failure	8	Fragment Queue Failure
	total-fragments-exceeded	8	Total Queued Fragments Exceeded
	tcp-dropped	8	TCP Dropped
	low-cpu-threshold	8	Low CPU Threshold Reached
	ipip-dropped	8	IP-in-IP Dropped
	total-sessions-exceeded	8	Total Sessions Exceeded Drop
	error-drop	8	Fragment Processing Drop
	overlap-error	8	Overlapping Fragment Dropped
	ipv6ip-rcv	8	IPv6-in-IP Received
	session-expired	8	Session Expired
	sctp-rcv	8	SCTP Received
	policy-drop	8	MTU Exceeded Policy Drop
	icmp-rcv	8	ICMP Received
	session-packets-exceeded	8	Session Max Packets Exceeded
	duplicate-first-frag	8	Duplicate First Fragment
	reassembly-success	8	Fragment Reassembly Success
	sctp-dropped	8	SCTP Dropped
	ipd-entry-drop	8	DDoS Protection Drop
	too-small	8	Fragment Too Small Drop
	ipv6ip-dropped	8	IPv6-in-IP Dropped
	session-inserted	8	Session Inserted
	max-len-exceeded	8	Fragment Max Data Length Exceeded

continues on next page

Table 2.19 – continued from previous page

	Counter	Size	Description
	max-packets-exceeded	8	Too Many Packets Per Reassembly Drop
	other-dropped	8	Other Dropped
	first-tcp-too-small	8	First TCP Fragment Too Small Drop
	high-cpu-threshold	8	High CPU Threshold Reached
	fast-aging-set	8	Fragmentation Fast Aging Set
	ipip-rcv	8	IP-in-IP Received
	icmpv6-dropped	8	ICMPv6 Dropped
	fast-aging-unset	8	Fragmentation Fast Aging Unset
	reassembly-failure	8	Fragment Reassembly Failure
	duplicate-last-frag	8	Duplicate Last Fragment

pptp

Description: pptp is a **JSON Block**. Please see below for *alg_pptp*

Type: Object

Refernce Object: */axapi/v3/ip/nat/alg/pptp*

alg_pptp

Specification	
Type	*object*

pptp

Description 'disable': Disable PPTP NAT ALG; 'enable': Enable PPTP NAT ALG;

Type: string

Supported Values: disable, enable

Default: disable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_pptp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'current-smp-sessions': current-smp-sessions; 'current-gre-sessions': current-gre-sessions; 'smp-session-creation-failure': smp-session-creation-failure; 'truncated-pns-message': truncated-pns-message; 'truncated-pac-message': truncated-pac-message; 'mismatched-pns-call-id': mismatched-pns-call-id; 'mismatched-pac-call-id': mismatched-pac-call-id; 'retransmitted-pns-message': retransmitted-pns-message; 'retransmitted-pac-message': retransmitted-pac-message; 'truncated-gre-packet': truncated-gre-packet; 'unknown-gre-version': unknown-gre-version; 'no-matching-gre-session': no-matching-gre-session;

Type: string

Supported Values: all, current-smp-sessions, current-gre-sessions, smp-session-creation-failure, truncated-pns-message, truncated-pac-message, mismatched-pns-call-id, mismatched-pac-call-id, retransmitted-pns-message, retransmitted-pac-message, truncated-gre-packet, unknown-gre-version, no-matching-gre-session

pool-group-list

Specification	
Type	*list*
Block object keys	

member-list

Type: List

Refernce Object: */axapi/v3/ip/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat-global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat-global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cross_cpu_helper_created': Cross CPU Helper Created; 'cross_cpu_helper_free': Cross CPU Helper Free; 'cross_cpu_sent': Cross CPU Helper Packets Sent; 'cross_cpu_rcv': Cross CPU Helper Packets Received; 'cross_cpu_helper_nat_pool_standby': Cross CPU Helper Standby; 'cross_cpu_helper_cpu_mismatch': Cross CPU Helper CPU Mismatch; 'cross_cpu_bad_l3': Cross CPU Unsupported L3; 'cross_cpu_bad_l4': Cross CPU Unsupported L4; 'cross_cpu_no_session': Cross CPU No Session Found; 'cross_cpu_helper_deleted': Cross CPU Helper Deleted; 'cross_cpu_helper_free_retry_lookup': Cross CPU Helper Free Retry Lookup; 'cross_cpu_helper_free_not_found': Cross CPU Helper Free Not Found;

Type: string

Supported Values: all, cross_cpu_helper_created, cross_cpu_helper_free, cross_cpu_sent, cross_cpu_rcv, cross_cpu_helper_nat_pool_standby, cross_cpu_helper_cpu_mismatch, cross_cpu_bad_l3, cross_cpu_bad_l4, cross_cpu_no_session, cross_cpu_helper_deleted, cross_cpu_helper_free_retry_lookup, cross_cpu_helper_free_not_found

template

Specification	
Type	*object*

logging-list

Type: List

Refernce Object: */axapi/v3/ip/nat/template/logging/{name}*

template_logging-list

Specification	
Type	*list*
Block object keys	

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-rip-rport

Description Include the IP and port of real server in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *template_logging-list_log*

Type: Object

name

Description NAT logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

severity

Description: severity is a **JSON Block**. Please see below for *template_logging-list_severity*

Type: Object

source-port

Description: source-port is a **JSON Block**. Please see below for *template_logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_severity

Specification	
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

template_logging-list_log

Specification	
Type	*object*

port-mappings

Description 'creation': Log creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable

template_logging-list_source-port

Specification	
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

translation

Specification	
Type	*object*

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *translation_icmp-timeout*

Type: Object

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-timeout-list

Type: List

Refernce Object: */axapi/v3/ip/nat/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_service-timeout-list

Specification	
Type	*list*
Block object keys	

port

Description Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-type

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

translation_icmp-timeout

Specification	
Type	*object*

icmp-timeout

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

Default: fast

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

icmp

Specification	
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source*

inside_source

Specification	
Type	*object*

class-list

Description: class-list is a **JSON Block**. Please see below for *inside_source_class-list*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source/class-list*

list

Description: list is a **JSON Block**. Please see below for *inside_source_list*

Type: Object

Refernce Object: */axapi/v3/ip/nat/inside/source/list*

static-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/static/{src-address}+{nat-address}*

inside_source_static-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable static mapping (default); 'disable': Disable static mapping;

Type: string

Supported Values: enable, disable

Default: enable

nat-address

Description NAT Address

Type: string

Format: ipv4-address

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

inside_source_list

Specification	
Type	*object*

acl-id-list-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/list/acl-id-list/{acl-id}*

acl-name-list-list

Type: List

Refernce Object: */axapi/v3/ip/nat/inside/source/list/acl-name-list/{name}*

inside_source_list_acl-id-list-list

Specification	
Type	*list*
Block object keys	

acl-id

Description Acl id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

pool

Description Pool or Pool Group (Pool or Pool Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_list_acl-name-list-list

Specification	
Type	*list*
Block object keys	

msl

Description Maximum Session Life Value

Type: number

Range: 1-1800

name

Description Apply an access list

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

pool

Description Pool or Pool Group (Pool or Pool Group Nam)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_class-list

Specification	
Type	*object*

name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-list

Specification	
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

pool-list

pool-list is **JSON List** of *pool attributes*

pool-list : [

{ *pool attributes* },

{ *pool attributes* },

...

]

pool attributes

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface

Type: number

Format: interface

gateway

Description Configure gateway IP

Type: string

Format: ipv4-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

Mutual Exclusion: start-address and use-if-ip are mutually exclusive

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip and start-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/vrrp-a/vrid*

translation attributes

icmp-timeout

Description: icmp-timeout is a **JSON Block**. Please see below for *icmp-timeout*

Type: Object

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-timeout-list

Type: List

Refernce Object: */axapi/v3/ip/nat/translation/service-timeout/{service-type}+{port}*

tcp-timeout

Description TCP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

udp-timeout

Description UDP protocol extended translations (Timeout in seconds (Interval of 60 seconds), default is 300 seconds (5 minutes))

Type: number

Range: 2-15000

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-timeout-list

Specification	
Type	*list*
Block object keys	

port

Description Port Number

Type: number

Range: 1-65535

service-type

Description 'tcp': TCP Protocol; 'udp': UDP Protocol;

Type: string

Supported Values: tcp, udp

timeout-type

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp-timeout

Specification	
Type	*object*

icmp-timeout

Description 'age': Expiration time; 'fast': Use Fast aging;

Type: string

Supported Values: age, fast

Default: fast

icmp-timeout-val

Description Timeout in seconds (Interval of 60 seconds)

Type: number

Range: 2-15000

2.48.63 ip nat translation service-timeout

stats data

	Counter	Size	Description
	cpu-threshold-drop	8	High CPU Drop
	icmpv6-rcv	8	ICMPv6 Received
	tcp-rcv	8	TCP Received
	other-rcv	8	Other Received
	udp-dropped	8	UDP Dropped
	bad-ip-len	8	Bad IP Length
	first-l4-too-small	8	First L4 Fragment Too Small Drop
	no-session-memory	8	Out of Session Memory
	unaligned-len	8	Payload Length Unaligned
	icmp-dropped	8	ICMP Dropped
	udp-rcv	8	UDP Received
	exceeded-len	8	Payload Length Out of Bounds
	fragment-queue-success	8	Fragment Queue Success
	first-gtp-packet-too-small	8	First GTP Fragment Too Small Drop
	fragment-queue-failure	8	Fragment Queue Failure
	total-fragments-exceeded	8	Total Queued Fragments Exceeded
	tcp-dropped	8	TCP Dropped
	low-cpu-threshold	8	Low CPU Threshold Reached
	ipip-dropped	8	IP-in-IP Dropped
	total-sessions-exceeded	8	Total Sessions Exceeded Drop
	error-drop	8	Fragment Processing Drop
	overlap-error	8	Overlapping Fragment Dropped
	ipv6ip-rcv	8	IPv6-in-IP Received
	session-expired	8	Session Expired
	sctp-rcv	8	SCTP Received
	policy-drop	8	MTU Exceeded Policy Drop
	icmp-rcv	8	ICMP Received
	session-packets-exceeded	8	Session Max Packets Exceeded

