Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw4

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw6

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_resend-template

Specification	
Type	*object*

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means never resend template)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means never resend template)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common

Specification	
Type	*object*

max-packet-queue-time

Description Configure netflow packet queue time (Max packet queue time(*20ms). Default:50(*20ms = 1s)))

Type: number

Range: 0-50

Default: 50

nat44_tpl_1001

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-time-on-flow-record

Description Reset session start time to current time on each flow timeout export for long-lasting session (default: disabled).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

Specification	
Type	*list*
Block object keys	

information-element-blk

Type: List

ipfix-template-id

Description Custom IPFIX Template ID

Type: number

Range: 2001-3000

name

Description IPFIX CUSTOM Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor attributes

custom-record

Description: custom-record is a **JSON Block**. Please see below for *custom-record*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/custom-record*

destination

Description: destination is a **JSON Block**. Please see below for *destination*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/destination*

disable

Description Disable this netflow monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *disable-log-by-destination*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination*

flow-timeout

Description Configure timeout value to export flow records periodically for long-live session (Number of minutes: default is 10, 0 means only send flow record when session is deleted)

Type: number

Range: 0-1440

Default: 10

name

Description Name of netflow monitor

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

protocol

Description 'v9': Netflow version 9; 'v10': Netflow version 10 (IPFIX);

Type: string

Supported Values: v9, v10

Default: v9

record

Description: record is a **JSON Block**. Please see below for *record*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/record*

resend-template

Description: resend-template is a **JSON Block**. Please see below for *resend-template*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/resend-template*

sample

Description: sample is a **JSON Block**. Please see below for *sample*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/sample*

sampling-enable

Type: List

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Refernce Object: */axapi/v3/netflow/monitor/{name}/source-address*

source-ip-use-mgmt

Description Use management interface's IP address for source ip of netflow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

custom-record

Specification	
Type	*object*

custom-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Maximum Length: 1 characters

source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination

Specification	
Type	*object*

ip-cfg

Description: ip-cfg is a **JSON Block**. Please see below for *destination_ip-cfg*

Type: Object

ipv6-cfg

Description: ipv6-cfg is a **JSON Block**. Please see below for *destination_ipv6-cfg*

Type: Object

service-group

Description Service-group for load balancing between multiple collector servers

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group ip and ipv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination_ip-cfg

Specification	
Type	*object*

ip

Description IP address of netflow collector

Type: string

Format: ipv4-address

Mutual Exclusion: ip service-group and ipv6 are mutually exclusive

port4

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

destination_ipv6-cfg

Specification	
Type	*object*

ipv6

Description IPv6 address of netflow collector

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 service-group and ip are mutually exclusive

port6

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

disable-log-by-destination

Specification	
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

record

Specification	
Type	*object*

dslite

Description DS-Lite Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat44

Description NAT44 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nat64

Description NAT64 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5

Description NetFlow V5 Flow Record Template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

netflow-v5-ext

Description Extended NetFlow V5 Flow Record Template, supports ipv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-batch-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-batch-v2-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

port-mapping-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-dslite

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw4

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-fw6

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat44

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

sesn-event-nat64

Description 'both': Export both creation and deletion events; 'creation': Export only creation events; 'deletion': Export only deletion events;

Type: string

Supported Values: both, creation, deletion

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets-sent': packets-sent; 'bytes-sent': bytes-sent; 'nat44-records-sent': nat44-records-sent; 'nat44-records-sent-failure': nat44-records-sent-failure; 'nat64-records-sent': nat64-records-sent; 'nat64-records-sent-failure': nat64-records-sent-failure; 'dslite-records-sent': dslite-records-sent; 'dslite-records-sent-failure': dslite-records-sent-failure; 'session-event-nat44-records-sent': session-event-nat44-records-sent; 'session-event-nat44-records-sent-failure': session-event-nat44-records-sent-failure; 'session-event-nat64-records-sent': session-event-nat64-records-sent; 'session-event-nat64-records-sent-failure': session-event-nat64-records-sent-failure; 'session-event-dslite-records-sent': session-event-dslite-records-sent; 'session-event-dslite-records-sent-failure': session-event-dslite-records-sent-failure; 'port-mapping-nat44-records-sent': port-mapping-nat44-records-sent; 'port-mapping-nat44-records-sent-failure': port-mapping-nat44-records-sent-failure; 'port-mapping-nat64-records-sent': port-mapping-nat64-records-sent; 'port-mapping-nat64-records-sent-failure': port-mapping-nat64-records-sent-failure; 'port-mapping-dslite-records-sent': port-mapping-dslite-records-sent; 'port-mapping-dslite-records-sent-failure': port-mapping-dslite-records-sent-failure; 'netflow-v5-records-sent': netflow-v5-records-sent; 'netflow-v5-records-sent-failure': netflow-v5-records-sent-failure; 'netflow-v5-ext-records-sent': netflow-v5-ext-records-sent; 'netflow-v5-ext-records-sent-failure': netflow-v5-ext-records-sent-failure;

resend-template

Specification	
Type	*object*

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means never resend template)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means never resend template)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

    }
}
```

destination attributes

ip-cfg

Description: ip-cfg is a **JSON Block**. Please see below for *ip-cfg*

Type: Object

ipv6-cfg

Description: ipv6-cfg is a **JSON Block**. Please see below for *ipv6-cfg*

Type: Object

service-group

Description Service-group for load balancing between multiple collector servers

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group ip and ipv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-cfg

Specification	
Type	*object*

ip

Description IP address of netflow collector

Type: string

Format: ipv4-address

Mutual Exclusion: ip service-group and ipv6 are mutually exclusive

port4

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

ipv6-cfg

Specification	
Type	*object*

ipv6

Description IPv6 address of netflow collector

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 service-group and ip are mutually exclusive

port6

Description Port number, default is 9996

Type: number

Range: 1-65535

Default: 9996

2.65.6 netflow monitor disable-log-by-destination

Disable logging by destination protocol and port

disable-log-by-destination Specification

Type	*Configuration Resource*
Element Name	disable-log-by-destination
Element URI	/axapi/v3/netflow/monitor/{name}/disable-log-by-destination
Element Attributes	disable-log-by-destination_attributes
Schema	`disable-log-by-destination schema`

Operations Allowed:

Create Object

POST

/axapi/v3/netflow/monitor/{name}/disable-log-by-destination

disable-log-by-destination attributes

Get Object

GET

/axapi/v3/netflow/monitor/{name}/disable-log-by-destination

/axapi/v3/netflow/monitor/{name}/disable-log-by-destination

disable-log-by-destination attributes

Delete Object

DELETE

/axapi/v3/netflow/monitor/{name}/disable-log-by-destination

disable-log-by-destination attributes

disable-log-by-destination attributes

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/netflow/monitor/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

ip-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

ip6-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip6-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

ip6-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

2.65.7 netflow monitor disable-log-by-destination ip

Configure a filter IP enrty

ip Specification

Type	*Collection*
Object Key(s)	*ipv4-addr*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

DELETE /axapi/v3/netflow/monitor/a/resend-template
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

resend-template attributes

records

Description To resend template once for each number of records (Number of records: default is 1000, 0 means never resend template)

Type: number

Range: 0-1000000

Default: 1000

timeout

Description To set time interval to resend template (number of seconds: default is 1800, 0 means never resend template)

Type: number

Range: 0-86400

Default: 1800

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.65.11 netflow monitor sample

Configure filters for monitoring traffic (All traffic is monitored if no filters configured)

sample Specification

Type	*Intermediate Resource*
Element Name	sample
Element URI	/axapi/v3/netflow/monitor/{name}/sample
Element Attributes	sample_attributes
Schema	`sample schema`

Operations Allowed:

Get Object

network Specification

Type	*Intermediate Resource*
Element Name	network
Element URI	/axapi/v3/network
Element Attributes	network_attributes
Schema	`network schema`

Operations Allowed:

Get Object

GET

/axapi/v3/network

network_attributes

network attributes

arp

Description: arp is a **JSON Block**. Please see below for *arp*

Type: Object

Refernce Object: */axapi/v3/network/arp*

arp-timeout

Description: arp-timeout is a **JSON Block**. Please see below for *arp-timeout*

Type: Object

Refernce Object: */axapi/v3/network/arp-timeout*

available-trunk-list

Description: available-trunk-list is a **JSON Block**. Please see below for *available-trunk-list*

Type: Object

Refernce Object: */axapi/v3/network/available-trunk-list*

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/network/bfd*

bpdu-fwd-group-list

Type: List

Refernce Object: */axapi/v3/network/bpdu-fwd-group/{bpdu-fwd-group-number}*

bridge-vlan-group-list

Type: List

Refernce Object: */axapi/v3/network/bridge-vlan-group/{bridge-vlan-group-number}*

icmp-rate-limit

Description: icmp-rate-limit is a **JSON Block**. Please see below for *icmp-rate-limit*

Type: Object

Refernce Object: */axapi/v3/network/icmp-rate-limit*

icmpv6-rate-limit

Description: icmpv6-rate-limit is a **JSON Block**. Please see below for *icmpv6-rate-limit*

Type: Object

Refernce Object: */axapi/v3/network/icmpv6-rate-limit*

lacp

Description: lacp is a **JSON Block**. Please see below for *lacp*

Type: Object

Refernce Object: */axapi/v3/network/lacp*

lacp-passthrough-list

Type: List

Refernce Object: */axapi/v3/network/lacp-passthrough/{peer-from}+{peer-to}*

lif-stats

Description: lif-stats is a **JSON Block**. Please see below for *lif-stats*

Type: Object

Refernce Object: /axapi/v3/network/lif-stats

lldp

Description: lldp is a **JSON Block**. Please see below for *lldp*

Type: Object

Refernce Object: */axapi/v3/network/lldp*

mac-address

Description: mac-address is a **JSON Block**. Please see below for *mac-address*

Type: Object

Refernce Object: */axapi/v3/network/mac-address*

mac-age-time

Description: mac-age-time is a **JSON Block**. Please see below for *mac-age-time*

Type: Object

Refernce Object: */axapi/v3/network/mac-age-time*

spanning-tree

Description: spanning-tree is a **JSON Block**. Please see below for *spanning-tree*

Type: Object

Refernce Object: */axapi/v3/network/spanning-tree*

trunk

Description: trunk is a **JSON Block**. Please see below for *trunk*

Type: Object

Refernce Object: */axapi/v3/network/trunk*

twamp

Description: twamp is a **JSON Block**. Please see below for *twamp*

Type: Object

Refernce Object: */axapi/v3/network/twamp*

ve-stats

Description: ve-stats is a **JSON Block**. Please see below for *ve-stats*

Type: Object

Refernce Object: /axapi/v3/network/ve-stats

virtual-wire-ethernet-group-list

Type: List

Refernce Object: */axapi/v3/network/virtual-wire-ethernet-group/{group-id}*

virtual-wire-global

Description: virtual-wire-global is a **JSON Block**. Please see below for *virtual-wire-global*

Type: Object

Refernce Object: */axapi/v3/network/virtual-wire-global*

virtual-wire-list

Type: List

Refernce Object: */axapi/v3/network/virtual-wire/{virtual-wire-id}*

vlan-global

Description: vlan-global is a **JSON Block**. Please see below for *vlan-global*

Type: Object

Refernce Object: */axapi/v3/network/vlan-global*

vlan-list

Type: List

Refernce Object: */axapi/v3/network/vlan/{vlan-num}*

arp

Specification	
Type	*object*

dynamic

Description: dynamic is a **JSON Block**. Please see below for *arp_dynamic*

Type: Object

Refernce Object: */axapi/v3/network/arp/dynamic*

static-list

Type: List

Refernce Object: */axapi/v3/network/arp/static/{ip-addr}+{vlan}*

arp_dynamic

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

arp_static-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet port (Port Value)

Type: number

Format: interface

Mutual Exclusion: ethernet and trunk are mutually exclusive

ip-addr

Description IP address

Type: string

Format: ipv4-address

mac-addr

Description MAC address

Type: string

Format: mac-address

trunk

Description Trunk group

Type: number

Range: 1-4096

Mutual Exclusion: trunk and ethernet are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN ID

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

bpdu-fwd-group-list

Specification	
Type	*list*
Block object keys	

bpdu-fwd-group-number

Description

Type: number

Range: 1-8

ethernet-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bpdu-fwd-group-list_ethernet-list

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet Port

Type: number

Format: interface

ethernet-start

Description Ethernet Port (Interface number)

Type: number

Format: interface

vlan-global

Specification	
Type	*object*

enable-def-vlan-l2-forwarding

Description Enable layer 2 forwarding on default vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3-vlan-fwd-disable

Description Disable L3 forwarding between VLANs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'xparent_vlan_list_err': Transparent Mode VLAN List Errors;

Type: string

Supported Values: all, xparent_vlan_list_err

lacp

Specification	
Type	*object*

system-priority

Description LACP system priority (LACP system priority, 1-65535, default 32768)

Type: number

Range: 1-65535

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp

Specification	
Type	*object*

responder

Description: responder is a **JSON Block**. Please see below for *twamp_responder*

Type: Object

Refernce Object: */axapi/v3/network/twamp/responder*

twamp_responder

Specification	
Type	*object*

enable-both-ip-ipv6

Description Enable both IP and IPv6 TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-both-ip-ipv6 enable-ip and enable-ipv6 are mutually exclusive

enable-ip

Description Enable IP TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-ip enable-ipv6 and enable-both-ip-ipv6 are mutually exclusive

enable-ipv6

Description Enable IPv6 TWAMP packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: enable-ipv6 enable-ip and enable-both-ip-ipv6 are mutually exclusive

ip

Description: ip is a **JSON Block**. Please see below for *twamp_responder_ip*

Type: Object

Refernce Object: */axapi/v3/network/twamp/responder/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *twamp_responder_ipv6*

Type: Object

Refernce Object: */axapi/v3/network/twamp/responder/ipv6*

port

Description Port number

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp_responder_ip

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

acl-name

Description Apply a named access list (Access List name)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name and acl-id are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

twamp_responder_ipv6

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v6-acl-name

Description Apply an access list (Named Access List)

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

lif-stats

Specification	
Type	*object*

enable

Description Enable LIF interface stats generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp

Specification	
Type	*object*

enable-cfg

Description: enable-cfg is a **JSON Block**. Please see below for *lldp_enable-cfg*

Type: Object

management-address

Description: management-address is a **JSON Block**. Please see below for *lldp_management-address*

Type: Object

Refernce Object: */axapi/v3/network/lldp/management-address*

notification-cfg

Description: notification-cfg is a **JSON Block**. Please see below for *lldp_notification-cfg*

Type: Object

system-description

Description Configure lldp system description

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

system-name

Description Configure lldp system name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

tx-set

Description: tx-set is a **JSON Block**. Please see below for *lldp_tx-set*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address

Specification	
Type	*object*

dns-list

Type: List

Refernce Object: */axapi/v3/network/lldp/management-address/dns/{dns}*

ipv4-addr-list

Type: List

Refernce Object: */axapi/v3/network/lldp/management-address/ipv4-addr/{ipv4}*

ipv6-addr-list

Type: List

Refernce Object: */axapi/v3/network/lldp/management-address/ipv6-addr/{ipv6}*

lldp_management-address_ipv6-addr-list

Specification	
Type	*list*
Block object keys	

interface-ipv6

Description: interface-ipv6 is a **JSON Block**. Please see below for *lldp_management-address_ipv6-addr-list_interface-ipv6*

Type: Object

ipv6

Description Configure lldp management-address, subtype is ipv6 (lldp management-address ipv6 address)

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_ipv6-addr-list_interface-ipv6

Specification	
Type	*object*

ipv6-eth

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

ipv6-mgmt

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-ve

Description configure lldp management-address interface ve (lldp management-address interface port number)

Type: number

Range: 2-4094

lldp_management-address_ipv4-addr-list

Specification	
Type	*list*
Block object keys	

interface-ipv4

Description: interface-ipv4 is a **JSON Block**. Please see below for *lldp_management-address_ipv4-addr-list_interface-ipv4*

Type: Object

ipv4

Description Configure lldp management-address, subtype is ipv4 (lldp management-address ipv4 address)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_ipv4-addr-list_interface-ipv4

Specification	
Type	*object*

ipv4-eth

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

ipv4-mgmt

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-ve

Description configure lldp management-address interface ve (lldp management-address interface port number)

Type: number

Range: 2-4094

lldp_management-address_dns-list

Specification	
Type	*list*
Block object keys	

dns

Description Configure lldp management-address, subtype is dns (lldp management-address dns address)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

interface

Description: interface is a **JSON Block**. Please see below for *lldp_management-address_dns-list_interface*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lldp_management-address_dns-list_interface

Specification	
Type	*object*

ethernet

Description configure lldp management-address interface ethernet (lldp management-address interface port number)

Type: number

Format: interface

Mutual Exclusion: ethernet ve and management are mutually exclusive

management

Description configure lldp management-address interface management

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: management ethernet and ve are mutually exclusive

ve

Description configure lldp management-address interface management (lldp management-address interface port number)

Type: number

Range: 2-4094

Mutual Exclusion: ve ethernet and management are mutually exclusive

lldp_notification-cfg

Specification	
Type	*object*

interval

Description Configure lldp notification interval, default is 30 (The lldp notification interval value, default is 30)

Type: number

Range: 5-3600

Default: 30

notification

Description Enable lldp notification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lldp_tx-set

Specification	
Type	*object*

fast-count

Description Configure lldp tx fast count value (The lldp tx fast count value, default is 4)

Type: number

Range: 1-8

Default: 4

fast-interval

Description Configure lldp tx fast interval value (The lldp tx fast interval value, default is 1)

Type: number

Range: 1-3600

Default: 1

hold

Description Configure lldp tx hold multiplier (The lldp tx hold value, default is 4)

Type: number

Range: 1-10

Default: 4

reinit-delay

Description Configure lldp tx reinit delay (The lldp tx reinit_delay value, default is 2)

Type: number

Range: 1-10

Default: 2

tx-interval

Description Configure lldp tx interval (The lldp tx interval value, default is 30)

Type: number

Range: 1-3600

Default: 30

lldp_enable-cfg

Specification	
Type	*object*

enable

Description Enable lldp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rx

Description Enable lldp rx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tx

Description Enable lldp tx

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

arp-timeout

Specification	
Type	*object*

timeout

Description ARP entry timeout

Type: number

Range: 60-86400

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd

Specification	
Type	*object*

echo

Description Enable BFD Echo

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable BFD

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval-cfg

Description: interval-cfg is a **JSON Block**. Please see below for *bfd_interval-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bfd_interval-cfg

Specification	
Type	*object*

interval

Description Transmit interval between BFD packets (Milliseconds)

Type: number

Range: 48-1000

Default: 800

min-rx

Description Minimum receive interval capability (Milliseconds)

Type: number

Range: 48-1000

Default: 800

multiplier

Description Multiplier value used to compute holddown (value used to multiply the interval)

Type: number

Range: 3-50

Default: 4

mac-age-time

Specification	
Type	*object*

aging-time

Description Set aging period in seconds for all MAC interfaces (default 300 seconds)

Type: number

Range: 10-600

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-list

Specification	
Type	*list*
Block object keys	

eth1

Description

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

eth2

Description

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

group1

Description

Type: number

Range: 1-16

Refernce Object: */axapi/v3/network/virtual-wire-ethernet-group*

group2

Description

Type: number

Range: 1-16

Refernce Object: */axapi/v3/network/virtual-wire-ethernet-group*

trunk1

Description

Type: number

Range: 1-4096

Refernce Object: */axapi/v3/interface/trunk*

trunk2

Description

Type: number

Range: 1-4096

Refernce Object: */axapi/v3/interface/trunk*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-id

Description virtual wire id

Type: number

Range: 1-32

bridge-vlan-group-list

Specification	
Type	*list*
Block object keys	

bridge-vlan-group-number

Description Bridge VLAN Group Number

Type: number

Range: 1-255

forward-traffic

Description 'forward-all-traffic': Forward all traffic between bridge members; 'forward-ip-traffic': Forward only IP traffic between bridge members (default);

Type: string

Supported Values: forward-all-traffic, forward-ip-traffic

Default: forward-ip-traffic

name

Description Bridge Group Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet Port (Virtual Ethernet Port number)

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

vlan-list

Type: List

bridge-vlan-group-list_vlan-list

Specification	
Type	*list*
Block object keys	

vlan-end

Description VLAN id

Type: number

Refernce Object: */axapi/v3/network/vlan*

vlan-start

Description VLAN id

Type: number

Refernce Object: */axapi/v3/network/vlan*

mac-address

Specification	
Type	*object*

dynamic

Description: dynamic is a **JSON Block**. Please see below for *mac-address_dynamic*

Type: Object

Refernce Object: */axapi/v3/network/mac-address/dynamic*

static-list

Type: List

Refernce Object: */axapi/v3/network/mac-address/static/{mac}+{vlan}*

mac-address_dynamic

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mac-address_static-list

Specification	
Type	*list*
Block object keys	

dest

Description Trap MAC with this DA to CPU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac

Description Configure a Static MAC address

Type: string

Format: mac-address

port

Description Ethernet Port on which the Address is applicable (Port Value (Defualt VLAN is 1))

Type: number

Format: interface

redirect-dummy-mac

Description Dummy for redirect use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description VLAN Id

Type: number

Range: 2-4094

Refernce Object: */axapi/v3/network/vlan*

spanning-tree

Specification	
Type	*object*

mode

Description: mode is a **JSON Block**. Please see below for *spanning-tree_mode*

Type: Object

Maximum Length: 1 characters

spanning-tree_mode_stp

Specification	
Type	*object*

action

Description enable spanning tree RSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description set bridge priority

Type: number

Range: 0-61440

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-start

Description VLAN ID

Type: number

Range: 2-4094

spanning-tree_mode_rstp

Specification	
Type	*object*

action

Description enable spanning tree RSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priority

Description set bridge priority

Type: number

Range: 0-61440

Default: 32768

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-start

Description VLAN ID

Type: number

Range: 2-4094

spanning-tree_mode_mstp

Specification	
Type	*object*

action

Description Enable spanning tree MSTP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

instance-list

Type: List

Refernce Object: */axapi/v3/network/spanning-tree/mode/mstp/instance/{instance-start}*

priority

Description Set bridge priority

Type: number

Range: 0-61440

Default: 32768

revision-cfg

Description: revision-cfg is a **JSON Block**. Please see below for *spanning-tree_mode_mstp_revision-cfg*

Type: Object

ve-stats

Specification	
Type	*object*

enable

Description Enable vlan ve interface stats generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-wire-global

Specification	
Type	*object*

sampling-enable

Type: List

src-mac-learning

Description Update source mac information for all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update-active-vlan

Description 'all': all; 'l3-packet': l3-packet(default);

Type: string

Supported Values: all, l3-packet

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-update-period

Description Update period in second (default is 30)

Type: number

Range: 1-255

virtual-wire-global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'vlan-update': VLAN update; 'mac-update': MAC update;

Type: string

Supported Values: all, vlan-update, mac-update

vlan-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'broadcast_count': Broadcast counter; 'multicast_count': Multicast counter; 'ip_multicast_count': IP Multicast counter; 'unknown_unicast_count': Unknown Unicast counter; 'mac_movement_count': Mac Movement counter;

Type: string

Supported Values: all, broadcast_count, multicast_count, ip_multicast_count, unknown_unicast_count, mac_movement_count, shared_vlan_partition_switched_counter

vlan-list_tagged-trunk-list

Specification	
Type	*list*
Block object keys	

tagged-trunk-end

Description Trunk Group

Type: number

tagged-trunk-start

Description Trunk groups

Type: number

icmp-rate-limit

Specification	
Type	*object*

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-normal-rate-limit

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

available-trunk-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6-rate-limit

Specification	
Type	*object*

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-normal-rate-limit

Description Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lacp-passthrough-list

Specification	
Type	*list*
Block object keys	

peer-from

Description Peer member to forward received LACP packets

Type: number

Format: interface

peer-to

Description Peer member to forward received LACP packets

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.66.2 network arp

Configure ARP

arp Specification

Type	*Intermediate Resource*
Element Name	arp
Element URI	/axapi/v3/network/arp
Element Attributes	arp_attributes
Schema	`arp schema`

Operations Allowed:

Get Object

GET

/axapi/v3/network/arp

2.67.5 ntp server hostname

IPV4 address, IPV6 address or host name of NTP server

hostname Specification

Type	*Collection*
Object Key(s)	*host-servername*
Collection Name	*hostname-list*
Collection URI	/axapi/v3/ntp/server/hostname
Element Name	hostname
Element URI	/axapi/v3/ntp/server/hostname/{host-servername}
Element Attributes	hostname_attributes
Schema	`hostname schema`

Operations Allowed:

Create Object

POST

/axapi/v3/ntp/server/hostname

hostname attributes

```
POST /axapi/v3/ntp/server/hostname/
Payload:
{
    "hostname": {
        "host-servername": "a",
        "key": 1
    }
}
```

Create List

POST

/axapi/v3/ntp/server/hostname

hostname attributes

Get Object

GET

/axapi/v3/ntp/server/hostname/{host-servername}

hostname attributes

```
GET /axapi/v3/ntp/server/hostname/a
Reponse:
{
    "hostname": {
        "host-servername": "a",
```

(continues on next page)

(continued from previous page)

```
        "key": 1,
        "prefer": 0,
        "action": "enable",
        "uuid": "71599a40-5bf1-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/ntp/server/hostname/a"
    }
}
```

Get List

GET

/axapi/v3/ntp/server/hostname

hostname-list

Modify Object

POST

/axapi/v3/ntp/server/hostname/{host-servername}

hostname attributes

Replace Object

PUT

/axapi/v3/ntp/server/hostname/{host-servername}

hostname attributes

```
PUT /axapi/v3/ntp/server/hostname/a
Payload:
{
    "hostname": {
        "host-servername": "a",
        "key": 2
    }
}
```

Replace List

PUT

/axapi/v3/ntp/server/hostname

hostname-list

Delete Object

DELETE

/axapi/v3/ntp/server/hostname/{host-servername}

hostname attributes

```
DELETE /axapi/v3/ntp/server/hostname/a
Reponse:
{
    "response": {
```

(continues on next page)

(continued from previous page)

```
        "status": "OK"
    }
}
```

hostname-list

hostname-list is **JSON List** of *hostname attributes*

hostname-list : [

{ *hostname attributes* },

{ *hostname attributes* },

...

]

hostname attributes

action

Description 'enable': Enable this NTP server; 'disable': Disable this NTP server;

Type: string

Supported Values: enable, disable

Default: enable

host-servername

Description IPV4 address, IPV6 address or host name of NTP server(string1~63)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

key

Description Use trusted key to authenticate this NTP server (The trusted key number to use)

Type: number

Range: 1-65535

Refernce Object: */axapi/v3/ntp/trusted-key*

prefer

Description Set this NTP server as preferred

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.67.6 ntp trusted-key

trusted key

trusted-key Specification

Type	*Collection*
Object Key(s)	*key*
Collection Name	*trusted-key-list*

alg

Description 'FTP': Spcify FTP ALG port range; 'TFTP': Spcify TFTP ALG port range; 'SIP': Spcify SIP ALG port range; 'DNS': Spcify DNS ALG port range;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

eq-dst

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

eq-src

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

gt-dst

Description Match only packets with a greater port number

Type: number

Range: 1-65534

gt-src

Description Match only packets with a greater port number

Type: number

Range: 1-65534

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

icmpv6

Description Internet Control Message Protocol version 6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code v6-any-code and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type v6-any-type and special-v6-type are mutually exclusive

lt-dst

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

lt-src

Description Match only packets with a lower port number

Type: number

Range: 2-65535

port-num-end-dst

Description Ending Destination Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Port Number

Type: number

Range: 1-65535

protocol-id

Description Protocol ID

Type: number

Range: 0-255

range-dst

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

range-src

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

seq-num

Description Sequence number

Type: number

Range: 1-8192

source

Description Source Port Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

special-v6-code

Description 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code v6-any-code and icmpv6-code are mutually exclusive

special-v6-type

Description 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type icmpv6-type and v6-any-type are mutually exclusive

tcp-udp

Description 'tcp': Protocol TCP; 'udp': Protocol UDP;

Type: string

Supported Values: tcp, udp

v6-any-code

Description Any ICMPv6 code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-code icmpv6-code and special-v6-code are mutually exclusive

v6-any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-type icmpv6-type and special-v6-type are mutually exclusive

Description 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type icmpv6-type and v6-any-type are mutually exclusive

tcp-udp

Description 'tcp': Protocol TCP; 'udp': Protocol UDP;

Type: string

Supported Values: tcp, udp

v6-any-code

Description Any ICMPv6 code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-code icmpv6-code and special-v6-code are mutually exclusive

v6-any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v6-any-type icmpv6-type and special-v6-type are mutually exclusive

2.70 overlay-mgmt-info

Objects:

2.70.1 overlay-mgmt-info

Overlay management specific data

overlay-mgmt-info Specification

Type	*Collection*
Object Key(s)	*plugin_name, appstring*
Collection Name	*overlay-mgmt-info-list*
Collection URI	/axapi/v3/overlay-mgmt-info
Element Name	overlay-mgmt-info
Element URI	/axapi/v3/overlay-mgmt-info/{plugin_name}+{appstring}
Element Attributes	overlay-mgmt-info_attributes
Schema	`overlay-mgmt-info schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-mgmt-info

overlay-mgmt-info attributes

```
POST /axapi/v3/overlay-mgmt-info/
Payload:
{
    "overlay-mgmt-info": {
        "appstring": "a",
        "plugin_name": "a"
    }
}
```

Create List

POST

/axapi/v3/overlay-mgmt-info

overlay-mgmt-info attributes

Get Object

GET

/axapi/v3/overlay-mgmt-info/{plugin_name}+{appstring}

overlay-mgmt-info attributes

```
GET /axapi/v3/overlay-mgmt-info/a+a
Reponse:
{
    "overlay-mgmt-info": {
        "plugin_name": "a",
        "appstring": "a",
        "uuid": "9b798910-60de-11d9-92b2-001fa00680a0",
        "a10-url": "/axapi/v3/overlay-mgmt-info/a+a"
    }
}
```

Get List

GET

/axapi/v3/overlay-mgmt-info

overlay-mgmt-info-list

Modify Object

POST

/axapi/v3/overlay-mgmt-info/{plugin_name}+{appstring}

overlay-mgmt-info attributes

Replace Object

PUT

/axapi/v3/overlay-mgmt-info/{plugin_name}+{appstring}

overlay-mgmt-info attributes

```
PUT /axapi/v3/overlay-mgmt-info/a+a
Payload:
{
    "overlay-mgmt-info": {
        "appstring": "a",
        "plugin_name": "a"
    }
}
```

Replace List

PUT

/axapi/v3/overlay-mgmt-info

overlay-mgmt-info-list

Delete Object

DELETE

/axapi/v3/overlay-mgmt-info/{plugin_name}+{appstring}

overlay-mgmt-info attributes

```
DELETE /axapi/v3/overlay-mgmt-info/a+a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

overlay-mgmt-info-list

overlay-mgmt-info-list is **JSON List** of *overlay-mgmt-info attributes*

overlay-mgmt-info-list : [

{ *overlay-mgmt-info attributes* },

{ *overlay-mgmt-info attributes* },

...