Table 2.20 – continued from previous page

	Counter	Size	Description
	duplicate-first-frag	8	Duplicate First Fragment
	reassembly-success	8	Fragment Reassembly Success
	sctp-dropped	8	SCTP Dropped
	ipd-entry-drop	8	DDoS Protection Drop
	too-small	8	Fragment Too Small Drop
	ipv6ip-dropped	8	IPv6-in-IP Dropped
	session-inserted	8	Session Inserted
	max-len-exceeded	8	Fragment Max Data Length Exceeded
	max-packets-exceeded	8	Too Many Packets Per Reassembly Drop
	other-dropped	8	Other Dropped
	first-tcp-too-small	8	First TCP Fragment Too Small Drop
	high-cpu-threshold	8	High CPU Threshold Reached
	fast-aging-set	8	Fragmentation Fast Aging Set
	ipip-rcv	8	IP-in-IP Received
	icmpv6-dropped	8	ICMPv6 Dropped
	fast-aging-unset	8	Fragmentation Fast Aging Unset
	reassembly-failure	8	Fragment Reassembly Failure
	duplicate-last-frag	8	Duplicate Last Fragment

2.51 ipv6

Objects:

2.51.1 ipv6

Global IP configuration subcommands

ipv6 Specification

Type	*Intermediate Resource*
Element Name	ipv6
Element URI	/axapi/v3/ipv6
Element Attributes	ipv6_attributes
Schema	`ipv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ipv6

ipv6_attributes

ipv6 attributes

access-list-list

Type: List

Refernce Object: */axapi/v3/ipv6/access-list/{name}*

address

Description: address is a **JSON Block**. Please see below for *address*

Type: Object

Refernce Object: */axapi/v3/ipv6/address*

default-gateway

Description: default-gateway is a **JSON Block**. Please see below for *default-gateway*

Type: Object

Refernce Object: */axapi/v3/ipv6/default-gateway*

fib

Description: fib is a **JSON Block**. Please see below for *fib*

Type: Object

Refernce Object: */axapi/v3/ipv6/fib*

fib-summary

Description: fib-summary is a **JSON Block**. Please see below for *fib-summary*

Type: Object

Refernce Object: */axapi/v3/ipv6/fib-summary*

frag

Description: frag is a **JSON Block**. Please see below for *frag*

Type: Object

Refernce Object: */axapi/v3/ipv6/frag*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *icmpv6*

Type: Object

Refernce Object: */axapi/v3/ipv6/icmpv6*

nat

Description: nat is a **JSON Block**. Please see below for *nat*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat*

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Refernce Object: */axapi/v3/ipv6/neighbor*

ospf

Description: ospf is a **JSON Block**. Please see below for *ospf*

Type: Object

Refernce Object: */axapi/v3/ipv6/ospf*

prefix-list-list

Type: List

Refernce Object: */axapi/v3/ipv6/prefix-list/{name}*

reroute

Description: reroute is a **JSON Block**. Please see below for *reroute*

Type: Object

Refernce Object: */axapi/v3/ipv6/reroute*

rib

Description: rib is a **JSON Block**. Please see below for *rib*

Type: Object

Refernce Object: */axapi/v3/ipv6/rib*

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

Refernce Object: */axapi/v3/ipv6/route*

unnumbered

Description: unnumbered is a **JSON Block**. Please see below for *unnumbered*

Type: Object

Refernce Object: */axapi/v3/ipv6/unnumbered*

frag

Specification	
Type	*object*

frag-timeout

Description in milliseconds 4 - 16000 (default is 1000)

Type: number

Range: 4-65535

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

frag_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-inserted': Session Inserted; 'session-expired': Session Expired; 'icmp-rcv': ICMP Received; 'icmpv6-rcv': ICMPv6 Received; 'udp-rcv': UDP Received; 'tcp-rcv': TCP Received; 'ipip-rcv': IP-in-IP Received; 'ipv6ip-rcv': IPv6-in-IP Received; 'other-rcv': Other Received; 'icmp-dropped': ICMP Dropped; 'icmpv6-dropped': ICMPv6 Dropped; 'udp-dropped': UDP Dropped; 'tcp-dropped': TCP Dropped; 'ipip-dropped': IP-in-IP Dropped; 'ipv6ip-dropped': IPv6-in-IP Dropped; 'other-dropped': Other Dropped; 'overlap-error': Overlapping Fragment Dropped; 'bad-ip-len': Bad IP Length; 'too-small': Fragment Too Small Drop; 'first-tcp-too-small': First TCP Fragment Too Small Drop; 'first-l4-too-small': First L4 Fragment Too Small Drop; 'total-sessions-exceeded': Total Sessions Exceeded Drop; 'no-session-memory': Out of Session Memory; 'fast-aging-set': Fragmentation Fast Aging Set; 'fast-aging-unset': Fragmentation Fast Aging Unset; 'fragment-queue-success': Fragment Queue Success; 'unaligned-len': Payload Length Unaligned; 'exceeded-len': Payload Length Out of Bounds; 'duplicate-first-frag': Duplicate First Fragment; 'duplicate-last-frag': Duplicate Last Fragment; 'total-fragments-exceeded': Total Queued Fragments Exceeded; 'fragment-queue-failure': Fragment Queue

Failure; 'reassembly-success': Fragment Reassembly Success; 'max-len-exceeded': Fragment Max Data Length Exceeded; 'reassembly-failure': Fragment Reassembly Failure; 'policy-drop': MTU Exceeded Policy Drop; 'error-drop': Fragment Processing Drop; 'max-packets-exceeded': Too Many Packets Per Reassembly Drop; 'session-packets-exceeded': Session Max Packets Exceeded; 'frag-session-count': Fragmentation Session Count; 'high-cpu-threshold': High CPU Threshold Reached; 'low-cpu-threshold': Low CPU Threshold Reached; 'cpu-threshold-drop': High CPU Drop; 'ipd-entry-drop': DDoS Protection Drop; 'sctp-rcv': SCTP Received; 'sctp-dropped': SCTP Dropped;

Type: string

Supported Values: all, session-inserted, session-expired, icmp-rcv, icmpv6-rcv, udp-rcv, tcp-rcv, ipip-rcv, ipv6ip-rcv, other-rcv, icmp-dropped, icmpv6-dropped, udp-dropped, tcp-dropped, ipip-dropped, ipv6ip-dropped, other-dropped, overlap-error, bad-ip-len, too-small, first-tcp-too-small, first-l4-too-small, total-sessions-exceeded, no-session-memory, fast-aging-set, fast-aging-unset, fragment-queue-success, unaligned-len, exceeded-len, duplicate-first-frag, duplicate-last-frag, total-fragments-exceeded, fragment-queue-failure, reassembly-success, max-len-exceeded, reassembly-failure, policy-drop, error-drop, high-cpu-threshold, low-cpu-threshold, cpu-threshold-drop, ipd-entry-drop, max-packets-exceeded, session-packets-exceeded, frag-session-count, sctp-rcv, sctp-dropped, first-gtp-packet-too-small

nat

Specification	
Type	*object*

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *nat_icmpv6*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *nat_inside*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/inside*

pool-group-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool/{pool-name}*

nat_icmpv6

Specification	
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-group-list

Specification	
Type	*list*
Block object keys	

member-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat_inside_source*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/inside/source*

nat_inside_source

Specification	
Type	*object*

list-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/inside/source/list/{list-name}*

nat_inside_source_list-list

Specification	
Type	*list*
Block object keys	

list-name

Description IPv6 access-list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

pool

Description IPv6 NAT Pool (Pool Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_pool-list

Specification	
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv6-address

gateway

Description Configure gateway IP

Type: string

Format: ipv6-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: number

Range: 64-128

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Port-Usage': Port-Usage; 'Total-Used': Total-Used; 'Total-Freed': Total-Freed; 'Failed': Failed;

Type: string

Supported Values: all, Port-Usage, Total-Used, Total-Freed, Failed

fib-summary

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

display-route-single-line

Description Print an entry in single line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route

Specification	
Type	*object*

rib-list

Type: List

Refernce Object: */axapi/v3/ipv6/route/rib/{ipv6-address}*

static

Description: static is a **JSON Block**. Please see below for *route_static*

Type: Object

Refernce Object: */axapi/v3/ipv6/route/static*

route_rib-list

Specification	
Type	*list*
Block object keys	

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

ipv6-nexthop-ipv6

Type: List

ipv6-nexthop-tunnel

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_rib-list_ipv6-nexthop-tunnel

Specification	
Type	*list*
Block object keys	

description

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance-nexthop-tunnel

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ipv6-nexthop-tunnel-addr

Description Forwarding router's address

Type: string

Format: ipv6-address

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Range: 1-128

route_rib-list_ipv6-nexthop-ipv6

Specification	
Type	*list*
Block object keys	

description

Description Description for static route

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

distance

Description Distance value for this route

Type: number

Range: 1-255

Default: 1

ethernet

Description Ethernet interface (Ethernet interface number)

Type: number

Format: interface

ipv6-nexthop

Description Forwarding router's address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ve

Description Virtual Ethernet interface (Virtual Ethernet interface number)

Type: number

Format: interface

route_static

Specification	
Type	*object*

bfd

Description: bfd is a **JSON Block**. Please see below for *route_static_bfd*

Type: Object

Refernce Object: */axapi/v3/ipv6/route/static/bfd*

route_static_bfd

Specification	
Type	*object*

bfd-ipv6-list

Type: List

Refernce Object: */axapi/v3/ipv6/route/static/bfd/bfd-ipv6/{local-ipv6}+{nexthop-ipv6}*

ethernet-list

Type: List

Refernce Object: */axapi/v3/ipv6/route/static/bfd/ethernet/{eth-num}+{nexthop-ipv6-ll}*

trunk-list

Type: List

Refernce Object: */axapi/v3/ipv6/route/static/bfd/trunk/{trunk-num}+{nexthop-ipv6-ll}*

ve-list

Type: List

Refernce Object: */axapi/v3/ipv6/route/static/bfd/ve/{ve-num}+{nexthop-ipv6-ll}*

route_static_bfd_bfd-ipv6-list

Specification	
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

local-ipv6

Description Local IPv6 address

Type: string

Format: ipv6-address

nexthop-ipv6

Description Nexthop IPv6 address

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_ethernet-list

Specification	
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

eth-num

Description Ethernet (not a member of vlan or trunk)

Type: number

Range: 0-2147483647

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_trunk-list

Specification	
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

trunk-num

Description Trunk interface

Type: number

Range: 1-4096

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

route_static_bfd_ve-list

Specification	
Type	*list*
Block object keys	

action

Description 'down': BFD down; (BFD state)

Type: string

Supported Values: down

nexthop-ipv6-ll

Description Nexthop IPv6 address (Link-local)

Type: string

Format: ipv6-address

template

Description Configure tracking template (bind tracking template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

threshold

Description action triggering threshold

Type: number

Range: 1-255

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description Virtual ethernet interface

Type: number

Range: 2-4094

access-list-list

Specification	
Type	*list*
Block object keys	

name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-list-list_rules

Specification	
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: geo-locationicmp, tcp, udp, ipv6 and service-obj-group are mutually exclusive

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ipv6, service-obj-group and geo-location are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ipv6

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6icmp, tcp, udp, service-obj-group and geo-location are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp, ipv6 and geo-location are mutually exclusive

special-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 129, echo reply; 'echo-request': help Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded; 'dest-unreachable': Type 1, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, packet-too-big, param-prob, time-exceeded, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ipv6, service-obj-group and geo-location are mutually exclusive

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ipv6, service-obj-group and geo-location are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

fib

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6

Specification	
Type	*object*

redirect

Description Disable outbound ICMPv6 redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMPv6 unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

default-gateway

Specification	
Type	*object*

ipv6-default-gateway

Description Default gateway address

Type: string

Format: ipv6-address

Refernce Object: */axapi/v3/ipv6/address*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor

Specification	
Type	*object*

dynamic

Description: dynamic is a **JSON Block**. Please see below for *neighbor_dynamic*

Type: Object

Refernce Object: */axapi/v3/ipv6/neighbor/dynamic*

static-list

Type: List

Refernce Object: */axapi/v3/ipv6/neighbor/static/{ipv6-addr}+{vlan}*

neighbor_dynamic

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_static-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: ethernet trunk and tunnel are mutually exclusive

ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

mac

Description MAC Address

Type: string

Format: mac-address

trunk

Description Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: trunk ethernet and tunnel are mutually exclusive

tunnel

Description Tunnel interface

Type: number

Range: 1-128

Mutual Exclusion: tunnel ethernet and trunk are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN ID

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

address

Specification	
Type	*object*

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: anycast and link-local are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: link-local and anycast are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute

Specification	
Type	*object*

suppress-protocols

Description: suppress-protocols is a **JSON Block**. Please see below for *reroute_suppress-protocols*

Type: Object

Refernce Object: */axapi/v3/ipv6/reroute/suppress-protocols*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reroute_suppress-protocols

Specification	
Type	*object*

connected

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp

Description EBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ibgp

Description IBGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis

Description ISIS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf

Description OSPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rip

Description RIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list

Specification	
Type	*list*
Block object keys	

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

prefix-list-list_rules

Specification	
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "::0/0 le le 128"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-128

ipaddr

Description IPv6 prefix, e.g., 3ffe::/16

Type: string

Format: ipv6-address-plen

le

Description Maximum prefix length to be matched

Type: number

Range: 0-128

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

unnumbered

Specification	
Type	*object*

use-source-acl

Description Access List, Upon deny packet's source address will be NATed (ACL Name)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

use-source-ipv6

Description: use-source-ipv6 is a **JSON Block**. Please see below for *unnumbered_use-source-ipv6*

Type: Object

Refernce Object: */axapi/v3/ipv6/unnumbered/use-source-ipv6*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

unnumbered_use-source-ipv6

Specification	
Type	*object*

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rib

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.51.2 ipv6 access-list

Configure a IPv6 Access List

access-list Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*access-list-list*
Collection URI	/axapi/v3/ipv6/access-list
Element Name	access-list
Element URI	/axapi/v3/ipv6/access-list/{name}
Element Attributes	access-list_attributes
Schema	`access-list schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/access-list

access-list attributes

```
POST /axapi/v3/ipv6/access-list/
Payload:
{
    "access-list": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/ipv6/access-list

access-list attributes

Get Object

GET

/axapi/v3/ipv6/access-list/{name}

access-list attributes

```
GET /axapi/v3/ipv6/access-list/a
Reponse:
{
    "access-list": {
        "name": "a",
        "uuid": "5b9a512a-4dfb-11e9-8b76-000c2940c949",
        "user-tag": "a",
        "a10-url": "/axapi/v3/ipv6/access-list/a"
    }
}
```

Get List

GET

/axapi/v3/ipv6/access-list

access-list-list

Modify Object

POST

/axapi/v3/ipv6/access-list/{name}

access-list attributes

Replace Object

PUT

/axapi/v3/ipv6/access-list/{name}

access-list attributes

```
PUT /axapi/v3/ipv6/access-list/a
Payload:
{
    "access-list": {
        "name": "a",
        "user-tag": "abc"
    }
}
```

Replace List

PUT

/axapi/v3/ipv6/access-list

access-list-list

Delete Object

DELETE

/axapi/v3/ipv6/access-list/{name}

access-list attributes

```
DELETE /axapi/v3/ipv6/access-list/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

access-list-list

access-list-list is **JSON List** of *access-list attributes*

access-list-list : [

{ *access-list attributes* },

{ *access-list attributes* },

...

]

access-list attributes

name

Description Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

rules

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	
Type	*list*
Block object keys	

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description Specify geo-location name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: geo-locationicmp, tcp, udp, ipv6 and service-obj-group are mutually exclusive

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ipv6, service-obj-group and geo-location are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ipv6

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6icmp, tcp, udp, service-obj-group and geo-location are mutually exclusive

remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-num

Description Sequence Number

Type: number

Range: 1-8192

service-obj-group

Description Service object group (Source object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp, ipv6 and geo-location are mutually exclusive

special-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 129, echo reply; 'echo-request': help Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded; 'dest-unreachable': Type 1, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, packet-too-big, param-prob, time-exceeded, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv6-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-object-group

Description Network object group (Source network object group name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ipv6, service-obj-group and geo-location are mutually exclusive

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ipv6, service-obj-group and geo-location are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

2.51.3 ipv6 address

Transparent mode IPv6 Address

address Specification

Type	*Configuration Resource*
Element Name	address
Element URI	/axapi/v3/ipv6/address
Element Attributes	address_attributes
Schema	`address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/address

address attributes

```
POST /axapi/v3/ipv6/address
Payload:
{
    "address": {

```
DELETE /axapi/v3/ipv6/address
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

address attributes

anycast

Description Configure an IPv6 anycast address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: anycast and link-local are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address-plen

link-local

Description Configure an IPv6 link local address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: link-local and anycast are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.51.4 ipv6 default-gateway

Default gateway address

default-gateway Specification

Type	*Configuration Resource*
Element Name	default-gateway

	tcp-dropped	8	TCP Dropped
	low-cpu-threshold	8	Low CPU Threshold Reached
	ipip-dropped	8	IP-in-IP Dropped
	total-sessions-exceeded	8	Total Sessions Exceeded Drop
	error-drop	8	Fragment Processing Drop

continues on next page

Table 2.21 – continued from previous page

	Counter	Size	Description
	overlap-error	8	Overlapping Fragment Dropped
	ipv6ip-rcv	8	IPv6-in-IP Received
	session-expired	8	Session Expired
	sctp-rcv	8	SCTP Received
	policy-drop	8	MTU Exceeded Policy Drop
	icmp-rcv	8	ICMP Received
	session-packets-exceeded	8	Session Max Packets Exceeded
	duplicate-first-frag	8	Duplicate First Fragment
	reassembly-success	8	Fragment Reassembly Success
	sctp-dropped	8	SCTP Dropped
	ipd-entry-drop	8	DDoS Protection Drop
	too-small	8	Fragment Too Small Drop
	ipv6ip-dropped	8	IPv6-in-IP Dropped
	session-inserted	8	Session Inserted
	max-len-exceeded	8	Fragment Max Data Length Exceeded
	max-packets-exceeded	8	Too Many Packets Per Reassembly Drop
	other-dropped	8	Other Dropped
	first-tcp-too-small	8	First TCP Fragment Too Small Drop
	high-cpu-threshold	8	High CPU Threshold Reached
	fast-aging-set	8	Fragmentation Fast Aging Set
	ipip-rcv	8	IP-in-IP Received
	icmpv6-dropped	8	ICMPv6 Dropped
	fast-aging-unset	8	Fragmentation Fast Aging Unset
	reassembly-failure	8	Fragment Reassembly Failure
	duplicate-last-frag	8	Duplicate Last Fragment