]

overlay-mgmt-info attributes

appstring

Description Application string

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

plugin_name

Description Plugin string

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71 overlay-tunnel

Objects:

2.71.1 overlay-tunnel

Configure a Tunnel end point

overlay-tunnel Specification

Type	*Intermediate Resource*
Element Name	overlay-tunnel
Element URI	/axapi/v3/overlay-tunnel
Element Attributes	overlay-tunnel_attributes
Schema	`overlay-tunnel schema`

Operations Allowed:

Get Object

GET

/axapi/v3/overlay-tunnel

overlay-tunnel_attributes

overlay-tunnel attributes

options

Description: options is a **JSON Block**. Please see below for *options*

Refernce Object: */axapi/v3/overlay-tunnel/options*

vtep-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}*

options

Specification	
Type	*object*

fragmentation-mode-inner

Description Enable the inner-fragmentation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-mac

Description MAC to be used with Gateway segment Id (MAC Address for the Gateway segment)

Type: string

Format: mac-address

ip-dscp-preserve

Description Copy DSCP bits from inner IP to outer IP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nvgre-disable-flow-id

Description Disable Flow-ID computation for NVGRE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nvgre-key-mode-lower24

Description Use the lower 24-bits of the GRE key as the VSID

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-mss-adjust-disable

Description Disable TCP MSS adjustment in SYN packet for tunnels

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vxlan-dest-port

Description VXLAN UDP Destination Port (UDP Port Number (default 4789))

Type: number

Range: 1-65535

vtep-list

Specification	
Type	*list*
Block object keys	

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: ip-encap, gre, nvgre, vxlan

Default: vxlan

host-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/host/{ip-addr}+{overlay-mac-addr}+{vni}+{remote-vtep}*

id

Description VTEP Identifier

Type: number

Range: 1-190

local-ip-address

Description: local-ip-address is a **JSON Block**. Please see below for *vtep-list_local-ip-address*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address*

local-ipv6-address

remote-ipv6-address-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_local-ipv6-address

Specification	
Type	*object*

ipv6-address

Description Source Tunnel End Point IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cfg_err_count': Config errors; 'flooded_pkt_count': Flooded packet count; 'encap_unresolved_count': Encap unresolved failures; 'unknown_encap_rx_pkt': Encap miss rx pkts; 'unknown_encap_tx_pkt': Encap miss tx pkts; 'arp_req_sent': Arp request sent; 'vtep_host_learned': Hosts learned; 'vtep_host_learn_error': Host learn error; 'invalid_lif_rx': Invalid Lif pkts in; 'invalid_lif_tx': Invalid Lif pkts out; 'unknown_vtep_tx': Vtep unknown tx; 'unknown_vtep_rx': Vtep Unkown rx; 'unhandled_pkt_rx': Unhandled packets in; 'unhandled_pkt_tx': Unhandled packets out; 'total_pkts_rx': Total packets out; 'total_bytes_rx': Total packet bytes in; 'unicast_pkt_rx': Total unicast packets in; 'bcast_pkt_rx': Total broadcast packets in; 'mcast_pkt_rx': Total multicast packets in; 'dropped_pkt_rx': Dropped received packets; 'encap_miss_pkts_rx': Encap missed in received packets; 'bad_chksum_pks_rx': Bad checksum in received packets; 'requeue_pkts_in': Requeued packets in; 'pkts_out': Packets out; 'total_bytes_tx': Packet bytes out; 'unicast_pkt_tx': Unicast packets out; 'bcast_pkt_tx': Broadcast packets out; 'mcast_pkt_tx': Multicast packets out; 'dropped_pkts_tx': Dropped packets out; 'large_pkts_rx': Too large packets in; 'dot1q_pkts_rx': Dot1q packets in; 'frag_pkts_tx': Frag packets out; 'reassembled_pkts_rx': Reassembled packets in; 'bad_inner_ipv4_len_rx': bad inner ipv4 packet len; 'bad_inner_ipv6_len_rx': Bad inner ipv6 packet len; 'lif_un_init_rx': Lif uninitialized packets in;

Type: string

Supported Values: all, cfg_err_count, flooded_pkt_count, encap_unresolved_count, unknown_encap_rx_pkt, unknown_encap_tx_pkt, arp_req_sent, vtep_host_learned, vtep_host_learn_error, invalid_lif_rx, invalid_lif_tx, unknown_vtep_tx, unknown_vtep_rx, unhandled_pkt_rx, unhandled_pkt_tx, total_pkts_rx, total_bytes_rx, unicast_pkt_rx, bcast_pkt_rx, mcast_pkt_rx, dropped_pkt_rx, encap_miss_pkts_rx, bad_chksum_pks_rx, requeue_pkts_in, pkts_out, total_bytes_tx, unicast_pkt_tx, bcast_pkt_tx, mcast_pkt_tx, dropped_pkts_tx, large_pkts_rx, dot1q_pkts_rx, frag_pkts_tx, reassembled_pkts_rx, bad_inner_ipv4_len_rx, bad_inner_ipv6_len_rx, frag_drop_pkts_tx, lif_un_init_rx

vtep-list_remote-ipv6-address-list

Specification	
Type	*list*
Block object keys	

ipv6-address

Description IPv6 Address of the remote VTEP

Type: string

Format: ipv6-address

use-lif

Description: use-lif is a **JSON Block**. Please see below for *vtep-list_remote-ipv6-address-list_use-lif*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_remote-ipv6-address-list_use-lif

Specification	
Type	*object*

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_remote-ip-address-list

Specification	
Type	*list*
Block object keys	

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: nvgre, vxlan

gre-keepalive

Description: gre-keepalive is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_gre-keepalive*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive*

ip-address

Description IP Address of the remote VTEP

Type: string

Format: ipv4-address

use-gre-key

Description: use-gre-key is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_use-gre-key*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key*

use-lif

Description: use-lif is a **JSON Block**. Please see below for *vtep-list_remote-ip-address-list_use-lif*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Specification	
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-list_host-list

Specification	
Type	*list*
Block object keys	

ip-addr

Description IPv4 address of the overlay host

Type: string

Format: ipv4-address

overlay-mac-addr

Description MAC Address of the overlay host

Type: string

Format: mac-address

remote-vtep

Description Configure the VTEP IP address (IPv4 address of the VTEP for the remote host)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni

Description Configure the segment id (VNI of the remote host)

Type: number

Range: 1-16777215

packets in; 'dot1q_pkts_rx': Dot1q packets in; 'frag_pkts_tx': Frag packets out; 'reassembled_pkts_rx': Reassembled packets in; 'bad_inner_ipv4_len_rx': bad inner ipv4 packet len; 'bad_inner_ipv6_len_rx': Bad inner ipv6 packet len; 'frag_drop_pkts_tx': Frag dropped packets out; 'lif_un_init_rx': Lif uninitialized packets in;

Type: string

Supported Values: all, cfg_err_count, flooded_pkt_count, encap_unresolved_count, unknown_encap_rx_pkt, unknown_encap_tx_pkt, arp_req_sent, vtep_host_learned, vtep_host_learn_error, invalid_lif_rx, invalid_lif_tx, unknown_vtep_tx, unknown_vtep_rx, unhandled_pkt_rx, unhandled_pkt_tx, total_pkts_rx, total_bytes_rx, unicast_pkt_rx, bcast_pkt_rx, mcast_pkt_rx, dropped_pkt_rx, encap_miss_pkts_rx, bad_chksum_pks_rx, requeue_pkts_in, pkts_out, total_bytes_tx, unicast_pkt_tx, bcast_pkt_tx, mcast_pkt_tx, dropped_pkts_tx, large_pkts_rx, dot1q_pkts_rx, frag_pkts_tx, reassembled_pkts_rx, bad_inner_ipv4_len_rx, bad_inner_ipv6_len_rx, frag_drop_pkts_tx, lif_un_init_rx

remote-ipv6-address-list

Specification	
Type	*list*
Block object keys	

ipv6-address

Description IPv6 Address of the remote VTEP

Type: string

Format: ipv6-address

use-lif

Description: use-lif is a **JSON Block**. Please see below for *remote-ipv6-address-list_use-lif*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ipv6-address-list_use-lif

Specification	
Type	*object*

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list

Specification	
Type	*list*
Block object keys	

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: nvgre, vxlan

gre-keepalive

Description: gre-keepalive is a **JSON Block**. Please see below for *remote-ip-address-list_gre-keepalive*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive*

ip-address

Description IP Address of the remote VTEP

Type: string

Format: ipv4-address

use-gre-key

Description: use-gre-key is a **JSON Block**. Please see below for *remote-ip-address-list_use-gre-key*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key*

use-lif

Description: use-lif is a **JSON Block**. Please see below for *remote-ip-address-list_use-lif*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}*

remote-ip-address-list_gre-keepalive

Specification	
Type	*object*

retry-count

Description Keepalive multiplier

Type: number

Range: 2-100

retry-time

Description Keepalive retry interval in seconds

Type: number

Range: 1-60

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_use-lif

Specification	
Type	*object*

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_vni-list

Specification	
Type	*list*
Block object keys	

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote-ip-address-list_use-gre-key

Specification	
Type	*object*

gre-key

Description key

Type: number

Range: 0-4294967295

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-ip-address

Specification	
Type	*object*

ip-address

Description Source Tunnel End Point IPv4 address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address/vni/{segment}*

local-ip-address_vni-list

Specification	
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host-list

Specification	
Type	*list*
Block object keys	

ip-addr

Description IPv4 address of the overlay host

Type: string

Format: ipv4-address

overlay-mac-addr

Description MAC Address of the overlay host

Type: string

Format: mac-address

remote-vtep

Description Configure the VTEP IP address (IPv4 address of the VTEP for the remote host)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni

Description Configure the segment id (VNI of the remote host)

Type: number

Range: 1-16777215

stats data

	Counter	Size	Description
	mcast_pkt_tx	4	Multicast packets out
	total_bytes_rx	4	Total packet bytes in
	dropped_pkt_rx	4	Dropped received packets
	pkts_out	4	Packets out
	unhandled_pkt_rx	4	Unhandled packets in
	unknown_encap_tx_pkt	4	Encap miss tx pkts
	reassembled_pkts_rx	4	Reassembled packets in
	frag_drop_pkts_tx	4	Frag dropped packets out
	frag_pkts_tx	4	Frag packets out
	dropped_pkts_tx	4	Dropped packets out
	total_bytes_tx	4	Packet bytes out
	large_pkts_rx	4	Too large packets in
	invalid_lif_tx	4	Invalid Lif pkts out
	encap_miss_pkts_rx	4	Encap missed in received packets
	unicast_pkt_rx	4	Total unicast packets in
	dot1q_pkts_rx	4	Dot1q packets in
	vtep_host_learned	4	Hosts learned
	unhandled_pkt_tx	4	Unhandled packets out
	unknown_vtep_rx	4	Vtep Unkown rx
	invalid_lif_rx	4	Invalid Lif pkts in
	unknown_encap_rx_pkt	4	Encap miss rx pkts
	bad_chksum_pkts_rx	4	Bad checksum in received packets
	encap_unresolved_count	4	Encap unresolved failures
	bad_inner_ipv6_len_rx	4	Bad inner ipv6 packet len
	cfg_err_count	4	Config errors
	unknown_vtep_tx	4	Vtep unknown tx
	flooded_pkt_count	4	Flooded packet count
	total_pkts_rx	4	Total packets out
	vtep_host_learn_error	4	Host learn error

continues on next page

Table 2.25 – continued from previous page

	Counter	Size	Description
	re-queue_pkts_in	4	Requeued packets in
	lif_un_init_rx	4	Lif uninitialized packets in
	mcast_pkt_rx	4	Total multicast packets in
	bcast_pkt_tx	4	Broadcast packets out
	bcast_pkt_rx	4	Total broadcast packets in
	uni-cast_pkt_tx	4	Unicast packets out
	bad_inner_ipv4_4len_rx		bad inner ipv4 packet len
	arp_req_sent	4	Arp request sent

2.71.4 overlay-tunnel vtep destination-ip-address

Configure remote tunnel end point parameters

destination-ip-address Specification

Type	*Collection*
Object Key(s)	*ip-address*
Collection Name	*destination-ip-address-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address
Element Name	destination-ip-address
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}
Element Attributes	destination-ip-address_attributes
Schema	`destination-ip-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address

destination-ip-address attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address

destination-ip-address attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}

destination-ip-address attributes

Get List

GET

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address

destination-ip-address-list

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}

destination-ip-address attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}

destination-ip-address attributes

Replace List

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address

destination-ip-address-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}

destination-ip-address attributes

destination-ip-address-list

destination-ip-address-list is **JSON List** of *destination-ip-address attributes*

destination-ip-address-list : [

{ *destination-ip-address attributes* },

{ *destination-ip-address attributes* },

...

]

destination-ip-address attributes

encap

Description 'nvgre': Tunnel Encapsulation Type is NVGRE; 'vxlan': Tunnel Encapsulation Type is VXLAN;

Type: string

Supported Values: nvgre, vxlan

ip-address

Description IP Address of the remote VTEP

Type: string

Format: ipv4-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}*

vni-list

Specification	
Type	*list*
Block object keys	

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.5 overlay-tunnel vtep destination-ip-address vni

Virtual Segment Id configured on the remote VTEP

vni Specification

Type	*Collection*
Object Key(s)	*segment*
Collection Name	*vni-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni
Element Name	vni
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}
Element Attributes	vni_attributes
Schema	`vni schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni

vni attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni

vni attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}

vni attributes

Get List

GET

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni

vni-list

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}

vni attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}

vni attributes

Replace List

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni

vni-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/destination-ip-address/{ip-address}/vni/{segment}

vni attributes

vni-list

vni-list is **JSON List** of *vni attributes*

vni-list : [

{ *vni attributes* },

{ *vni attributes* },

...

]

vni attributes

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.6 overlay-tunnel vtep host

IP Address of the local tunnel end point

host Specification

Type	*Collection*
Object Key(s)	*ip-addr, overlay-mac-addr, vni, remote-vtep*
Collection Name	*host-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/host
Element Name	host
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/host/{ip-addr}+{overlay-mac-addr}+{vni}+{remote-vtep}
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/host

host attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/host

host attributes

Get Object

host-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/host/{ip-addr}+{overlay-mac-addr}+{vni}+{remote-vtep}

host attributes

host-list

host-list is **JSON List** of *host attributes*

host-list : [

{ *host attributes* },

{ *host attributes* },

...

]

host attributes

ip-addr

Description IPv4 address of the overlay host

Type: string

Format: ipv4-address

overlay-mac-addr

Description MAC Address of the overlay host

Type: string

Format: mac-address

remote-vtep

Description Configure the VTEP IP address (IPv4 address of the VTEP for the remote host)

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni

Description Configure the segment id (VNI of the remote host)

Type: number

Range: 1-16777215

2.71.7 overlay-tunnel vtep local-ip-address

IP Address of the local tunnel end point

local-ip-address Specification

Type	*Configuration Resource*
Element Name	local-ip-address
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/local-ip-address
Element Attributes	local-ip-address_attributes
Schema	`local-ip-address schema`

Operations Allowed:

Create Object

POST

vni-list

Specification	
Type	*list*
Block object keys	

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

use-gre-key

Specification	
Type	*object*

gre-key

Description key

Type: number

Range: 0-4294967295

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.11 overlay-tunnel vtep remote-ip-address gre-keepalive

Specify the gre keepalive

gre-keepalive Specification

Type	*Configuration Resource*
Element Name	gre-keepalive
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive
Element Attributes	gre-keepalive_attributes
Schema	`gre-keepalive schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive

gre-keepalive attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive

gre-keepalive attributes

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive

gre-keepalive attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive

gre-keepalive attributes

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/gre-keepalive

gre-keepalive attributes

gre-keepalive attributes

retry-count

Description Keepalive multiplier

Type: number

Range: 2-100

retry-time

Description Keepalive retry interval in seconds

Type: number

Range: 1-60

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.12 overlay-tunnel vtep remote-ip-address use-gre-key

Specify the gre key

use-gre-key Specification

Type	*Configuration Resource*
Element Name	use-gre-key
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key
Element Attributes	use-gre-key_attributes
Schema	`use-gre-key schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key

use-gre-key attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key

use-gre-key attributes

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key

use-gre-key attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key

use-gre-key attributes

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-gre-key

use-gre-key attributes

use-gre-key attributes

gre-key

Description key

Type: number

Range: 0-4294967295

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.13 overlay-tunnel vtep remote-ip-address use-lif

Specify the interface lif

use-lif Specification

Type	*Configuration Resource*
Element Name	use-lif
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif
Element Attributes	use-lif_attributes
Schema	`use-lif schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif

use-lif attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif

use-lif attributes

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif

use-lif attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif

use-lif attributes

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/use-lif

use-lif attributes

use-lif attributes

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.14 overlay-tunnel vtep remote-ip-address vni

Virtual Segment Id configured on the remote VTEP

vni Specification

Type	*Collection*
Object Key(s)	*segment*
Collection Name	*vni-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni
Element Name	vni
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}
Element Attributes	vni_attributes
Schema	`vni schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni

vni attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni

vni attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}

vni attributes

Get List

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni

vni-list

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}

vni attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}

vni attributes

Replace List

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni

vni-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ip-address/{ip-address}/vni/{segment}

vni attributes

vni-list

vni-list is **JSON List** of *vni attributes*

vni-list : [

{ *vni attributes* },

{ *vni attributes* },

...

]

vni attributes

segment

Description VNI configured for the remote VTEP

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.15 overlay-tunnel vtep remote-ipv6-address

Configure remote tunnel end point parameters

remote-ipv6-address Specification

Type	*Collection*
Object Key(s)	*ipv6-address*
Collection Name	*remote-ipv6-address-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address
Element Name	remote-ipv6-address
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}
Element Attributes	remote-ipv6-address_attributes
Schema	`remote-ipv6-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address

remote-ipv6-address attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address

remote-ipv6-address attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}

remote-ipv6-address attributes

Get List

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address

remote-ipv6-address-list

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}

remote-ipv6-address attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}

remote-ipv6-address attributes

Replace List

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address

remote-ipv6-address-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}

remote-ipv6-address attributes

remote-ipv6-address-list

remote-ipv6-address-list is **JSON List** of *remote-ipv6-address attributes*

remote-ipv6-address-list : [

{ *remote-ipv6-address attributes* },

{ *remote-ipv6-address attributes* },

...

]

remote-ipv6-address attributes

ipv6-address

Description IPv6 Address of the remote VTEP

Type: string

Format: ipv6-address

use-lif

Description: use-lif is a **JSON Block**. Please see below for *use-lif*

Type: Object

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

use-lif

Specification	
Type	*object*

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.16 overlay-tunnel vtep remote-ipv6-address use-lif

Specify the interface lif

use-lif Specification

Type	*Configuration Resource*
Element Name	use-lif
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif
Element Attributes	use-lif_attributes
Schema	`use-lif schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif

use-lif attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif

use-lif attributes

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif

use-lif attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif

use-lif attributes

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/remote-ipv6-address/{ipv6-address}/use-lif

use-lif attributes

use-lif attributes

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface name)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.17 overlay-tunnel vtep source-ip-address

IP Address of the local tunnel end point

source-ip-address Specification

Type	*Configuration Resource*
Element Name	source-ip-address
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address
Element Attributes	source-ip-address_attributes
Schema	`source-ip-address schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address

source-ip-address attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address

source-ip-address attributes

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address

source-ip-address attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address

source-ip-address attributes

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address

source-ip-address attributes

source-ip-address attributes

ip-address

Description Source Tunnel End Point IPv4 address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vni-list

Type: List

Refernce Object: */axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}*

vni-list

Specification	
Type	*list*
Block object keys	

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface number)

Type: number

Range: 1-128

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.71.18 overlay-tunnel vtep source-ip-address vni

IP Address of the local tunnel end point

vni Specification

Type	*Collection*
Object Key(s)	*segment*
Collection Name	*vni-list*
Collection URI	/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni
Element Name	vni
Element URI	/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}
Element Attributes	vni_attributes
Schema	`vni schema`

Operations Allowed:

Create Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni

vni attributes

Create List

POST

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni

vni attributes

Get Object

GET

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}

vni attributes

Get List

GET

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni

vni-list

Modify Object

POST

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}

vni attributes

Replace Object

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}

vni attributes

Replace List

PUT

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni

vni-list

Delete Object

DELETE

/axapi/v3/overlay-tunnel/vtep/{id}/source-ip-address/vni/{segment}

vni attributes

vni-list

vni-list is **JSON List** of *vni attributes*

vni-list : [

{ *vni attributes* },

{ *vni attributes* },

...

]

vni attributes

gateway

Description This is a Gateway segment id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface binding the Provider Partition to the User Partition (logical interface number)

Type: number

Range: 1-128

partition

Description Name of the Partition with the L2 segment being extended (Name of the User Partition with the L2 segment being extended)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

segment

Description Id of the segment that is being extended

Type: number

Range: 1-16777215

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.72 partition

Objects:

2.72.1 partition

Create/unload a Network partition

partition Specification

Type	*Collection*
Object Key(s)	*partition-name*
Collection Name	*partition-list*
Collection URI	/axapi/v3/partition
Element Name	partition
Element URI	/axapi/v3/partition/{partition-name}
Element Attributes	partition_attributes
Statistics Data URI	/axapi/v3/partition/{partition-name}/stats
Schema	`partition schema`

Operations Allowed:

Create Object

POST

/axapi/v3/partition

partition attributes

```
POST /axapi/v3/partition/
Payload:
{
    "partition": {
        "partition-name": "a",
        "id": 1
    }
}
```

Create List

POST

/axapi/v3/partition

partition attributes

Get Object

GET

/axapi/v3/partition/{partition-name}

partition attributes

```
GET /axapi/v3/partition/a
Reponse:
{
    "partition": {
        "partition-name": "a",
        "id": 1,
        "uuid": "a4d8e3ee-5bf1-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/partition/a"
    }
}
```

Get List

GET

/axapi/v3/partition

partition-list

Modify Object

POST

/axapi/v3/partition/{partition-name}

partition attributes

Delete Object

DELETE

/axapi/v3/partition/{partition-name}

partition attributes

```
DELETE /axapi/v3/partition/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

partition-list

partition-list is **JSON List** of *partition attributes*

partition-list : [

{ *partition attributes* },

{ *partition attributes* },

...

]

partition attributes

application-type

Description 'adc': Application type ADC; 'cgnv6': Application type CGNv6;

Type: string

Supported Values: adc, cgnv6

id

Description Specify unique Partition id

Type: number

partition-name

Description Object partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

shared-vlan

Description: shared-vlan is a **JSON Block**. Please see below for *shared-vlan*

Type: Object

Refernce Object: */axapi/v3/partition/{partition-name}/shared-vlan*

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

Refernce Object: */axapi/v3/partition/{partition-name}/template*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shared-vlan

Specification	
Type	*object*

allowable-ip-range

Type: List

allowable-ipv6-range

Type: List

mgmt-floating-ip-address

Description IPv4 Address for Shared VLAN Mgmt IP Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description

Type: number

Range: 2-4094

vrid

Description Specify VRRP-A vrid

Type: number

Range: 0-31

template

Specification	
Type	*object*

resource-accounting

Description Attach a resource accounting template (Name of the template)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.72.2 partition shared-vlan

Enable shared-vlan feature in Network partition

shared-vlan Specification

Type	*Configuration Resource*
Element Name	shared-vlan
Element URI	/axapi/v3/partition/{partition-name}/shared-vlan
Element Attributes	shared-vlan_attributes
Schema	`shared-vlan schema`

Operations Allowed:

Create Object

POST

/axapi/v3/partition/{partition-name}/shared-vlan

shared-vlan attributes

Get Object

GET

/axapi/v3/partition/{partition-name}/shared-vlan

shared-vlan attributes

Replace Object

PUT

/axapi/v3/partition/{partition-name}/template

template attributes

Delete Object

DELETE

/axapi/v3/partition/{partition-name}/template

template attributes

template attributes

resource-accounting

Description Attach a resource accounting template (Name of the template)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.73 partition-group

Objects:

2.73.1 partition-group

Modify a partition group

partition-group Specification

Type	*Collection*
Object Key(s)	*partition-group-name*
Collection Name	*partition-group-list*
Collection URI	/axapi/v3/partition-group
Element Name	partition-group
Element URI	/axapi/v3/partition-group/{partition-group-name}
Element Attributes	partition-group_attributes
Schema	`partition-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/partition-group

partition-group attributes

```
POST /axapi/v3/partition-group/
Payload:
{
    "partition-group": {
        "partition-group-name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/partition-group

partition-group attributes

Get Object

GET

/axapi/v3/partition-group/{partition-group-name}

partition-group attributes

```
GET /axapi/v3/partition-group/a
Reponse:

Refernce Object: */axapi/v3/pki/delete*

delete-oper

Description: delete-oper is a **JSON Block**. Please see below for *delete-oper*

Type: Object

Refernce Object: /axapi/v3/pki/delete-oper

placeholder

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scep-cert-list

Type: List

Refernce Object: */axapi/v3/pki/scep-cert/{name}*

ssli

Description: ssli is a **JSON Block**. Please see below for *ssli*

Type: Object

Refernce Object: */axapi/v3/pki/ssli*

ssli

Specification	
Type	*object*

generate

Description: generate is a **JSON Block**. Please see below for *ssli_generate*

Type: Object

Refernce Object: */axapi/v3/pki/ssli/generate*

revoke

Description: revoke is a **JSON Block**. Please see below for *ssli_revoke*

Type: Object

Refernce Object: */axapi/v3/pki/ssli/revoke*

ssli_revoke

Specification	
Type	*object*

port

Description port number

Type: number

Range: 0-65534

serial

Description Serial number in hex

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ssli_generate

Specification	
Type	*object*

crl

Description: crl is a **JSON Block**. Please see below for *ssli_generate_crl*

Type: Object

Refernce Object: */axapi/v3/pki/ssli/generate/crl*

ssli_generate_crl

Specification	
Type	*object*

port

Description port number

Type: number

Range: 0-65534

vip-name

Description VIP name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

cert-stats

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cmp-cert-list

Specification	
Type	*list*
Block object keys	

allow-unprotected-errors

Description Accept missing or invalid protection of negative responses(CA likes EJCBA tends to not protect negative responses)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cmp-trusted-ca

Description The specific CA to trust while verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

cmp-trusted-cert

Description The specific CMP server certificate to use and directly trust when verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of CMP commands(default 1 and detailed 2)

Type: number

Range: 1-2

Default: 1

max-polltime

Description Maximum time in seconds a(n) enrollment/key update may take (default 120)

Type: number

Range: 5-1024

Default: 120

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

recipient-dn

Description Distinguished Name of the CMP message recipient, i.e., the CMP server (usually a CA or RA entity)) (DN OIDis case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

secret

Description Specify the pre-shared secret used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description pre-shared secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *cmp-cert-list_subject-alternate-name*

Type: Object

subject-dn

Description Distinguished Name to use while enrolling the certificate(For EJBCA CA, this is the subject DN of an End Entity) (DN OID is case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

url

Description CMP server's absolute URL(http(s)://host:[port]/path), path is the location to use for the CMP server(aka CMP alias)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cmp-cert-list_subject-alternate-name

Specification	
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

copy-key

Specification	
Type	*object*

dest-key

Description Destination key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP generated key file

Type: number

Range: 1-4

src-key

Description Source key file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

copy-cert

Specification	
Type	*object*

dest-cert

Description Destination certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

overwrite

Description Overwrite the destination file if already present

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotation

Description Specify rotation number of SCEP generated certificate file

Type: number

Range: 1-4

src-cert

Description Source certificate file

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cert

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

delete-oper

Specification	
Type	*object*

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

acme-cert-list

Specification	
Type	*list*
Block object keys	

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

domain

Description Main domain you want to issue the cert for. CA will verify whether you control this domain

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

email

Description A valid email address for your ACME account. CA uses this email to send you expiration or other notices

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment with CA. Due to CA rate limit, A10 strongly recommend you set "run-with-staging-server" during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force

Description Ignore the next renewal time and force to renew cert

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of ACME commands(default 1 and detailed 2, including debug messages)

Type: number

Range: 1-2

Default: 1

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '2048': Key size 2048 bits(default); '3072': Key size 3072 bits; '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 2048, 3072, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

san-domain

Description Subject-alternate-name dns(s) for your cert, sperated by /

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

staging

Description Run ACME operation with staging server. Due to CA rate limit, A10 strongly recommends you set this during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staging-url

Description ACME staging directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

url

Description ACME directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify ha VRRP-A vrid. It is used to sync http-01 challenge token

Type: number

Range: 0-31

create-oper

Specification	
Type	*object*

bits

Description '1024': 1024; '2048': 2048; '4096': 4096;

Type: string

Supported Values: 256, 384, 1024, 2048, 4096

Default: 1024

cert-type

Description 'rsa': rsa; 'ecdsa': ecdsa;

Type: string

Supported Values: rsa, ecdsa

Default: rsa

common-name

Description

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

country

Description

Type: string

Maximum Length: 3 characters

Maximum Length: 2 characters

csr-generate

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

digest

Description 'sha1': sha1; 'sha256': sha256; 'sha384': sha384; 'sha512': sha512;

Type: string

Supported Values: sha1, sha256, sha384, sha512

Default: sha1

division

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

email

Description

Type: string

Format: email-addr

Maximum Length: 64 characters

Maximum Length: 1 characters

filename

Description

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

locality

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

organization

Description

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rootca

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secured

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

state-province

Description

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

v3-request

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

valid-days

Description

Type: number

Range: 30-3650

Default: 730

scep-cert-list

Specification	
Type	*list*
Block object keys	

days

Description Validity of self-signed certificate (default 1825)

Type: number

Range: 1-3650

Default: 1825

dn

Description Specify the Distinguished-Name to use while enrolling the certificate (Format: "cn=user, dc=example, dc=com")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

end-date

Description End date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Interval time in seconds to poll when SCEP response is PENDING (default 5)

Type: number

Range: 1-3600

Default: 5

key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

log-level

Description level for logging output of scepclient commands(default 1 and detailed 4)

Type: number

Range: 1-4

Default: 1

max-polltime

Description Maximum time in seconds to poll when SCEP response is PENDING (default 180)

Type: number

Range: 15-432000

Default: 180

method

Description 'GET': GET request; 'POST': POST request;

Type: string

Supported Values: GET, POST

Default: GET

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify the password used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry;

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months;

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

start-date

Description Start date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *scep-cert-list_subject-alternate-name*

Type: Object

url

Description Specify the Enrollment Agent's absolute URL (Format: http://host/path)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scep-cert-list_subject-alternate-name

Specification	
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

delete

Specification	
Type	*object*

ca

Description CA certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

cert-name

Description Certificate file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

crl

Description CRL file name

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

csr

Description CSR file name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

private-key

Description Private key file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

2.74.2 pki acme-cert

ACME Certificate enrollment object

acme-cert Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*acme-cert-list*
Collection URI	/axapi/v3/pki/acme-cert

acme-cert attributes

acme-cert-list

acme-cert-list is **JSON List** of *acme-cert attributes*

acme-cert-list : [

{ *acme-cert attributes* },

{ *acme-cert attributes* },

...

]

acme-cert attributes

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

domain

Description Main domain you want to issue the cert for. CA will verify whether you control this domain

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

email

Description A valid email address for your ACME account. CA uses this email to send you expiration or other notices

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment with CA. Due to CA rate limit, A10 strongly recommend you set "run-with-staging-server" during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force

Description Ignore the next renewal time and force to renew cert

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of ACME commands(default 1 and detailed 2, including debug messages)

Type: number

Range: 1-2

Default: 1

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '2048': Key size 2048 bits(default); '3072': Key size 3072 bits; '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 2048, 3072, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

san-domain

Description Subject-alternate-name dns(s) for your cert, sperated by /

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

staging

Description Run ACME operation with staging server. Due to CA rate limit, A10 strongly recommends you set this during test

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

staging-url

Description ACME staging directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

url

Description ACME directory URL. By default, use Let's encrypt as CA server

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify ha VRRP-A vrid. It is used to sync http-01 challenge token

Type: number

Range: 0-31

2.74.3 pki cmp-cert

CMP Certificate enrollment object

cmp-cert Specification

cmp-cert attributes

cmp-cert-list

cmp-cert-list is **JSON List** of *cmp-cert attributes*

cmp-cert-list : [

{ *cmp-cert attributes* },

{ *cmp-cert attributes* },

...

]

cmp-cert attributes

allow-unprotected-errors

Description Accept missing or invalid protection of negative responses(CA likes EJCBA tends to not protect negative responses)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-type

Description Specify the type of certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cmp-trusted-ca

Description The specific CA to trust while verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

cmp-trusted-cert

Description The specific CMP server certificate to use and directly trust when verifying signature of CMP response message

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ec-key-length

Description '256': Key size 256 bits; '384': Key size 384 bits(default);

Type: string

Supported Values: 256, 384

Default: 384

ecdsa-type

Description ECDSA certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ecdsa-type and rsa-type are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description Level for logging output of CMP commands(default 1 and detailed 2)

Type: number

Range: 1-2

Default: 1

max-polltime

Description Maximum time in seconds a(n) enrollment/key update may take (default 120)

Type: number

Range: 5-1024

Default: 120

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

recipient-dn

Description Distinguished Name of the CMP message recipient, i.e., the CMP server (usually a CA or RA entity)) (DN OIDis case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

rsa-key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

rsa-type

Description RSA certificate (default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rsa-type and ecdsa-type are mutually exclusive

secret

Description Specify the pre-shared secret used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description pre-shared secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *subject-alternate-name*

Type: Object

subject-dn

Description Distinguished Name to use while enrolling the certificate(For EJBCA CA, this is the subject DN of an End Entity) (DN OID is case sensitive)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 2 characters

url

Description CMP server's absolute URL(http(s)://host:[port]/path), path is the location to use for the CMP server(aka CMP alias)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

subject-alternate-name

Specification	
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.74.4 pki scep-cert

SCEP Certificate enrollment object

scep-cert Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*scep-cert-list*
Collection URI	/axapi/v3/pki/scep-cert
Element Name	scep-cert

        "status": "OK"
    }
}
```

scep-cert-list

scep-cert-list is **JSON List** of *scep-cert attributes*

scep-cert-list : [

{ *scep-cert attributes* },

{ *scep-cert attributes* },

...

]

scep-cert attributes

days

Description Validity of self-signed certificate (default 1825)

Type: number

Range: 1-3650

Default: 1825

dn

Description Specify the Distinguished-Name to use while enrolling the certificate (Format: "cn=user, dc=example, dc=com")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

end-date

Description End date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

enroll

Description Initiates enrollment of device with the CA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Interval time in seconds to poll when SCEP response is PENDING (default 5)

Type: number

Range: 1-3600

Default: 5

key-length

Description '1024': Key size 1024 bits; '2048': Key size 2048 bits(default); '4096': Key size 4096 bits; '8192': Key size 8192 bits;

Type: string

Supported Values: 1024, 2048, 4096, 8192

Default: 2048

log-level

Description level for logging output of scepclient commands(default 1 and detailed 4)

Type: number

Range: 1-4

Default: 1

max-polltime

Description Maximum time in seconds to poll when SCEP response is PENDING (default 180)

Type: number

Range: 15-432000

Default: 180

method

Description 'GET': GET request; 'POST': POST request;

Type: string

Supported Values: GET, POST

Default: GET

minute

Description Periodic interval in minutes

Type: number

Range: 2-255

Mutual Exclusion: minute and renew-every-type are mutually exclusive

name

Description Specify Certificate name to be enrolled

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify the password used to enroll the device's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renew-before

Description Specify interval before certificate expiry to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-before and renew-every are mutually exclusive

renew-before-type

Description 'hour': Number of hours before cert expiry; 'day': Number of days before cert expiry; 'week': Number of weeks before cert expiry; 'month': Number of months before cert expiry(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

renew-before-value

Description Value of renewal period

Type: number

Range: 1-255

renew-every

Description Specify periodic interval in which to renew the certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: renew-every and renew-before are mutually exclusive

renew-every-type

Description 'hour': Periodic interval in hours; 'day': Periodic interval in days; 'week': Periodic interval in weeks; 'month': Periodic interval in months(1 month=30 days);

Type: string

Supported Values: hour, day, week, month

Mutual Exclusion: renew-every-type and minute are mutually exclusive

renew-every-value

Description Value of renewal period

Type: number

Range: 1-255

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

start-date

Description Start date of self-signed certificate in YYMMDDHHMMSS format specified in UTC time

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

subject-alternate-name

Description: subject-alternate-name is a **JSON Block**. Please see below for *subject-alternate-name*

Type: Object

url

Description Specify the Enrollment Agent's absolute URL (Format: http://host/path)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

subject-alternate-name

Specification	
Type	*object*

san-type

Description 'email': Enter e-mail address of the subject; 'dns': Enter hostname of the subject; 'ip': Enter IP address of the subject;

Type: string

Supported Values: email, dns, ip

san-value

Description Value of subject-alternate-name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

2.74.5 pki ssli

SSLi Specific Commands

ssli Specification

Type	*Intermediate Resource*
Element Name	ssli
Element URI	/axapi/v3/pki/ssli
Element Attributes	ssli_attributes
Schema	`ssli schema`

Operations Allowed:

Get Object

    }
}
```

radius-server attributes

default-privilege-read-write

Description Specify the RADIUS default privilege

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

Refernce Object: */axapi/v3/radius-server/host*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

ipv4-list

Type: List

Refernce Object: */axapi/v3/radius-server/host/ipv4/{ipv4-addr}*

ipv6-list

Type: List

Refernce Object: */axapi/v3/radius-server/host/ipv6/{ipv6-addr}*

name-list

Type: List

Refernce Object: */axapi/v3/radius-server/host/name/{hostname}*

host_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-addr

Description IPV4 address of RADIUS server

Type: string

Format: ipv4-address

secret

Description: secret is a **JSON Block**. Please see below for *host_ipv4-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv4-list_secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv4-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_ipv4-list_secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

host_name-list

Specification	
Type	*list*
Block object keys	

hostname

Description Hostname of RADIUS server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret

Description: secret is a **JSON Block**. Please see below for *host_name-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_name-list_secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_name-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_name-list_secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

host_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of RADIUS server

Type: string

Format: ipv6-address

secret

Description: secret is a **JSON Block**. Please see below for *host_ipv6-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host_ipv6-list_secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *host_ipv6-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

host_ipv6-list_secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

2.75.2 radius-server host

Specify the RADIUS server's hostname or IP address

host Specification

Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/radius-server/host
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/radius-server/host

host_attributes

```
GET /axapi/v3/radius-server/host
Reponse:

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

name-list

Specification	
Type	*list*
Block object keys	

hostname

Description Hostname of RADIUS server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret

Description: secret is a **JSON Block**. Please see below for *name-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

name-list_secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *name-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

name-list_secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-addr

Description IPV6 address of RADIUS server

Type: string

Format: ipv6-address

secret

Description: secret is a **JSON Block**. Please see below for *ipv6-list_secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-list_secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *ipv6-list_secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-list_secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

2.75.3 radius-server host ipv4

Specify the hostname of RADIUS server

ipv4 Specification

Type	*Collection*
Object Key(s)	*ipv4-addr*
Collection Name	*ipv4-list*
Collection URI	/axapi/v3/radius-server/host/ipv4
Element Name	ipv4
Element URI	/axapi/v3/radius-server/host/ipv4/{ipv4-addr}
Element Attributes	ipv4_attributes
Schema	`ipv4 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/radius-server/host/ipv4

ipv4 attributes

```
POST /axapi/v3/radius-server/host/ipv4/
Payload:
{
    "ipv4": {
        "ipv4-addr": "3.3.3.3",
        "secret": {
            "secret-value": "a",
            "port-cfg": {
                "auth-port": 1
            }
        }
    }
}
```

Create List

POST

/axapi/v3/radius-server/host/ipv4

ipv4 attributes

Get Object

GET

/axapi/v3/radius-server/host/ipv4/{ipv4-addr}

ipv4 attributes

```
GET /axapi/v3/radius-server/host/ipv4/3.3.3.3
Reponse:
{
    "ipv4": {
        "ipv4-addr": "3.3.3.3",
        "secret": {
            "encrypted": "XXXXX",
            "port-cfg": {
                "auth-port": 1,
                "retransmit": 3,
                "timeout": 3
            }
        },
        "uuid": "4f62f050-600e-11d9-9363-001fa00680a0",

DELETE

/axapi/v3/radius-server/host/ipv4/{ipv4-addr}

ipv4 attributes

```
DELETE /axapi/v3/radius-server/host/ipv4/3.3.3.3
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ipv4-list

ipv4-list is **JSON List** of *ipv4 attributes*

ipv4-list : [

{ *ipv4 attributes* },

{ *ipv4 attributes* },

...