2.51.6 ipv6 icmpv6

Global ICMPv6 commands

icmpv6 Specification

Type	*Configuration Resource*
Element Name	icmpv6
Element URI	/axapi/v3/ipv6/icmpv6
Element Attributes	icmpv6_attributes
Schema	`icmpv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
POST /axapi/v3/ipv6/icmpv6
Payload:
{
    "icmpv6": {
        "redirect": 1
    }
}
```

Get Object

GET

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
GET /axapi/v3/ipv6/icmpv6
Reponse:
{
    "icmpv6": {
        "redirect": 1,
        "unreachable": 0,
        "uuid": "e541386c-60c1-11d9-b64f-001fa00680a0",
        "a10-url": "/axapi/v3/ipv6/icmpv6"
    }
}
```

Modify Object

POST

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

Replace Object

PUT

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
PUT /axapi/v3/ipv6/icmpv6
Payload:
{
    "icmpv6": {
        "redirect": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/ipv6/icmpv6

icmpv6 attributes

```
DELETE /axapi/v3/ipv6/icmpv6
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

icmpv6 attributes

redirect

Description Disable outbound ICMPv6 redirect messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

unreachable

Description Disable outbound ICMPv6 unreachable messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.51.7 ipv6 nat

Configure IPv6 NAT

nat Specification

Type	*Intermediate Resource*
Element Name	nat
Element URI	/axapi/v3/ipv6/nat
Element Attributes	nat_attributes
Schema	`nat schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ipv6/nat

nat_attributes

nat attributes

icmpv6

Description: icmpv6 is a **JSON Block**. Please see below for *icmpv6*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/icmpv6*

inside

Description: inside is a **JSON Block**. Please see below for *inside*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/inside*

pool-group-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}*

pool-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool/{pool-name}*

icmpv6

Specification	
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-group-list

Specification	
Type	*list*
Block object keys	

member-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Refernce Object: */axapi/v3/ipv6/nat/inside/source*

inside_source

Specification	
Type	*object*

list-list

Type: List

Refernce Object: */axapi/v3/ipv6/nat/inside/source/list/{list-name}*

inside_source_list-list

Specification	
Type	*list*
Block object keys	

list-name

Description IPv6 access-list name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

pool

Description IPv6 NAT Pool (Pool Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/nat/pool-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pool-list

Specification	
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv6-address

gateway

Description Configure gateway IP

Type: string

Format: ipv6-address

ip-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netmask

Description Configure mask for pool

Type: number

Range: 64-128

pool-name

Description Specify pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-overload

Description Nat Pool Port overload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-device-id

Description Configure Scaleout device id to which this NAT pool is to be bound (Specify Scaleout device id)

Type: number

Range: 1-16

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'Port-Usage': Port-Usage; 'Total-Used': Total-Used; 'Total-Freed': Total-Freed; 'Failed': Failed;

Type: string

Supported Values: all, Port-Usage, Total-Used, Total-Freed, Failed

2.51.8 ipv6 nat icmpv6

ICMPv6 configuration for IPv6 NAT

icmpv6 Specification

Type	*Configuration Resource*

prefix-list-list is **JSON List** of *prefix-list attributes*

prefix-list-list : [

{ *prefix-list attributes* },

{ *prefix-list attributes* },

...

]

prefix-list attributes

name

Description Name of a prefix list

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rules

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules

Specification	
Type	*list*
Block object keys	

action

Description 'deny': Specify packets to reject; 'permit': Specify packets to forward;

Type: string

Supported Values: deny, permit

any

Description Any prefix match. Same as "::0/0 le le 128"

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Prefix-list specific description (Up to 80 characters describing this prefix-list)

Type: string

Maximum Length: 80 characters

Maximum Length: 1 characters

ge

Description Minimum prefix length to be matched

Type: number

Range: 0-128

ipaddr

Description IPv6 prefix, e.g., 3ffe::/16

Type: string

Format: ipv6-address-plen

le

Description Maximum prefix length to be matched

Type: number

Range: 0-128

seq

Description Sequence number of an entry

Type: number

Range: 1-4294967295

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv4-list_domain-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv6-list

Specification	
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *host_ipv6-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv6-addr

Description IPV6 address of ldap server

Type: string

Format: ipv6-address

ipv6-addr-cfg

Description: ipv6-addr-cfg is a **JSON Block**. Please see below for *host_ipv6-list_ipv6-addr-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv6-list_port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv6-list_port-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv6-list_ipv6-addr-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

host_ipv6-list_domain-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

2.54.2 ldap-server host

Specify the LDAP server's hostname or IP address

host Specification

Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/ldap-server/host
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/ldap-server/host

host_attributes

host attributes

ipv4-list

Type: List

Refernce Object: */axapi/v3/ldap-server/host/ipv4/{ipv4-addr}*

ipv6-list

Type: List

Refernce Object: */axapi/v3/ldap-server/host/ipv6/{ipv6-addr}*

ldap-hostname-list

Type: List

Refernce Object: */axapi/v3/ldap-server/host/ldap-hostname/{hostname}*

ldap-hostname-list

Specification	
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *ldap-hostname-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

hostname

Description Hostname of LDAP server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

hostname-cfg

Description: hostname-cfg is a **JSON Block**. Please see below for *ldap-hostname-list_hostname-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *ldap-hostname-list_port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ldap-hostname-list_hostname-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

ldap-hostname-list_port-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

ldap-hostname-list_domain-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

ipv4-list

Specification	
Type	*list*
Block object keys	

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *ipv4-list_domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv4-addr

Description IPV4 address of ldap server

Type: string

Format: ipv4-address

ipv4-addr-cfg

Description: ipv4-addr-cfg is a **JSON Block**. Please see below for *ipv4-list_ipv4-addr-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *ipv4-list_port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-list_ipv4-addr-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

ipv4-list_port-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

ipv4-list_domain-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

        "status": "OK"
    }
}
```

ldap-hostname-list

ldap-hostname-list is **JSON List** of *ldap-hostname attributes*

ldap-hostname-list : [

{ *ldap-hostname attributes* },

{ *ldap-hostname attributes* },

...

]

ldap-hostname attributes

base

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cn-value

Description LDAP common name identifier (i.e.: cn, uid)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

dn-value

Description LDAP distinguished name (dn)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

domain

Description Configure AD domain name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

domain-cfg

Description: domain-cfg is a **JSON Block**. Please see below for *domain-cfg*

Type: Object

group

Description Configure the group DN which user belongs to

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

hostname

Description Hostname of LDAP server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

hostname-cfg

Description: hostname-cfg is a **JSON Block**. Please see below for *hostname-cfg*

Type: Object

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *port-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hostname-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 3268 without ssl or 3269 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

port-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

domain-cfg

Specification	
Type	*object*

port

Description Specify the LDAP server's port (default 389 without ssl or 636 with ssl)

Type: number

Range: 1-65535

ssl

Description Use SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the LDAP server's timeout (default 3)

Type: number

Range: 1-60

2.55 license-manager

Objects:

2.55.1 license-manager

Configure license manager

license-manager Specification

Type	*Configuration Resource*
Element Name	license-manager
Element URI	/axapi/v3/license-manager
Element Attributes	license-manager_attributes
Schema	`license-manager schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager

license-manager attributes

Get Object

GET

/axapi/v3/license-manager

license-manager attributes

Modify Object

DELETE

/axapi/v3/license-manager

license-manager attributes

license-manager attributes

bandwidth-base

Description Configure feature bandwidth base (Mb)

Type: number

Range: 10-102400

bandwidth-unrestricted

Description Set the bandwidth to maximum

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description: connect is a **JSON Block**. Please see below for *connect*

Type: Object

Refernce Object: */axapi/v3/license-manager/connect*

host-list

Type: List

Refernce Object: */axapi/v3/license-manager/host/{host-ipv4}+{host-ipv6}*

instance-name

Description Configure instance name [format: (string).(string).(string).(string)]

Type: string

Maximum Length: 63 characters

Maximum Length: 7 characters

interval

Description Configure interval profile (1 monthly, 2 daily, 3 hourly)

Type: number

Range: 1-3

overage

Description: overage is a **JSON Block**. Please see below for *overage*

Type: Object

Refernce Object: */axapi/v3/license-manager/overage*

reminder-list

Type: List

Refernce Object: */axapi/v3/license-manager/reminder/{reminder-value}*

sn

Description serial number

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port to connect license server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

connect

Specification	
Type	*object*

connect

Description Connect to license manager to activate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reminder-list

Specification	
Type	*list*
Block object keys	

reminder-value

Description Configure reminder for grace time (Hour)

Type: number

Range: 1-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

overage

Specification	
Type	*object*

bytes

Description Number of bytes

Type: number

Range: 1-1023

days

Description Number of days

Type: number

Range: 0-365

gb

Description Number of GB

Type: number

Range: 1-65535

hours

Description Number of hours

Type: number

Range: 0-23

kb

Description Number of KB

Type: number

Range: 1-1023

mb

Description Number of MB

Type: number

Range: 1-1023

minutes

Description Number of minutes

Type: number

Range: 0-59

seconds

Description Number of seconds

Type: number

Range: 0-59

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host-list

Specification	
Type	*list*
Block object keys	

host-ipv4

Description license server ip address (length:1-31)