]

ipv4 attributes

ipv4-addr

Description IPV4 address of RADIUS server

Type: string

Format: ipv4-address

secret

Description: secret is a **JSON Block**. Please see below for *secret*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secret

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

port-cfg

Description: port-cfg is a **JSON Block**. Please see below for *secret_port-cfg*

Type: Object

secret-value

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

secret_port-cfg

Specification	
Type	*object*

acct-port

Description Specify the RADIUS server's accounting port (default 1813)

Type: number

Range: 1-65535

auth-port

Description Specify the RADIUS server's authentication port (default 1812)

Type: number

Range: 1-65535

retransmit

Description Specify the maximum times allowed for resending an request to the radius server (default 3)

Type: number

Range: 0-5

Default: 3

timeout

Description Specify the maximum time allowed for waiting for a response from a radius server (default 3)

Type: number

Range: 1-15

Default: 3

2.75.4 radius-server host ipv6

Specify the hostname of RADIUS server

ipv6 Specification

Type	*Collection*
Object Key(s)	*ipv6-addr*
Collection Name	*ipv6-list*

Specification	
Type	*list*
Block object keys	

object

Description Lineage of object class for permitted operation

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

operation

Description 'no-access': no-access; 'read': read; 'write': write;

Type: string

Supported Values: no-access, read, oper, write

2.77.6 rba user partition

RBA configuration for the access privilege of a user within one partition

partition Specification

Type	*Collection*
Object Key(s)	*partition-name*
Collection Name	*partition-list*
Collection URI	/axapi/v3/rba/user/{name}/partition
Element Name	partition
Element URI	/axapi/v3/rba/user/{name}/partition/{partition-name}
Element Attributes	partition_attributes
Schema	`partition schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rba/user/{name}/partition

partition attributes

Create List

POST

/axapi/v3/rba/user/{name}/partition

partition attributes

Get Object

GET

/axapi/v3/rba/user/{name}/partition/{partition-name}

partition attributes

Get List

GET

/axapi/v3/rba/user/{name}/partition

partition-list

Modify Object

POST

/axapi/v3/rba/user/{name}/partition/{partition-name}

partition attributes

Replace Object

PUT

/axapi/v3/rba/user/{name}/partition/{partition-name}

partition attributes

Replace List

PUT

/axapi/v3/rba/user/{name}/partition

partition-list

Delete Object

DELETE

/axapi/v3/rba/user/{name}/partition/{partition-name}

partition attributes

partition-list

partition-list is **JSON List** of *partition attributes*

partition-list : [

{ *partition attributes* },

{ *partition attributes* },

...

]

partition attributes

partition-name

Description partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

role-list

Type: List

rule-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

role-list

Specification	
Type	*list*
Block object keys	

role

Description Role in a given partition

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/rba/role*

rule-list

Specification	
Type	*list*
Block object keys	

object

Description Lineage of object class for permitted operation

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

operation

Description 'no-access': no-access; 'read': read; 'write': write;

Type: string

Supported Values: no-access, read, oper, write

2.78 remove-upgrade-lock

Objects:

2.78.1 remove-upgrade-lock

removing upgrade lock file mgmt_is_upgrade

remove-upgrade-lock Specification

Type	*Configuration Resource*
Element Name	remove-upgrade-lock
Element URI	/axapi/v3/remove-upgrade-lock
Element Attributes	remove-upgrade-lock_attributes
Schema	`remove-upgrade-lock schema`

Operations Allowed:

Create Object

POST

/axapi/v3/remove-upgrade-lock

remove-upgrade-lock attributes

Get Object

GET

/axapi/v3/remove-upgrade-lock

remove-upgrade-lock attributes

Modify Object

POST

/axapi/v3/remove-upgrade-lock

remove-upgrade-lock attributes

Replace Object

PUT

/axapi/v3/remove-upgrade-lock

remove-upgrade-lock attributes

Delete Object

DELETE

/axapi/v3/remove-upgrade-lock

remove-upgrade-lock attributes

remove-upgrade-lock attributes

file

Description Lock is in the form of a file. This is not required for command.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.79 report

Objects:

2.79.1 report

Report configurations

report Specification

Type	*Configuration Resource*
Element Name	report
Element URI	/axapi/v3/report
Element Attributes	report_attributes
Schema	`report schema`

Operations Allowed:

Create Object

POST

/axapi/v3/report

report attributes

Get Object

GET

/axapi/v3/report

report attributes

Modify Object

POST

/axapi/v3/report

report attributes

Replace Object

PUT

/axapi/v3/report

report attributes

Delete Object

DELETE

/axapi/v3/report

report attributes

report attributes

debug

Description: debug is a **JSON Block**. Please see below for *debug*

Type: Object

Refernce Object: */axapi/v3/report/debug*

debug

Specification	
Type	*object*

log

Description Enable Report module's normal logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sflow

Description Enable debugging logs of sFlow parser

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.80 resource-track

Objects:

2.80.1 resource-track

Define a resource track policy template

resource-track Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*resource-track-list*
Collection URI	/axapi/v3/resource-track
Element Name	resource-track
Element URI	/axapi/v3/resource-track/{name}
Element Attributes	resource-track_attributes
Schema	`resource-track schema`

Operations Allowed:

Create Object

POST

/axapi/v3/resource-track

resource-track attributes

Create List

POST

/axapi/v3/resource-track

resource-track attributes

Get Object

GET

/axapi/v3/resource-track/{name}

resource-track attributes

Get List

GET

/axapi/v3/resource-track

resource-track-list

Modify Object

POST

/axapi/v3/resource-track/{name}

resource-track attributes

Replace Object

PUT

/axapi/v3/resource-track/{name}

resource-track attributes

Replace List

PUT

/axapi/v3/resource-track

resource-track-list

Delete Object

DELETE

/axapi/v3/resource-track/{name}

resource-track attributes

resource-track-list

resource-track-list is **JSON List** of *resource-track attributes*

resource-track-list : [

{ *resource-track attributes* },

{ *resource-track attributes* },

...

]

resource-track attributes

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

gateway

Description: gateway is a **JSON Block**. Please see below for *gateway*

Type: Object

interface

Type: List

name

Description resource track policy template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

route

Description: route is a **JSON Block**. Please see below for *route*

Type: Object

scaleout-cfg

Description: scaleout-cfg is a **JSON Block**. Please see below for *scaleout-cfg*

Type: Object

trunk-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan-cfg

Type: List

vlan-cfg

Specification	
Type	*list*
Block object keys	

timeout

Description

Type: number

Range: 2-600

vlan

Description VLAN tracking (VLAN id)

Type: number

Range: 2-4094

weight

Description The failover event weight

Type: number

Range: 1-255

route

Specification	
Type	*object*

ip-destination-cfg

Type: List

ipv6-destination-cfg

Type: List

route_ipv6-destination-cfg

Specification	
Type	*list*
Block object keys	

distance

Description Route's administrative distance (default: match any)

Type: number

Range: 1-255

gatewayv6

Description Match the route's gateway (next-hop) (default: match any)

Type: string

Format: ipv6-address

ipv6-destination

Description IPv6 Destination Prefix

Type: string

Format: ipv6-address-plen

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

weight

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

route_ip-destination-cfg

Specification	
Type	*list*
Block object keys	

distance

Description Route's administrative distance(default: match any)

Type: number

Range: 1-255

gateway

Description

Type: string

Format: ipv4-address

ip-destination

Description Destination prefix

Type: string

Format: ipv4-address

mask

Description Destination prefix mask

Type: string

Format: ipv4-netmask

protocol

Description 'any': Match any routing protocol (default); 'static': Match only static routes (added by user); 'dynamic': Match routes added by dynamic routing protocols (e.g. OSPF);

Type: string

Supported Values: any, static, dynamic

Default: any

weight

Description The amount the priority will decrease if the route is missing (The amount the priority will decrease if the route is not present)

Type: number

Range: 1-255

bgp

Specification	
Type	*object*

bgp-ipv4-address-cfg

Type: List

bgp-ipv6-address-cfg

Type: List

bgp_bgp-ipv4-address-cfg

Specification	
Type	*list*
Block object keys	

bgp-ipv4-address

Description bgp IP Address

Type: string

Format: ipv4-address

weight

Description The failover event weight

Type: number

Range: 1-255

bgp_bgp-ipv6-address-cfg

Specification	
Type	*list*
Block object keys	

bgp-ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

weight

Description The failover event weight

Type: number

Range: 1-255

interface

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet Interface (Ethernet interface number)

Type: number

Format: interface

weight

Description The failover event weight

Type: number

Range: 1-255

scaleout-cfg

Specification	
Type	*object*

scaleout

Description scaleout tracking

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weight

Description The failover event weight

Type: number

Range: 1-255

gateway

Specification	
Type	*object*

gw-ipv4-address-cfg

Type: List

gw-ipv6-address-cfg

Type: List

gateway_gw-ipv4-address-cfg

Specification	
Type	*list*
Block object keys	

gw-ipv4-address

Description IP Address

Type: string

Format: ipv4-address

weight

Description The failover event weight

Type: number

Range: 1-255

gateway_gw-ipv6-address-cfg

Specification	
Type	*list*
Block object keys	

gw-ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

weight

Description The failover event weight

Type: number

Range: 1-255

trunk-cfg

Specification	
Type	*list*
Block object keys	

per-port-weight

Description Per port failover weight

Type: number

Range: 0-255

Default: 0

trunk

Description trunk tracking (trunk id)

Type: number

Range: 1-4096

weight

Description failover event weight

Type: number

Range: 1-255

2.81 route-map

Objects:

2.81.1 route-map

Configure route-map

route-map Specification

Type	*Collection*
Object Key(s)	*tag, action, sequence*
Collection Name	*route-map-list*
Collection URI	/axapi/v3/route-map
Element Name	route-map
Element URI	/axapi/v3/route-map/{tag}+{action}+{sequence}
Element Attributes	route-map_attributes
Schema	`route-map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/route-map

route-map attributes

```
POST /axapi/v3/route-map/
Payload:
{
    "route-map": {
        "action": "permit",
        "tag": "a",
        "sequence": 1
    }
}
```

Create List

POST

/axapi/v3/route-map

route-map attributes

Get Object

GET

/axapi/v3/route-map/{tag}+{action}+{sequence}

route-map attributes

```
GET /axapi/v3/route-map/a+permit+1
Reponse:
{
    "route-map": {
        "tag": "a",
        "action": "permit",
        "sequence": 1,
        "uuid": "a215423c-60ed-11d9-92b2-001fa00680a0",
        "a10-url": "/axapi/v3/route-map/a+permit+1"
    }
}
```

Get List

GET

/axapi/v3/route-map

route-map-list

Modify Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}

route-map attributes

Replace Object

PUT

/axapi/v3/route-map/{tag}+{action}+{sequence}

route-map attributes

```
PUT /axapi/v3/route-map/a+permit+1
Payload:
{
    "route-map": {
        "action": "permit",
        "tag": "a",
        "sequence": 1
    }
}
```

Replace List

PUT

/axapi/v3/route-map

route-map-list

Delete Object

DELETE

/axapi/v3/route-map/{tag}+{action}+{sequence}

route-map attributes

```
DELETE /axapi/v3/route-map/a+permit+1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

route-map-list

route-map-list is **JSON List** of *route-map attributes*

route-map-list : [

{ *route-map attributes* },

{ *route-map attributes* },

...

]

route-map attributes

action

Description 'permit': Route map permits set operations; 'deny': Route map denies set operations;

Type: string

Supported Values: permit, deny

match

Description: match is a **JSON Block**. Please see below for *match*

Type: Object

Refernce Object: */axapi/v3/route-map/{tag}+{action}+{sequence}/match*

sequence

Description Sequence to insert to/delete from existing route-map entry

Type: number

Range: 1-65535

set

Description: set is a **JSON Block**. Please see below for *set*

Type: Object

Refernce Object: */axapi/v3/route-map/{tag}+{action}+{sequence}/set*

tag

Description Route map tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

set

Specification	
Type	*object*

aggregator

Description: aggregator is a **JSON Block**. Please see below for *set_aggregator*

Type: Object

as-path

Description: as-path is a **JSON Block**. Please see below for *set_as-path*

Type: Object

atomic-aggregate

Description BGP atomic aggregate attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-list

Description: comm-list is a **JSON Block**. Please see below for *set_comm-list*

Type: Object

community

Description BGP community attribute

Type: string

Format: string-rlx

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *set_dampening-cfg*

Type: Object

ddos

Description: ddos is a **JSON Block**. Please see below for *set_ddos*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *set_extcommunity*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *set_ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *set_ipv6*

Type: Object

level

Description: level is a **JSON Block**. Please see below for *set_level*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *set_local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *set_metric*

Type: Object

metric-type

Description: metric-type is a **JSON Block**. Please see below for *set_metric-type*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *set_origin*

Type: Object

originator-id

Description: originator-id is a **JSON Block**. Please see below for *set_originator-id*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *set_tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description: weight is a **JSON Block**. Please see below for *set_weight*

Type: Object

set_extcommunity

Specification	
Type	*object*

rt

Description: rt is a **JSON Block**. Please see below for *set_extcommunity_rt*

Type: Object

soo

Description: soo is a **JSON Block**. Please see below for *set_extcommunity_soo*

Type: Object

set_extcommunity_rt

Specification	
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

set_extcommunity_soo

Specification	
Type	*object*

value

Description VPN extended community

Type: string

Format: string-rlx

set_origin

Specification	
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp igp and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp egp and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete egp and igp are mutually exclusive

set_aggregator

Specification	
Type	*object*

aggregator-as

Description: aggregator-as is a **JSON Block**. Please see below for *set_aggregator_aggregator-as*

Type: Object

set_aggregator_aggregator-as

Specification	
Type	*object*

asn

Description AS number

Type: number

Range: 1-4294967295

ip

Description IP address of aggregator

Type: string

Format: ipv4-address

set_weight

Specification	
Type	*object*

weight-val

Description Weight value

Type: number

Range: 0-4294967295

set_level

Specification	
Type	*object*

value

Description 'level-1': Export into a level-1 area; 'level-1-2': Export into level-1 and level-2; 'level-2': Export into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

set_ip

Specification	
Type	*object*

next-hop

Description: next-hop is a **JSON Block**. Please see below for *set_ip_next-hop*

Type: Object

set_ip_next-hop

Specification	
Type	*object*

address

Description IP address of next hop

Type: string

Format: ipv4-address

set_metric

Specification	
Type	*object*

value

Description Metric value

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

set_as-path

Specification	
Type	*object*

num

Description AS number

Type: number

Range: 1-4294967295

num2

Description AS number

Type: number

Range: 1-4294967295

prepend

Description Prepend to the as-path (AS number)

Type: string

Format: string-rlx

set_comm-list

Specification	
Type	*object*

delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name v-std and v-exp are mutually exclusive

name-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-exp

Description Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: v-exp v-std and name are mutually exclusive

v-exp-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-std

Description Community-list number (standard)

Type: number

Range: 1-99

Mutual Exclusion: v-std v-exp and name are mutually exclusive

set_local-preference

Specification	
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

set_ddos

Specification	
Type	*object*

class-list-cid

Description Class-List Cid

Type: number

Range: 1-32

class-list-name

Description Class-List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone

Description Zone Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

set_tag

Specification	
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

set_ipv6

Specification	
Type	*object*

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *set_ipv6_next-hop-1*

Type: Object

set_ipv6_next-hop-1

Specification	
Type	*object*

address

Description global address of next hop

Type: string

Format: ipv6-address

local

Description: local is a **JSON Block**. Please see below for *set_ipv6_next-hop-1_local*

Type: Object

set_ipv6_next-hop-1_local

Specification	
Type	*object*

address

Description IPv6 address of next hop

Type: string

Format: ipv6-address

set_dampening-cfg

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

set_originator-id

Specification	
Type	*object*

originator-ip

Description IP address of originator

Type: string

Format: ipv4-address

set_metric-type

Specification	
Type	*object*

value

Description 'external': IS-IS external metric type; 'internal': IS-IS internal metric type; 'type-1': OSPF external type 1 metric; 'type-2': OSPF external type 2 metric;

Type: string

Supported Values: external, internal, type-1, type-2

match

Specification	
Type	*object*

as-path

Description: as-path is a **JSON Block**. Please see below for *match_as-path*

Type: Object

community

Description: community is a **JSON Block**. Please see below for *match_community*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *match_extcommunity*

Type: Object

group

Description: group is a **JSON Block**. Please see below for *match_group*

Type: Object

interface

Description: interface is a **JSON Block**. Please see below for *match_interface*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *match_ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *match_ipv6*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *match_local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *match_metric*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *match_origin*

Type: Object

route-type

Description: route-type is a **JSON Block**. Please see below for *match_route-type*

Type: Object

scaleout

Description: scaleout is a **JSON Block**. Please see below for *match_scaleout*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *match_tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

match_extcommunity

Specification	
Type	*object*

extcommunity-l-name

Description: extcommunity-l-name is a **JSON Block**. Please see below for *match_extcommunity_extcommunity-l-name*

Type: Object

match_extcommunity_extcommunity-l-name

Specification	
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Format: string-rlx

match_origin

Specification	
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp igp and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp egp and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete egp and igp are mutually exclusive

match_group

Specification	
Type	*object*

group-id

Description HA or VRRP-A group id

Type: number

Range: 0-31

ha-state

Description 'active': HA or VRRP-A in Active State; 'standby': HA or VRRP-A in Standby State;

Type: string

Supported Values: active, standby

match_ip

Specification	
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *match_ip_address*

Type: Object

next-hop

Description: next-hop is a **JSON Block**. Please see below for *match_ip_next-hop*

Type: Object

peer

Description: peer is a **JSON Block**. Please see below for *match_ip_peer*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *match_ip_rib*

Type: Object

match_ip_peer

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

match_ip_next-hop

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

prefix-list-1

Description: prefix-list-1 is a **JSON Block**. Please see below for *match_ip_next-hop_prefix-list-1*

Type: Object

match_ip_next-hop_prefix-list-1

Specification	
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_ip_rib

Specification	
Type	*object*

exact

Description Exact match a prefix (Prefix IPv4 address)

Type: string

Format: ipv4-cidr

Mutual Exclusion: exact reachable and unreachable are mutually exclusive

reachable

Description IP address is reachable

Type: string

Format: ipv4-address

Mutual Exclusion: reachable exact and unreachable are mutually exclusive

unreachable

Description IP address is unreachable

Type: string

Format: ipv4-address

Mutual Exclusion: unreachable exact and reachable are mutually exclusive

match_ip_address

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *match_ip_address_prefix-list*

Type: Object

match_ip_address_prefix-list

Specification	
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_metric

Specification	
Type	*object*

value

Description Metric value

Type: number

Range: 0-4294967295

match_ipv6

Specification	
Type	*object*

address-1

Description: address-1 is a **JSON Block**. Please see below for *match_ipv6_address-1*

Type: Object

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *match_ipv6_next-hop-1*

Type: Object

peer-1

Description: peer-1 is a **JSON Block**. Please see below for *match_ipv6_peer-1*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *match_ipv6_rib*

Type: Object

match_ipv6_next-hop-1

Specification	
Type	*object*

next-hop-acl-name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: next-hop-acl-name and v6-addr are mutually exclusive

prefix-list-name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

v6-addr

Description IPv6 address of next hop

Type: string

Format: ipv6-address

Mutual Exclusion: v6-addr and next-hop-acl-name are mutually exclusive

match_ipv6_rib

Specification	
Type	*object*

exact

Description Exact match a prefix (Prefix IPv6 address)

Type: string

Format: ipv6-address-plen

Mutual Exclusion: exact reachable and unreachable are mutually exclusive

reachable

Description IPv6 address is reachable

Type: string

Format: ipv6-address

Mutual Exclusion: reachable exact and unreachable are mutually exclusive

unreachable

Description IPv6 address is unreachable

Type: string

Format: ipv6-address

Mutual Exclusion: unreachable exact and reachable are mutually exclusive

match_ipv6_peer-1

Specification	
Type	*object*

acl1

Description IPv6 access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

match_ipv6_address-1

Specification	
Type	*object*

name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-2

Description: prefix-list-2 is a **JSON Block**. Please see below for *match_ipv6_address-1_prefix-list-2*

Type: Object

match_ipv6_address-1_prefix-list-2

Specification	
Type	*object*

name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_community

Specification	
Type	*object*

name-cfg

Description: name-cfg is a **JSON Block**. Please see below for *match_community_name-cfg*

Type: Object

match_community_name-cfg

Specification	
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Format: string-rlx

match_local-preference

Specification	
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

match_route-type

Specification	
Type	*object*

external

Description: external is a **JSON Block**. Please see below for *match_route-type_external*

Type: Object

match_route-type_external

Specification	
Type	*object*

value

Description 'type-1': Match OSPF External Type 1 metrics; 'type-2': Match OSPF External Type 2 metrics;

Type: string

Supported Values: type-1, type-2

match_tag

Specification	
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

match_as-path

Specification	
Type	*object*

name

Description AS path access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

match_interface

Specification	
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetloopback, trunk, ve and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Range: 0-10

Mutual Exclusion: loopbackethernet, trunk, ve and tunnel are mutually exclusive

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

Mutual Exclusion: trunkethernet, loopback, ve and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelethernet, loopback, trunk and ve are mutually exclusive

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

Mutual Exclusion: veethernet, loopback, trunk and tunnel are mutually exclusive

match_scaleout

Specification	
Type	*object*

cluster-id

Description Scaleout Cluster-id

Type: number

Range: 1-64

operational-state

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

2.81.2 route-map match

Match values from routing table

match Specification

Type	*Configuration Resource*
Element Name	match
Element URI	/axapi/v3/route-map/{tag}+{action}+{sequence}/match
Element Attributes	match_attributes
Schema	`match schema`

Operations Allowed:

Create Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
POST /axapi/v3/route-map/a+deny+1/match
Payload:
{
```

(continues on next page)

(continued from previous page)

```
    "match": {
        "as-path": {
            "name": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
GET /axapi/v3/route-map/a+deny+1/match
Reponse:
{
    "match": {
        "as-path": {
            "name": "a"
        },
        "origin": {
            "egp": 0
        },
        "uuid": "a00e2822-60ee-11d9-92b2-001fa00680a0",
        "a10-url": "/axapi/v3/route-map/a+deny+1/match"
    }
}
```

Modify Object

POST

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

Replace Object

PUT

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
PUT /axapi/v3/route-map/a+deny+1/match
Payload:
{
    "match": {
        "as-path": {
            "name": "abcd"
        }
    }
}
```

Delete Object

DELETE

/axapi/v3/route-map/{tag}+{action}+{sequence}/match

match attributes

```
DELETE /axapi/v3/route-map/a+deny+1/match
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

match attributes

as-path

Description: as-path is a **JSON Block**. Please see below for *as-path*

Type: Object

community

Description: community is a **JSON Block**. Please see below for *community*

Type: Object

extcommunity

Description: extcommunity is a **JSON Block**. Please see below for *extcommunity*

Type: Object

group

Description: group is a **JSON Block**. Please see below for *group*

Type: Object

interface

Description: interface is a **JSON Block**. Please see below for *interface*

Type: Object

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

local-preference

Description: local-preference is a **JSON Block**. Please see below for *local-preference*

Type: Object

metric

Description: metric is a **JSON Block**. Please see below for *metric*

Type: Object

origin

Description: origin is a **JSON Block**. Please see below for *origin*

Type: Object

route-type

Description: route-type is a **JSON Block**. Please see below for *route-type*

Type: Object

scaleout

Description: scaleout is a **JSON Block**. Please see below for *scaleout*

Type: Object

tag

Description: tag is a **JSON Block**. Please see below for *tag*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

extcommunity

Specification	
Type	*object*

extcommunity-l-name

Description: extcommunity-l-name is a **JSON Block**. Please see below for *extcommunity_extcommunity-l-name*

Type: Object

extcommunity_extcommunity-l-name

Specification	
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Format: string-rlx

origin

Specification	
Type	*object*

egp

Description remote EGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: egp igp and incomplete are mutually exclusive

igp

Description local IGP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: igp egp and incomplete are mutually exclusive

incomplete

Description unknown heritage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: incomplete egp and igp are mutually exclusive

group

Specification	
Type	*object*

group-id

Description HA or VRRP-A group id

Type: number

Range: 0-31

ha-state

Description 'active': HA or VRRP-A in Active State; 'standby': HA or VRRP-A in Standby State;

Type: string

Supported Values: active, standby

ip

Specification	
Type	*object*

address

Description: address is a **JSON Block**. Please see below for *ip_address*

Type: Object

next-hop

Description: next-hop is a **JSON Block**. Please see below for *ip_next-hop*

Type: Object

peer

Description: peer is a **JSON Block**. Please see below for *ip_peer*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *ip_rib*

Type: Object

ip_peer

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

ip_next-hop

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

prefix-list-1

Description: prefix-list-1 is a **JSON Block**. Please see below for *ip_next-hop_prefix-list-1*

Type: Object

ip_next-hop_prefix-list-1

Specification	
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip_rib

Specification	
Type	*object*

exact

Description Exact match a prefix (Prefix IPv4 address)

Type: string

Format: ipv4-cidr

Mutual Exclusion: exact reachable and unreachable are mutually exclusive

reachable

Description IP address is reachable

Type: string

Format: ipv4-address

Mutual Exclusion: reachable exact and unreachable are mutually exclusive

unreachable

Description IP address is unreachable

Type: string

Format: ipv4-address

Mutual Exclusion: unreachable exact and reachable are mutually exclusive

ip_address

Specification	
Type	*object*

acl1

Description IP access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ip_address_prefix-list*

Type: Object

ip_address_prefix-list

Specification	
Type	*object*

name

Description IP prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

metric

Specification	
Type	*object*

value

Description Metric value

Type: number

Range: 0-4294967295

ipv6

Specification	
Type	*object*

address-1

Description: address-1 is a **JSON Block**. Please see below for *ipv6_address-1*

Type: Object

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *ipv6_next-hop-1*

Type: Object

peer-1

Description: peer-1 is a **JSON Block**. Please see below for *ipv6_peer-1*

Type: Object

rib

Description: rib is a **JSON Block**. Please see below for *ipv6_rib*

Type: Object

ipv6_next-hop-1

Specification	
Type	*object*

next-hop-acl-name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: next-hop-acl-name and v6-addr are mutually exclusive

prefix-list-name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

v6-addr

Description IPv6 address of next hop

Type: string

Format: ipv6-address

Mutual Exclusion: v6-addr and next-hop-acl-name are mutually exclusive

ipv6_rib

Specification	
Type	*object*

exact

Description Exact match a prefix (Prefix IPv6 address)

Type: string

Format: ipv6-address-plen

Mutual Exclusion: exact reachable and unreachable are mutually exclusive

reachable

Description IPv6 address is reachable

Type: string

Format: ipv6-address

Mutual Exclusion: reachable exact and unreachable are mutually exclusive

unreachable

Description IPv6 address is unreachable

Type: string

Format: ipv6-address

Mutual Exclusion: unreachable exact and reachable are mutually exclusive

ipv6_peer-1

Specification	
Type	*object*

acl1

Description IPv6 access-list number

Type: number

Range: 1-199

Mutual Exclusion: acl1 acl2 and name are mutually exclusive

acl2

Description IP access-list number (expanded range)

Type: number

Range: 1300-2699

Mutual Exclusion: acl2 acl1 and name are mutually exclusive

name

Description IP access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name acl1 and acl2 are mutually exclusive

ipv6_address-1

Specification	
Type	*object*

name

Description IPv6 access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-2

Description: prefix-list-2 is a **JSON Block**. Please see below for *ipv6_address-1_prefix-list-2*

Type: Object

ipv6_address-1_prefix-list-2

Specification	
Type	*object*

name

Description IPv6 prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

community

Specification	
Type	*object*

name-cfg

Description: name-cfg is a **JSON Block**. Please see below for *community_name-cfg*

Type: Object

community_name-cfg

Specification	
Type	*object*

exact-match

Description Do exact matching of ecommunities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Format: string-rlx

local-preference

Specification	
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

route-type

Specification	
Type	*object*

external

Description: external is a **JSON Block**. Please see below for *route-type_external*

Type: Object

route-type_external

Specification	
Type	*object*

value

Description 'type-1': Match OSPF External Type 1 metrics; 'type-2': Match OSPF External Type 2 metrics;

Type: string

Supported Values: type-1, type-2

tag

Specification	
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

as-path

Specification	
Type	*object*

name

Description AS path access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

interface

Specification	
Type	*object*

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetloopback, trunk, ve and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Range: 0-10

Mutual Exclusion: loopbackethernet, trunk, ve and tunnel are mutually exclusive

trunk

Description Trunk Interface (Trunk interface number)

Type: number

Range: 1-4096

Mutual Exclusion: trunkethernet, loopback, ve and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelethernet, loopback, trunk and ve are mutually exclusive

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Range: 2-4094

Mutual Exclusion: veethernet, loopback, trunk and tunnel are mutually exclusive

scaleout

Specification	
Type	*object*

cluster-id

Description Scaleout Cluster-id

Type: number

Range: 1-64

operational-state

Description 'up': Scaleout is up and running; 'down': Scaleout is down or disabled;

Type: string

Supported Values: up, down

2.81.3 route-map set

Set values in destination routing protocol

set Specification

Type	*object*

aggregator-as

Description: aggregator-as is a **JSON Block**. Please see below for *aggregator_aggregator-as*

Type: Object

aggregator_aggregator-as

Specification	
Type	*object*

asn

Description AS number

Type: number

Range: 1-4294967295

ip

Description IP address of aggregator

Type: string

Format: ipv4-address

weight

Specification	
Type	*object*

weight-val

Description Weight value

Type: number

Range: 0-4294967295

level

Specification	
Type	*object*

value

Description 'level-1': Export into a level-1 area; 'level-1-2': Export into level-1 and level-2; 'level-2': Export into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

ip

Specification	
Type	*object*

next-hop

Description: next-hop is a **JSON Block**. Please see below for *ip_next-hop*

Type: Object

ip_next-hop

Specification	
Type	*object*

address

Description IP address of next hop

Type: string

Format: ipv4-address

metric

Specification	
Type	*object*

value

Description Metric value

Type: string

Maximum Length: 11 characters

Maximum Length: 1 characters

as-path

Specification	
Type	*object*

num

Description AS number

Type: number

Range: 1-4294967295

num2

Description AS number

Type: number

Range: 1-4294967295

prepend

Description Prepend to the as-path (AS number)

Type: string

Format: string-rlx

comm-list

Specification	
Type	*object*

delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Community-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: name v-std and v-exp are mutually exclusive

name-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-exp

Description Community-list number (expanded)

Type: number

Range: 100-199

Mutual Exclusion: v-exp v-std and name are mutually exclusive

v-exp-delete

Description Delete matching communities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v-std

Description Community-list number (standard)

Type: number

Range: 1-99

Mutual Exclusion: v-std v-exp and name are mutually exclusive

local-preference

Specification	
Type	*object*

val

Description Preference value

Type: number

Range: 0-4294967295

ddos

Specification	
Type	*object*

class-list-cid

Description Class-List Cid

Type: number

Range: 1-32

class-list-name

Description Class-List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone

Description Zone Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tag

Specification	
Type	*object*

value

Description Tag value

Type: number

Range: 0-4294967295

ipv6

Specification	
Type	*object*

next-hop-1

Description: next-hop-1 is a **JSON Block**. Please see below for *ipv6_next-hop-1*

Type: Object

ipv6_next-hop-1

Specification	
Type	*object*

address

Description global address of next hop

Type: string

Format: ipv6-address

local

Description: local is a **JSON Block**. Please see below for *ipv6_next-hop-1_local*

Type: Object

ipv6_next-hop-1_local

Specification	
Type	*object*

address

Description IPv6 address of next hop

Type: string

Format: ipv6-address

dampening-cfg

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

originator-id

Specification	
Type	*object*

originator-ip

Description IP address of originator

Type: string

Format: ipv4-address

metric-type

Specification	
Type	*object*

value

Description 'external': IS-IS external metric type; 'internal': IS-IS internal metric type; 'type-1': OSPF external type 1 metric; 'type-2': OSPF external type 2 metric;

Type: string

Supported Values: external, internal, type-1, type-2

2.82 router

Objects:

2.82.1 router

Configure routing process

router Specification

Type	*Intermediate Resource*
Element Name	router
Element URI	/axapi/v3/router
Element Attributes	router_attributes
Schema	`router schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router

router_attributes

router attributes

bgp-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/router/ipv6*

isis-list

Type: List

Refernce Object: */axapi/v3/router/isis/{tag}*

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

Refernce Object: */axapi/v3/router/log*

ospf-list

Type: List

Refernce Object: */axapi/v3/router/ospf/{process-id}*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/router/rip*

ospf-list

Specification	
Type	*list*
Block object keys	

area-list

Type: List

Refernce Object: */axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ospf-list_default-information*

Type: Object

Refernce Object: */axapi/v3/router/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distance

Description: distance is a **JSON Block**. Please see below for *ospf-list_distance*

Type: Object

distribute-internal-list

Type: List

distribute-lists

Type: List

extern-lsa-equivalence-check

Description external LSA equivalance check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-standby-extra-cost

Type: List

host-list

Type: List

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *ospf-list_log-adjacency-changes-cfg*

Type: Object

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

maximum-area

Description Maximum number of OSPF area (OSPF area limit)

Type: number

Range: 1-4294967294

neighbor-list

Type: List

network-list

Type: List

ospf-1

Description: ospf-1 is a **JSON Block**. Please see below for *ospf-list_ospf-1*

Type: Object

overflow

Description: overflow is a **JSON Block**. Please see below for *ospf-list_overflow*

Type: Object

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ospf-list_passive-interface*

Type: Object

process-id

Description OSPF process ID

Type: number

Range: 0-65535

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ospf-list_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ospf/{process-id}/redistribute*

rfc1583-compatible

Description Compatible with RFC 1583

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description: router-id is a **JSON Block**. Please see below for *ospf-list_router-id*

Type: Object

summary-address-list

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_distribute-internal-list

Specification	
Type	*list*
Block object keys	

di-area-ipv4

Description OSPF area ID as a IP address format

Type: string

Format: ipv4-address

di-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

di-cost

Description Cost of route

Type: number

Range: 1-65535

Default: 1

di-type

Description 'lw4o6': LW4O6 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, floating-ip, ip-nat, ip-nat-list, static-nat, vip, vip-only-flagged

ospf-list_distribute-lists

Specification	
Type	*list*
Block object keys	

direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

option

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-id

Description OSPF process ID

Type: number

Range: 1-65535

protocol

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'lw4o6': LW4O6 Prefix; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'isis': ISO IS-IS; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, lw4o6, ip-nat, ip-nat-list, static-nat, isis, ospf, rip, static

value

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_router-id

Specification	
Type	*object*

value

Description OSPF router-id in IPv4 address format

Type: string

Format: ipv4-address

ospf-list_neighbor-list

Specification	
Type	*list*
Block object keys	

address

Description Neighbor address

Type: string

Format: ipv4-address

cost

Description OSPF cost for point-to-multipoint neighbor (Metric)

Type: number

Range: 1-65535

poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 1-65535

priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf-list_ospf-1

Specification	
Type	*object*

abr-type

Description: abr-type is a **JSON Block**. Please see below for *ospf-list_ospf-1_abr-type*

Type: Object

ospf-list_ospf-1_abr-type

Specification	
Type	*object*

option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'shortcut': Shortcut ABR; 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, shortcut, standard

Default: cisco

ospf-list_host-list

Specification	
Type	*list*
Block object keys	

area-cfg

Description: area-cfg is a **JSON Block**. Please see below for *ospf-list_host-list_area-cfg*

Type: Object

host-address

Description Host address

Type: string

Format: ipv4-address

ospf-list_host-list_area-cfg

Specification	
Type	*object*

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Mutual Exclusion: area-ipv4 and area-num are mutually exclusive

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

Mutual Exclusion: area-num and area-ipv4 are mutually exclusive

cost

Description Cost of host

Type: number

Range: 0-65535

Default: 0

ospf-list_log-adjacency-changes-cfg

Specification	
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

ospf-list_area-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *ospf-list_area-list_stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ospf-list_area-list_nssa-cfg

Specification	
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description 'always': Translate always; 'candidate': Candidate for translator (default); 'never': Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

ospf-list_area-list_filter-lists

Specification	
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_area-list_virtual-link-list

Specification	
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ospf-list_area-list_stub-cfg

Specification	
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-list_area-list_auth-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf-list_area-list_range-list

Specification	
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

ospf-list_summary-address-list

Specification	
Type	*list*
Block object keys	

not-advertise

Description Suppress routes that match the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-address

Description Configure IP address summaries (Summary prefix)

Type: string

Format: ipv4-cidr

tag

Description Set tag (32-bit tag value)

Type: number

Range: 0-4294967295

ospf-list_passive-interface

Specification	
Type	*object*

eth-cfg

Type: List

lif-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ospf-list_passive-interface_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

tunnel-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_loopback-cfg

Specification	
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

loopback-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ve-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_lif-cfg

Specification	
Type	*list*
Block object keys	

lif

Description Logical interface (Lif interface number)

Type: number

Format: interface

lif-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_trunk-cfg

Specification	
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

trunk-address

Description Address of Interface

Type: string

Format: ipv4-address

ospf-list_passive-interface_eth-cfg

Specification	
Type	*list*
Block object keys	

eth-address

Description Address of Interface

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ospf-list_default-information

Specification	
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_overflow

Specification	
Type	*object*

database

Description: database is a **JSON Block**. Please see below for *ospf-list_overflow_database*

Type: Object

ospf-list_overflow_database

Specification	
Type	*object*

count

Description Maximum number of LSAs

Type: number

Range: 0-4294967294

Default: 4294967294

db-external

Description Maximum number of LSAs

Type: number

Range: 0-2147483647

Default: 2147483647

limit

Description 'hard': Hard limit: Instance will be shutdown if exceeded; 'soft': Soft limit: Warning will be given if exceeded;

Type: string

Supported Values: hard, soft

Default: hard

recovery-time

Description Time to recover (0 not recover)

Type: number

Range: 0-65535

Default: 0

ospf-list_distance

Specification	
Type	*object*

distance-ospf

Description: distance-ospf is a **JSON Block**. Please see below for *ospf-list_distance_distance-ospf*

Type: Object

distance-value

Description OSPF Administrative distance

Type: number

Range: 1-255

Default: 110

ospf-list_distance_distance-ospf

Specification	
Type	*object*

distance-external

Description External routes (Distance for external routes)

Type: number

Range: 1-255

distance-inter-area

Description Inter-area routes (Distance for inter-area routes)

Type: number

Range: 1-255

distance-intra-area

Description Intra-area routes (Distance for intra-area routes)

Type: number

Range: 1-255

ospf-list_redistribute

Specification	
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ospf-list_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, isis, rip, static

ospf-list_redistribute_ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

ospf-list_redistribute_ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

ospf-list_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-list_redistribute_vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ospf-list_network-list

Specification	
Type	*list*
Block object keys	

network-area

Description: network-area is a **JSON Block**. Please see below for *ospf-list_network-list_network-area*

Type: Object

network-ipv4

Description Network number

Type: string

Format: ipv4-address

network-ipv4-cidr

Description OSPF network prefix

Type: string

Format: ipv4-cidr

network-ipv4-mask

Description OSPF wild card bits

Type: string

Format: ipv4-rev-netmask

ospf-list_network-list_network-area

Specification	
Type	*object*

instance-value

Description Instance ID

Type: number

Range: 0-255

Default: 0

network-area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

network-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

ospf-list_timers

Specification	
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ospf-list_timers_spf*

Type: Object

ospf-list_timers_spf

Specification	
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ospf-list_timers_spf_exp*

Type: Object

ospf-list_timers_spf_exp

Specification	
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ospf-list_ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

log

Specification	
Type	*object*

file

Description: file is a **JSON Block**. Please see below for *log_file*

Type: Object

Refernce Object: */axapi/v3/router/log/file*

log-buffer

Description Logging goes to log-buffer

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log_file

Specification	
Type	*object*

name

Description Logging filename (File name)

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

per-protocol

Description Per protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotate

Description Log file rotation (Number of backup files)

Type: number

Range: 0-100

size

Description Log file maximum size (File size in MBytes)

Type: number

Range: 0-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distance-list-cfg

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *rip_distribute-list*

Type: Object

Refernce Object: */axapi/v3/router/rip/distribute-list*

neighbor

Type: List

network-addresses

Type: List

network-interface-list-cfg

Type: List

offset-list

Description: offset-list is a **JSON Block**. Please see below for *rip_offset-list*

Type: Object

Refernce Object: */axapi/v3/router/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIP UDP receive buffer size (the RIP UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *rip_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/rip/redistribute*

rip-maximum-prefix-cfg

Description: rip-maximum-prefix-cfg is a **JSON Block**. Please see below for *rip_rip-maximum-prefix-cfg*

Type: Object

route-cfg

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Set routing protocol version (RIP version)

Type: number

Range: 1-2

Default: 2

rip_rip-maximum-prefix-cfg

Specification	
Type	*object*

maximum-prefix

Description Set the maximum number of RIP routes

Type: number

Range: 1-2048

maximum-prefix-thres

Description Percentage of maximum routes to generate a warning (Default 75%)

Type: number

Range: 1-100

Default: 75

rip_route-cfg

Specification	
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix network/length)

Type: string

Format: ipv4-cidr

rip_passive-interface-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_redistribute

Specification	
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

rip_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

rip_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, static-nat, ospf, static

rip_network-interface-list-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_timers

Specification	
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *rip_timers_timers-cfg*

Type: Object

rip_timers_timers-cfg

Specification	
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

rip_neighbor

Specification	
Type	*list*
Block object keys	

value

Description Neighbor address

Type: string

Format: ipv4-address

rip_offset-list

Specification	
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list

Specification	
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *rip_distribute-list_prefix*

Type: Object

Refernce Object: */axapi/v3/router/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list_prefix

Specification	
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_prefix_prefix-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distance-list-cfg

Specification	
Type	*list*
Block object keys	

distance

Description Administrative distance (Distance value)

Type: number

Range: 1-255

Default: 120

distance-acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance-ipv4-mask

Description IP source prefix

Type: string

Format: ipv4-cidr

rip_network-addresses

Specification	
Type	*list*
Block object keys	

network-ipv4-mask

Description IP prefix network/length, e.g., 35.0.0.0/8

Type: string

Format: ipv4-cidr

bgp-list

Specification	
Type	*list*
Block object keys	

address-family

Description: address-family is a **JSON Block**. Please see below for *bgp-list_address-family*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family*

aggregate-address-list

Type: List

as-number

Description AS number

Type: number

Range: 1-4294967295

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp-list_bgp*

Type: Object

distance-list

Type: List

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor*

network

Description: network is a **JSON Block**. Please see below for *bgp-list_network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/network*

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *bgp-list_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description: timers is a **JSON Block**. Please see below for *bgp-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_nat-map-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *bgp-list_redistribute_vip*

Type: Object

bgp-list_redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_redistribute_vip_only-not-flagged-cfg*

Type: Object

bgp-list_redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate prefix)

Type: string

Format: ipv4-cidr

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_bgp

Specification	
Type	*object*

always-compare-med

Description Allow comparing MED from different neighbors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bestpath-cfg

Description: bestpath-cfg is a **JSON Block**. Please see below for *bgp-list_bgp_bestpath-cfg*

Type: Object

bgp-restart-time

Description BGP Peer Graceful Restart time in seconds (default 90)

Type: number

Range: 1-3600

Default: 90

bgp-stalepath-time

Description BGP Graceful Restart Stalepath retention time in seconds (default 360)

Type: number

Range: 1-3600

Default: 360

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *bgp-list_bgp_dampening-cfg*

Type: Object

deterministic-med

Description Pick the best-MED path among paths advertised from the neighboring AS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-first-as

Description Enforce the first AS for EBGP routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-external-failover

Description Immediately reset session if a link to a directly connected external peer goes down

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

graceful-restart

Description Configure BGP BGP Graceful Restart

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-preference-value

Description Configure default local preference value

Type: number

Range: 0-4294967295

Default: 100

log-neighbor-changes

Description Log neighbor up/down and reset reason

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger-count

Description BGP nexthop-tracking status (count)

Type: number

Range: 0-127

Default: 0

override-validation

Description override router-id validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description Override current router identifier (peers will reset) (Manually configured router identifier)

Type: string

Format: ipv4-address

scan-time

Description Configure background scan interval (Scan interval (sec) [Default:60 Disable:0])

Type: number

Range: 0-60

Default: 60

bgp-list_bgp_dampening-cfg

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_bgp_bestpath-cfg

Specification	
Type	*object*

compare-routerid

Description Compare router-id for identical EBGP paths

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore

Description Ignore as-path length in selecting a route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

missing-as-worst

Description Treat missing MED as the least preferred one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-recv-med

Description To remove rcvd MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-send-med

Description To remove send MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_network

Specification	
Type	*object*

ip-cidr-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *bgp-list_network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

bgp-list_network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_network_ip-cidr-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_timers

Specification	
Type	*object*

bgp-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

bgp-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

bgp-list_neighbor

Specification	
Type	*object*

ethernet-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

bgp-list_neighbor_ve-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

bgp-list_neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_neighbor_ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_neighbor_ethernet-neighbor-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_neighbor_trunk-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_distance-list

Specification	
Type	*list*
Block object keys	

acl-str

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

admin-distance

Description Define an administrative distance

Type: number

Range: 1-255

ext-routes-dist

Description Distance for routes external to the AS

Type: number

Range: 1-255

int-routes-dist

Description Distance for routes internal to the AS

Type: number

Range: 1-255

local-routes-dist

Description Distance for local routes

Type: number

Range: 1-255

src-prefix

Description IP source prefix

Type: string

Format: ipv4-cidr

bgp-list_address-family

Specification	
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

bgp-list_address-family_ipv6

Specification	
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_distance

Specification	
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

bgp-list_address-family_ipv6_redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip*

Type: Object

bgp-list_address-family_ipv6_redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_nat64-cfg

Specification	
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

bgp-list_address-family_ipv6_redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp-list_address-family_ipv6_bgp

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_network

Specification	
Type	*object*

ipv6-network-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *bgp-list_address-family_ipv6_network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

bgp-list_address-family_ipv6_network_ipv6-network-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor

Specification	
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

bgp-list_address-family_ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ve-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

bgp-list_address-family_ipv6_neighbor_trunk-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

bgp-list_address-family_ipv6_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6

Specification	
Type	*object*

ospf-list

Type: List

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip*

ipv6_ospf-list

Specification	
Type	*list*
Block object keys	

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ipv6_ospf-list_default-information*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ipv6_ospf-list_distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ipv6_ospf-list_passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_ospf-list_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *ipv6_ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf-list_distribute-internal-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

ipv6_ospf-list_redistribute

Specification	
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ipv6_ospf-list_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, nat64, lw4o6, isis, rip, static

ipv6_ospf-list_redistribute_ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_ospf-list_redistribute_ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

ipv6_ospf-list_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ipv6_ospf-list_redistribute_vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ipv6_ospf-list_distribute-list

Specification	
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ipv6_ospf-list_distribute-list_prefix-list*

Type: Object

ipv6_ospf-list_distribute-list_prefix-list

Specification	
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_ospf-list_area-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ipv6_ospf-list_area-list_virtual-link-list

Specification	
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ipv6_ospf-list_area-list_range-list

Specification	
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

ipv6_ospf-list_default-information

Specification	
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf-list_passive-interface

Specification	
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ipv6_ospf-list_passive-interface_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_trunk-cfg

Specification	
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_loopback-cfg

Specification	
Type	*list*

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

ipv6_ospf-list_passive-interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ipv6_ospf-list_timers

Specification	
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ipv6_ospf-list_timers_spf*

Type: Object

ipv6_ospf-list_timers_spf

Specification	
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ipv6_ospf-list_timers_spf_exp*

Type: Object

ipv6_ospf-list_timers_spf_exp

Specification	
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ipv6_ospf-list_ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

ipv6_rip

Specification	
Type	*object*

aggregate-address-cfg

Type: List

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ipv6_rip_distribute-list*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/distribute-list*

Description: offset-list is a **JSON Block**. Please see below for *ipv6_rip_offset-list*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIPNG UDP receive buffer size (the RIPNG UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_rip_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/redistribute*

ripng-neighbor

Description: ripng-neighbor is a **JSON Block**. Please see below for *ipv6_rip_ripng-neighbor*

Type: Object

route-cfg

Type: List

route-map

Description: route-map is a **JSON Block**. Please see below for *ipv6_rip_route-map*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/route-map*

timers

Description: timers is a **JSON Block**. Please see below for *ipv6_rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_offset-list

Specification	
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_offset-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_route-map

Specification	
Type	*object*

map-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_route-map_map-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-direction

Description 'in': Route map set for input filtering; 'out': Route map set for output filtering;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_passive-interface-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_redistribute

Specification	
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

ipv6_rip_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ipv6_rip_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, ospf, static

ipv6_rip_route-cfg

Specification	
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

ipv6_rip_timers

Specification	
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *ipv6_rip_timers_timers-cfg*

Type: Object

ipv6_rip_timers_timers-cfg

Specification	
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

ipv6_rip_aggregate-address-cfg

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

ipv6_rip_ripng-neighbor

Specification	
Type	*object*

ripng-neighbor-cfg

Type: List

ipv6_rip_ripng-neighbor_ripng-neighbor-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

neighbor-link-local-addr

Description IPv6 link-local address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_distribute-list

Specification	
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *ipv6_rip_distribute-list_prefix*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_distribute-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ipv6_rip_distribute-list_prefix

Specification	
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip_distribute-list_prefix_prefix-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

isis-list

Specification	
Type	*list*
Block object keys	

address-family

Description: address-family is a **JSON Block**. Please see below for *isis-list_address-family*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/address-family*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

area-password-cfg

Description: area-password-cfg is a **JSON Block**. Please see below for *isis-list_area-password-cfg*

Type: Object

authentication

Description: authentication is a **JSON Block**. Please see below for *isis-list_authentication*

Type: Object

bfd

Description 'all-interfaces': Enable BFD on all interfaces;

Type: string

Supported Values: all-interfaces

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance-list

Type: List

domain-password-cfg

Description: domain-password-cfg is a **JSON Block**. Please see below for *isis-list_domain-password-cfg*

Type: Object

ha-standby-extra-cost

Type: List

ignore-lsp-errors

Description Ignore LSPs with bad checksums

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

is-type

Description 'level-1': Act as a station router only; 'level-1-2': Act as both a station router and an area router; 'level-2-only': Act as an area router only;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *isis-list_log-adjacency-changes-cfg*

Type: Object

lsp-gen-interval-list

Type: List

lsp-refresh-interval

Description Set LSP refresh interval (LSP refresh time in seconds)

Type: number

Range: 1-65535

Default: 900

max-lsp-lifetime

Description Set maximum LSP lifetime (Maximum LSP lifetime in seconds)

Type: number

Range: 350-65535

Default: 1200

metric-style-list

Type: List

net-list

Type: List

passive-interface-list

Type: List

protocol-list

Type: List

redistribute

Description: redistribute is a **JSON Block**. Please see below for *isis-list_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/redistribute*

set-overload-bit-cfg

Description: set-overload-bit-cfg is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg*

Type: Object

spf-interval-exp-list

Type: List

summary-address-list

Type: List

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default:

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis-list_domain-password-cfg

Specification	
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *isis-list_domain-password-cfg_authenticate*

Type: Object

password

Description Set the authentication password for a routing domain (Routing domain password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis-list_domain-password-cfg_authenticate

Specification	
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

isis-list_set-overload-bit-cfg

Specification	
Type	*object*

on-startup

Description: on-startup is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg_on-startup*

Type: Object

set-overload-bit

Description Signal other touers not to use us in SPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suppress-cfg

Description: suppress-cfg is a **JSON Block**. Please see below for *isis-list_set-overload-bit-cfg_suppress-cfg*

Type: Object

isis-list_set-overload-bit-cfg_suppress-cfg

Specification	
Type	*object*

external

Description If overload-bit set, don't advertise IP prefixes learned from other protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interlevel

Description If overload-bit set, don't advertise IP prefixes learned from another ISIS level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_set-overload-bit-cfg_on-startup

Specification	
Type	*object*

delay

Description Time in seconds to advertise ourself as overloaded after reboot

Type: number

Range: 5-86400

Mutual Exclusion: delay and wait-for-bgp are mutually exclusive

wait-for-bgp

Description Let BGP decide when to unset the overload bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: wait-for-bgp and delay are mutually exclusive

isis-list_net-list

Specification	
Type	*list*
Block object keys	

net

Description A Network Entity Title for this process (XX.XXXX. . . . .XXXX.XX Network entity title (NET))

Type: string

Format: nasp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

isis-list_metric-style-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-1-2

type

Description 'narrow': Use old style of TLVs with narrow metric; 'wide': Use new style of TLVs to carry wider metric; 'transition': Send and accept both styles of TLVs during transition; 'narrow-transition': Send old style of TLVs with narrow metric with accepting both styles of TLVs; 'wide-transition': Send new style of TLVs to carry wider metric with accepting both styles of TLVs;

Type: string

Supported Values: narrow, wide, transition, narrow-transition, wide-transition

Default: narrow

isis-list_authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

isis-list_authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

isis-list_authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Authentication mode;

Type: string

Supported Values: md5

isis-list_authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_protocol-list

Specification	
Type	*list*
Block object keys	

protocol-topology

Description Protocol Topology

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_log-adjacency-changes-cfg

Specification	
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

isis-list_spf-interval-exp-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

max

Description Maximum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min

Description Minimum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

isis-list_passive-interface-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

isis-list_summary-address-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IP network prefix

Type: string

Format: ipv4-cidr

isis-list_address-family

Specification	
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/address-family/ipv6*

isis-list_address-family_ipv6

Specification	
Type	*object*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

multi-topology-cfg

Description: multi-topology-cfg is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_multi-topology-cfg*

Type: Object

redistribute

Description: redistribute is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/address-family/ipv6/redistribute*

summary-prefix-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis-list_address-family_ipv6_redistribute

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

isis-list_address-family_ipv6_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

isis-list_address-family_ipv6_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, nat64, ospf, rip, static

isis-list_address-family_ipv6_redistribute_isis

Specification	
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-2-from*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-2-from

Specification	
Type	*object*

into-2

Description: into-2 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-2-from_into-2*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-2-from_into-2

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_address-family_ipv6_redistribute_isis_level-1-from

Specification	
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *isis-list_address-family_ipv6_redistribute_isis_level-1-from_into-1*

Type: Object

isis-list_address-family_ipv6_redistribute_isis_level-1-from_into-1

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_address-family_ipv6_multi-topology-cfg

Specification	
Type	*object*

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

isis-list_address-family_ipv6_summary-prefix-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

isis-list_redistribute

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *isis-list_redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

isis-list_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

isis-list_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, ospf, rip, static

isis-list_redistribute_isis

Specification	
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-2-from*

Type: Object

isis-list_redistribute_isis_level-2-from

Specification	
Type	*object*

into-2

Description: into-2 is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-2-from_into-2*

Type: Object

isis-list_redistribute_isis_level-2-from_into-2

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_redistribute_isis_level-1-from

Specification	
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *isis-list_redistribute_isis_level-1-from_into-1*

Type: Object

isis-list_redistribute_isis_level-1-from_into-1

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis-list_area-password-cfg

Specification	
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *isis-list_area-password-cfg_authenticate*

Type: Object

password

Description Configure the authentication password for an area (Area password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

isis-list_area-password-cfg_authenticate

Specification	
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

isis-list_lsp-gen-interval-list

Specification	
Type	*list*
Block object keys	

interval

Description Minimum interval in seconds

Type: number

Range: 1-120

Default: 30

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

isis-list_distance-list

Specification	
Type	*list*
Block object keys	

System-ID

Description System-ID in XXXX.XXXX.XXXX

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

isis-list_ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.82.2 router bgp

Border Gateway Protocol (BGP)

bgp Specification

Type	*Collection*
Object Key(s)	*as-number*
Collection Name	*bgp-list*
Collection URI	/axapi/v3/router/bgp
Element Name	bgp
Element URI	/axapi/v3/router/bgp/{as-number}
Element Attributes	bgp_attributes
Schema	`bgp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp

bgp attributes

```
POST /axapi/v3/router/bgp/
Payload:
{
    "bgp": {
        "as-number": 1,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/router/bgp

bgp attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}

bgp attributes

```
GET /axapi/v3/router/bgp/1
Reponse:
{
    "bgp": {
        "as-number": 1,
        "bgp": {
            "always-compare-med": 0,
            "bestpath-cfg": {
                "ignore": 0,
                "compare-routerid": 0,
                "remove-recv-med": 0,
                "remove-send-med": 0,
                "missing-as-worst": 0
            },
            "dampening-cfg": {
                "dampening": 0
            },
            "local-preference-value": 100,
            "deterministic-med": 0,
            "enforce-first-as": 0,

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}

bgp attributes

```
DELETE /axapi/v3/router/bgp/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

bgp-list

bgp-list is **JSON List** of *bgp attributes*

bgp-list : [

{ *bgp attributes* },

{ *bgp attributes* },

...

]

bgp attributes

address-family

Description: address-family is a **JSON Block**. Please see below for *address-family*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family*

aggregate-address-list

Type: List

as-number

Description AS number

Type: number

Range: 1-4294967295

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

distance-list

Type: List

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor*

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/network*

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *redistribute_nat-map-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *redistribute_vip*

Type: Object

redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-not-flagged-cfg*

Type: Object

redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate prefix)

Type: string

Format: ipv4-cidr

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Specification	
Type	*object*

always-compare-med

Description Allow comparing MED from different neighbors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bestpath-cfg

Description: bestpath-cfg is a **JSON Block**. Please see below for *bgp_bestpath-cfg*

Type: Object

bgp-restart-time

Description BGP Peer Graceful Restart time in seconds (default 90)

Type: number

Range: 1-3600

Default: 90

bgp-stalepath-time

Description BGP Graceful Restart Stalepath retention time in seconds (default 360)

Type: number

Range: 1-3600

Default: 360

dampening-cfg

Description: dampening-cfg is a **JSON Block**. Please see below for *bgp_dampening-cfg*

Type: Object

deterministic-med

Description Pick the best-MED path among paths advertised from the neighboring AS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-first-as

Description Enforce the first AS for EBGP routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-external-failover

Description Immediately reset session if a link to a directly connected external peer goes down

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

graceful-restart

Description Configure BGP BGP Graceful Restart

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-preference-value

Description Configure default local preference value

Type: number

Range: 0-4294967295

Default: 100

log-neighbor-changes

Description Log neighbor up/down and reset reason

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger-count

Description BGP nexthop-tracking status (count)

Type: number

Range: 0-127

Default: 0

override-validation

Description override router-id validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description Override current router identifier (peers will reset) (Manually configured router identifier)

Type: string

Format: ipv4-address

scan-time

Description Configure background scan interval (Scan interval (sec) [Default:60 Disable:0])

Type: number

Range: 0-60

Default: 60

bgp_dampening-cfg

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half-time

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-penalty

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

bgp_bestpath-cfg

Specification	
Type	*object*

compare-routerid

Description Compare router-id for identical EBGP paths

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore

Description Ignore as-path length in selecting a route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

missing-as-worst

Description Treat missing MED as the least preferred one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-recv-med

Description To remove rcvd MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-send-med

Description To remove send MED attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Specification	
Type	*object*

ip-cidr-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_ip-cidr-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

timers

Specification	
Type	*object*

bgp-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

bgp-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

neighbor

Specification	
Type	*object*

ethernet-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

neighbor_ve-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ethernet-neighbor-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_trunk-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distance-list

Specification	
Type	*list*
Block object keys	

acl-str

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

admin-distance

Description Define an administrative distance

Type: number

Range: 1-255

ext-routes-dist

Description Distance for routes external to the AS

Type: number

Range: 1-255

int-routes-dist

Description Distance for routes internal to the AS

Type: number

Range: 1-255

local-routes-dist

Description Distance for local routes

Type: number

Range: 1-255

src-prefix

Description IP source prefix

Type: string

Format: ipv4-cidr

address-family

Specification	
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *address-family_ipv6*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

address-family_ipv6

Specification	
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *address-family_ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *address-family_ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *address-family_ipv6_neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *address-family_ipv6_network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *address-family_ipv6_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_distance

Specification	
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

address-family_ipv6_redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip*

Type: Object

address-family_ipv6_redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_nat64-cfg

Specification	
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

address-family_ipv6_redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_bgp

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_network

Specification	
Type	*object*

ipv6-network-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *address-family_ipv6_network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

address-family_ipv6_network_ipv6-network-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor

Specification	
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

address-family_ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

address-family_ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

address-family_ipv6_neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

address-family_ipv6_neighbor_peer-group-neighbor-list_neighbor-prefix-lists

2.82.3 router bgp address-family

Enter Address Family command mode

address-family Specification

Type	*Intermediate Resource*
Element Name	address-family
Element URI	/axapi/v3/router/bgp/{as-number}/address-family
Element Attributes	address-family_attributes
Schema	`address-family schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family

address-family_attributes

address-family attributes

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6*

ipv6

Specification	
Type	*object*

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *ipv6_bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *ipv6_distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *ipv6_neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *ipv6_network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ipv6_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_distance

Specification	
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

ipv6_redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *ipv6_redistribute_vip*

Type: Object

ipv6_redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_nat64-cfg

Specification	
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *ipv6_redistribute_vip_only-not-flagged-cfg*

Type: Object

ipv6_redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_bgp

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_network

Specification	
Type	*object*

ipv6-network-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *ipv6_network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

ipv6_network_ipv6-network-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor

Specification	
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

ipv6_neighbor_ethernet-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ve-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

ipv6_neighbor_trunk-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6_neighbor_ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6_neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6_neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.4 router bgp address-family ipv6

ipv6 Address family

ipv6 Specification

Type	*Configuration Resource*
Element Name	ipv6
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6
Element Attributes	ipv6_attributes
Schema	`ipv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6

ipv6 attributes

```
POST /axapi/v3/router/bgp/1/address-family/ipv6
Payload:
{
    "ipv6": {
        "network": {
            "synchronization": {
                "network-synchronization": 1
            }
        },
        "bgp": {
            "dampening": 1,
            "dampening-half": 1,
            "dampening-start-reuse": 1,
            "dampening-max-supress": 1,
            "dampening-start-supress": 1
        }
    }
}
```

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6

ipv6 attributes

```
GET /axapi/v3/router/bgp/1/address-family/ipv6
Reponse:
{
    "ipv6": {
        "bgp": {
            "dampening": 1,
            "dampening-half": 1,
            "dampening-start-reuse": 1,
            "dampening-start-supress": 1,
            "dampening-max-supress": 1
        },
        "maximum-paths-value": 1,
        "originate": 0,
        "auto-summary": 0,
        "synchronization": 0,
        "uuid": "77723322-60f8-11d9-a942-001fa00680a0",
        "network": {
            "synchronization": {
                "network-synchronization": 1,
                "uuid": "77727990-60f8-11d9-a942-001fa00680a0",
                "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6/network/
↪synchronization"
            },
            "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6/network"
        },
        "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6"
    }
}
```

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6

ipv6 attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6

ipv6 attributes

```
PUT /axapi/v3/router/bgp/1/address-family/ipv6
Payload:
{
    "ipv6": {
        "network": {
            "ipv6-network-list": [
                {
```

(continues on next page)

(continued from previous page)

```
                    "network-ipv6": "2003::/64",
                    "backdoor": 0
                }
            ]
        },
        "bgp": {
            "dampening": 1,
            "dampening-half": 2,
            "dampening-start-reuse": 2,
            "dampening-max-supress": 2,
            "dampening-start-supress": 2,
            "dampening-unreachability": 2
        }
    }
}
```

ipv6 attributes

aggregate-address-list

Type: List

auto-summary

Description Enable automatic network number summarization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

distance

Description: distance is a **JSON Block**. Please see below for *distance*

Type: Object

maximum-paths-value

Description Supported BGP multipath numbers

Type: number

Range: 1-64

Default: 1

neighbor

Description: neighbor is a **JSON Block**. Please see below for *neighbor*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor*

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network*

originate

Description Distribute an IPv6 default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute*

synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distance

Specification	
Type	*object*

distance-ext

Description Distance for routes external to the AS

Type: number

Range: 1-255

distance-int

Description Distance for routes internal to the AS

Type: number

Range: 1-255

distance-local

Description Distance for local routes

Type: number

Range: 1-255

redistribute

Specification	
Type	*object*

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *redistribute_connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *redistribute_floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *redistribute_ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *redistribute_isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *redistribute_lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *redistribute_nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *redistribute_nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *redistribute_ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *redistribute_rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *redistribute_static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *redistribute_static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *redistribute_vip*

Type: Object

redistribute_ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat64-cfg

Specification	
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *redistribute_vip_only-not-flagged-cfg*

Type: Object

redistribute_vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aggregate-address-list

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Configure BGP aggregate entries (Aggregate IPv6 prefix)

Type: string

Format: ipv6-address-plen

as-set

Description Generate AS set path information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-only

Description Filter more specific routes from updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgp

Specification	
Type	*object*

dampening

Description Enable route-flap dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-half

Description Reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

dampening-max-supress

Description Maximum duration to suppress a stable route(minutes)

Type: number

Range: 1-255

dampening-start-reuse

Description Value to start reusing a route

Type: number

Range: 1-20000

dampening-start-supress

Description Value to start suppressing a route

Type: number

Range: 1-20000

dampening-unreachability

Description Un-reachability Half-life time for the penalty(minutes)

Type: number

Range: 1-45

route-map

Description Route-map to specify criteria for dampening (Route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

network

Specification	
Type	*object*

ipv6-network-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/ipv6-network/{network-ipv6}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *network_synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

network_ipv6-network-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network_synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor

Specification	
Type	*object*

ethernet-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ethernet-neighbor-ipv6/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}*

ve-neighbor-ipv6-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}*

neighbor_ethernet-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ve-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

neighbor_trunk-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor_ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor_ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor_ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.5 router bgp address-family ipv6 neighbor

Specify a neighbor router

neighbor Specification

Type	*Intermediate Resource*
Element Name	neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor

ethernet-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys

Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ve-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

trunk-neighbor-ipv6-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.8 router bgp address-family ipv6 neighbor ipv6-neighbor

Specify a peer-group neighbor router

ipv6-neighbor Specification

Type	*Collection*
Object Key(s)	*neighbor-ipv6*
Collection Name	*ipv6-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor
Element Name	ipv6-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}
Element Attributes	ipv6-neighbor_attributes
Schema	`ipv6-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor

ipv6-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ipv6-neighbor

ipv6-neighbor-list

ipv6-neighbor-list

ipv6-neighbor-list is **JSON List** of *ipv6-neighbor attributes*

```
ipv6-neighbor-list : [
        { ipv6-neighbor attributes },
        { ipv6-neighbor attributes },
        ...
    ]
```

ipv6-neighbor attributes

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.9 router bgp address-family ipv6 neighbor peer-group-neighbor

Specify a peer-group neighbor router

peer-group-neighbor Specification

Type	*Collection*
Object Key(s)	*peer-group*
Collection Name	*peer-group-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor
Element Name	peer-group-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}
Element Attributes	peer-group-neighbor_attributes
Schema	`peer-group-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor

peer-group-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor

peer-group-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}

peer-group-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor

peer-group-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}

peer-group-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor/{peer-group}

peer-group-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/peer-group-neighbor

peer-group-neighbor-list

peer-group-neighbor-list

peer-group-neighbor-list is **JSON List** of *peer-group-neighbor attributes*