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

host-ipv6

Description Configure license manager server ipv6-address

Type: string

Format: ipv6-address

Maximum Length: 63 characters

Maximum Length: 1 characters

port

Description Configure the license manager port, default is 443

Type: number

Range: 1-65535

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.2 license-manager connect

Connect to license manager to activate

connect Specification

Type	*Configuration Resource*
Element Name	connect
Element URI	/axapi/v3/license-manager/connect
Element Attributes	connect_attributes
Schema	`connect schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager/connect

connect attributes

Get Object

GET

/axapi/v3/license-manager/connect

connect attributes

Modify Object

POST

/axapi/v3/license-manager/connect

connect attributes

Replace Object

PUT

/axapi/v3/license-manager/connect

connect attributes

Delete Object

DELETE

/axapi/v3/license-manager/connect

connect attributes

connect attributes

connect

Description Connect to license manager to activate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.3 license-manager host

Configure license manager host

host Specification

Type	*Collection*
Object Key(s)	*host-ipv4, host-ipv6*
Collection Name	*host-list*
Collection URI	/axapi/v3/license-manager/host
Element Name	host
Element URI	/axapi/v3/license-manager/host/{host-ipv4}+{host-ipv6}
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager/host

host attributes

Create List

POST

/axapi/v3/license-manager/host

host attributes

Get Object

GET

/axapi/v3/license-manager/host/{host-ipv4}+{host-ipv6}

Delete Object

DELETE

/axapi/v3/license-manager/host/{host-ipv4}+{host-ipv6}

host attributes

host-list

host-list is **JSON List** of *host attributes*

host-list : [

{ *host attributes* },

{ *host attributes* },

...

]

host attributes

host-ipv4

Description license server ip address (length:1-31)

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

host-ipv6

Description Configure license manager server ipv6-address

Type: string

Format: ipv6-address

Maximum Length: 63 characters

Maximum Length: 1 characters

port

Description Configure the license manager port, default is 443

Type: number

Range: 1-65535

Default: 443

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.4 license-manager overage

Set overage parameters

overage Specification

Type	*Configuration Resource*
Element Name	overage
Element URI	/axapi/v3/license-manager/overage
Element Attributes	overage_attributes
Schema	`overage schema`

Operations Allowed:

Create Object

POST

/axapi/v3/license-manager/overage

overage attributes

overage attributes

overage attributes

bytes

Description Number of bytes

Type: number

Range: 1-1023

days

Description Number of days

Type: number

Range: 0-365

gb

Description Number of GB

Type: number

Range: 1-65535

hours

Description Number of hours

Type: number

Range: 0-23

kb

Description Number of KB

Type: number

Range: 1-1023

mb

Description Number of MB

Type: number

Range: 1-1023

minutes

Description Number of minutes

Type: number

Range: 0-59

seconds

Description Number of seconds

Type: number

Range: 0-59

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.55.5 license-manager reminder

Set the reminder for grace time

reminder Specification

Type	*Collection*
Object Key(s)	*reminder-value*
Collection Name	*reminder-list*
Collection URI	/axapi/v3/license-manager/reminder
Element Name	reminder
Element URI	/axapi/v3/license-manager/reminder/{reminder-value}
Element Attributes	reminder_attributes
Schema	`reminder schema`

Operations Allowed:

test

Description: test is a **JSON Block**. Please see below for *test*

Type: Object

Refernce Object: */axapi/v3/locale/test*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description 'en_US.UTF-8': English locale for the USA, encoding with UTF-8 (default); 'zh_CN.UTF-8': Chinese locale for PRC, encoding with UTF-8; 'zh_CN.GB18030': Chinese locale for PRC, encoding with GB18030; 'zh_CN.GBK': Chinese locale for PRC, encoding with GBK; 'zh_CN.GB2312': Chinese locale for PRC, encoding with GB2312; 'zh_TW.UTF-8': Chinese locale for Taiwan, encoding with UTF-8; 'zh_TW.BIG5': Chinese locale for Taiwan, encoding with BIG5; 'zh_TW.EUCTW': Chinese locale for Taiwan, encoding with EUC-TW; 'ja_JP.UTF-8': Japanese locale for Japan, encoding with UTF-8; 'ja_JP.EUC-JP': Japanese locale for Japan, encoding with EUC-JP;

Type: string

Supported Values: en_US.UTF-8, zh_CN.UTF-8, zh_CN.GB18030, zh_CN.GBK, zh_CN.GB2312, zh_TW.UTF-8, zh_TW.BIG5, zh_TW.EUCTW, ja_JP.UTF-8, ja_JP.EUC-JP

Default: en_US.UTF-8

test

Specification	
Type	*object*

locale

Description 'zh_CN': Chinese locale for PRC; 'zh_TW': Chinese locale for Taiwan; 'ja_JP': Japanese locale for Japan;

Type: string

Supported Values: zh_CN, zh_TW, ja_JP

2.57 logging

Objects:

2.57.1 logging

System logging configuration

logging Specification

Type	*Intermediate Resource*
Element Name	logging
Element URI	/axapi/v3/logging
Element Attributes	logging_attributes
Schema	`logging schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging

logging_attributes

logging attributes

auditlog

Description: auditlog is a **JSON Block**. Please see below for *auditlog*

Type: Object

Refernce Object: */axapi/v3/logging/auditlog*

buffered

Description: buffered is a **JSON Block**. Please see below for *buffered*

Refernce Object: */axapi/v3/logging/lsn*

monitor

Description: monitor is a **JSON Block**. Please see below for *monitor*

Type: Object

Refernce Object: */axapi/v3/logging/monitor*

single-priority-list

Type: List

Refernce Object: */axapi/v3/logging/single-priority/{levelname}*

syslog

Description: syslog is a **JSON Block**. Please see below for *syslog*

Type: Object

Refernce Object: */axapi/v3/logging/syslog*

trap

Description: trap is a **JSON Block**. Please see below for *trap*

Type: Object

Refernce Object: */axapi/v3/logging/trap*

buffered

Specification	
Type	*object*

buffersize

Description Logging buffer size (in items), default 30000

Type: number

Range: 10000-50000

Default: 30000

levelname

Description 'disable': Do not send log to buffer; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: debugging

partition-buffersize

Description Logging buffer size (in items), default 3000

Type: number

Range: 1000-5000

Default: 3000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email-address

Specification	
Type	*object*

email-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email-address_email-list

Specification	
Type	*list*
Block object keys	

email-address

Description Email address information of recipients

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

console

Specification	
Type	*object*

console-levelname

Description 'disable': Do not send log to console; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: error

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor

Specification	
Type	*object*

monitor-levelname

Description 'disable': Do not send log to monitor; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

facility

Specification	
Type	*object*

facilityname

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn

Specification	
Type	*object*

log-suppression

Description: log-suppression is a **JSON Block**. Please see below for *lsn_log-suppression*

Type: Object

Refernce Object: */axapi/v3/logging/lsn/log-suppression*

quota-exceeded

Description: quota-exceeded is a **JSON Block**. Please see below for *lsn_quota-exceeded*

Type: Object

Refernce Object: */axapi/v3/logging/lsn/quota-exceeded*

lsn_quota-exceeded

Specification	
Type	*object*

custom1

Description Customized attribute No.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom2

Description Customized attribute No.2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom3

Description Customized attribute No.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom4

Description Customized attribute No.4

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom5

Description Customized attribute No.5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom6

Description Customized attribute No.6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-pool-based

Description Disable log LSN user quota exceeded based on LSN pool(Default: enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imei

Description International Mobile Equipment Identity (IMEI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imsi

Description International Mobile Subscriber Identity (IMSI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-based

Description Log LSN user quota exceeded based on private IP(Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn

Description Mobile Subscriber Integrated Services Digital Netwrok-Number (MSISDN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

with-radius-attribute

Description Log with radius attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn_log-suppression

Specification	
Type	*object*

count

Description Configure log suppression count (default: 100)

Type: number

Range: 50-500

Default: 100

time

Description Log generation timeout(default: 30 seconds)

Type: number

Range: 1-300

Default: 30

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-partition-name

Specification	
Type	*object*

disable-partition-name

Description Disable partition name in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log