```
peer-group-neighbor-list : [
        { peer-group-neighbor attributes },
        { peer-group-neighbor attributes },
        ...
    ]
```

peer-group-neighbor attributes

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.10 router bgp address-family ipv6 neighbor trunk-neighbor-ipv6

Specify a trunk unnumbered neighbor

trunk-neighbor-ipv6 Specification

Type	*Collection*
Object Key(s)	*trunk*
Collection Name	*trunk-neighbor-ipv6-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6
Element Name	trunk-neighbor-ipv6
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}
Element Attributes	trunk-neighbor-ipv6_attributes
Schema	`trunk-neighbor-ipv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6

trunk-neighbor-ipv6 attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6

trunk-neighbor-ipv6 attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}

trunk-neighbor-ipv6 attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6

trunk-neighbor-ipv6-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}

trunk-neighbor-ipv6 attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6/{trunk}

trunk-neighbor-ipv6 attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/trunk-neighbor-ipv6

trunk-neighbor-ipv6-list

trunk-neighbor-ipv6-list

trunk-neighbor-ipv6-list is **JSON List** of *trunk-neighbor-ipv6 attributes*

trunk-neighbor-ipv6-list : [

{ *trunk-neighbor-ipv6 attributes* },

{ *trunk-neighbor-ipv6 attributes* },

...

]

trunk-neighbor-ipv6 attributes

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.11 router bgp address-family ipv6 neighbor ve-neighbor-ipv6

Specify a VE unnumbered neighbor

ve-neighbor-ipv6 Specification

Type	*Collection*
Object Key(s)	*ve*
Collection Name	*ve-neighbor-ipv6-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6
Element Name	ve-neighbor-ipv6
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}
Element Attributes	ve-neighbor-ipv6_attributes
Schema	`ve-neighbor-ipv6 schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6

ve-neighbor-ipv6 attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6

ve-neighbor-ipv6 attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}

ve-neighbor-ipv6 attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6

ve-neighbor-ipv6-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}

ve-neighbor-ipv6 attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6/{ve}

ve-neighbor-ipv6 attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/neighbor/ve-neighbor-ipv6

ve-neighbor-ipv6-list

ve-neighbor-ipv6-list

ve-neighbor-ipv6-list is **JSON List** of *ve-neighbor-ipv6 attributes*

ve-neighbor-ipv6-list : [

{ *ve-neighbor-ipv6 attributes* },

{ *ve-neighbor-ipv6 attributes* },

...

]

ve-neighbor-ipv6 attributes

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

2.82.12 router bgp address-family ipv6 network

Specify a network to announce via BGP

network Specification

Type	*Intermediate Resource*
Element Name	network
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network
Element Attributes	network_attributes
Schema	`network schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/network

network_attributes

```
GET /axapi/v3/router/bgp/1/address-family/ipv6/network
Reponse:
{
    "network": {
        "synchronization": {
            "network-synchronization": 1,
            "uuid": "7aab97fc-60fa-11d9-a942-001fa00680a0",
            "a10-url": "/axapi/v3/router/bgp/1/address-family/ipv6/network/
↪synchronization"

synchronization

Description: synchronization is a **JSON Block**. Please see below for *synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/address-family/ipv6/network/synchronization*

ipv6-network-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv6

Description Specify a network to announce via BGP

Type: string

Format: ipv6-address-plen

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.13 router bgp address-family ipv6 network ipv6-network

Specify a ip address mask network to announce via BGP

ipv6-network Specification

Type	*Collection*
Object Key(s)	*network-ipv6*
Collection Name	*ipv6-network-list*

2.82.15 router bgp address-family ipv6 redistribute

Redistribute information from another routing protocol

redistribute Specification

Type	*Configuration Resource*
Element Name	redistribute
Element URI	/axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute
Element Attributes	redistribute_attributes
Schema	`redistribute schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute

redistribute attributes

```
POST /axapi/v3/router/bgp/1/address-family/ipv6/redistribute
Payload:
{
    "redistribute": {
        "connected-cfg": {
            "connected": 1,
            "route-map": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/router/bgp/{as-number}/address-family/ipv6/redistribute

redistribute attributes

```
GET /axapi/v3/router/bgp/1/address-family/ipv6/redistribute
Reponse:
{
    "redistribute": {
        "connected-cfg": {
            "connected": 1,
            "route-map": "a"
        },
        "floating-ip-cfg": {
            "floating-ip": 0
        },
        "nat64-cfg": {
            "nat64": 0
```

(continues on next page)

(continued from previous page)

```
        },
        "nat-map-cfg": {
            "nat-map": 0
        },
        "lw4o6-cfg": {
            "lw4o6": 0
        },
        "static-nat-cfg": {
            "static-nat": 0
        },
        "ip-nat-cfg": {
            "ip-nat": 0
        },
        "ip-nat-list-cfg": {
            "ip-nat-list": 0
        },

connected-cfg

Description: connected-cfg is a **JSON Block**. Please see below for *connected-cfg*

Type: Object

floating-ip-cfg

Description: floating-ip-cfg is a **JSON Block**. Please see below for *floating-ip-cfg*

Type: Object

ip-nat-cfg

Description: ip-nat-cfg is a **JSON Block**. Please see below for *ip-nat-cfg*

Type: Object

ip-nat-list-cfg

Description: ip-nat-list-cfg is a **JSON Block**. Please see below for *ip-nat-list-cfg*

Type: Object

isis-cfg

Description: isis-cfg is a **JSON Block**. Please see below for *isis-cfg*

Type: Object

lw4o6-cfg

Description: lw4o6-cfg is a **JSON Block**. Please see below for *lw4o6-cfg*

Type: Object

nat-map-cfg

Description: nat-map-cfg is a **JSON Block**. Please see below for *nat-map-cfg*

Type: Object

nat64-cfg

Description: nat64-cfg is a **JSON Block**. Please see below for *nat64-cfg*

Type: Object

ospf-cfg

Description: ospf-cfg is a **JSON Block**. Please see below for *ospf-cfg*

Type: Object

rip-cfg

Description: rip-cfg is a **JSON Block**. Please see below for *rip-cfg*

Type: Object

static-cfg

Description: static-cfg is a **JSON Block**. Please see below for *static-cfg*

Type: Object

static-nat-cfg

Description: static-nat-cfg is a **JSON Block**. Please see below for *static-nat-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *vip*

Type: Object

ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat64-cfg

Specification	
Type	*object*

nat64

Description NAT64 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *vip_only-not-flagged-cfg*

Type: Object

vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.82.16 router bgp neighbor

Specify a neighbor router

neighbor Specification

Type	*Intermediate Resource*
Element Name	neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor
Element Attributes	neighbor_attributes
Schema	`neighbor schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor

neighbor_attributes

neighbor attributes

ethernet-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}*

ipv4-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv4-neighbor/{neighbor-ipv4}*

ipv6-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}*

peer-group-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}*

trunk-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/trunk-neighbor/{trunk}*

ve-neighbor-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}*

ve-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

ipv4-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv4-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv4-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv4-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

peer-group-neighbor-list

Specification	
Type	*list*
Block object keys	

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

peer-group-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

peer-group-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

peer-group-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list

Specification	
Type	*list*
Block object keys	

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

ipv6-neighbor-list_distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ipv6-neighbor-list_neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ipv6-neighbor-list_neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

ethernet-neighbor-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface number

Type: number

Format: interface

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-neighbor-list

Specification	
Type	*list*
Block object keys	

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

trunk

Description Trunk interface number

Type: number

Format: interface

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.17 router bgp neighbor ethernet-neighbor

Specify an ethernet unnumbered neighbor

ethernet-neighbor Specification

Type	*Collection*
Object Key(s)	*ethernet*
Collection Name	*ethernet-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor
Element Name	ethernet-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}
Element Attributes	ethernet-neighbor_attributes
Schema	`ethernet-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor

ethernet-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor

ethernet-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ethernet-neighbor/{ethernet}

ethernet-neighbor attributes

Get List

ipv4-neighbor-list : [

{ *ipv4-neighbor attributes* },

{ *ipv4-neighbor attributes* },

...

]

ipv4-neighbor attributes

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv4

Description Neighbor address

Type: string

Format: ipv4-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.19 router bgp neighbor ipv6-neighbor

Specify a ipv6 neighbor router

ipv6-neighbor Specification

Type	*Collection*
Object Key(s)	*neighbor-ipv6*
Collection Name	*ipv6-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor
Element Name	ipv6-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}
Element Attributes	ipv6-neighbor_attributes
Schema	`ipv6-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor

ipv6-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/ipv6-neighbor/{neighbor-ipv6}

ipv6-neighbor attributes

ipv6-neighbor-list

ipv6-neighbor-list is **JSON List** of *ipv6-neighbor attributes*

ipv6-neighbor-list : [

{ *ipv6-neighbor attributes* },

{ *ipv6-neighbor attributes* },

...

]

ipv6-neighbor attributes

acos-application-only

Description Send BGP update to ACOS application

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: advertisement-interval and peer-group-name are mutually exclusive

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

Mutual Exclusion: as-origination-interval and peer-group-name are mutually exclusive

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

bfd-value

Description Key String

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-originate and peer-group-name are mutually exclusive

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disallow-infinite-holdtime and peer-group-name are mutually exclusive

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-restart

Description enable graceful-restart helper for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

key-id

Description Key ID

Type: number

Range: 0-255

key-type

Description 'md5': md5; 'meticulous-md5': meticulous-md5; 'meticulous-sha1': meticulous-sha1; 'sha1': sha1; 'simple': simple; (Keyed MD5/Meticulous Keyed MD5/Meticulous Keyed SHA1/Keyed SHA1/Simple Password)

Type: string

Supported Values: md5, meticulous-md5, meticulous-sha1, sha1, simple

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nbr-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

neighbor-filter-lists

Type: List

neighbor-ipv6

Description Neighbor IPv6 address

Type: string

Format: ipv6-address

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: next-hop-self and peer-group-name are mutually exclusive

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-name

Description Configure peer-group (peer-group name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: peer-group-nameadvertisement-interval, as-origination-interval, default-originate, disallow-infinite-holdtime, next-hop-self, timers and unsuppress-map are mutually exclusive

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart-min

Description restart value, 1 to 1440 minutes

Type: number

Range: 1-1440

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: unsuppress-map and peer-group-name are mutually exclusive

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.20 router bgp neighbor peer-group-neighbor

Specify a peer-group neighbor router

peer-group-neighbor Specification

Type	*Collection*
Object Key(s)	*peer-group*
Collection Name	*peer-group-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor
Element Name	peer-group-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}
Element Attributes	peer-group-neighbor_attributes
Schema	`peer-group-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor

peer-group-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor

peer-group-neighbor attributes

Get Object

/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}

peer-group-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor

peer-group-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/peer-group-neighbor/{peer-group}

peer-group-neighbor attributes

peer-group-neighbor-list

peer-group-neighbor-list is **JSON List** of *peer-group-neighbor attributes*

peer-group-neighbor-list : [

{ *peer-group-neighbor attributes* },

{ *peer-group-neighbor attributes* },

...

]

peer-group-neighbor attributes

activate

Description Enable the Address Family for this Neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

advertisement-interval

Description Minimum interval between sending BGP routing updates (time in seconds)

Type: number

Range: 1-600

allowas-in

Description Accept as-path with my AS present in it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allowas-in-count

Description Number of occurrences of AS number

Type: number

Range: 1-10

Default: 3

as-origination-interval

Description Minimum interval between sending AS-origination routing updates (time in seconds)

Type: number

Range: 1-600

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

collide-established

Description Include Neighbor in Established State for Collision Detection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connect

Description BGP connect timer

Type: number

Range: 1-65535

default-originate

Description Originate default route to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Neighbor specific description (Up to 80 characters describing this neighbor)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

disallow-infinite-holdtime

Description BGP per neighbor disallow-infinite-holdtime

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

distribute-lists

Type: List

dont-capability-negotiate

Description Do not perform capability negotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic

Description Advertise dynamic capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop

Description Allow EBGP neighbors not on directly connected networks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ebgp-multihop-hop-count

Description maximum hop count

Type: number

Range: 1-255

enforce-multihop

Description Enforce EBGP neighbors to perform multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Mutual Exclusion: ethernetupdate-source-ip, update-source-ipv6, loopback, ve, trunk, lif and tunnel are mutually exclusive

extended-nexthop

Description Advertise extended-nexthop capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inbound

Description Allow inbound soft reconfiguration for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lif

Description Logical interface (Lif interface number)

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: lifupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and tunnel are mutually exclusive

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

Mutual Exclusion: loopbackupdate-source-ip, update-source-ipv6, ethernet, ve, trunk, lif and tunnel are mutually exclusive

maximum-prefix

Description Maximum number of prefix accept from this peer (maximum no. of prefix limit (various depends on model))

Type: number

Range: 1-1048576

Default: 128

maximum-prefix-thres

Description threshold-value, 1 to 100 percent

Type: number

Range: 1-100

multihop

Description Enable multihop

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor-filter-lists

Type: List

neighbor-prefix-lists

Type: List

neighbor-route-map-lists

Type: List

next-hop-self

Description Disable the next hop calculation for this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

override-capability

Description Override capability negotiation result

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pass-encrypted

Description

pass-value

Description Key String

Type: string

Format: password

Maximum Length: 80 characters

Maximum Length: 1 characters

passive

Description Don't send open messages to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group

Description Neighbor tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

peer-group-key

Description Configure peer-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-group-remote-as

Description Specify AS number of BGP neighbor

Type: number

Range: 1-4294967295

prefix-list-direction

Description 'both': both; 'receive': receive; 'send': send;

Type: string

Supported Values: both, receive, send

remove-private-as

Description Remove private AS number from outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route-map to specify criteria to originate default (route-map name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-refresh

Description Advertise route-refresh capability to this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

send-community-val

Description 'both': Send Standard and Extended Community attributes; 'none': Disable Sending Community attributes; 'standard': Send Standard Community attributes; 'extended': Send Extended Community attributes;

Type: string

Supported Values: both, none, standard, extended

Default: both

shutdown

Description Administratively shut down this neighbor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

strict-capability-match

Description Strict capability negotiation match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers-holdtime

Description Holdtime

Type: number

Range: 0-65535

Default: 90

timers-keepalive

Description Keepalive interval

Type: number

Range: 0-65535

Default: 30

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

Mutual Exclusion: trunkupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, lif and tunnel are mutually exclusive

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

Mutual Exclusion: tunnelupdate-source-ip, update-source-ipv6, ethernet, loopback, ve, trunk and lif are mutually exclusive

unsuppress-map

Description Route-map to selectively unsuppress suppressed routes (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

update-source-ip

Description IP address

Type: string

Format: ipv4-address

Mutual Exclusion: update-source-ipupdate-source-ipv6, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

update-source-ipv6

Description IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: update-source-ipv6update-source-ip, ethernet, loopback, ve, trunk, lif and tunnel are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Mutual Exclusion: veupdate-source-ip, update-source-ipv6, ethernet, loopback, trunk, lif and tunnel are mutually exclusive

weight

Description Set default weight for routes from this neighbor

Type: number

Range: 0-65535

Default: 0

distribute-lists

Specification	
Type	*list*
Block object keys	

distribute-list

Description Filter updates to/from this neighbor (IP standard/extended/named access list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distribute-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-route-map-lists

Specification	
Type	*list*
Block object keys	

nbr-rmap-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

nbr-route-map

Description Apply route map to neighbor (Name of route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

neighbor-prefix-lists

Specification	
Type	*list*
Block object keys	

nbr-prefix-list

Description Filter updates to/from this neighbor (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nbr-prefix-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

neighbor-filter-lists

Specification	
Type	*list*
Block object keys	

filter-list

Description Establish BGP filters (AS path access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list-direction

Description 'in': in; 'out': out;

Type: string

Supported Values: in, out

2.82.21 router bgp neighbor trunk-neighbor

Specify a trunk unnumbered neighbor

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.22 router bgp neighbor ve-neighbor

Specify a VE unnumbered neighbor

ve-neighbor Specification

Type	*Collection*
Object Key(s)	*ve*
Collection Name	*ve-neighbor-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor
Element Name	ve-neighbor
Element URI	/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}
Element Attributes	ve-neighbor_attributes
Schema	`ve-neighbor schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor

ve-neighbor-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/neighbor/ve-neighbor/{ve}

ve-neighbor attributes

ve-neighbor-list

ve-neighbor-list is **JSON List** of *ve-neighbor attributes*

ve-neighbor-list : [

{ *ve-neighbor attributes* },

{ *ve-neighbor attributes* },

...

]

ve-neighbor attributes

peer-group-name

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

unnumbered

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual ethernet interface number

Type: number

Format: interface

2.82.23 router bgp network

Specify a network to announce via BGP

network Specification

Type	*Intermediate Resource*
Element Name	network
Element URI	/axapi/v3/router/bgp/{as-number}/network
Element Attributes	network_attributes
Schema	`network schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/bgp/{as-number}/network

network_attributes

network attributes

ip-cidr-list

Type: List

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}*

synchronization

Description: synchronization is a **JSON Block**. Please see below for *synchronization*

Type: Object

Refernce Object: */axapi/v3/router/bgp/{as-number}/network/synchronization*

synchronization

Specification	
Type	*object*

network-synchronization

Description Perform IGP synchronization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-cidr-list

Specification	
Type	*list*
Block object keys	

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.24 router bgp network ip-cidr

Specify a ip network to announce via BGP

ip-cidr Specification

Type	*Collection*
Object Key(s)	*network-ipv4-cidr*
Collection Name	*ip-cidr-list*
Collection URI	/axapi/v3/router/bgp/{as-number}/network/ip-cidr
Element Name	ip-cidr
Element URI	/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}
Element Attributes	ip-cidr_attributes
Schema	`ip-cidr schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr attributes

Create List

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr attributes

Get Object

GET

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Get List

GET

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr-list

Modify Object

POST

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Replace Object

PUT

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

Replace List

PUT

/axapi/v3/router/bgp/{as-number}/network/ip-cidr

ip-cidr-list

Delete Object

DELETE

/axapi/v3/router/bgp/{as-number}/network/ip-cidr/{network-ipv4-cidr}

ip-cidr attributes

ip-cidr-list

ip-cidr-list is **JSON List** of *ip-cidr attributes*

ip-cidr-list : [

{ *ip-cidr attributes* },

{ *ip-cidr attributes* },

...

]

ip-cidr attributes

backdoor

Description Specify a BGP backdoor route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

comm-value

Description community value in the format 1-4294967295|AA:NN|internet|local-AS|no-advertise|no-export

Type: string

Format: string-rlx

description

Description Network specific description (Up to 80 characters describing this network)

Type: string

Format: string-rlx

Maximum Length: 80 characters

Maximum Length: 1 characters

network-ipv4-cidr

Description Specify network mask

Type: string

Format: ipv4-cidr

route-map

Description Route-map to modify the attributes (Name of the route map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.25 router bgp network synchronization

help Perform IGP synchronization

synchronization Specification

Type	*Configuration Resource*
Element Name	synchronization
Element URI	/axapi/v3/router/bgp/{as-number}/network/synchronization
Element Attributes	synchronization_attributes
Schema	`synchronization schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/bgp/{as-number}/network/synchronization

synchronization attributes

```
POST /axapi/v3/router/bgp/1/network/synchronization
Payload:
{

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description: vip is a **JSON Block**. Please see below for *vip*

Type: Object

ip-nat-list-cfg

Specification	
Type	*object*

ip-nat-list

Description IP NAT list

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

lw4o6-cfg

Specification	
Type	*object*

lw4o6

Description LW4O6 Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

connected-cfg

Specification	
Type	*object*

connected

Description Connected

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip

Specification	
Type	*object*

only-flagged-cfg

Description: only-flagged-cfg is a **JSON Block**. Please see below for *vip_only-flagged-cfg*

Type: Object

only-not-flagged-cfg

Description: only-not-flagged-cfg is a **JSON Block**. Please see below for *vip_only-not-flagged-cfg*

Type: Object

vip_only-not-flagged-cfg

Specification	
Type	*object*

only-not-flagged

Description Only not flagged

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip_only-flagged-cfg

Specification	
Type	*object*

only-flagged

Description Selected Virtual IP (VIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-cfg

Specification	
Type	*object*

ip-nat

Description IP NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

floating-ip-cfg

Specification	
Type	*object*

floating-ip

Description Floating IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

isis-cfg

Specification	
Type	*object*

isis

Description ISO IS-IS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

nat-map-cfg

Specification	
Type	*object*

nat-map

Description NAT MAP Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

rip-cfg

Specification	
Type	*object*

rip

Description Routing Information Protocol (RIP)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-cfg

Specification	
Type	*object*

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static-nat

Description Static NAT Prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static-cfg

Specification	
Type	*object*

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

static

Description Static routes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.82.27 router ipv6

IPv6 information

ipv6 Specification

Type	*Intermediate Resource*
Element Name	ipv6
Element URI	/axapi/v3/router/ipv6
Element Attributes	ipv6_attributes
Schema	`ipv6 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/router/ipv6

ipv6_attributes

ipv6 attributes

ospf-list

Type: List

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}*

rip

Description: rip is a **JSON Block**. Please see below for *rip*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip*

ospf-list

Specification	
Type	*list*
Block object keys	

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *ospf-list_default-information*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *ospf-list_distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *ospf-list_passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *ospf-list_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *ospf-list_timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_distribute-internal-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

ospf-list_redistribute

Specification	
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

ospf-list_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, nat64, lw4o6, isis, rip, static

ospf-list_redistribute_ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_redistribute_ip-nat-floating-list

Specification	
Type	*list*

Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-list_redistribute_vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ospf-list_distribute-list

Specification	
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *ospf-list_distribute-list_prefix-list*

Type: Object

ospf-list_distribute-list_prefix-list

Specification	
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ospf-list_area-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

ospf-list_area-list_virtual-link-list

Specification	
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

ospf-list_area-list_range-list

Specification	
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

ospf-list_default-information

Specification	
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf-list_passive-interface

Specification	
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

ospf-list_passive-interface_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ospf-list_passive-interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ospf-list_passive-interface_trunk-cfg

Specification	
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

ospf-list_passive-interface_loopback-cfg

Specification	
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

ospf-list_passive-interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

ospf-list_timers

Specification	
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *ospf-list_timers_spf*

Type: Object

ospf-list_timers_spf

Specification	
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *ospf-list_timers_spf_exp*

Type: Object

ospf-list_timers_spf_exp

Specification	
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ospf-list_ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

rip

Specification	
Type	*object*

aggregate-address-cfg

Type: List

cisco-metric-behavior

Description 'enable': Enables updating metric consistent with Cisco; 'disable': Disables updating metric consistent with Cisco; (Enable/Disable updating metric consistent with Cisco)

Type: string

Supported Values: enable, disable

Default: disable

default-information

Description 'originate': originate; (Distribute default route)

Type: string

Supported Values: originate

default-metric

Description Set a metric of redistribute routes (Default metric)

Type: number

Range: 1-16

Default: 1

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *rip_distribute-list*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/distribute-list*

offset-list

Description: offset-list is a **JSON Block**. Please see below for *rip_offset-list*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/offset-list*

passive-interface-list

Type: List

recv-buffer-size

Description Set the RIPNG UDP receive buffer size (the RIPNG UDP receive buffer size value)

Type: number

Range: 8192-2147483647

redistribute

Description: redistribute is a **JSON Block**. Please see below for *rip_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/redistribute*

ripng-neighbor

Description: ripng-neighbor is a **JSON Block**. Please see below for *rip_ripng-neighbor*

Type: Object

route-cfg

Type: List

route-map

Description: route-map is a **JSON Block**. Please see below for *rip_route-map*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/route-map*

timers

Description: timers is a **JSON Block**. Please see below for *rip_timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list

Specification	
Type	*object*

acl-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_offset-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

metric

Description Metric value

Type: number

Range: 0-16

offset-list-direction

Description 'in': Filter incoming updates; 'out': Filter outgoing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_route-map

Specification	
Type	*object*

map-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_route-map_map-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-direction

Description 'in': Route map set for input filtering; 'out': Route map set for output filtering;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_redistribute

Specification	
Type	*object*

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

rip_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

rip_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, ospf, static

rip_route-cfg

Specification	
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

rip_timers

Specification	
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *rip_timers_timers-cfg*

Type: Object

rip_timers_timers-cfg

Specification	
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

rip_aggregate-address-cfg

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

rip_ripng-neighbor

Specification	
Type	*object*

ripng-neighbor-cfg

Type: List

rip_ripng-neighbor_ripng-neighbor-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

neighbor-link-local-addr

Description IPv6 link-local address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list

Specification	
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *rip_distribute-list_prefix*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

rip_distribute-list_prefix

Specification	
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip_distribute-list_prefix_prefix-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

2.82.28 router ipv6 ospf

Open Shortest Path First (OSPFv3)

ospf Specification

Type	*Collection*
Object Key(s)	*process-id*
Collection Name	*ospf-list*
Collection URI	/axapi/v3/router/ipv6/ospf
Element Name	ospf
Element URI	/axapi/v3/router/ipv6/ospf/{process-id}

    }
}
```

ospf-list

ospf-list is **JSON List** of *ospf attributes*

ospf-list : [

{ *ospf attributes* },

{ *ospf attributes* },

...

]

ospf attributes

abr-type-option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, standard

Default: cisco

area-list

Type: List

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *default-information*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distribute-internal-list

Type: List

distribute-list

Description: distribute-list is a **JSON Block**. Please see below for *distribute-list*

Type: Object

ha-standby-extra-cost

Type: List

log-adjacency-changes

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *passive-interface*

Type: Object

process-id

Description OSPFv3 process tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/ospf/{process-id}/redistribute*

router-id

Description router-id for the OSPF process (OSPFv3 router-id in IPv4 address format)

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-internal-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Default: 255.255.255.255

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

cost

Description Cost

Type: number

Range: 1-65535

Default: 1

type

Description 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, nat64, static-nat, floating-ip, ip-nat, ip-nat-list, vip, vip-only-flagged

redistribute

Specification	
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, nat64, lw4o6, isis, rip, static

redistribute_ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribute_ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

distribute-list

Specification	
Type	*object*

prefix-list

Description: prefix-list is a **JSON Block**. Please see below for *distribute-list_prefix-list*

Type: Object

distribute-list_prefix-list

Specification	
Type	*object*

direction

Description 'in': Filter incoming routing updates;

Type: string

Supported Values: in

value

Description Prefix-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

area-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

area-list_virtual-link-list

Specification	
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

area-list_range-list

Specification	
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

default-information

Specification	
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

passive-interface

Specification	
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

passive-interface_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

passive-interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

passive-interface_trunk-cfg

Specification	
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

passive-interface_loopback-cfg

Specification	
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

passive-interface_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

timers

Specification	
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *timers_spf*

Type: Object

timers_spf

Specification	
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *timers_spf_exp*

Type: Object

timers_spf_exp

Specification	
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.82.29 router ipv6 ospf area

OSPF area parameters

area Specification

Type	*Collection*
Object Key(s)	*area-ipv4, area-num*
Collection Name	*area-list*
Collection URI	/axapi/v3/router/ipv6/ospf/{process-id}/area
Element Name	area
Element URI	/axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}
Element Attributes	area_attributes
Schema	`area schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ipv6/ospf/{process-id}/area

area attributes

Create List

POST

/axapi/v3/router/ipv6/ospf/{process-id}/area

area attributes

Get Object

GET

/axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Get List

GET

/axapi/v3/router/ipv6/ospf/{process-id}/area

area-list

Modify Object

POST

/axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace Object

PUT

/axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace List

area-list

Delete Object

DELETE

/axapi/v3/router/ipv6/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

area-list

area-list is **JSON List** of *area attributes*

area-list : [

{ *area attributes* },

{ *area attributes* },

...

]

area attributes

area-ipv4

Description OSPFv3 area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPFv3 area ID as a decimal value

Type: number

Range: 0-4294967295

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Type: List

stub

Description Configure OSPFv3 area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

virtual-link-list

Specification	
Type	*list*
Block object keys	

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

instance-id

Description OSPFv3 instance ID

Type: number

Range: 0-255

Default: 0

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

value

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

range-list

Specification	
Type	*list*
Block object keys	

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

value

Description Area range for IPv6 prefix

Type: string

Format: ipv6-address-plen

2.82.30 router ipv6 ospf default-information

Control distribution of default information

default-information Specification

Type	*Configuration Resource*
Element Name	default-information
Element URI	/axapi/v3/router/ipv6/ospf/{process-id}/default-information
Element Attributes	default-information_attributes
Schema	`default-information schema`

Operations Allowed:

Create Object

POST

default-information attributes

Delete Object

DELETE

/axapi/v3/router/ipv6/ospf/{process-id}/default-information

default-information attributes

default-information attributes

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.31 router ipv6 ospf redistribute

Redistribute information from another routing protocol

redistribute Specification

Type	*Configuration Resource*
Element Name	redistribute
Element URI	/axapi/v3/router/ipv6/ospf/{process-id}/redistribute
Element Attributes	redistribute_attributes
Schema	`redistribute schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ipv6/ospf/{process-id}/redistribute

redistribute attributes

```
POST /axapi/v3/router/ipv6/ospf/a/redistribute
Payload:

```

redistribute attributes

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'nat64': NAT64 Prefix; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, nat-map, static-nat, nat64, lw4o6, isis, rip, static

ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

ip-nat-prefix

Description Address

Type: string

Format: ipv6-address-plen

vip-list

Specification	
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv6-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv6-address

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, nat64, static-nat, ospf, static

route-cfg

Specification	
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix)

Type: string

Format: ipv6-address-plen

timers

Specification	
Type	*object*

timers-cfg

Description: timers-cfg is a **JSON Block**. Please see below for *timers_timers-cfg*

Type: Object

timers_timers-cfg

Specification	
Type	*object*

basic

Description Basic routing protocol update timers (Routing table update timer value in second. Default is 30)

Type: number

Range: 5-2147483647

val-2

Description Routing information timeout timer. Default is 180

Type: number

Range: 5-2147483647

val-3

Description Garbage collection timer. Default is 120

Type: number

Range: 5-2147483647

aggregate-address-cfg

Specification	
Type	*list*
Block object keys	

aggregate-address

Description Set aggregate RIP route announcement (Aggregate network)

Type: string

Format: ipv6-address-plen

ripng-neighbor

Specification	
Type	*object*

ripng-neighbor-cfg

Type: List

ripng-neighbor_ripng-neighbor-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

neighbor-link-local-addr

Description IPv6 link-local address

Type: string

Format: ipv6-address

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distribute-list

Specification	
Type	*object*

acl-cfg

Type: List

prefix

Description: prefix is a **JSON Block**. Please see below for *distribute-list_prefix*

Type: Object

Refernce Object: */axapi/v3/router/ipv6/rip/distribute-list/prefix*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-list_acl-cfg

Specification	
Type	*list*
Block object keys	

acl

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

distribute-list_prefix

Specification	
Type	*object*

prefix-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-list_prefix_prefix-cfg

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

prefix-list

Description Filter prefixes in routing updates (Name of a prefix list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

prefix-list-direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

2.82.33 router ipv6 rip distribute-list

Filter networks in routing updates

distribute-list Specification

Type	*Configuration Resource*
Element Name	distribute-list
Element URI	/axapi/v3/router/ipv6/rip/distribute-list

Supported Values: originate

distance-list

Type: List

domain-password-cfg

Description: domain-password-cfg is a **JSON Block**. Please see below for *domain-password-cfg*

Type: Object

ha-standby-extra-cost

Type: List

ignore-lsp-errors

Description Ignore LSPs with bad checksums

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

is-type

Description 'level-1': Act as a station router only; 'level-1-2': Act as both a station router and an area router; 'level-2-only': Act as an area router only;

Type: string

Supported Values: level-1, level-1-2, level-2-only

Default: level-1

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *log-adjacency-changes-cfg*

Type: Object

lsp-gen-interval-list

Type: List

lsp-refresh-interval

Description Set LSP refresh interval (LSP refresh time in seconds)

Type: number

Range: 1-65535

Default: 900

max-lsp-lifetime

Description Set maximum LSP lifetime (Maximum LSP lifetime in seconds)

Type: number

Range: 350-65535

Default: 1200

metric-style-list

Type: List

net-list

Type: List

passive-interface-list

Type: List

protocol-list

Type: List

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/redistribute*

set-overload-bit-cfg

Description: set-overload-bit-cfg is a **JSON Block**. Please see below for *set-overload-bit-cfg*

Type: Object

spf-interval-exp-list

Type: List

summary-address-list

Type: List

tag

Description ISO routing area tag

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Default:

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-password-cfg

Specification	
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *domain-password-cfg_authenticate*

Type: Object

password

Description Set the authentication password for a routing domain (Routing domain password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

domain-password-cfg_authenticate

Specification	
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

set-overload-bit-cfg

Specification	
Type	*object*

on-startup

Description: on-startup is a **JSON Block**. Please see below for *set-overload-bit-cfg_on-startup*

Type: Object

set-overload-bit

Description Signal other touers not to use us in SPF

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suppress-cfg

Description: suppress-cfg is a **JSON Block**. Please see below for *set-overload-bit-cfg_suppress-cfg*

Type: Object

set-overload-bit-cfg_suppress-cfg

Specification	
Type	*object*

external

Description If overload-bit set, don't advertise IP prefixes learned from other protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interlevel

Description If overload-bit set, don't advertise IP prefixes learned from another ISIS level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

set-overload-bit-cfg_on-startup

Specification	
Type	*object*

delay

Description Time in seconds to advertise ourself as overloaded after reboot

Type: number

Range: 5-86400

Mutual Exclusion: delay and wait-for-bgp are mutually exclusive

wait-for-bgp

Description Let BGP decide when to unset the overload bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: wait-for-bgp and delay are mutually exclusive

net-list

Specification	
Type	*list*
Block object keys	

net

Description A Network Entity Title for this process (XX.XXXX. . . . .XXXX.XX Network entity title (NET))

Type: string

Format: nasp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

metric-style-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-1-2

type

Description 'narrow': Use old style of TLVs with narrow metric; 'wide': Use new style of TLVs to carry wider metric; 'transition': Send and accept both styles of TLVs during transition; 'narrow-transition': Send old style of TLVs with narrow metric with accepting both styles of TLVs; 'wide-transition': Send new style of TLVs to carry wider metric with accepting both styles of TLVs;

Type: string

Supported Values: narrow, wide, transition, narrow-transition, wide-transition

Default: narrow

authentication

Specification	
Type	*object*

key-chain-list

Type: List

mode-list

Type: List

send-only-list

Type: List

authentication_key-chain-list

Specification	
Type	*list*
Block object keys	

key-chain

Description Authentication key-chain (Name of key-chain)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level

Description 'level-1': Specify authentication key-chain for level-1 PDUs; 'level-2': Specify authentication key-chain for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

authentication_mode-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication mode for level-1 PDUs; 'level-2': Specify authentication mode for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

mode

Description 'md5': Authentication mode;

Type: string

Supported Values: md5

authentication_send-only-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Specify authentication send-only for level-1 PDUs; 'level-2': Specify authentication send-only for level-2 PDUs;

Type: string

Supported Values: level-1, level-2

send-only

Description Authentication send-only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol-list

Specification	
Type	*list*
Block object keys	

protocol-topology

Description Protocol Topology

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-adjacency-changes-cfg

Specification	
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

spf-interval-exp-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

max

Description Maximum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min

Description Minimum Delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

passive-interface-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

lif

Description Logical interface (Lif interface number)

Type: number

Format: interface

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

summary-address-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IP network prefix

Type: string

Format: ipv4-cidr

address-family

Specification	
Type	*object*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *address-family_ipv6*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/address-family/ipv6*

address-family_ipv6

Specification	
Type	*object*

adjacency-check

Description Check ISIS neighbor protocol support

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

default-information

Description 'originate': Distribute a default route;

Type: string

Supported Values: originate

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

multi-topology-cfg

Description: multi-topology-cfg is a **JSON Block**. Please see below for *address-family_ipv6_multi-topology-cfg*

Type: Object

redistribute

Description: redistribute is a **JSON Block**. Please see below for *address-family_ipv6_redistribute*

Type: Object

Refernce Object: */axapi/v3/router/isis/{tag}/address-family/ipv6/redistribute*

summary-prefix-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

address-family_ipv6_redistribute

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

address-family_ipv6_redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

address-family_ipv6_redistribute_redist-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'nat64': NAT64 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, nat64, ospf, rip, static

address-family_ipv6_redistribute_isis

Specification	
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis_level-2-from*

Type: Object

address-family_ipv6_redistribute_isis_level-2-from

Specification	
Type	*object*

into-2

Description: into-2 is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis_level-2-from_into-2*

Type: Object

address-family_ipv6_redistribute_isis_level-2-from_into-2

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_redistribute_isis_level-1-from

Specification	
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *address-family_ipv6_redistribute_isis_level-1-from_into-1*

Type: Object

address-family_ipv6_redistribute_isis_level-1-from_into-1

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

address-family_ipv6_multi-topology-cfg

Specification	
Type	*object*

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

address-family_ipv6_summary-prefix-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

redistribute

Specification	
Type	*object*

isis

Description: isis is a **JSON Block**. Please see below for *redistribute_isis*

Type: Object

redist-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-list

Type: List

redistribute_vip-list

Specification	
Type	*list*
Block object keys	

vip-level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

vip-metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

vip-metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_redist-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': IS-IS level-1 routes only; 'level-1-2': IS-IS level-1 and level-2 routes; 'level-2': IS-IS level-2 routes only;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

metric

Description Metric for redistributed routes (IS-IS default metric)

Type: number

Range: 0-4261412864

Default: 0

metric-type

Description 'external': Set IS-IS External metric type; 'internal': Set IS-IS Internal metric type;

Type: string

Supported Values: external, internal

Default: internal

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'lw4o6': LW4O6 Prefix; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, lw4o6, nat-map, static-nat, ospf, rip, static

redistribute_isis

Specification	
Type	*object*

level-1-from

Description: level-1-from is a **JSON Block**. Please see below for *redistribute_isis_level-1-from*

Type: Object

level-2-from

Description: level-2-from is a **JSON Block**. Please see below for *redistribute_isis_level-2-from*

Type: Object

redistribute_isis_level-2-from

Specification

into-2

Description: into-2 is a **JSON Block**. Please see below for *redistribute_isis_level-2-from_into-2*

Type: Object

redistribute_isis_level-2-from_into-2

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute_isis_level-1-from

Specification	
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *redistribute_isis_level-1-from_into-1*

Type: Object

redistribute_isis_level-1-from_into-1

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-password-cfg

Specification	
Type	*object*

authenticate

Description: authenticate is a **JSON Block**. Please see below for *area-password-cfg_authenticate*

Type: Object

password

Description Configure the authentication password for an area (Area password)

Type: string

Format: string-rlx

Maximum Length: 254 characters

Maximum Length: 1 characters

area-password-cfg_authenticate

Specification	
Type	*object*

snp

Description 'send-only': Send but do not check PDUs on receiving; 'validate': Send and check PDUs on receiving;

Type: string

Supported Values: send-only, validate

lsp-gen-interval-list

Specification	
Type	*list*
Block object keys	

interval

Description Minimum interval in seconds

Type: number

Range: 1-120

Default: 30

level

Description 'level-1': Set interval for level 1 only; 'level-2': Set interval for level 2 only;

Type: string

Supported Values: level-1, level-2

distance-list

Specification	
Type	*list*
Block object keys	

System-ID

Description System-ID in XXXX.XXXX.XXXX

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

acl

Description Access list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

distance

Description ISIS Administrative Distance (Distance value)

Type: number

Range: 1-255

Default: 115

ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.82.39 router isis address-family

Enter Address Family command mode

level

Description 'level-1': Level-1 only; 'level-1-2': Level-1-2; 'level-2': Level-2 only;

Type: string

Supported Values: level-1, level-1-2, level-2

Mutual Exclusion: level and transition are mutually exclusive

level-transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-topology

Description Enable multi-topology mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

transition

Description Accept and generate both IS-IS IPv6 and Multi-topology IPV6 TLVs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: transition and level are mutually exclusive

ipv6_summary-prefix-list

Specification	
Type	*list*
Block object keys	

level

Description 'level-1': Summarize into level-1 area; 'level-1-2': Summarize into both area and sub-domain; 'level-2': Summarize into level-2 sub-domain;

Type: string

Supported Values: level-1, level-1-2, level-2

Default: level-2

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

Description: into-2 is a **JSON Block**. Please see below for *isis_level-2-from_into-2*

Type: Object

isis_level-2-from_into-2

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-1

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isis_level-1-from

Specification	
Type	*object*

into-1

Description: into-1 is a **JSON Block**. Please see below for *isis_level-1-from_into-1*

Type: Object

isis_level-1-from_into-1

Specification	
Type	*object*

distribute-list

Description Select routes (Access-list name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

level-2

Description Inter-area routes into level-2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.82.43 router lacp

Link Aggregation Control Protocol (LACP)

lacp Specification

Type	*Configuration Resource*
Element Name	lacp
Element URI	/axapi/v3/router/lacp
Element Attributes	lacp_attributes
Schema	`lacp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/lacp

lacp attributes

Get Object

GET

/axapi/v3/router/lacp

lacp attributes

Modify Object

POST

/axapi/v3/router/lacp

lacp attributes

Replace Object

PUT

/axapi/v3/router/lacp

lacp attributes

Delete Object

DELETE

/axapi/v3/router/lacp

lacp attributes

lacp attributes

2.82.44 router log

Router log options

log Specification

Type	*Configuration Resource*
Element Name	log
Element URI	/axapi/v3/router/log
Element Attributes	log_attributes
Schema	`log schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/log

log attributes

```
POST /axapi/v3/router/log
Payload:
{
    "log": {
        "log-buffer": 1
    }
}
```

Get Object

GET

/axapi/v3/router/log

log attributes

```
GET /axapi/v3/router/log
Reponse:
{
    "log": {
        "log-buffer": 1,
        "uuid": "d6a0adda-6100-11d9-a942-001fa00680a0",
        "a10-url": "/axapi/v3/router/log"
    }
}
```

Modify Object

POST

/axapi/v3/router/log

log attributes

Replace Object

PUT

/axapi/v3/router/log

log attributes

```
PUT /axapi/v3/router/log
Payload:
{
    "log": {
        "log-buffer": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/router/log

log attributes

```
DELETE /axapi/v3/router/log
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

log attributes

file

Description: file is a **JSON Block**. Please see below for *file*

Type: Object

Refernce Object: */axapi/v3/router/log/file*

log-buffer

Description Logging goes to log-buffer

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

file

Specification	
Type	*object*

name

Description Logging filename (File name)

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

per-protocol

Description Per protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotate

Description Log file rotation (Number of backup files)

Type: number

Range: 0-100

size

Description Log file maximum size (File size in MBytes)

Type: number

Range: 0-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.45 router log file

Logging to file

file Specification

Type	*Configuration Resource*
Element Name	file
Element URI	/axapi/v3/router/log/file
Element Attributes	file_attributes
Schema	`file schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/log/file

file attributes

```
POST /axapi/v3/router/log/file
Payload:
{
    "file": {
        "per-protocol": 1
    }
}
```

Get Object

GET

/axapi/v3/router/log/file

file attributes

```
GET /axapi/v3/router/log/file
Reponse:
{
    "file": {
        "per-protocol": 1,
        "uuid": "e411d246-6100-11d9-a942-001fa00680a0",
        "a10-url": "/axapi/v3/router/log/file"
    }
}
```

Modify Object

POST

/axapi/v3/router/log/file

file attributes

Replace Object

PUT

/axapi/v3/router/log/file

file attributes

```
PUT /axapi/v3/router/log/file
Payload:
{
    "file": {
        "per-protocol": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/router/log/file

file attributes

```
DELETE /axapi/v3/router/log/file
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

file attributes

name

Description Logging filename (File name)

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

per-protocol

Description Per protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rotate

Description Log file rotation (Number of backup files)

Type: number

Range: 0-100

size

Description Log file maximum size (File size in MBytes)

Type: number

Range: 0-1000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.46 router ospf

Open Shortest Path First (OSPF)

ospf Specification

Type	*Collection*
Object Key(s)	*process-id*
Collection Name	*ospf-list*
Collection URI	/axapi/v3/router/ospf
Element Name	ospf
Element URI	/axapi/v3/router/ospf/{process-id}
Element Attributes	ospf_attributes
Schema	`ospf schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf

ospf attributes

```
POST /axapi/v3/router/ospf/
Payload:
{
    "ospf": {
        "process-id": 1,
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/router/ospf

ospf attributes

Get Object

GET

/axapi/v3/router/ospf/{process-id}

ospf attributes

```
GET /axapi/v3/router/ospf/1
Reponse:
{
    "ospf": {

/axapi/v3/router/ospf/{process-id}

ospf attributes

Replace Object

PUT

/axapi/v3/router/ospf/{process-id}

ospf attributes

```
PUT /axapi/v3/router/ospf/1
Payload:
{
    "ospf": {
        "process-id": 1,
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/router/ospf

ospf-list

Delete Object

DELETE

/axapi/v3/router/ospf/{process-id}

ospf attributes

```
DELETE /axapi/v3/router/ospf/1
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

ospf-list

ospf-list is **JSON List** of *ospf attributes*

ospf-list : [

{ *ospf attributes* },

{ *ospf attributes* },

...

]

ospf attributes

area-list

Type: List

Refernce Object: */axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}*

auto-cost-reference-bandwidth

Description Use reference bandwidth method to assign OSPF cost (The reference bandwidth in terms of Mbits per second)

Type: number

Range: 1-4294967

Default: 10000

bfd-all-interfaces

Description Enable BFD on all interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

default-information

Description: default-information is a **JSON Block**. Please see below for *default-information*

Type: Object

Refernce Object: */axapi/v3/router/ospf/{process-id}/default-information*

default-metric

Description Set metric of redistributed routes (Default metric)

Type: number

Range: 1-16777214

Default: 20

distance

Description: distance is a **JSON Block**. Please see below for *distance*

Type: Object

distribute-internal-list

Type: List

distribute-lists

Type: List

extern-lsa-equivalence-check

Description external LSA equivalance check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-standby-extra-cost

Type: List

host-list

Type: List

log-adjacency-changes-cfg

Description: log-adjacency-changes-cfg is a **JSON Block**. Please see below for *log-adjacency-changes-cfg*

Type: Object

max-concurrent-dd

Description Maximum number allowed to process DD concurrently (Number of DD process)

Type: number

Range: 1-65535

Default: 5

maximum-area

Description Maximum number of OSPF area (OSPF area limit)

Type: number

Range: 1-4294967294

neighbor-list

Type: List

network-list

Type: List

ospf-1

Description: ospf-1 is a **JSON Block**. Please see below for *ospf-1*

Type: Object

overflow

Description: overflow is a **JSON Block**. Please see below for *overflow*

Type: Object

passive-interface

Description: passive-interface is a **JSON Block**. Please see below for *passive-interface*

Type: Object

process-id

Description OSPF process ID

Type: number

Range: 0-65535

Default: 0

redistribute

Description: redistribute is a **JSON Block**. Please see below for *redistribute*

Type: Object

Refernce Object: */axapi/v3/router/ospf/{process-id}/redistribute*

rfc1583-compatible

Description Compatible with RFC 1583

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router-id

Description: router-id is a **JSON Block**. Please see below for *router-id*

Type: Object

summary-address-list

Type: List

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distribute-internal-list

Specification	
Type	*list*
Block object keys	

di-area-ipv4

Description OSPF area ID as a IP address format

Type: string

Format: ipv4-address

di-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

di-cost

Description Cost of route

Type: number

Range: 1-65535

Default: 1

di-type

Description 'lw4o6': LW4O6 Prefix; 'floating-ip': Floating IP; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'vip': Virtual IP (VIP); 'vip-only-flagged': Selected Virtual IP (VIP);

Type: string

Supported Values: lw4o6, floating-ip, ip-nat, ip-nat-list, static-nat, vip, vip-only-flagged

distribute-lists

Specification	
Type	*list*
Block object keys	

direction

Description 'in': Filter incoming routing updates; 'out': Filter outgoing routing updates;

Type: string

Supported Values: in, out

option

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

ospf-id

Description OSPF process ID

Type: number

Range: 1-65535

protocol

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'lw4o6': LW4O6 Prefix; 'ip-nat': IP NAT; 'ip-nat-list': IP NAT list; 'isis': ISO IS-IS; 'ospf': Open Shortest Path First (OSPF); 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, lw4o6, ip-nat, ip-nat-list, static-nat, isis, ospf, rip, static

value

Description Access-list name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

router-id

Specification	
Type	*object*

value

Description OSPF router-id in IPv4 address format

Type: string

Format: ipv4-address

neighbor-list

Specification	
Type	*list*
Block object keys	

address

Description Neighbor address

Type: string

Format: ipv4-address

cost

Description OSPF cost for point-to-multipoint neighbor (Metric)

Type: number

Range: 1-65535

poll-interval

Description OSPF dead-router polling interval (Seconds)

Type: number

Range: 1-65535

priority

Description OSPF priority of non-broadcast neighbor

Type: number

Range: 0-255

ospf-1

Specification	
Type	*object*

abr-type

Description: abr-type is a **JSON Block**. Please see below for *ospf-1_abr-type*

Type: Object

ospf-1_abr-type

Specification	
Type	*object*

option

Description 'cisco': Alternative ABR, Cisco implementation (RFC3509); 'ibm': Alternative ABR, IBM implementation (RFC3509); 'shortcut': Shortcut ABR; 'standard': Standard behavior (RFC2328);

Type: string

Supported Values: cisco, ibm, shortcut, standard

Default: cisco

host-list

Specification	
Type	*list*
Block object keys	

area-cfg

Description: area-cfg is a **JSON Block**. Please see below for *host-list_area-cfg*

Type: Object

host-address

Description Host address

Type: string

Format: ipv4-address

host-list_area-cfg

Specification	
Type	*object*

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

Mutual Exclusion: area-ipv4 and area-num are mutually exclusive

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

Mutual Exclusion: area-num and area-ipv4 are mutually exclusive

cost

Description Cost of host

Type: number

Range: 0-65535

Default: 0

log-adjacency-changes-cfg

Specification	
Type	*object*

state

Description 'detail': Log changes in adjacency state; 'disable': Disable logging;

Type: string

Supported Values: detail, disable

area-list

Specification	
Type	*list*
Block object keys	

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *area-list_auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *area-list_nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *area-list_stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

area-list_nssa-cfg

Specification	
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description 'always': Translate always; 'candidate': Candidate for translator (default); 'never': Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

area-list_filter-lists

Specification	
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

area-list_virtual-link-list

Specification	
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

area-list_stub-cfg

Specification	
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-list_auth-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

area-list_range-list

Specification	
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

summary-address-list

Specification	
Type	*list*
Block object keys	

not-advertise

Description Suppress routes that match the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

summary-address

Description Configure IP address summaries (Summary prefix)

Type: string

Format: ipv4-cidr

tag

Description Set tag (32-bit tag value)

Type: number

Range: 0-4294967295

passive-interface

Specification	
Type	*object*

eth-cfg

Type: List

lif-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

tunnel-cfg

Type: List

ve-cfg

Type: List

passive-interface_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel

Description Tunnel interface (Tunnel interface number)

Type: number

Format: interface

tunnel-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_loopback-cfg

Specification	
Type	*list*
Block object keys	

loopback

Description Loopback interface (Port number)

Type: number

Format: interface

loopback-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_ve-cfg

Specification	
Type	*list*
Block object keys	

ve

Description Virtual ethernet interface (Virtual ethernet interface number)

Type: number

Format: interface

ve-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_lif-cfg

Specification	
Type	*list*
Block object keys	

lif

Description Logical interface (Lif interface number)

Type: number

Format: interface

lif-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_trunk-cfg

Specification	
Type	*list*
Block object keys	

trunk

Description Trunk interface (Trunk interface number)

Type: number

Format: interface

trunk-address

Description Address of Interface

Type: string

Format: ipv4-address

passive-interface_eth-cfg

Specification	
Type	*list*
Block object keys	

eth-address

Description Address of Interface

Type: string

Format: ipv4-address

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

default-information

Specification	
Type	*object*

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

overflow

Specification	
Type	*object*

database

Description: database is a **JSON Block**. Please see below for *overflow_database*

Type: Object

overflow_database

Specification	
Type	*object*

count

Description Maximum number of LSAs

Type: number

Range: 0-4294967294

Default: 4294967294

db-external

Description Maximum number of LSAs

Type: number

Range: 0-2147483647

Default: 2147483647

limit

Description 'hard': Hard limit: Instance will be shutdown if exceeded; 'soft': Soft limit: Warning will be given if exceeded;

Type: string

Supported Values: hard, soft

Default: hard

recovery-time

Description Time to recover (0 not recover)

Type: number

Range: 0-65535

Default: 0

distance

Specification	
Type	*object*

distance-ospf

Description: distance-ospf is a **JSON Block**. Please see below for *distance_distance-ospf*

Type: Object

distance-value

Description OSPF Administrative distance

Type: number

Range: 1-255

Default: 110

distance_distance-ospf

Specification	
Type	*object*

distance-external

Description External routes (Distance for external routes)

Type: number

Range: 1-255

distance-inter-area

Description Inter-area routes (Distance for inter-area routes)

Type: number

Range: 1-255

distance-intra-area

Description Intra-area routes (Distance for intra-area routes)

Type: number

Range: 1-255

redistribute

Specification	
Type	*object*

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redistribute_redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, isis, rip, static

redistribute_ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

redistribute_ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

redistribute_vip-list

Specification	
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redistribute_vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

network-list

Specification	
Type	*list*
Block object keys	

network-area

Description: network-area is a **JSON Block**. Please see below for *network-list_network-area*

Type: Object

network-ipv4

Description Network number

Type: string

Format: ipv4-address

network-ipv4-cidr

Description OSPF network prefix

Type: string

Format: ipv4-cidr

network-ipv4-mask

Description OSPF wild card bits

Type: string

Format: ipv4-rev-netmask

network-list_network-area

Specification	
Type	*object*

instance-value

Description Instance ID

Type: number

Range: 0-255

Default: 0

network-area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

network-area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

timers

Specification	
Type	*object*

spf

Description: spf is a **JSON Block**. Please see below for *timers_spf*

Type: Object

timers_spf

Specification	
Type	*object*

exp

Description: exp is a **JSON Block**. Please see below for *timers_spf_exp*

Type: Object

timers_spf_exp

Specification	
Type	*object*

max-delay

Description Maximum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 50000

min-delay

Description Minimum delay between receiving a change to SPF calculation in milliseconds

Type: number

Range: 0-2147483647

Default: 500

ha-standby-extra-cost

Specification	
Type	*list*
Block object keys	

extra-cost

Description The extra cost value

Type: number

Range: 1-65535

group

Description Group (Group ID)

Type: number

Range: 0-31

2.82.47 router ospf area

OSPF area parameters

area Specification

Type	*Collection*
Object Key(s)	*area-ipv4, area-num*
Collection Name	*area-list*
Collection URI	/axapi/v3/router/ospf/{process-id}/area
Element Name	area
Element URI	/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}
Element Attributes	area_attributes
Schema	`area schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf/{process-id}/area

area attributes

Create List

POST

/axapi/v3/router/ospf/{process-id}/area

area attributes

Get Object

GET

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Get List

GET

/axapi/v3/router/ospf/{process-id}/area

area-list

Modify Object

POST

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace Object

PUT

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

Replace List

PUT

/axapi/v3/router/ospf/{process-id}/area

area-list

Delete Object

DELETE

/axapi/v3/router/ospf/{process-id}/area/{area-ipv4}+{area-num}

area attributes

area-list

area-list is **JSON List** of *area attributes*

area-list : [

{ *area attributes* },

{ *area attributes* },

...

]

area attributes

area-ipv4

Description OSPF area ID in IP address format

Type: string

Format: ipv4-address

area-num

Description OSPF area ID as a decimal value

Type: number

Range: 0-4294967295

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

default-cost

Description Set the summary-default cost of a NSSA or stub area (Stub's advertised default summary cost)

Type: number

Range: 0-16777215

Default: 1

filter-lists

Type: List

nssa-cfg

Description: nssa-cfg is a **JSON Block**. Please see below for *nssa-cfg*

Type: Object

range-list

Type: List

shortcut

Description 'default': Set default shortcutting behavior; 'disable': Disable shortcutting through the area; 'enable': Enable shortcutting through the area;

Type: string

Supported Values: default, disable, enable

Default: default

stub-cfg

Description: stub-cfg is a **JSON Block**. Please see below for *stub-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-link-list

Type: List

nssa-cfg

Specification	
Type	*object*

default-information-originate

Description Originate Type 7 default into NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

Default: 1

metric-type

Description OSPF metric type (OSPF metric type for default routes)

Type: number

Range: 1-2

Default: 2

no-redistribution

Description No redistribution into this NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-summary

Description Do not send summary LSA into NSSA

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nssa

Description Specify a NSSA area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

translator-role

Description 'always': Translate always; 'candidate': Candidate for translator (default); 'never': Do not translate;

Type: string

Supported Values: always, candidate, never

Default: candidate

filter-lists

Specification	
Type	*list*
Block object keys	

acl-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

acl-name

Description Filter networks by access-list (Name of an access-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

filter-list

Description Filter networks between OSPF areas

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

plist-direction

Description 'in': Filter networks sent to this area; 'out': Filter networks sent from this area;

Type: string

Supported Values: in, out

plist-name

Description Filter networks by prefix-list (Name of an IP prefix-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

virtual-link-list

Specification	
Type	*list*
Block object keys	

authentication-key

Description Set authentication key (Authentication key (8 chars))

Type: string

Format: string-rlx

Maximum Length: 8 characters

Maximum Length: 1 characters

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dead-interval

Description Dead router detection time (Seconds)

Type: number

Range: 1-65535

hello-interval

Description Hello packet interval (Seconds)

Type: number

Range: 1-65535

md5

Description Use MD5 algorithm (Authentication key (16 chars))

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

message-digest-key

Description Set message digest key (Key ID)

Type: number

Range: 1-255

retransmit-interval

Description LSA retransmit interval (Seconds)

Type: number

Range: 1-3600

transmit-delay

Description LSA transmission delay (Seconds)

Type: number

Range: 1-3600

Default: 1

virtual-link-auth-type

Description 'message-digest': Use message-digest authentication; 'null': Use null authentication;

Type: string

Supported Values: message-digest, null

virtual-link-authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-link-ip-addr

Description ID (IP addr) associated with virtual link neighbor

Type: string

Format: ipv4-address

stub-cfg

Specification	
Type	*object*

no-summary

Description Do not inject inter-area routes into area

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stub

Description Configure OSPF area as stub

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Specification	
Type	*object*

authentication

Description Enable authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-digest

Description Use message-digest authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-list

Specification	
Type	*list*
Block object keys	

area-range-prefix

Description Area range for IPv4 prefix

Type: string

Format: ipv4-cidr

option

Description 'advertise': Advertise this range (default); 'not-advertise': DoNotAdvertise this range;

Type: string

Supported Values: advertise, not-advertise

Default: advertise

2.82.48 router ospf default-information

Control distribution of default information

default-information Specification

Type	*Configuration Resource*
Element Name	default-information
Element URI	/axapi/v3/router/ospf/{process-id}/default-information
Element Attributes	default-information_attributes
Schema	`default-information schema`

Operations Allowed:

Create Object

POST

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
POST /axapi/v3/router/ospf/1/default-information
Payload:
{
    "default-information": {
        "originate": 1,
        "always": 1
    }
}
```

Get Object

GET

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
GET /axapi/v3/router/ospf/1/default-information
Reponse:
{
    "default-information": {
        "originate": 1,
        "always": 1,
        "metric-type": 2,
        "uuid": "a4baa0da-6102-11d9-a942-001fa00680a0",
        "a10-url": "/axapi/v3/router/ospf/1/default-information"
    }
}
```

Modify Object

POST

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

Replace Object

PUT

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
PUT /axapi/v3/router/ospf/1/default-information
Payload:
{
    "default-information": {
        "originate": 1,
        "always": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/router/ospf/{process-id}/default-information

default-information attributes

```
DELETE /axapi/v3/router/ospf/1/default-information
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

default-information attributes

always

Description Always advertise default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description OSPF metric type for default routes

Type: number

Range: 1-2

Default: 2

originate

Description Distribute a default route

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.82.49 router ospf redistribute

Redistribute information from another routing protocol

redistribute Specification

Type	*Configuration Resource*
Element Name	redistribute
Element URI	/axapi/v3/router/ospf/{process-id}/redistribute
Element Attributes	redistribute_attributes
Schema	`redistribute schema`

Operations Allowed:

redistribute attributes

ip-nat

Description IP-NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-nat-floating-list

Type: List

metric-ip-nat

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ip-nat

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf-list

Type: List

redist-list

Type: List

route-map-ip-nat

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ip-nat

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-floating-list

Type: List

vip-list

Type: List

redist-list

Specification	
Type	*list*
Block object keys	

metric

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'lw4o6': LW4O6 Prefix; 'isis': ISO IS-IS; 'rip': Routing Information Protocol (RIP); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, lw4o6, nat-map, static-nat, isis, rip, static

ospf-list

Specification	
Type	*list*
Block object keys	

metric-ospf

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

metric-type-ospf

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

ospf

Description Open Shortest Path First (OSPF)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

process-id

Description OSPF process ID

Type: number

Range: 1-65535

route-map-ospf

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-ospf

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-4294967295

ip-nat-floating-list

Specification	
Type	*list*
Block object keys	

ip-nat-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

ip-nat-prefix

Description Address

Type: string

Format: ipv4-cidr

vip-list

Specification	
Type	*list*
Block object keys	

metric-type-vip

Description '1': Set OSPF External Type 1 metrics; '2': Set OSPF External Type 2 metrics;

Type: string

Supported Values: 1, 2

Default: 2

metric-vip

Description OSPF default metric (OSPF metric)

Type: number

Range: 0-16777214

route-map-vip

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tag-vip

Description Set tag for routes redistributed into OSPF (32-bit tag value)

Type: number

Range: 0-2147483647

type-vip

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

vip-floating-list

Specification	
Type	*list*
Block object keys	

vip-address

Description Address

Type: string

Format: ipv4-address

vip-floating-IP-forward

Description Floating-IP as forward address

Type: string

Format: ipv4-address

timers

Description: timers is a **JSON Block**. Please see below for *timers*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Set routing protocol version (RIP version)

Type: number

Range: 1-2

Default: 2

rip-maximum-prefix-cfg

Specification	
Type	*object*

maximum-prefix

Description Set the maximum number of RIP routes

Type: number

Range: 1-2048

maximum-prefix-thres

Description Percentage of maximum routes to generate a warning (Default 75%)

Type: number

Range: 1-100

Default: 75

route-cfg

Specification	
Type	*list*
Block object keys	

route

Description Static route advertisement (debugging purpose) (IP prefix network/length)

Type: string

Format: ipv4-cidr

passive-interface-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

vip-route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

vip-type

Description 'only-flagged': Selected Virtual IP (VIP); 'only-not-flagged': Only not flagged;

Type: string

Supported Values: only-flagged, only-not-flagged

redist-list

Specification	
Type	*list*
Block object keys	

metric

Description Metric for redistributed routes (metric value)

Type: number

Range: 0-16

route-map

Description Route map reference (Pointer to route-map entries)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

type

Description 'bgp': Border Gateway Protocol (BGP); 'connected': Connected; 'floating-ip': Floating IP; 'ip-nat-list': IP NAT list; 'ip-nat': IP NAT; 'isis': ISO IS-IS; 'lw4o6': LW4O6 Prefix; 'ospf': Open Shortest Path First (OSPF); 'static': Static routes;

Type: string

Supported Values: bgp, connected, floating-ip, ip-nat-list, ip-nat, isis, lw4o6, nat-map, static-nat, ospf, static

2.83 rule-set

Objects:

2.83.1 rule-set

Configure Security policy Rule Set

rule-set Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*rule-set-list*
Collection URI	/axapi/v3/rule-set
Element Name	rule-set
Element URI	/axapi/v3/rule-set/{name}
Element Attributes	rule-set_attributes
Statistics Data URI	/axapi/v3/rule-set/{name}/stats
Operational Data URI	/axapi/v3/rule-set/{name}/oper
Schema	`rule-set schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set

rule-set attributes

```
POST /axapi/v3/rule-set/
Payload:
{
    "rule-set": {
        "name": "a",
        "user-tag": "a"
    }
}
```

    }
}
```

rule-set-list

rule-set-list is **JSON List** of *rule-set attributes*

rule-set-list : [

{ *rule-set attributes* },

{ *rule-set attributes* },

...