Specification	
Type	*object*

access

Description: access is a **JSON Block**. Please see below for *local-log_access*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/access*

app-fw

Description: app-fw is a **JSON Block**. Please see below for *local-log_app-fw*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/app-fw*

authentication

Description: authentication is a **JSON Block**. Please see below for *local-log_authentication*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/authentication*

global

Description: global is a **JSON Block**. Please see below for *local-log_global*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/global*

local-log_access

Specification	
Type	*object*

log

Description: log is a **JSON Block**. Please see below for *local-log_access_log*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/access/log*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_access_top-n*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/access/top-n*

local-log_access_top-n

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_access_log

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_authentication

Specification	
Type	*object*

log

Description: log is a **JSON Block**. Please see below for *local-log_authentication_log*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/authentication/log*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_authentication_top-n*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/authentication/top-n*

local-log_authentication_top-n

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_authentication_log

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'enqueue': Total local-log enqueue; 'enqueue-full': Total local-log queue full; 'enqueue-error': Total local-log enqueue error; 'dequeue': Total local-log dequeue; 'dequeue-error': Total local-log dequeue processing error; 'raw-log': Total local-log raw logs; 'raw-log-error': Total raw log logging error; 'log-summarized': Total raw log summarized; 'l1-log-summarized': Total layer 1 log summarized; 'l2-log-summarized': Total layer 2 log summarized; 'log-summarized-error': Total local-log summarization error; 'aam-db': Total local-log AAM raw database; 'ep-db': Total local-log EP raw database; 'fw-db': Total local-log Firewall raw database; 'aam-top-user-db': Total local-log AAM top user summary database; 'ep-top-user-db': Total local-log EP top user summary database; 'ep-top-src-db': Total local-log EP top client summary database; 'ep-top-dst-db': Total local-log EP top destination summary database; 'ep-top-domain-db': Total local-log EP top domain summary database; 'ep-top-web-category-db': Total local-log EP top web-category summary database; 'ep-top-host-db': Total local-log EP top host summary database; 'fw-top-app-db': Total local-log Firewall top application summary database; 'fw-top-src-db': Total local-log Firewall top source summary database; 'fw-top-app-src-db': Total local-log Firewall top application and source summary database; 'fw-top-category-db': Total local-log Firewall top category summary database; 'db-erro': Total local-log database create error; 'query': Total local-log axapi query; 'response': Total local-log axapi response; 'query-error': Total local-log axapi query error; 'fw-top-thr-db': Total local-log Firewall top threat summary database; 'fw-top-thr-src-db': Total local-log Firewall top threat and source summary database;

Type: string

Supported Values: all, enqueue, enqueue-full, enqueue-error, dequeue, dequeue-error, raw-log, raw-log-error, log-summarized, l1-log-summarized, l2-log-summarized, log-summarized-error, aam-db, ep-db, fw-db, aam-top-user-db, ep-top-user-db, ep-top-src-db, ep-top-dst-db, ep-top-domain-db, ep-top-web-category-db, ep-top-host-db, fw-top-app-db, fw-top-src-db, fw-top-app-src-db, fw-top-category-db, db-erro, query, response, query-error, fw-top-thr-db, fw-top-thr-src-db

local-log_app-fw

Specification	
Type	*object*

dot-plot

Description: dot-plot is a **JSON Block**. Please see below for *local-log_app-fw_dot-plot*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/app-fw/dot-plot*

top-n

Description: top-n is a **JSON Block**. Please see below for *local-log_app-fw_top-n*

Type: Object

Refernce Object: */axapi/v3/logging/local-log/app-fw/top-n*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log_app-fw_top-n

Specification	
Type	*object*

uuid

Description uuid of the object

Maximum Length: 1 characters

email

Specification	
Type	*object*

buffer

Description: buffer is a **JSON Block**. Please see below for *email_buffer*

Type: Object

Refernce Object: */axapi/v3/logging/email/buffer*

filter-list

Type: List

Refernce Object: */axapi/v3/logging/email/filter/{filter-id}*

level

Description: level is a **JSON Block**. Please see below for *email_level*

Type: Object

Refernce Object: */axapi/v3/logging/email/level*

email_buffer

Specification	
Type	*object*

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email_filter-list

Specification	
Type	*list*
Block object keys	

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

email_level

Specification	
Type	*object*

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

syslog

Specification	
Type	*object*

syslog-levelname

Description 'disable': Do not send log to syslog; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

ipv4addr-list

Type: List

Refernce Object: */axapi/v3/logging/host/ipv4addr/{host-ipv4}*

ipv6addr-list

Type: List

Refernce Object: */axapi/v3/logging/host/ipv6addr/{host-ipv6}*

partition

Description: partition is a **JSON Block**. Please see below for *host_partition*

Type: Object

Refernce Object: */axapi/v3/logging/host/partition*

host_ipv6addr-list

Specification	
Type	*list*
Block object keys	

host-ipv6

Description Set syslog host ipv6 address

Type: string

Format: ipv6-address

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_partition

Specification	
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Refernce Object: */axapi/v3/partition*

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv4addr-list

Specification	
Type	*list*
Block object keys	

host-ipv4

Description Set syslog host ip address

Type: string

Format: host

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

export

Specification	
Type	*object*

all

Description System support messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description Remote url

Type: string

Format: url

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trap

Specification	
Type	*object*

trap-levelname

Description 'disable': Do not send trap to snmp host; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2);

Type: string

Supported Values: disable, emergency, alert, critical

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auditlog

Specification	
Type	*object*

audit-facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Configure the facility of auditlog)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

host4

Description Configure the auditlog host

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: host4shared, partition-name and host6 are mutually exclusive

host6

Description Configure the auditlog host

Type: string

Format: ipv6-address

Mutual Exclusion: host6shared, partition-name and host4 are mutually exclusive

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-nameshared, host6 and host4 are mutually exclusive

Refernce Object: */axapi/v3/partition*

port

Description Set remote audit log port number(Default 514)

Type: number

Range: 1-32767

Default: 514

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: sharedpartition-name, host6 and host4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

single-priority-list

Specification	
Type	*list*
Block object keys	

levelname

Description 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

configure

Specification	
Type	*object*

line-feed-in-udp-syslog

Description Add newline for syslog over UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.2 logging auditlog

Set send auditlog to syslog host

auditlog Specification

Type	*Configuration Resource*
Element Name	auditlog
Element URI	/axapi/v3/logging/auditlog
Element Attributes	auditlog_attributes
Schema	`auditlog schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/auditlog

auditlog attributes

```
POST /axapi/v3/logging/auditlog
Payload:
{
    "auditlog": {
        "audit-facility": "local0",
        "partition-name": "a",
        "port": 1
    }
}
```

Get Object

GET

/axapi/v3/logging/auditlog

auditlog attributes

```
GET /axapi/v3/logging/auditlog
Reponse:
{
    "auditlog": {
        "partition-name": "a",
        "audit-facility": "local0",
        "port": 1,
        "uuid": "f15ffbe2-60c6-11d9-9bdf-001fa00680a0",
        "a10-url": "/axapi/v3/logging/auditlog"
    }
}
```

Modify Object

POST

/axapi/v3/logging/auditlog

auditlog attributes

Replace Object

PUT

/axapi/v3/logging/auditlog

auditlog attributes

```
PUT /axapi/v3/logging/auditlog
Payload:
{
    "auditlog": {
        "audit-facility": "local2",
        "partition-name": "abcd",
        "port": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/auditlog

auditlog attributes

```
DELETE /axapi/v3/logging/auditlog
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

auditlog attributes

audit-facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Configure the facility of auditlog)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

host4

Description Configure the auditlog host

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: host4shared, partition-name and host6 are mutually exclusive

host6

Description Configure the auditlog host

Type: string

Format: ipv6-address

Mutual Exclusion: host6shared, partition-name and host4 are mutually exclusive

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-nameshared, host6 and host4 are mutually exclusive

Refernce Object: */axapi/v3/partition*

port

Description Set remote audit log port number(Default 514)

Type: number

Range: 1-32767

Default: 514

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: sharedpartition-name, host6 and host4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.3 logging buffered

Set buffered logging parameters

buffered Specification

Type	*Configuration Resource*
Element Name	buffered
Element URI	/axapi/v3/logging/buffered
Element Attributes	buffered_attributes
Schema	`buffered schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/buffered

buffered attributes

```
POST /axapi/v3/logging/buffered
Payload:
{
    "buffered": {
        "buffersize": 10000
    }
}
```

Get Object

GET

/axapi/v3/logging/buffered

buffered attributes

```
GET /axapi/v3/logging/buffered
Reponse:
{
    "buffered": {
        "buffersize": 10000,
        "levelname": "debugging",
        "uuid": "e2ce3148-6c5f-11e9-b8b7-dbe69c1e923a",
        "a10-url": "/axapi/v3/logging/buffered"
    }
}
```

Modify Object

POST

/axapi/v3/logging/buffered

buffered attributes

Replace Object

PUT

/axapi/v3/logging/buffered

buffered attributes

```
PUT /axapi/v3/logging/buffered
Payload:
{
    "buffered": {
        "buffersize": 10001
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/buffered

buffered attributes

```
DELETE /axapi/v3/logging/buffered
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

buffered attributes

buffersize

Description Logging buffer size (in items), default 30000

Type: number

Range: 10000-50000

Default: 30000

levelname

Description 'disable': Do not send log to buffer; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: debugging

partition-buffersize

Description Logging buffer size (in items), default 3000

Type: number

Range: 1000-5000

Default: 3000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.4 logging configure

Set logging configuration

configure Specification

Type	*Configuration Resource*
Element Name	configure
Element URI	/axapi/v3/logging/configure
Element Attributes	configure_attributes
Schema	`configure schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/configure

configure attributes

Get Object

GET

/axapi/v3/logging/configure

configure attributes

Modify Object

POST

/axapi/v3/logging/configure

configure attributes

Replace Object

PUT

/axapi/v3/logging/configure

configure attributes

Delete Object

DELETE

/axapi/v3/logging/configure

configure attributes

configure attributes

line-feed-in-udp-syslog

Description Add newline for syslog over UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.5 logging console

Set logging level which sent to console

console Specification

Type	*Configuration Resource*
Element Name	console
Element URI	/axapi/v3/logging/console
Element Attributes	console_attributes
Schema	`console schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/console

console attributes

```
POST /axapi/v3/logging/console
Payload:
{
    "console": {
        "console-levelname": "disable"
    }
}
```

Get Object

GET

/axapi/v3/logging/console

console attributes

```
GET /axapi/v3/logging/console
Reponse:
{
    "console": {
        "console-levelname": "disable",
        "uuid": "e2ce2ebe-6c5f-11e9-b8b7-dbe69c1e923a",
        "a10-url": "/axapi/v3/logging/console"
    }
}
```