]

rule-set attributes

app

Description: app is a **JSON Block**. Please see below for *app*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/app*

application

Description: application is a **JSON Block**. Please see below for *application*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/application*

name

Description Rule set name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/rule-set-tmpl*

remark

Description Rule set entry comment (Notes for this rule set)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rule-list

Type: List

Refernce Object: */axapi/v3/rule-set/{name}/rule/{name}*

rules-by-zone

Description: rules-by-zone is a **JSON Block**. Please see below for *rules-by-zone*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/rules-by-zone*

sampling-enable

Type: List

session-statistic

Description 'enable': Enable session based statistic (Default); 'disable': Disable session based statistic;

Type: string

Supported Values: enable, disable

Default: enable

tag

Description: tag is a **JSON Block**. Please see below for *tag*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/tag*

track-app-rule-list

Description: track-app-rule-list is a **JSON Block**. Please see below for *track-app-rule-list*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/track-app-rule-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

track-app-rule-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

application

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'unmatched-drops': Total Unmatched drops in this rule-set; 'permit': Accumulated permitted requests in this rule-set; 'deny': Accumulated denied requests in this rule-set; 'reset': Accumulated reset requests in this rule-set;

Type: string

Supported Values: all, unmatched-drops, permit, deny, reset

tag

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rule-list

Specification	
Type	*list*
Block object keys	

action

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

action-group

Description: action-group is a **JSON Block**. Please see below for *rule-list_action-group*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/rule/{name}/action-group*

app-list

Type: List

application-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: application-anyobj-grp-application, protocol and protocol-tag are mutually exclusive

cgnv6-fixed-nat-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6-log and cgnv6-policy are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT;

Type: string

Supported Values: lsn-lid, fixed-nat

Mutual Exclusion: cgnv6-policy and cgnv6-log are mutually exclusive

dest-list

Type: List

dscp-list

Type: List

dst-class-list

Description Match destination IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-class-listdst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

Refernce Object: */axapi/v3/class-list*

dst-domain-list

Description Match destination IP against domain-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-domain-list dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/domain-list*

dst-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-listdst-geoloc-name, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

dst-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-namedst-geoloc-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

dst-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv4-anydst-ipv6-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver and dst-domain-list are mutually exclusive

dst-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv6-anydst-ipv4-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver and dst-domain-list are mutually exclusive

dst-threat-list

Description Bind threat-list for destination IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/threat-intel/threat-list*

dst-zone

Description Bind zone for destination matching

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-zone and dst-zone-any are mutually exclusive

Refernce Object: */axapi/v3/zone*

dst-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-zone-any and dst-zone are mutually exclusive

forward-listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fw-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fwlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-template

Description Configure GTP Policy Template (GTP Template Policy Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/gtp-policy*

idle-timeout

Description TCP/UDP idle-timeout

Type: number

Range: 1-2097151

ip-version

Description 'v4': IPv4 rule; 'v6': IPv6 rule;

Type: string

Supported Values: v4, v6

Default: v4

lid

Description Apply a Template LID

Type: number

Range: 1-1023

lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port and log are mutually exclusive

listen-on-port-lid

Description Apply a Template LID

Type: number

Range: 1-1023

listen-on-port-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: log listen-on-port and policy are mutually exclusive

move-rule

Description: move-rule is a **JSON Block**. Please see below for *rule-list_move-rule*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/rule/{name}/move-rule*

name

Description name of the policy rule

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/rule-set-rule-tmpl*

policy

Description 'cgnv6': Apply CGNv6 policy; 'forward': Forward packet;

Type: string

Supported Values: cgnv6, forward, ipsec

Mutual Exclusion: policy and log are mutually exclusive

remark

Description Rule entry comment (Notes for this rule)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

reset-lid

Description Apply a Template LID

Type: number

Range: 1-1023

reset-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: service-anyprotocols, proto-id, obj-grp-service, icmp and icmpv6 are mutually exclusive

service-list

Type: List

source-list

Type: List

src-class-list

Description Match source IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-class-listsrc-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

Refernce Object: */axapi/v3/class-list*

src-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-listsrc-geoloc-name, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-namesrc-geoloc-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv4-anysrc-ipv6-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv6-anysrc-ipv4-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-threat-list

Description Bind threat-list for source IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/threat-intel/threat-list*

src-zone

Description Bind zone for source matching

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: src-zone and src-zone-any are mutually exclusive

Refernce Object: */axapi/v3/zone*

src-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-zone-any and src-zone are mutually exclusive

status

Description 'enable': Enable this rule; 'disable': Disable this rule;

Type: string

Supported Values: enable, disable

Default: enable

track-application

Description Enable application statistic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/vpn/ipsec*

rule-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': Hit counts;

Type: string

Supported Values: all, hit-count, permit-bytes, deny-bytes, reset-bytes, permit-packets, deny-packets, reset-packets, active-session-tcp, active-session-udp, active-session-icmp, active-session-other, session-tcp, session-udp, session-icmp, session-other, active-session-sctp, session-sctp, hitcount-timestamp, rate-limit-drops

rule-list_dscp-list

Specification	
Type	*list*
Block object keys	

dscp-range-end

Description Ending DSCP Number

Type: number

Range: 1-63

dscp-range-start

Description Start DSCP Number

Type: number

Range: 1-63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-range are mutually exclusive

rule-list_app-list

Specification	
Type	*list*

Type	*object*

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6listen-on-port, forward and ipsec are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT;

Type: string

Supported Values: lsn-lid, fixed-nat

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward ipsec and cgnv6 are mutually exclusive

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsecpermit-log, listen-on-port, forward, cgnv6, permit-limit-policy and permit-respond-to-user-mac are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port ipsec and cgnv6 are mutually exclusive

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Refernce Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log and ipsec are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/vpn/ipsec*

rule-list_dest-list

Specification	
Type	*list*
Block object keys	

dst-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: dst-ip-subnetdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any and dst-ipv6-subnet are mutually exclusive

dst-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-ipv6-subnetdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any and dst-ip-subnet are mutually exclusive

dst-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-grp-networkdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/network*

dst-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-networkdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object/network*

dst-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-serverdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/slb/server*

dst-slb-vserver

Description SLB Virtual server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-vserverdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/slb/virtual-server*

rule-list_move-rule

Specification	
Type	*object*

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list_source-list

Specification	
Type	*list*
Block object keys	

src-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: src-ip-subnetsrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any and src-ipv6-subnet are mutually exclusive

src-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-ipv6-subnetsrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any and src-ip-subnet are mutually exclusive

src-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-grp-networksrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any and src-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/network*

src-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-networksrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any and src-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object/network*

src-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-slb-serversrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any and src-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/slb/server*

rule-list_service-list

Specification	
Type	*list*
Block object keys	

alg

Description 'FTP': FTP; 'TFTP': TFTP; 'SIP': SIP; 'DNS': DNS; 'PPTP': PPTP; 'RTSP': RTSP;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP, ESP

eq-dst-port

Description Equal to the port number

Type: number

Range: 1-65535

eq-src-port

Description Equal to the port number

Type: number

Range: 1-65535

gt-dst-port

Description Greater than the port number

Type: number

Range: 1-65534

gt-src-port

Description Greater than the port number

Type: number

Range: 1-65534

icmp

Description ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp service-any and icmpv6 are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type and special-type are mutually exclusive

icmpv6

Description ICMPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmpv6 service-any and icmp are mutually exclusive

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type and special-v6-type are mutually exclusive

lt-dst-port

Description Lower than the port number

Type: number

Range: 2-65535

lt-src-port

Description Lower than the port number

Type: number

Range: 2-65535

obj-grp-service

Description service object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-service and service-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/service*

port-num-end-dst

Description Ending Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Port Number

Type: number

Range: 1-65535

proto-id

Description Protocol ID

Type: number

Range: 0-255

Mutual Exclusion: proto-id and service-any are mutually exclusive

protocols

Description 'tcp': tcp; 'udp': udp;

Type: string

Supported Values: tcp, udp, sctp

Mutual Exclusion: protocols and service-any are mutually exclusive

range-dst-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

range-src-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

sctp-template

Description SCTP Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/sctp*

special-code

Description 'any-code': Any ICMP code; 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: any-code, frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code and icmp-code are mutually exclusive

special-type

Description 'any-type': Any ICMP type; 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5,

redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: any-type, echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type and icmp-type are mutually exclusive

special-v6-code

Description 'any-code': Any ICMPv6 code; 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: any-code, addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code and icmpv6-code are mutually exclusive

special-v6-type

Description 'any-type': Any ICMPv6 type; 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: any-type, dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type and icmpv6-type are mutually exclusive

rules-by-zone

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rules-by-zone_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dummy': A dummy entry for a10countergen;

Type: string

Supported Values: all, dummy

stats data

	Counter	Size	Description
	reset	8	Reset counter
	unmatched-drops	8	Unmatched drops counter
	deny	8	Denied counter

	policy-permit	number	policy-permit

2.83.2 rule-set app

Application statistics in Rule Set

app Specification

Type	*Configuration Resource*
Element Name	app
Element URI	/axapi/v3/rule-set/{name}/app
Element Attributes	app_attributes
Statistics Data URI	/axapi/v3/rule-set/{name}/app/stats
Schema	`app schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set/{name}/app

app attributes

Get Object

GET

/axapi/v3/rule-set/{name}/app

app attributes

Modify Object

POST

/axapi/v3/rule-set/{name}/app

app attributes

app attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.83.3 rule-set application

application Specification

Type	*Configuration Resource*
Element Name	application
Element URI	/axapi/v3/rule-set/{name}/application
Element Attributes	application_attributes
Operational Data URI	/axapi/v3/rule-set/{name}/application/oper
Schema	`application schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set/{name}/application

application attributes

Get Object

GET

/axapi/v3/rule-set/{name}/application

application attributes

Modify Object

POST

/axapi/v3/rule-set/{name}/application

application attributes

Delete Object

DELETE

/axapi/v3/rule-set/{name}/application

application attributes

application attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	app-stat	string	app-stat
	category-stat	string	category-stat
	rule-list		rule-list
	rule	string	rule

2.83.4 rule-set rule

Configure rule-set rule

rule Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*rule-list*
Collection URI	/axapi/v3/rule-set/{name}/rule
Element Name	rule
Element URI	/axapi/v3/rule-set/{name}/rule/{name}
Element Attributes	rule_attributes
Statistics Data URI	/axapi/v3/rule-set/{name}/rule/{name}/stats
Operational Data URI	/axapi/v3/rule-set/{name}/rule/{name}/oper
Schema	`rule schema`

Operations Allowed:

Create Object

POST

/axapi/v3/rule-set/{name}/rule

rule attributes

Create List

POST

/axapi/v3/rule-set/{name}/rule

rule attributes

Get Object

GET

/axapi/v3/rule-set/{name}/rule/{name}

rule attributes

Get List

GET

/axapi/v3/rule-set/{name}/rule

rule-list

Modify Object

POST

/axapi/v3/rule-set/{name}/rule/{name}

rule attributes

Replace Object

PUT

/axapi/v3/rule-set/{name}/rule/{name}

rule attributes

Replace List

PUT

/axapi/v3/rule-set/{name}/rule

rule-list

Delete Object

DELETE

/axapi/v3/rule-set/{name}/rule/{name}

rule attributes

rule-list

rule-list is **JSON List** of *rule attributes*

rule-list : [

{ *rule attributes* },

{ *rule attributes* },

...

]

rule attributes

action

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

action-group

Description: action-group is a **JSON Block**. Please see below for *action-group*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/rule/{name}/action-group*

app-list

Type: List

application-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: application-anyobj-grp-application, protocol and protocol-tag are mutually exclusive

cgnv6-fixed-nat-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6-log and cgnv6-policy are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-lsn-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT;

Type: string

Supported Values: lsn-lid, fixed-nat

Mutual Exclusion: cgnv6-policy and cgnv6-log are mutually exclusive

dest-list

Type: List

dscp-list

Type: List

dst-class-list

Description Match destination IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-class-listdst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

Refernce Object: */axapi/v3/class-list*

dst-domain-list

Description Match destination IP against domain-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-domain-list dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/domain-list*

dst-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-listdst-geoloc-name, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

dst-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-geoloc-namedst-geoloc-list, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server and dst-slb-vserver are mutually exclusive

dst-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv4-anydst-ipv6-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver and dst-domain-list are mutually exclusive

dst-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-ipv6-anydst-ipv4-any, dst-ip-subnet, dst-ipv6-subnet, dst-obj-network, dst-obj-grp-network, dst-slb-server, dst-slb-vserver and dst-domain-list are mutually exclusive

dst-threat-list

Description Bind threat-list for destination IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/threat-intel/threat-list*

dst-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-zone and dst-zone-any are mutually exclusive

Refernce Object: */axapi/v3/zone*

dst-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: dst-zone-any and dst-zone are mutually exclusive

forward-listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fw-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fwlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-template

Description Configure GTP Policy Template (GTP Template Policy Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/gtp-policy*

idle-timeout

Description TCP/UDP idle-timeout

Type: number

Range: 1-2097151

ip-version

Description 'v4': IPv4 rule; 'v6': IPv6 rule;

Type: string

Supported Values: v4, v6

Default: v4

lid

Description Apply a Template LID

Type: number

Range: 1-1023

lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port and log are mutually exclusive

listen-on-port-lid

Description Apply a Template LID

Type: number

Range: 1-1023

listen-on-port-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: log listen-on-port and policy are mutually exclusive

move-rule

Description: move-rule is a **JSON Block**. Please see below for *move-rule*

Type: Object

Refernce Object: */axapi/v3/rule-set/{name}/rule/{name}/move-rule*

name

Description Rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/rule-set-rule-tmpl*

policy

Description 'cgnv6': Apply CGNv6 policy; 'forward': Forward packet; 'ipsec': Apply IPsec encapsulation;

Type: string

Supported Values: cgnv6, forward, ipsec

Mutual Exclusion: policy and log are mutually exclusive

remark

Description Rule entry comment (Notes for this rule)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

reset-lid

Description Apply a Template LID

Type: number

Range: 1-1023

reset-lidlog

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: service-anyprotocols, proto-id, obj-grp-service, icmp and icmpv6 are mutually exclusive

service-list

Type: List

source-list

Type: List

src-class-list

Description Match source IP against class-list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-class-listsrc-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

Refernce Object: */axapi/v3/class-list*

src-geoloc-list

Description Geolocation name list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-listsrc-geoloc-name, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-geoloc-list-shared

Description Use Geolocation list from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-geoloc-name

Description Single geolocation name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: src-geoloc-namesrc-geoloc-list, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-ipv4-any

Description 'any': Any IPv4 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv4-anysrc-ipv6-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-ipv6-any

Description 'any': Any IPv6 address;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-ipv6-anysrc-ipv4-any, src-ip-subnet, src-ipv6-subnet, src-obj-network, src-obj-grp-network and src-slb-server are mutually exclusive

src-threat-list

Description Bind threat-list for source IP based filtering

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/threat-intel/threat-list*

src-zone

Description Zone name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: src-zone and src-zone-any are mutually exclusive

Refernce Object: */axapi/v3/zone*

src-zone-any

Description 'any': any;

Type: string

Supported Values: any

Default: any

Mutual Exclusion: src-zone-any and src-zone are mutually exclusive

status

Description 'enable': Enable rule; 'disable': Disable rule;

Type: string

Supported Values: enable, disable

Default: enable

track-application

Description Enable application statistic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/vpn/ipsec*

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': Hit counts;

Type: string

Supported Values: all, hit-count, permit-bytes, deny-bytes, reset-bytes, permit-packets, deny-packets, reset-packets, active-session-tcp, active-session-udp, active-session-icmp, active-session-other, session-tcp, session-udp, session-icmp, session-other, active-session-sctp, session-sctp, hitcount-timestamp, rate-limit-drops

dscp-list

Specification	
Type	*list*
Block object keys	

dscp-range-end

Description Ending DSCP Number

Type: number

Range: 1-63

dscp-range-start

Description Start DSCP Number

Type: number

Range: 1-63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110);

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef

Mutual Exclusion: dscp-value and dscp-range are mutually exclusive

app-list

Specification	
Type	*list*
Block object keys	

obj-grp-application

Description Application object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-application and application-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/application*

protocol

Description Specify application(s)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: protocol and application-any are mutually exclusive

protocol-tag

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'aetls': Application known to enforce HSTS and

thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games;

'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, aetls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum, gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation, web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

Mutual Exclusion: protocol-tag and application-any are mutually exclusive

action-group

Specification	
Type	*object*

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6listen-on-port, forward and ipsec are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT;

Type: string

Supported Values: lsn-lid, fixed-nat

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward ipsec and cgnv6 are mutually exclusive

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsecpermit-log, listen-on-port, forward, cgnv6, permit-limit-policy and permit-respond-to-user-mac are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port ipsec and cgnv6 are mutually exclusive

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Refernce Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log and ipsec are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/vpn/ipsec*

dest-list

Specification	
Type	*list*
Block object keys	

dst-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: dst-ip-subnetdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any and dst-ipv6-subnet are mutually exclusive

dst-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: dst-ipv6-subnetdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any, dst-ipv6-any and dst-ip-subnet are mutually exclusive

dst-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-grp-networkdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/network*

dst-obj-network

Description Network object

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-obj-networkdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object/network*

dst-slb-server

Description SLB Real server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-serverdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/slb/server*

dst-slb-vserver

Description SLB Virtual server name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-slb-vserverdst-class-list, dst-geoloc-name, dst-geoloc-list, dst-ipv4-any and dst-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/slb/virtual-server*

move-rule

Specification	
Type	*object*

location

Description 'top': top; 'before': before; 'after': after; 'bottom': bottom;

Type: string

Supported Values: top, before, after, bottom

Default: bottom

target-rule

Description

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

source-list

Specification	
Type	*list*
Block object keys	

src-ip-subnet

Description IPv4 IP Address

Type: string

Format: ipv4-cidr

Mutual Exclusion: src-ip-subnetsrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any and src-ipv6-subnet are mutually exclusive

src-ipv6-subnet

Description IPv6 IP Address

Type: string

Format: ipv6-address-plen

Mutual Exclusion: src-ipv6-subnetsrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any, src-ipv6-any and src-ip-subnet are mutually exclusive

src-obj-grp-network

Description Network object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-obj-grp-networksrc-class-list, src-geoloc-name, src-geoloc-list, src-ipv4-any and src-ipv6-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/network*

src-obj-network

Description Network object

Type: string

service-list

Specification	
Type	*list*
Block object keys	

alg

Description 'FTP': FTP; 'TFTP': TFTP; 'SIP': SIP; 'DNS': DNS; 'PPTP': PPTP; 'RTSP': RTSP; 'ESP': ESP;

Type: string

Supported Values: FTP, TFTP, SIP, DNS, PPTP, RTSP, ESP

eq-dst-port

Description Equal to the port number

Type: number

Range: 1-65535

eq-src-port

Description Equal to the port number

Type: number

Range: 1-65535

gt-dst-port

Description Greater than the port number

Type: number

Range: 1-65534

gt-src-port

Description Greater than the port number

Type: number

Range: 1-65534

icmp

Description ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmp service-any and icmpv6 are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type and special-type are mutually exclusive

icmpv6

Description ICMPv6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmpv6 service-any and icmp are mutually exclusive

icmpv6-code

Description ICMPv6 code number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-code and special-v6-code are mutually exclusive

icmpv6-type

Description ICMPv6 type number

Type: number

Range: 0-254

Mutual Exclusion: icmpv6-type and special-v6-type are mutually exclusive

lt-dst-port

Description Lower than the port number

Type: number

Range: 2-65535

lt-src-port

Description Lower than the port number

Type: number

Range: 2-65535

obj-grp-service

Description service object group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: obj-grp-service and service-any are mutually exclusive

Refernce Object: */axapi/v3/object-group/service*

port-num-end-dst

Description Ending Port Number

Type: number

Range: 1-65535

port-num-end-src

Description Ending Port Number

Type: number

Range: 1-65535

proto-id

Description Protocol ID

Type: number

Range: 0-255

Mutual Exclusion: proto-id and service-any are mutually exclusive

protocols

Description 'tcp': tcp; 'udp': udp; 'sctp': sctp;

Type: string

Supported Values: tcp, udp, sctp

Mutual Exclusion: protocols and service-any are mutually exclusive

range-dst-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

range-src-port

Description Port range (Starting Port Number)

Type: number

Range: 1-65535

sctp-template

Description SCTP Template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/sctp*

special-code

Description 'any-code': Any ICMP code; 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: any-code, frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code and icmp-code are mutually exclusive

special-type

Description 'any-type': Any ICMP type; 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5,

redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: any-type, echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type and icmp-type are mutually exclusive

special-v6-code

Description 'any-code': Any ICMPv6 code; 'addr-unreachable': Code 3, address unreachable; 'admin-prohibited': Code 1, admin prohibited; 'no-route': Code 0, no route to destination; 'not-neighbour': Code 2, not neighbor; 'port-unreachable': Code 4, destination port unreachable;

Type: string

Supported Values: any-code, addr-unreachable, admin-prohibited, no-route, not-neighbour, port-unreachable

Mutual Exclusion: special-v6-code and icmpv6-code are mutually exclusive

special-v6-type

Description 'any-type': Any ICMPv6 type; 'dest-unreachable': Type 1, destination unreachable; 'echo-reply': Type 129, echo reply; 'echo-request': Type 128, echo request; 'packet-too-big': Type 2, packet too big; 'param-prob': Type 4, parameter problem; 'time-exceeded': Type 3, time exceeded;

Type: string

Supported Values: any-type, dest-unreachable, echo-reply, echo-request, packet-too-big, param-prob, time-exceeded

Mutual Exclusion: special-v6-type and icmpv6-type are mutually exclusive

stats data

	Counter	Size	Description
	active-session-other	8	Active other protocol session counter
	session-icmp	8	ICMP session counter
	hit-count	8	Hit counts
	active-session-tcp	8	Active TCP session counter
	deny-packets	8	Denied packets counter
	session-other	8	Other protocol session counter
	session-sctp	8	SCTP session counter
	active-session-icmp	8	Active ICMP session counter
	permit-bytes	8	Permitted bytes counter
	reset-packets	8	Reset packets counter
	hitcount-timestamp	8	Last hit counts timestamp
	reset-bytes	8	Reset bytes counter
	session-udp	8	UDP session counter
	rate-limit-drops	8	Rate Limit Drops
	session-tcp	8	TCP session counter
	active-session-sctp	8	Active SCTP session counter
	active-session-udp	8	Active UDP session counter
	deny-bytes	8	Denied bytes counter

action-group attributes

cgnv6

Description Apply CGNv6 policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cgnv6listen-on-port, forward and ipsec are mutually exclusive

cgnv6-lsn-lid

Description LSN LID

Type: number

Range: 1-1023

cgnv6-policy

Description 'lsn-lid': Apply specified CGNv6 LSN LID; 'fixed-nat': Apply CGNv6 Fixed NAT;

Type: string

Supported Values: lsn-lid, fixed-nat

deny-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: forward ipsec and cgnv6 are mutually exclusive

ipsec

Description Apply IPsec encapsulation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipsecpermit-log, listen-on-port, forward, cgnv6, permit-limit-policy and permit-respond-to-user-mac are mutually exclusive

listen-on-port

Description Listen on port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: listen-on-port ipsec and cgnv6 are mutually exclusive

permit-limit-policy

Description Limit policy Template

Type: number

Range: 1-1023

Mutual Exclusion: permit-limit-policy and ipsec are mutually exclusive

Refernce Object: */axapi/v3/template/limit-policy*

permit-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-log and ipsec are mutually exclusive

permit-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: permit-respond-to-user-mac and ipsec are mutually exclusive

reset-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default:off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type

Description 'permit': permit; 'deny': deny; 'reset': reset;

Type: string

Supported Values: permit, deny, reset

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vpn-ipsec-name

Description VPN IPsec name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/vpn/ipsec*

2.83.6 rule-set rules-by-zone

rules-by-zone Specification

Type	*Configuration Resource*
Element Name	rules-by-zone

2.84 running-config

Objects:

2.84.1 running-config

Configure the behaviour of show running config

running-config Specification

Type	*Configuration Resource*
Element Name	running-config
Element URI	/axapi/v3/running-config
Element Attributes	running-config_attributes
Schema	`running-config schema`

Operations Allowed:

Create Object

POST

/axapi/v3/running-config

running-config attributes

```
POST /axapi/v3/running-config
Payload:
{
    "running-config": {
        "aflex": 1
    }
}
```

Get Object

GET

/axapi/v3/running-config

running-config attributes

```
GET /axapi/v3/running-config
Reponse:
{
    "running-config": {
        "aflex": 1,
        "uuid": "889dabae-5bf3-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/running-config"
    }
}
```

Modify Object

POST

/axapi/v3/running-config

running-config attributes

Replace Object

PUT

/axapi/v3/running-config

running-config attributes

```
PUT /axapi/v3/running-config
Payload:
{
    "running-config": {
        "aflex": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/running-config

running-config attributes

```
DELETE /axapi/v3/running-config
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

running-config attributes

aflex

Description Show aFleX scripts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

class-list

Description Show class-list files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.85 scaleout

Objects:

2.85.1 scaleout

Configure Scaleout

scaleout Specification

Type	*Intermediate Resource*
Element Name	scaleout

Description: traffic-map is a **JSON Block**. Please see below for *traffic-map*

Type: Object

Refernce Object: */axapi/v3/scaleout/traffic-map*

status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

distributed-forwarding

Specification	
Type	*object*

cgn

Description Enable CGN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fw

Description Enable FW

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

apps

Specification	
Type	*object*

enable

Description Enable Scaleout for apps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip-mac-overwrite

Description: skip-mac-overwrite is a **JSON Block**. Please see below for *apps_skip-mac-overwrite*

Type: Object

Refernce Object: */axapi/v3/scaleout/apps/skip-mac-overwrite*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

apps_skip-mac-overwrite

Specification	
Type	*object*

enable

Description Skips overwriting dest MAC of flooded packets on Active node

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traffic-map

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list

Specification	
Type	*list*
Block object keys	

cluster-devices

Description: cluster-devices is a **JSON Block**. Please see below for *cluster-list_cluster-devices*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices*

cluster-id

Description Scaleout cluster-id

Type: number

Range: 1-64

db-config

Description: db-config is a **JSON Block**. Please see below for *cluster-list_db-config*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/db-config*

device-groups

Description: device-groups is a **JSON Block**. Please see below for *cluster-list_device-groups*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups*

follow-vcs

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-device

Description: local-device is a **JSON Block**. Please see below for *cluster-list_local-device*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device*

service-config

Description: service-config is a **JSON Block**. Please see below for *cluster-list_service-config*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config*

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *cluster-list_tracking-template*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device

Specification	
Type	*object*

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

cluster-mode

Description 'layer-2': Nodes in cluster are layer 2 connected (default mode); 'layer-3': Nodes in cluster are l3 connected;

Type: string

Supported Values: layer-2, layer-3

Default: layer-2

exclude-interfaces

Description: exclude-interfaces is a **JSON Block**. Please see below for *cluster-list_local-device_exclude-interfaces*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces*

id

Description

Type: number

Range: 1-16

l2-redirect

Description: l2-redirect is a **JSON Block**. Please see below for *cluster-list_local-device_l2-redirect*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/l2-redirect*

priority

Description

Type: number

Range: 1-255

session-sync

Description: session-sync is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync*

start-delay

Description

Type: number

Range: 10-300

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *cluster-list_local-device_tracking-template*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template*

traffic-redirection

Description: traffic-redirection is a **JSON Block**. Please see below for *cluster-list_local-device_traffic-redirection*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_session-sync

Specification	
Type	*object*

follow-shared

Description Follow shared partition for session sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync_interfaces*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *cluster-list_local-device_session-sync_reachability-options*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/reachability-options*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_local-device_session-sync_interfaces

Specification	
Type	*object*

eth-cfg

Type: List

loopback-cfg

Type: List

trunk-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_db-config

Specification	
Type	*object*

broken-detect-timeout

Description database connection broken detection timeout (mseconds) (12000 mseconds for default)

Type: number

Range: 500-120000

Default: 12000

client-recv-timeout

Description

Type: number

Range: 50-100000

Default: 13000

clientPort

Description client session port

Type: number

Range: 100-65535

elect-conn-timeout

Description election connection timeout (mseconds) (1200 for default)

Type: number

Range: 500-15000

Default: 1200

initLimit

Description

Type: number

Range: 1-500

loopback-intf-support

Description support loopback interface for scaleout database (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

maxSessionTimeout

Description

Type: number

Range: 50-100000

Default: 30000

minSessionTimeout

Description

Type: number

Range: 50-100000

Default: 100

more-election-packet

Description send more election packet in election period (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

syncLimit

Description

Type: number

Range: 1-500

tickTime

Description

Type: number

Range: 50-10000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cluster-list_tracking-template

Skips overwriting dest MAC of flooded packets on Active node

skip-mac-overwrite Specification

Type	*Configuration Resource*
Element Name	skip-mac-overwrite
Element URI	/axapi/v3/scaleout/apps/skip-mac-overwrite
Element Attributes	skip-mac-overwrite_attributes
Schema	`skip-mac-overwrite schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

Get Object

GET

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

Modify Object

POST

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

Replace Object

PUT

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

Delete Object

DELETE

/axapi/v3/scaleout/apps/skip-mac-overwrite

skip-mac-overwrite attributes

skip-mac-overwrite attributes

enable

Description Skips overwriting dest MAC of flooded packets on Active node

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.85.4 scaleout cluster

Configure scaleout cluster

cluster Specification

Type	*Collection*
Object Key(s)	*cluster-id*
Collection Name	*cluster-list*
Collection URI	/axapi/v3/scaleout/cluster
Element Name	cluster
Element URI	/axapi/v3/scaleout/cluster/{cluster-id}
Element Attributes	cluster_attributes
Schema	`cluster schema`

Operations Allowed:

Create Object

POST

/axapi/v3/scaleout/cluster

cluster attributes

Create List

POST

/axapi/v3/scaleout/cluster

cluster attributes

Get Object

cluster-list

Delete Object

DELETE

/axapi/v3/scaleout/cluster/{cluster-id}

cluster attributes

cluster-list

cluster-list is **JSON List** of *cluster attributes*

```
cluster-list : [
        { cluster attributes },
        { cluster attributes },
        ...
    ]
```

cluster attributes

cluster-devices

Description: cluster-devices is a **JSON Block**. Please see below for *cluster-devices*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/cluster-devices*

cluster-id

Description Scaleout cluster-id

Type: number

Range: 1-64

db-config

Description: db-config is a **JSON Block**. Please see below for *db-config*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/db-config*

device-groups

Description: device-groups is a **JSON Block**. Please see below for *device-groups*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/device-groups*

follow-vcs

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-device

Description: local-device is a **JSON Block**. Please see below for *local-device*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device*

service-config

Description: service-config is a **JSON Block**. Please see below for *service-config*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/service-config*

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *tracking-template*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/tracking-template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device

Specification	
Type	*object*

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

cluster-mode

Description 'layer-2': Nodes in cluster are layer 2 connected (default mode); 'layer-3': Nodes in cluster are l3 connected;

Type: string

Supported Values: layer-2, layer-3

Default: layer-2

exclude-interfaces

Description: exclude-interfaces is a **JSON Block**. Please see below for *local-device_exclude-interfaces*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/exclude-interfaces*

id

Description

Type: number

Range: 1-16

l2-redirect

Description: l2-redirect is a **JSON Block**. Please see below for *local-device_l2-redirect*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/l2-redirect*

priority

Description

Type: number

Range: 1-255

session-sync

Description: session-sync is a **JSON Block**. Please see below for *local-device_session-sync*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync*

start-delay

Description

Type: number

Range: 10-300

tracking-template

Description: tracking-template is a **JSON Block**. Please see below for *local-device_tracking-template*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/tracking-template*

traffic-redirection

Description: traffic-redirection is a **JSON Block**. Please see below for *local-device_traffic-redirection*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/traffic-redirection*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-device_session-sync

Specification	
Type	*object*

follow-shared

Description Follow shared partition for session sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interfaces

Description: interfaces is a **JSON Block**. Please see below for *local-device_session-sync_interfaces*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/interfaces*

reachability-options

Description: reachability-options is a **JSON Block**. Please see below for *local-device_session-sync_reachability-options*

Type: Object

Refernce Object: */axapi/v3/scaleout/cluster/{cluster-id}/local-device/session-sync/reachability-options*

Maximum Length: 64 characters

Maximum Length: 1 characters

db-config

Specification	
Type	*object*

broken-detect-timeout

Description database connection broken detection timeout (mseconds) (12000 mseconds for default)

Type: number

Range: 500-120000

Default: 12000

client-recv-timeout

Description

Type: number

Range: 50-100000

Default: 13000

clientPort

Description client session port

Type: number

Range: 100-65535

elect-conn-timeout

Description election connection timeout (mseconds) (1200 for default)

Type: number

Range: 500-15000

Default: 1200

initLimit

Description

Type: number

Range: 1-500

loopback-intf-support

Description support loopback interface for scaleout database (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

maxSessionTimeout

Description

Type: number

Range: 50-100000

Default: 30000

minSessionTimeout

Description

Type: number

Range: 50-100000

Default: 100

more-election-packet

Description send more election packet in election period (enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

syncLimit

Description

Type: number

Range: 1-500

tickTime

Description

Type: number

Range: 50-10000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

service-partition attributes

service-partition-list

service-partition-list is **JSON List** of *service-partition attributes*

service-partition-list : [

{ *service-partition attributes* },

{ *service-partition attributes* },

...

]

service-partition attributes

application-type

Description 'adc': Application type ADC;

Type: string

Supported Values: adc

follow-vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 0-31

Default: 0

Refernce Object: */axapi/v3/vrrp-a/vrid*

id

Description Specify unique service partition id

Type: number

partition-name

Description Object service partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.89 session-filter

Objects:

2.89.1 session-filter

Create a convenience Filter to display/clear sessions

session-filter Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*session-filter-list*

}
```

session-filter-list

session-filter-list is **JSON List** of *session-filter attributes*

session-filter-list : [

{ *session-filter attributes* },

{ *session-filter attributes* },

...

]

session-filter attributes

filter-cfg

Description: filter-cfg is a **JSON Block**. Please see below for *filter-cfg*

Type: Object

name

Description Session filter name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

set

Description Set filter criteria

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

filter-cfg

Specification	
Type	*object*

app

Description Specify application(s), separated by comma (For example: http,tcp)

Type: string

Format: string-rlx

Maximum Length: 1024 characters

Maximum Length: 1 characters

app-category

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'aetls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.;

'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information':

Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, aetls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum, gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation, web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

dest-addr

Description Forward Destination IP (Destination IP address)

Type: string

Format: ipv4-address

dest-mask

Description Forward Destination IP Subnet (Destination Netmask)

Type: string

Format: ipv4-netmask

dport2

Description Forward Destination Port (Dest Port)

Type: number

Range: 1-65535

session-type

Description 'ipv6': Display ipv6 sessions only; 'sip': SIP sessions;

Type: string

Supported Values: ipv6, sip

source-addr

Description Forward Source IP (Source IP address)

Type: string

Format: ipv4-address

source-mask

Description Forward Source IP Subnet (Source Netmask)

Type: string

Format: ipv4-netmask

source-port

Description Forward Source Port

Type: number

Range: 1-65535

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6 and ip are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.90.4 sflow collector

Configure sFlow collector (a.k.a. receiver)

collector Specification

Type	*Intermediate Resource*
Element Name	collector
Element URI	/axapi/v3/sflow/collector
Element Attributes	collector_attributes
Schema	`collector schema`

Operations Allowed:

Get Object

GET

/axapi/v3/sflow/collector

collector_attributes

collector attributes

ip-list

Type: List

Refernce Object: */axapi/v3/sflow/collector/ip/{addr}+{port}*

ipv6-list

Type: List

Refernce Object: */axapi/v3/sflow/collector/ipv6/{addr}+{port}*

ip-list

Specification	
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IP address

Type: string

Format: ipv4-address

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6-list

Specification	
Type	*list*
Block object keys	

addr

Description Configure sFlow collector IPv6 address

Type: string

Format: ipv6-address

port

Description Port number (default is 6343)

Type: number

Range: 1-65535

Default: 6343

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.90.5 sflow collector ip

Configure sFlow IPv4 collector

ip Specification

Type	*Collection*
Object Key(s)	*addr, port*
Collection Name	*ip-list*
Collection URI	/axapi/v3/sflow/collector/ip
Element Name	ip
Element URI	/axapi/v3/sflow/collector/ip/{addr}+{port}
Element Attributes	ip_attributes
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sflow/collector/ip

ip attributes

```
POST /axapi/v3/sflow/collector/ip/
Payload:
{
    "ip": {
        "addr": "3.3.3.3",
        "port": 1
    }
}
```

Create List

POST

}
```

setting attributes

counter-polling-interval

Description sFlow counter polling interval, default is 20

Type: number

Range: 1-200

Default: 10

local-collection

Description 'enable': Enable local sflow collection; 'disable': Disable local sflow collection;

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-header

Description Configure maximum number of bytes that should be copied from a sampled packet (default: 128) (The maximum number of bytes (Default: 128))

Type: number

Range: 14-512

Default: 128

packet-sampling-rate

Description sFlow packet sampling rate, default is 1000

Type: number

Range: 10-1000000

Default: 1000

source-ip-use-mgmt

Description Use management interface's IP address for source IP of sFlow packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.90.11 sflow source-address

Specify source address of sFlow packet

source-address Specification

Type	*Configuration Resource*
Element Name	source-address

Type: string

Supported Values: all, reqmod_request, respmod_request, reqmod_request_after_100, respmod_request_after_100, reqmod_response, respmod_response, reqmod_response_after_100, respmod_response_after_100, chunk_no_allow_204, len_exceed_no_allow_204, result_continue, result_icap_response, result_100_continue, result_other, status_2xx, status_200, status_201, status_202, status_203, status_204, status_205, status_206, status_207, status_1xx, status_100, status_101, status_102, status_3xx, status_300, status_301, status_302, status_303, status_304, status_305, status_306, status_307, status_4xx, status_400, status_401, status_402, status_403, status_404, status_405, status_406, status_407, status_408, status_409, status_410, status_411, status_412, status_413, status_414, status_415, status_416, status_417, status_418, status_419, status_420, status_422, status_423, status_424, status_425, status_426, status_449, status_450, status_5xx, status_500, status_501, status_502, status_503, status_504, status_505, status_506, status_507, status_508, status_509, status_510, status_6xx, status_unknown, send_option_req, app_serv_conn_no_pcb_err, app_serv_conn_err, chunk1_hdr_err, chunk2_hdr_err, chunk_bad_trail_err, no_payload_next_buff_err, no_payload_buff_err, resp_hdr_incomplete_err, serv_sel_fail_err, start_icap_conn_fail_err, prep_req_fail_err, icap_ver_err, icap_line_err, encap_hdr_incomplete_err, no_icap_resp_err, resp_line_read_err, resp_line_parse_err, resp_hdr_err, req_hdr_incomplete_err, no_status_code_err, http_resp_line_read_err, http_resp_line_parse_err, http_resp_hdr_err, recv_option_resp

ssl

Specification	
Type	*object*

sni-automap-attributes

Description: sni-automap-attributes is a **JSON Block**. Please see below for *ssl_sni-automap-attributes*