Modify Object

POST

/axapi/v3/logging/console

console attributes

Replace Object

PUT

/axapi/v3/logging/console

console attributes

```
PUT /axapi/v3/logging/console
Payload:
{
    "console": {
        "console-levelname": "disable"
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/console

console attributes

```
DELETE /axapi/v3/logging/console
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

console attributes

console-levelname

Description 'disable': Do not send log to console; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: disable, emergency, alert, critical, error, warning, notification, information, debugging

Default: error

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.6 logging disable-partition-name

disable-partition-name Specification

Type	*Configuration Resource*
Element Name	disable-partition-name
Element URI	/axapi/v3/logging/disable-partition-name
Element Attributes	disable-partition-name_attributes
Schema	`disable-partition-name schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
POST /axapi/v3/logging/disable-partition-name
Payload:
{
    "disable-partition-name": {
        "disable-partition-name": 1
    }
}
```

Get Object

GET

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
GET /axapi/v3/logging/disable-partition-name
Reponse:
{
    "disable-partition-name": {
        "disable-partition-name": 1,
        "uuid": "559c0a38-60c7-11d9-9bdf-001fa00680a0",
        "a10-url": "/axapi/v3/logging/disable-partition-name"
    }
}
```

Modify Object

POST

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

Replace Object

PUT

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
PUT /axapi/v3/logging/disable-partition-name
Payload:
{
    "disable-partition-name": {
        "disable-partition-name": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/disable-partition-name

disable-partition-name attributes

```
DELETE /axapi/v3/logging/disable-partition-name
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

disable-partition-name attributes

disable-partition-name

Description Disable partition name in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.7 logging email

Set logging level which sent to email address

email Specification

Type	*Intermediate Resource*
Element Name	email
Element URI	/axapi/v3/logging/email
Element Attributes	email_attributes
Schema	`email schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging/email

email_attributes

email attributes

buffer

Description: buffer is a **JSON Block**. Please see below for *buffer*

Type: Object

Refernce Object: */axapi/v3/logging/email/buffer*

filter-list

Type: List

Refernce Object: */axapi/v3/logging/email/filter/{filter-id}*

level

Description: level is a **JSON Block**. Please see below for *level*

Type: Object

Refernce Object: */axapi/v3/logging/email/level*

buffer

Specification	
Type	*object*

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

filter-list

Specification	
Type	*list*
Block object keys	

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

level

Specification	
Type	*object*

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.8 logging email-address

Set the recipients address

email-address Specification

Type	*Configuration Resource*
Element Name	email-address
Element URI	/axapi/v3/logging/email-address
Element Attributes	email-address_attributes
Schema	`email-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email-address

email-address attributes

```
POST /axapi/v3/logging/email-address
Payload:

}
```

Modify Object

POST

/axapi/v3/logging/email/buffer

buffer attributes

Replace Object

PUT

/axapi/v3/logging/email/buffer

buffer attributes

```
PUT /axapi/v3/logging/email/buffer
Payload:
{
    "buffer": {
        "number": 17
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/email/buffer

buffer attributes

```
DELETE /axapi/v3/logging/email/buffer
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

buffer attributes

number

Description Number of log messages that can be buffered (Number of log messages that can be buffered, default 50)

Type: number

Range: 16-256

Default: 50

time

Description Number of minutes a log message can stay in buffer (Number of minutes a log message can stay in buffer, default 10)

Type: number

Range: 10-1440

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.10 logging email filter

Logging via email filter settings

filter Specification

Type	*Collection*
Object Key(s)	*filter-id*
Collection Name	*filter-list*
Collection URI	/axapi/v3/logging/email/filter
Element Name	filter
Element URI	/axapi/v3/logging/email/filter/{filter-id}
Element Attributes	filter_attributes
Schema	`filter schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email/filter

filter attributes

```
POST /axapi/v3/logging/email/filter/
Payload:
{
    "filter": {
        "filter-id": 1,
        "expression": "level emergency module AFLEX and pattern aaa or"
    }
}
```

Create List

PUT

/axapi/v3/logging/email/filter/{filter-id}

filter attributes

```
PUT /axapi/v3/logging/email/filter/1
Payload:
{
    "filter": {
        "filter-id": 1,
        "expression": "level emergency module AFLEX and pattern aada or"
    }
}
```

Replace List

PUT

/axapi/v3/logging/email/filter

filter-list

Delete Object

DELETE

/axapi/v3/logging/email/filter/{filter-id}

filter attributes

```
DELETE /axapi/v3/logging/email/filter/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

filter-list

filter-list is **JSON List** of *filter attributes*

filter-list : [

{ *filter attributes* },

{ *filter attributes* },

...

]

filter attributes

expression

Description Reverse Polish Notation, consists of level 0-7, module AFLEX/HMON/..., pattern log-content-pattern, and or/and/not

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

filter-id

Description Logging via email filter settings

Type: number

Range: 1-8

trigger

Description Trigger email, override buffer settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.11 logging email level

Set logging level which sent to email address

level Specification

Type	*Configuration Resource*
Element Name	level
Element URI	/axapi/v3/logging/email/level
Element Attributes	level_attributes
Schema	`level schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/email/level

level attributes

```
POST /axapi/v3/logging/email/level
Payload:
{
    "level": {
        "email-levelname": "disable"
    }
}
```

Get Object

GET

/axapi/v3/logging/email/level

level attributes

```
GET /axapi/v3/logging/email/level
Reponse:
{
    "level": {
        "email-levelname": "disable",
        "uuid": "e2ce2f9a-6c5f-11e9-b8b7-dbe69c1e923a",
        "a10-url": "/axapi/v3/logging/email/level"
    }
}
```

Modify Object

POST

/axapi/v3/logging/email/level

level attributes

Replace Object

PUT

/axapi/v3/logging/email/level

level attributes

```
PUT /axapi/v3/logging/email/level
Payload:
{
    "level": {
        "email-levelname": "disable"
    }
}
```

Delete Object

DELETE

/axapi/v3/logging/email/level

level attributes

```
DELETE /axapi/v3/logging/email/level
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

level attributes

email-levelname

Description 'disable': Do not send log to email address; 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'notification': Normal but significant conditions (severity=5);

Type: string

Supported Values: disable, emergency, alert, critical, notification

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.12 logging facility

Facility parameter for syslog messages

facility Specification

Type	*Configuration Resource*
Element Name	facility
Element URI	/axapi/v3/logging/facility
Element Attributes	facility_attributes
Schema	`facility schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/facility

facility attributes

```
POST /axapi/v3/logging/facility
Payload:
{
    "facility": {
        "facilityname": "local0"
    }
}
```

Get Object

GET

/axapi/v3/logging/facility

facility attributes

```
GET /axapi/v3/logging/facility
Reponse:
{
    "facility": {
        "facilityname": "local0",
        "uuid": "c3e487c2-60c7-11d9-9bdf-001fa00680a0",
        "a10-url": "/axapi/v3/logging/facility"
    }
}
```

Modify Object

POST

/axapi/v3/logging/facility

facility attributes

Replace Object

PUT

/axapi/v3/logging/facility

facility attributes

Delete Object

DELETE

/axapi/v3/logging/facility

facility attributes

```
DELETE /axapi/v3/logging/facility
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

facility attributes

facilityname

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.13 logging host

Set remote syslog host DNS name or ip address

host Specification

Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/logging/host
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/logging/host

host_attributes

host attributes

ipv4addr-list

Type: List

Refernce Object: */axapi/v3/logging/host/ipv4addr/{host-ipv4}*

ipv6addr-list

Type: List

Refernce Object: */axapi/v3/logging/host/ipv6addr/{host-ipv6}*

partition

Description: partition is a **JSON Block**. Please see below for *partition*

Type: Object

Refernce Object: */axapi/v3/logging/host/partition*

ipv6addr-list

Specification	
Type	*list*
Block object keys	

host-ipv6

Description Set syslog host ipv6 address

Type: string

Format: ipv6-address

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

partition

Specification	
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Refernce Object: */axapi/v3/partition*

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4addr-list

Specification	
Type	*list*
Block object keys	

host-ipv4

Description Set syslog host ip address

Type: string

Format: host

over-tls

Description Enable remote logging over TLS session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Set remote syslog port number

Type: number

Range: 1-32767

Default: 514

tcp

Description Use TCP as transport protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.57.14 logging host ipv4addr

host DNS name or ipv4 address of remote syslog server

ipv4addr Specification

Type	*Collection*
Object Key(s)	*host-ipv4*
Collection Name	*ipv4addr-list*
Collection URI	/axapi/v3/logging/host/ipv4addr
Element Name	ipv4addr
Element URI	/axapi/v3/logging/host/ipv4addr/{host-ipv4}
Element Attributes	ipv4addr_attributes
Schema	`ipv4addr schema`

Operations Allowed:

Create Object

POST

/axapi/v3/logging/host/ipv4addr

ipv4addr attributes

Create List

POST

/axapi/v3/logging/host/ipv4addr

ipv4addr attributes

Get Object

custom1

Description Customized attribute No.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom2

Description Customized attribute No.2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom3

Description Customized attribute No.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom4

Description Customized attribute No.4

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom5

Description Customized attribute No.5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom6

Description Customized attribute No.6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-pool-based

Description Disable log LSN user quota exceeded based on LSN pool(Default: enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imei

Description International Mobile Equipment Identity (IMEI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

imsi

Description International Mobile Subscriber Identity (IMSI)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-based

Description Log LSN user quota exceeded based on private IP(Default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msisdn

Description Mobile Subscriber Integrated Services Digital Netwrok-Number (MSISDN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

with-radius-attribute

Description Log with radius attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-suppression

Specification	
Type	*object*

count

Description Configure log suppression count (default: 100)

maximum-paths attributes

path

Description supported multipath numbers

Type: number

Range: 1-64

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.59 merge-mode-add

Objects:

2.59.1 merge-mode-add

Control block-merge mode behavior

merge-mode-add Specification

Type	*Intermediate Resource*
Element Name	merge-mode-add
Element URI	/axapi/v3/merge-mode-add
Element Attributes	merge-mode-add_attributes
Schema	`merge-mode-add schema`

Operations Allowed:

Get Object

GET

/axapi/v3/merge-mode-add

merge-mode-add_attributes

merge-mode-add attributes

slb

Description: slb is a **JSON Block**. Please see below for *slb*

Type: Object

Refernce Object: */axapi/v3/merge-mode-add/slb*

slb

Specification	
Type	*object*

member

Description Control block-merge behavior for slb service-group member

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Control block-merge behavior for slb server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server-port

Description Control block-merge behavior for slb virtual-server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.59.2 merge-mode-add slb

Control block-merge mode behavior for slb objects

slb Specification

Type	*Configuration Resource*
Element Name	slb
Element URI	/axapi/v3/merge-mode-add/slb
Element Attributes	slb_attributes
Schema	`slb schema`

Operations Allowed:

Create Object

POST

/axapi/v3/merge-mode-add/slb

slb attributes

```
POST /axapi/v3/merge-mode-add/slb
Payload:
{
    "slb": {
        "server-port": 1
    }
}
```

Get Object

GET

/axapi/v3/merge-mode-add/slb

slb attributes

```
GET /axapi/v3/merge-mode-add/slb
Reponse:
{
    "slb": {
        "server-port": 1,
        "member": 0,
        "virtual-server-port": 0,
        "uuid": "86b17a64-60cb-11d9-92b2-001fa00680a0",
        "a10-url": "/axapi/v3/merge-mode-add/slb"
    }
}
```

Modify Object

POST

/axapi/v3/merge-mode-add/slb

slb attributes

Replace Object

PUT

/axapi/v3/merge-mode-add/slb

slb attributes

```
PUT /axapi/v3/merge-mode-add/slb
Payload:
{
    "slb": {
        "server-port": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/merge-mode-add/slb

slb attributes

```
DELETE /axapi/v3/merge-mode-add/slb
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

slb attributes

member

Description Control block-merge behavior for slb service-group member

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Control block-merge behavior for slb server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server-port

Description Control block-merge behavior for slb virtual-server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.60 mirror-port

Objects:

2.60.1 mirror-port

Enable a port to act as Mirror Port

mirror-port Specification

Type	*Collection*
Object Key(s)	*mirror-index*
Collection Name	*mirror-port-list*
Collection URI	/axapi/v3/mirror-port
Element Name	mirror-port
Element URI	/axapi/v3/mirror-port/{mirror-index}
Element Attributes	mirror-port_attributes
Schema	`mirror-port schema`

Operations Allowed:

Create Object

POST

/axapi/v3/mirror-port

mirror-port attributes

```
POST /axapi/v3/mirror-port/
Payload:
{
    "mirror-port": {
        "ethernet": 1,
        "mirror-index": 1
    }
}
```

Create List

POST

/axapi/v3/mirror-port

mirror-port attributes

Get Object

GET

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
GET /axapi/v3/mirror-port/1
Reponse:
{
    "mirror-port": {
        "mirror-index": 1,
        "ethernet": 1,
        "mirror-dir": "both",
        "uuid": "b3b6d0ac-5bf0-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/mirror-port/1"
    }
}
```

Get List

GET

/axapi/v3/mirror-port

mirror-port-list

Modify Object

POST

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

Replace Object

PUT

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
PUT /axapi/v3/mirror-port/1
Payload:
{
    "mirror-port": {
        "ethernet": 1,
        "mirror-index": 1
    }
}
```

Replace List

PUT

/axapi/v3/mirror-port

mirror-port-list

Delete Object

DELETE

/axapi/v3/mirror-port/{mirror-index}

mirror-port attributes

```
DELETE /axapi/v3/mirror-port/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

mirror-port-list

mirror-port-list is **JSON List** of *mirror-port attributes*

mirror-port-list : [

{ *mirror-port attributes* },

{ *mirror-port attributes* },

...

]

mirror-port attributes

ethernet

Description Ethernet port as mirror port (Port Value)

Type: number

Format: interface

mirror-dir

Description 'input': Mirror incoming packets to this port; 'output': Mirror outgoing packets to this port; 'both': Mirror both incoming and outgoing packets to this port;

Type: string

Supported Values: input, output, both

Default: both

mirror-index

Description Mirror index

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.61 misc

Objects:

2.61.1 misc

Delete Configuration file

misc Specification

Type	*Intermediate Resource*
Element Name	misc
Element URI	/axapi/v3/misc
Element Attributes	misc_attributes
Schema	`misc schema`

Operations Allowed:

Get Object

GET

/axapi/v3/misc

misc_attributes

misc attributes

2.61.2 misc top-level-lineage

Delete Configuration file

top-level-lineage Specification

Type	*Intermediate Resource*
Element Name	top-level-lineage
Element URI	/axapi/v3/misc/top-level-lineage
Element Attributes	top-level-lineage_attributes
Schema	`top-level-lineage schema`

Operations Allowed:

Get Object

GET

/axapi/v3/misc/top-level-lineage

top-level-lineage_attributes

top-level-lineage attributes

2.62 monitor

Objects:

2.62.1 monitor

System monitor configuration

monitor Specification

Type	*Configuration Resource*
Element Name	monitor
Element URI	/axapi/v3/monitor
Element Attributes	monitor_attributes
Schema	`monitor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/monitor

monitor attributes

```
POST /axapi/v3/monitor
Payload:

    }
}
```

monitor attributes

buffer-drop

Description Monitor buffer drop threshold (Threshold value)

Type: number

Range: 1-32767

Default: 4000

buffer-usage

Description Monitor IO buffer usage threshold (Threshold value)

Type: number

Range: 60000-4000000

conn-type0

Description Conn resource type 0 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type1

Description Conn resource type 1 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type2

Description Conn resource type 2 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type3

Description Conn resource type 3 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

conn-type4

Description Conn resource type 4 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

ctrl-btdump

Description Generate ctrl-cpu-btdump on threshold exceeeds

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ctrl-cpu

Description Monitor control CPU threshold (Threshold value in percentage, default 90)

Type: number

Range: 1-100

Default: 90

data-btdump

Description Generate data-cpu-btdump on threshold exceeeds

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu

Description Monitor data CPU threshold (Threshold value in percentage, default 90)

Type: number

Range: 1-100

Default: 90

disk

Description Monitor hard disk usage threshold (Threshold value in percentage, default 85)

Type: number

Range: 1-100

Default: 85

memory

Description Monitor memory usage threshold (Threshold value in percentage, default 95)

Type: number

Range: 1-100

Default: 95

smp-type0

Description SMP resource type 0 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type1

Description SMP resource type 1 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type2

Description SMP resource type 2 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type3

Description SMP resource type 3 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

smp-type4

Description SMP resource type 4 (Threshold value, default 32767)

Type: number

Range: 32767-256000000

Default: 32767

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

warn-temp

Description Monitor warning system temperature threshold (Threshold value in Celsius, default 68)

Type: number

2.63 multi-config

Objects:

2.63.1 multi-config

Set multi-config enable/disable

multi-config Specification

Type	*Configuration Resource*
Element Name	multi-config
Element URI	/axapi/v3/multi-config

ipfix-template

Description Custom IPFIX Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/netflow/template*

monitor-list_sample

Specification	
Type	*object*

ethernet-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/sample/ethernet/{ifindex}*

nat-pool-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/sample/nat-pool/{pool-name}*

ve-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/sample/ve/{ve-num}*

monitor-list_sample_ve-list

Specification	
Type	*list*
Block object keys	

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-num

Description VE interface number

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/interface/ve*

monitor-list_sample_nat-pool-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Name of nat pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_sample_ethernet-list

Specification	
Type	*list*
Block object keys	

ifindex

Description Ethernet interface number

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_destination

Specification	
Type	*object*

ip-cfg

Description: ip-cfg is a **JSON Block**. Please see below for *monitor-list_destination_ip-cfg*

Type: Object

ipv6-cfg

Description: ipv6-cfg is a **JSON Block**. Please see below for *monitor-list_destination_ipv6-cfg*

Type: Object

service-group

Description Service-group for load balancing between multiple collector servers

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group ip and ipv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_destination_ip-cfg

Specification	
Type	*object*

ip

Description IP address of netflow collector

Type: string

Format: ipv4-address

Mutual Exclusion: ip service-group and ipv6 are mutually exclusive

port4

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

monitor-list_destination_ipv6-cfg

Specification	
Type	*object*

ipv6

Description IPv6 address of netflow collector

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 service-group and ip are mutually exclusive

port6

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

monitor-list_disable-log-by-destination

Specification	
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip6-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_disable-log-by-destination_ip6-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_ip6-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_disable-log-by-destination_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

monitor-list_record

Specification	
Type	*object*

dslite

Description DS-Lite Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat44

Description NAT44 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat64

Description NAT64 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5

Description NetFlow V5 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5-ext

Description Extended NetFlow V5 Flow Record Template, supports ipv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-batch-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-dslite