Type: Object

Refernce Object: */axapi/v3/slb/ssl/sni-automap-attributes*

ssl_sni-automap-attributes

Specification	
Type	*object*

sni-delete-factor

Description Contexts are deleted in groups of this value. Default is 50

Type: number

Range: 1-10000

Default: 50

sni-lower-limit

Description Lower limit for free SNI contexts count. Default is 500

Type: number

Range: 1-65536

Default: 500

sni-upper-limit

Description Upper limit for free SNI contexts count. Default is 2000

Type: number

Range: 1-65536

Default: 2000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-data

Supported Values: all, intcp, synreceived, tcp_fwd_last_ack, tcp_rev_last_ack, tcp_rev_fin, tcp_fwd_fin, tcp_fwd_ackfin, inudp, syncookiessent, syncookiessent_ts, syncookiessentfailed, outrst, outrst_nosyn, outrst_broker, outrst_ack_attack, outrst_aflex, outrst_stale_sess, syn_stale_sess, outrst_tcpproxy, svrselfail, noroute, snat_fail, snat_no_fwd_route, snat_no_rev_route, snat_icmp_error_process, snat_icmp_no_match, smart_nat_id_mismatch, syncookiescheckfailed, novport_drop, no_vport_drop, nosyn_drop, nosyn_drop_fin, nosyn_drop_rst, nosyn_drop_ack, connlimit_drop, connlimit_reset, conn_rate_limit_drop, conn_rate_limit_reset, proxy_nosock_drop, drop_aflex, sess_aged_out, tcp_sess_aged_out, udp_sess_aged_out, other_sess_aged_out, tcp_no_slb, udp_no_slb, throttle_syn, drop_gslb, inband_hm_retry, inband_hm_reassign, auto_reassign, fast_aging_set, fast_aging_reset, dns_policy_drop, tcp_invalid_drop, anomaly_out_seq, anomaly_zero_win, anomaly_bad_content, anomaly_pbslb_drop, no_resourse_drop, reset_unknown_conn, reset_l7_on_failover, ignore_msl, l2_dsr, l3_dsr, port_preserve_attempt, port_preserve_succ, tcpsyndata_drop, tcpotherflags_drop, bw_rate_limit_exceed, bw_watermark_drop, l4_cps_exceed, nat_cps_exceed, l7_cps_exceed, ssl_cps_exceed, ssl_tpt_exceed, ssl_watermark_drop, concurrent_conn_exceed, svr_syn_handshake_fail, stateless_conn_timeout, tcp_ax_rexmit_syn, tcp_syn_rcv_ack, tcp_syn_rcv_rst, tcp_sess_noest_aged_out, tcp_sess_noest_csyn_rcv_aged_out, tcp_sess_noest_ssyn_xmit_aged_out, tcp_rexmit_syn, tcp_rexmit_syn_delq, tcp_rexmit_synack, tcp_rexmit_synack_delq, tcp_fwd_fin_dup, tcp_rev_fin_dup, tcp_rev_ackfin, tcp_fwd_rst, tcp_rev_rst, udp_req_oneplus_no_resp, udp_req_one_oneplus_resp, udp_req_resp_notmatch, udp_req_more_resp, udp_resp_more_req, udp_req_oneplus, udp_resp_oneplus, out_seq_ack_drop, tcp_est, synattack, syn_rate, syncookie_buff_drop, syncookie_buff_queue, skip_insert_client_ip, synreceived_hw, dns_id_switch, server_down_del, dnssec_switch, rate_drop_reset_unkn, tcp_connections_closed, gtp_c_invalid_port, gtp_c_invalid_header, gtp_c_invalid_message, reselect_svrselfail, snat_port_overload_fail, snat_force_preserve_alloc, snat_force_preserve_free

common

Specification	
Type	*object*

N5-new

Description HW assisted N5 SSL module with TLS 1.3 and TLS 1.2 support using OpenSSL 1.1.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-newsoftware, software-tls13, QAT and N5-old are mutually exclusive

N5-old

Description HW assisted N5 SSL module with TLS 1.2 support using OpenSSL 0.9.7

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-oldsoftware, software-tls13, QAT and N5-new are mutually exclusive

QAT

Description HW assisted QAT SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QATsoftware, software-tls13, N5-new and N5-old are mutually exclusive

aflex-table-entry-aging-interval

Description aFleX table entry aging interval in second

Type: number

Range: 1-3600

Default: 1

aflex-table-entry-sync

Description: aflex-table-entry-sync is a **JSON Block**. Please see below for *common_aflex-table-entry-sync*

Type: Object

Refernce Object: */axapi/v3/slb/common/aflex-table-entry-sync*

after-disable

Description Graceful shutdown after disable server/port and/or virtual server/port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-in-gateway-mode

Description Use source NAT gateway for L3 traffic for gateway mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-nat-no-ip-refresh

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

auto-translate-port

Description Auto Translate Port range

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh

Description Set buffer threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh-hw-buff

Description Set hardware buffer threshold

Type: number

Range: 1-2147483647

buff-thresh-relieve-thresh

Description Relieve threshold

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-high

Description Set high water mark of system buffer

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-low

Description Set low water mark of system buffer

Type: number

Range: 0-2147483647

compress-block-size

Description Set compression block size (Compression block size in bytes)

Type: number

Range: 6000-131008

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *common_conn-rate-limit*

Type: Object

Refernce Object: */axapi/v3/slb/common/conn-rate-limit*

ddos-pkt-count-thresh

Description Set packet count threshold for DDOS, default is 100

Type: number

Range: 1-256

Default: 100

ddos-pkt-size-thresh

Description Set data packet size threshold for DDOS, default is 64 bytes

Type: number

Range: 1-256

Default: 64

ddos-protection

Description: ddos-protection is a **JSON Block**. Please see below for *common_ddos-protection*

Type: Object

disable-adaptive-resource-check

Description Disable adaptive resource check based on buffer usage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-persist-scoring

Description Disable Persist Scoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-port-masking

Description Disable masking of ports for CPU hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-server-auto-reselect

Description Disable auto reselection of server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-age

Description Set DNS cache entry age, default is 300 seconds (1-1000000 seconds, default is 300 seconds)

Type: number

Range: 1-1000000

Default: 300

dns-cache-enable

Description Enable DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-entry-size

Description Set DNS cache entry size, default is 256 bytes (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-response-rate-limiting

Description: dns-response-rate-limiting is a **JSON Block**. Please see below for *common_dns-response-rate-limiting*

Type: Object

Refernce Object: */axapi/v3/slb/common/dns-response-rate-limiting*

dns-vip-stateless

Description Enable DNS VIP stateless mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-icmp-to-vip-when-vip-down

Description Drop ICMP to VIP when VIP down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-health-check-enable

Description Enable dsr-health-check (direct server return health check)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ecmp-hash

Description 'system-default': Use system default ecmp hashing algorithm; 'connection-based': Use connection information for hashing;

Type: string

Supported Values: system-default, connection-based

Default: system-default

enable-l7-req-acct

Description Enable L7 request accounting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

entity

Description 'server': Graceful shutdown server/port only; 'virtual-server': Graceful shutdown virtual server/port only;

Type: string

Supported Values: server, virtual-server

exclude-destination

Description 'local': Maximum local rate; 'remote': Maximum remote rate; (Maximum rates)

Type: string

Supported Values: local, remote

extended-stats

Description Enable global slb extended statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-path-disable

Description Disable fast path in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description Enable gateway health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-shutdown

Description 1-65535, in unit of seconds

Type: number

Range: 1-65535

graceful-shutdown-enable

Description Enable graceful shutdown

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-to-all-vip

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-fast-enable

Description Enable Http Fast in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-compression

Description Use hardware compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-syn-rr

Description Configure hardware SYN round robin (range 1-500000)

Type: number

Range: 1-500000

interval

Description Specify the healthcheck interval, default is 5 seconds (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

ipv4-offset

Description IPv4 Octet Offset for Hash

Type: number

Range: 0-3

Default: 0

l2l3-trunk-lb-disable

Description Disable L2/L3 trunk LB

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-for-reset-unknown-conn

Description Log when rate exceed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-latency

Description Enable low latency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-buff-queued-per-conn

Description Set per connection buffer threshold (Buffer value range 128-4096)

Type: number

Range: 128-4096

Default: 1000

max-http-header-count

Description Set maximum number of HTTP headers allowed

Type: number

Range: 90-255

Default: 90

max-local-rate

Description Set maximum local rate

Type: number

Range: 1-100

Default: 32

max-remote-rate

Description Set maximum remote rate

Type: number

Range: 1-1000000

Default: 15000

msl-time

Description Configure maximum session life, default is 2 seconds (1-40 seconds, default is 2 seconds)

Type: number

Range: 1-40

Default: 2

mss-table

Description Set MSS table (128-750, default is 536)

Type: number

Range: 128-750

Default: 536

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn-hm-rate

Description One Server Conn Health Check Rate

Type: number

Range: 1-60

override-port

Description Enable override port in DSR health check mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per-thr-percent

Description Percentage of default session count to use for per thread session table size

Type: number

Range: 1-100

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pkt-rate-for-reset-unknown-conn

Description

Type: number

Range: 1-1048575

player-id-check-enable

Description Enable the Player id check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

range

Description auto translate port range

Type: number

Range: 1-3

range-end

Description port range end

Type: number

Range: 0-65535

range-start

Description port range start

Type: number

Range: 0-65535

rate-limit-logging

Description Configure rate limit logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-stale-session

Description Send reset if session in delete queue receives a SYN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-port-conflict

Description Enable client port service port conflicts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description 'single-answer': Only cache DNS response with single answer; 'round-robin': Round robin;

Type: string

Supported Values: single-answer, round-robin

scale-out

Description Enable SLB scale out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scale-out-traffic-map

Description Set SLB scaleout traffic-map

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-on-no-dest-nat-vports

Description 'allow-same': Allow the binding service-group on no-dest-nat virtual ports; 'enforce-different': Enforce that the same service-group can not be bound on different no-dest-nat virtual ports;

Type: string

Supported Values: allow-same, enforce-different

Default: enforce-different

show-slb-server-legacy-cmd

Description Enable show slb server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-service-group-legacy-cmd

Description Enable show slb service-group legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-virtual-server-legacy-cmd

Description Enable show slb virtual-server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-gwy-for-l3

Description Use source NAT gateway for L3 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-preserve

Description: snat-preserve is a **JSON Block**. Please see below for *common_snat-preserve*

Type: Object

software

Description Software

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softwaresoftware-tls13, QAT, N5-new and N5-old are mutually exclusive

software-tls13

Description Software TLS1.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13software, QAT, N5-new and N5-old are mutually exclusive

sort-res

Description Enable SLB sorting of resource names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-sni-hash-enable

Description Enable SSLi SNI hash table

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-sg-multi-binding

Description Enable stateless service groups to be assigned to multiple L2/L3 DSR VIPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-disable

Description Disable global slb data statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the healthcheck timeout value, default is 15 seconds (Timeout Value, in seconds (default 15))

Type: number

Range: 1-360

Default: 15

traffic-map-type

Description 'vport': traffic-map per vport; 'global': global traffic-map;

Type: string

Supported Values: vport, global

Default: vport

ttl-threshold

Description Only cache DNS response with longer TTL

Type: number

Range: 1-10000000

use-default-sess-count

Description Use default session count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mss-tab

Description Use MSS based on internal table for SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_aflex-table-entry-sync

Specification	
Type	*object*

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_dns-response-rate-limiting

Specification	
Type	*object*

max-table-entries

Description Maximum number of entries allowed

Type: number

Range: 1000-4194304

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_conn-rate-limit

Specification	
Type	*object*

src-ip-list

Type: List

Refernce Object: */axapi/v3/slb/common/conn-rate-limit/src-ip/{protocol}*

common_conn-rate-limit_src-ip-list

Specification	
Type	*list*
Block object keys	

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

common_ddos-protection

Specification	
Type	*object*

ipd-enable-toggle

Description 'enable': Enable SLB DDoS protection; 'disable': Disable SLB DDoS protection (default);

Type: string

Supported Values: enable, disable

Default: disable

logging

Description: logging is a **JSON Block**. Please see below for *common_ddos-protection_logging*

Type: Object

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *common_ddos-protection_packets-per-second*

Type: Object

common_ddos-protection_packets-per-second

Specification	
Type	*object*

ipd-tcp

Description Configure packets-per-second threshold per TCP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ipd-udp

Description Configure packets-per-second threshold per UDP port (default: 200)

Type: number

Range: 0-65535

Default: 200

common_ddos-protection_logging

Specification	
Type	*object*

ipd-logging-toggle

Description 'enable': Enable SLB DDoS protection logging (default); 'disable': Disable SLB DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

common_snat-preserve

Specification

Block object keys	

ac-list

Type: List

name

Description Specify name of the class list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: test

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ac-class-list-list_ac-list

Specification	
Type	*list*
Block object keys	

ac-key-string

Description Specify key string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ac-key-value

Description Specify value string

Type: string

Format: string-rlx

Maximum Length: 639 characters

Maximum Length: 1 characters

ac-match-type

Description 'contains': String contains another string; 'ends-with': String ends with another string; 'equals': String equals another string; 'starts-with': String starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

action

Description 'add': Add the entry; 'delete': Delete the entry;

Type: string

Supported Values: add, delete

health-check-details

Specification	
Type	*list*
Block object keys	

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specfiy a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool shared-partition-pool and auto are mutually exclusive

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP proxy template (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Block object keys	

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-tmpl-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_cache-list_local-uri-policy

Specification	
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_cache-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': hits; 'miss': miss; 'bytes_served': bytes_served; 'total_req': total_req; 'caching_req': caching_req; 'nc_req_header': nc_req_header; 'nc_res_header': nc_res_header; 'rv_success': rv_success; 'rv_failure': rv_failure; 'ims_request': ims_request; 'nm_response': nm_response; 'rsp_type_CL': rsp_type_CL; 'rsp_type_CE': rsp_type_CE; 'rsp_type_304': rsp_type_304; 'rsp_type_other': rsp_type_other; 'rsp_no_compress': rsp_no_compress; 'rsp_gzip': rsp_gzip; 'rsp_deflate': rsp_deflate; 'rsp_other': rsp_other; 'nocache_match': nocache_match; 'match': match; 'invalidate_match': invalidate_match; 'content_toobig': content_toobig; 'content_toosmall': content_toosmall; 'entry_create_failures': entry_create_failures; 'mem_size': mem_size; 'entry_num': entry_num; 'replaced_entry': replaced_entry; 'aging_entry': aging_entry; 'cleaned_entry': cleaned_entry;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error

template_cache-list_uri-policy

Specification	
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_port-list

Specification	
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

template_connection-reuse-list

Specification	
Type	*list*
Block object keys	

keep-alive-conn

Description Keep a number of server connections open

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-per-server

Description Max Server Connections allowed (Connections per Server Port (default 1000))

Type: number

Range: 0-65535

Default: 1000

name

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

num-conn-per-port

Description Connections per Server Port (default 100)

Type: number

Range: 1-1024

Default: 100

preopen

Description Preopen server connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout in seconds. Multiple of 60 (def 2400)

Type: number

Range: 60-3600

Default: 2400

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-cost-list

Specification	
Type	*list*
Block object keys	

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-cost-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

template_reqmod-icap-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 1 - 65535, default is 0 (1 - 65536, default is 0)

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_reqmod-icap-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_smpp-list

Specification	
Type	*list*
Block object keys	

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_smtp-list

Specification	
Type	*list*
Block object keys	

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *template_smtp-list_template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_smtp-list_client-domain-switching

Specification	
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

template_smtp-list_template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

template_smtp-list_command-disable

Specification	
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

template_external-service-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

name

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-forward-list

Type: List

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_external-service-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_external-service-list_request-header-forward-list

Specification	
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_tcp-list

Specification	
Type	*list*
Block object keys	

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (default 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_diameter-list

Specification	
Type	*list*
Block object keys	

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *template_diameter-list_origin-host*

Type: Object

Refernce Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendon Id)

Type: number

Range: 0-2147483647

Default: 0

template_diameter-list_message-code-list

Specification	
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

template_diameter-list_avp-list

Specification	
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32 int64 and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64 int32 and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string int32 and int64 are mutually exclusive

template_diameter-list_origin-host

Specification	
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_udp-list

Specification	
Type	*list*
Block object keys	

age

Description short age

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (default 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-down-on-restart

Specification	
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list

Specification	
Type	*list*
Block object keys	

cookie-name

Description name of cookie to match (Cookie Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-match

Type: List

http-policy-match

Type: List

multi-match-rule-list

Type: List

Refernce Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list_http-policy-match

Specification	
Type	*list*
Block object keys	

match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

template_http-policy-list_multi-match-rule-list

Specification	
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-typecookie-name-equals-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-typecookie-name-contains-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-ends-with-type are mutually exclusive

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-typecookie-value-equals-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-typecookie-value-contains-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-typeheader-name-equals-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-typeheader-name-equals-type, header-name-contains-type and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-typeheader-name-contains-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-typeheader-name-equals-type, header-name-contains-type and header-name-ends-with-type are mutually exclusive

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-typeheader-value-equals-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-typeheader-value-equals-type, header-value-contains-type and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-typeheader-value-contains-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-typeheader-value-equals-type, header-value-contains-type and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-typehost-equals-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-typehost-equals-type, host-contains-type and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-typehost-contains-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-typehost-equals-type, host-contains-type and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-typequery-param-name-equals-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-typequery-param-name-contains-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-typequery-param-value-equals-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-typequery-param-value-contains-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template-waf

Description Waf Template to be used (Waf Template Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-typeurl-equals-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-typeurl-equals-type, url-contains-type and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-typeurl-contains-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-typeurl-equals-type, url-contains-type and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-policy-list_geo-location-match

Specification	
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

geo-location-template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

geo-location-template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

template_link-probe-list

Specification	
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *template_link-probe-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_link-probe-list_destination

Specification	
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as static-ipv4-addr and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr resolve-as and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr resolve-as and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_client-ssl-list

Specification	
Type	*list*
Block object keys	

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Refernce Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-san-ends-with-list

Type: List

certificate-san-equals-list

Type: List

certificate-san-starts-with-list

Type: List

certificate-subject-contains-list

Type: List

certificate-subject-ends-with-list

Type: List

certificate-subject-equals-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *template_client-ssl-list_exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *template_client-ssl-list_exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-certfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-keyfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificateforward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name shared-partition-pool and fp-cert-fetch-autonat are mutually exclusive

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days ocspst-sg-hours and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours ocspst-sg-days and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes ocspst-sg-days and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days ocspst-srvr-hours and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours ocspst-srvr-days and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes ocspst-srvr-days and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 0-604800

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lieftime in seconds from stateless session resumption (Lifetime value in seconds)

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template template-cipher and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher shared-partition-cipher-template and cipher-wo-prio are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *template_client-ssl-list_web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *template_client-ssl-list_web-reputation*

Type: Object

template_client-ssl-list_bypass-cert-subject-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

template_client-ssl-list_certificate-san-contains-list

Specification	
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_equals-list

Specification	
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_forward-proxy-trusted-ca-lists

Specification	
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_client-ssl-list_ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

template_client-ssl-list_contains-list

Specification	
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_ends-with-list

Specification	
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance*

template_client-ssl-list_client-auth-contains-list

Specification	
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-subject-contains-list

Specification	
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_req-ca-lists

Specification	
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-subject-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_web-reputation

Specification	
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-riskbypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-maliciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-riskbypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspiciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-thresholdbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthybypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

template_client-ssl-list_bypass-cert-issuer-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

template_client-ssl-list_client-auth-equals-list

Specification	
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-issuer-equals-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-san-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_client-ssl-list_certificate-list

Specification	
Type	*list*
Block object keys	

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_client-ssl-list_multi-class-list

Specification	
Type	*list*
Block object keys	

multi-clist-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: multi-clist-name and class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

template_client-ssl-list_certificate-issuer-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-ends-with

Description Forward proxy bypass if Certificate issuer ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_web-category

Specification	
Type	*object*

abortion

Description Category Abortion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adult-and-pornography

Description Category Adult and Pornography

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alcohol-and-tobacco

Description Category Alcohol and Tobacco

template_client-ssl-list_certificate-san-equals-list

Specification	
Type	*list*
Block object keys	

certificate-san-equals

Description Forward proxy bypass if Certificate SAN equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-issuer-contains-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-contains

Description Forward proxy bypass if Certificate issuer contains another string (Certificate issuer)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_client-auth-starts-with-list

Specification	
Type	*list*
Block object keys	

client-auth-starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-subject-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-ends-with

Description Forward proxy bypass if Certificate Subject ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_bypass-cert-san-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-san-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-multi-class-list-name and bypass-cert-san-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

template_client-ssl-list_server-name-list

Specification	
Type	*list*
Block object keys	

server-cert

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_client-ssl-list_exception-web-category

Specification	
Type	*object*

exception-abortion

Description Category Abortion

Type: boolean

template_client-ssl-list_certificate-issuer-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-starts

Description Forward proxy bypass if Certificate issuer starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_certificate-san-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-starts

Description Forward proxy bypass if Certificate SAN starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_client-auth-ends-with-list

Specification	
Type	*list*
Block object keys	

client-auth-ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_exception-web-reputation

Specification	
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-riskexception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-maliciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-riskexception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspiciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-thresholdexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthyexception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

template_client-ssl-list_certificate-subject-equals-list

Specification	
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_client-ssl-list_cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA':

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio template-cipher and shared-partition-cipher-template are mutually exclusive

template_client-ssl-list_starts-with-list

Specification	
Type	*list*
Block object keys	

starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_link-block-as-down

Specification	
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dynamic-service-list

Specification	
Type	*list*
Block object keys	

dns-server

Type: List

name

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dynamic-service-list_dns-server

Specification	
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

template_dblb-list

Specification	
Type	*list*
Block object keys	

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *template_dblb-list_calc-sha1*

Type: Object

Refernce Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dblb-list_calc-sha1

Specification	
Type	*object*

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

template_fix-list

Specification	
Type	*list*
Block object keys	

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_fix-list_tag-switching

Specification	
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

template_persist

Specification	
Type	*object*

cookie-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/cookie/{name}*

destination-ip-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/destination-ip/{name}*

source-ip-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/source-ip/{name}*

ssl-sid-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid/{name}*

template_persist_destination-ip-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_source-ip-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_cookie-list

Specification	
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_persist_ssl-sid-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_doh-list

Specification	
Type	*list*
Block object keys	

conn-reuse

Description 'enable': Enable Connection Reuse; 'disable': Disable Connection-Reuse (Default);

Type: string

Supported Values: enable, disable

Default: disable

dns-retry

Description: dns-retry is a **JSON Block**. Please see below for *template_doh-list_dns-retry*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/dns-retry*

forwarder

Description: forwarder is a **JSON Block**. Please see below for *template_doh-list_forwarder*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/forwarder*

name

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_doh-list_forwarder

Specification	
Type	*object*

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4forwarding-ipv6, tcp-service-group and udp-service-group are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6forwarding-ipv4, tcp-service-group and udp-service-group are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

template_doh-list_dns-retry

Specification	
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_sip-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_sip-list_server-request-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_sip-list_server-response-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_sip-list_client-request-header

Specification	
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_sip-list_client-response-header

Specification	
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_sip-list_exclude-translation

Specification	
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

template_respmod-icap-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 1 - 65535, default is 0 (1 - 65530, default is 0)

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_respmod-icap-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

template_virtual-server-list

Specification	
Type	*list*
Block object keys	

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_client-ssh-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hostkey

Description Specify private-key (Key Name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_ssli-list

Specification	
Type	*list*
Block object keys	

name

Description SSLi Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'http': HTTP service; 'xmpp': XMPP service; 'smtp': SMTP service; 'pop': POP service;

Type: string

Supported Values: http, xmpp, smtp, pop, ldap, ftp

Default: http

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssh-list

Specification	
Type	*list*
Block object keys	

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssh-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'successful_handshakes': successful_handshakes; 'failed_handshakes': failed_handshakes; 'forwarding_errors': forwarding_errors;

Type: string

Supported Values: all, successful_handshakes, failed_handshakes, forwarding_errors

template_dns-list

Specification	
Type	*list*
Block object keys	

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

class-list

Description: class-list is a **JSON Block**. Please see below for *template_dns-list_class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns-logging*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *template_dns-list_local-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP)

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *template_dns-list_query-class-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *template_dns-list_query-type-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *template_dns-list_recursive-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-edns-csubnet-to-server

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *template_dns-list_response-rate-limiting*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *template_dns-list_udp-retransmit*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_response-rate-limiting

Specification	
Type	*object*

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 20 per two seconds)

Type: number

Range: 1-1000

Default: 10

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

template_dns-list_response-rate-limiting_rrl-class-list-list

Specification	
Type	*list*
Block object keys	

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_response-rate-limiting_rrl-class-list-list_lid-list

Specification	
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_rpz-list

Specification	
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *template_dns-list_rpz-list_logging*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_rpz-list_logging

Specification	
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_rpz-list_logging_rpz-action

Specification	
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

template_dns-list_recursive-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 30

Type: number

Range: 1-62

Default: 30

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_recursive-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

template_dns-list_class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *template_dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

template_dns-list_udp-retransmit

Specification	
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-class-filter

Specification	
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-class-filter_query-class

Specification	
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

template_dns-list_local-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_local-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

template_dns-list_local-dns-resolution_local-resolver-cfg

Specification	
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

template_dns-list_query-type-filter

Specification	
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_query-type-filter_query-type

Specification	
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

template_http-list

Specification	
Type	*list*
Block object keys	

100-cont-wait-for-req-complete

Description When REQ has Expect 100 and response is not 100, then wait for whole request to be sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-sg

Description Select service group for non-http traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

client-ip-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-port-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-auto-disable-on-high-cpu

Description Auto-disable software compression on high cpu usage (Disable compression if cpu usage is above threshold. Default is off.)

Type: number

Range: 1-100

compression-content-type

Type: List

compression-enable

Description Enable Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-exclude-content-type

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description compression level, default 1 (compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 100

Type: number

Range: 1-1000

Default: 100

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc rd-secure and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *template_http-list_redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *template_http-list_template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-list_request-header-erase-list

Specification	
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_redirect-rewrite

Specification	
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

template_http-list_redirect-rewrite_match-list

Specification	
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_response-header-insert-list

Specification	
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_http-list_response-header-erase-list

Specification	
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template_http-list_template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

template_http-list_url-switching

Specification	
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

template_http-list_response-content-replace-list

Specification	
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template_http-list_request-header-insert-list

Specification	
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

template_http-list_host-switching

Specification	
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

template_http-list_compression-content-type

Specification	
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_http-list_compression-exclude-uri

Specification	
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_http-list_compression-exclude-content-type

Specification	
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_dns-logging-list

Specification	
Type	*list*
Block object keys	

disable

Description Disable DNS Logging template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging-protocol

Description 'both': Log DNS over tcp and udp; 'tcp': Log DNS over tcp; 'udp': Log DNS over udp;

Type: string

Supported Values: both, tcp, udp

dns-logging-request-section

Description 'all': Log DNS header and question section; 'header': Log DNS header information; 'question': Log DNS question section;

Type: string

Supported Values: all, header, question

dns-logging-type

Description 'query': DNS Query Logging;

Type: string

Supported Values: query

name

Description DNS Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_virtual-port-list

Specification	
Type	*list*
Block object keys	

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value)

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_mqtt-list

Specification	
Type	*list*
Block object keys	

clientid-hash-first

Description Use the begining part of client ID to calculate hash value (client ID string length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-last

Description Use the end part of Client ID to calculate hash value (Client ID length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-offset

Description Skip part of Client ID to calculate hash value (Offset of the Client ID)

Type: number

Range: 0-255

clientid-hash-persist

Description Use Client ID's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description MQTT Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_cipher-list

Specification	
Type	*list*
Block object keys	

cipher-cfg

Type: List

cipher13-cfg

Type: List

name

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_cipher-list_cipher13-cfg

Specification	
Type	*list*
Block object keys	

cipher13-suite

Description 'TLS_AES_256_GCM_SHA384': TLS_AES_256_GCM_SHA384; 'TLS_CHACHA20_POLY1305_SHA256': TLS_CHACHA20_POLY1305_SHA256; 'TLS_AES_128_GCM_SHA256': TLS_AES_128_GCM_SHA256;

Type: string

Supported Values: TLS_AES_256_GCM_SHA384, TLS_CHACHA20_POLY1305_SHA256, TLS_AES_128_GCM_SHA256

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

template_cipher-list_cipher-cfg

Specification	
Type	*list*
Block object keys	

cipher-suite

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_SM3, TLS1_ECDHE_SM2_WITH_SMS4_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

template_policy-list

Specification	
Type	*list*
Block object keys	

bw-list-id

Type: List

bw-list-name

Description Specify a blacklist/whitelist name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list

Description: class-list is a **JSON Block**. Please see below for *template_policy-list_class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list*

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *template_policy-list_forward-policy*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy

Specification	
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

filtering

Type: List

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

template_policy-list_forward-policy_san-filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

template_policy-list_forward-policy_action-list

Specification	
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url drop-response-code and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_action-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_source-list

Specification	
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *template_policy-list_forward-policy_source-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination

Specification	
Type	*object*

any

Description: any is a **JSON Block**. Please see below for *template_policy-list_forward-policy_source-list_destination_any*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/any*

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-reputation-scope/{web-reputation-scope}*

template_policy-list_forward-policy_source-list_destination_class-list-list

Specification	
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

sampling-enable

Type: List

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_forward-policy_source-list_destination_class-list-list_sampling-enable

Specification	
Type	*list*
Block object keys

Specification	
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

sampling-enable

Type: List

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-reputation-scope

Description Destination Web Reputation Scope Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/web-category/reputation-scope*

template_policy-list_forward-policy_source-list_destination_web-reputation-scope-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

template_policy-list_forward-policy_source-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

template_policy-list_class-list

Specification	
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

template_policy-list_class-list_lid-list_response-code-rate-limit

Specification	
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

template_policy-list_bw-list-id

Specification	
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

template_policy-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp_client_hello_not_found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

template_server-list

Specification	
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is "DRS"))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight)

Type: number

Range: 1-1000

Default: 1

template_monitor-list

Specification	
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_monitor-list_clear-cfg

Specification	
Type	*list*
Block object keys	

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

template_monitor-list_link-enable-cfg

Specification	
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-up-cfg

Specification	
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-down-cfg

Specification	
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

template_monitor-list_link-disable-cfg

Specification	
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

template_tcp-proxy-list

Specification	
Type	*list*
Block object keys	

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is 5 (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (sec), default is 600 (number)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (number)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number)

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *template_tcp-proxy-list_proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_tcp-proxy-list_proxy-header

Specification	
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

template_ftp-list

Specification	
Type	*list*
Block object keys	

active-mode-port

Description Non-Standard FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-mode-port-val

Description Non-Standard FTP Active mode port

Type: number

Range: 1-65534

Mutual Exclusion: active-mode-port-val and any are mutually exclusive

any

Description Allow any FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and active-mode-port-val are mutually exclusive

name

Description FTP template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

to

Description End range of FTP Active mode port

Type: number

Range: 1-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_imap-pop3-list

Specification	
Type	*list*
Block object keys	

logindisabled

Description Disable Login before STARTTLS.Works only for imap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description IMAP-POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

starttls

Description 'disabled': Disable STARTTLS; 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before imap transaction;

Type: string

Supported Values: disabled, optional, enforced

Default: disabled

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssl-list

Specification	
Type	*list*
Block object keys	

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *template_server-ssl-list_certificate*

Type: Object

Refernce Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template cipher-wo-prio and shared-partition-cipher-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 1-7200

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template cipher-wo-prio and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 30-34

Default: 33

template_server-ssl-list_crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_server-ssl-list_certificate

Specification	
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_server-ssl-list_ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

template_server-ssl-list_server-certificate-error

Specification	
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

template_server-ssl-list_ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

template_server-ssl-list_cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio cipher-template and shared-partition-cipher-template are mutually exclusive

link-probe

Specification	
Type	*object*

entry

Description: entry is a **JSON Block**. Please see below for *link-probe_entry*

Type: Object

Refernce Object: */axapi/v3/slb/link-probe/entry*

link-probe_entry

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-probe_entry_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_entries': Current Entry Count; 'total_created': Total Entry Created; 'total_inserted': Total Entry Inserted; 'total_ready_to_free': Total Entry Ready To Free; 'total_freed': Total Entry Freed; 'err_entry_create_failed': Entry Creation Failure; 'err_entry_create_oom': Entry Creation Out of Memory; 'err_entry_insert_failed': Entry Insert Failed; 'err_tmpl_probe_create_failed': Probe Template Creation Failure; 'err_tmpl_probe_create_oom': Probe Template Creation Out of Memory; 'total_http_probes_sent': Total HTTP Probes Sent out; 'total_http_response_received': Total HTTP responses received; 'total_http_response_good': Total HTTP responses matching probe template config; 'total_http_response_bad': Total HTTP responses not matching probe template config; 'total_tcp_err': Total TCP errors in probes sent out; 'err_smart_nat_alloc': Error creating Smart NAT Instance; 'err_smart_nat_port_alloc': Error obtaining Smart NAT source port; 'err_l4_sess_alloc': Error allocating L4 session for probe; 'err_probe_tcp_conn_send': Error in initiating TCP connection for probe; 'probe_tcp_conn_sent': TCP connection sent for probe;

Type: string

Supported Values: all, curr_entries, total_created, total_inserted, total_ready_to_free, total_freed, err_entry_create_failed, err_entry_create_oom, err_entry_insert_failed, err_tmpl_probe_create_failed, err_tmpl_probe_create_oom, total_http_probes_sent, total_http_response_received, total_http_response_good, total_http_response_bad, total_tcp_err, err_smart_nat_alloc, err_smart_nat_port_alloc, err_l4_sess_alloc, err_probe_tcp_conn_send, probe_tcp_conn_sent

ssl-cert-expire-check

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fast-http-proxy

Specification

perf

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

perf_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-throughput-bits-per-sec': Total throughput bits per sec; 'l4-conns-per-sec': L4 conns per sec; 'l7-conns-per-sec': L7 conns per sec; 'l7-trans-per-sec': L7 trans per sec; 'ssl-conns-per-sec': SSL conns per sec; 'ip-nat-conns-per-sec': IP NAT conns per sec; 'total-new-conns-per-sec': Total new conns per sec; 'total-curr-conns': Total curr conns; 'l4-bandwidth': L4 bandwidth; 'l7-bandwidth': L7 bandwidth;

Type: string

Supported Values: all, total-throughput-bits-per-sec, l4-conns-per-sec, l7-conns-per-sec, l7-trans-per-sec, ssl-conns-per-sec, ip-nat-conns-per-sec, total-new-conns-per-sec, total-curr-conns, l4-bandwidth, l7-bandwidth, serv-ssl-conns-per-sec, fw-conns-per-sec, gifw-conns-per-sec, l7-proxy-conns-per-sec, l7-proxy-trans-per-sec

dns

Specification	
Type	*object*

dns_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'slb_req': No. of requests; 'slb_resp': No. of responses; 'slb_no_resp': No. of resource failures; 'slb_req_rexmit': No. of request retransmits; 'slb_resp_no_match': No. of requests with no response; 'slb_no_resource': No. of resource failures; 'nat_req': (NAT) No. of requests; 'nat_resp': (NAT) No. of responses; 'nat_no_resp': (NAT) No. of resource failures; 'nat_req_rexmit': (NAT) No. of request retransmits; 'nat_resp_no_match': (NAT) No. of requests with no response; 'nat_no_resource': (NAT) No. of resource failures; 'nat_xid_reused': (NAT) No. of requests reusing a transaction id;

Type: string

Supported Values: all, slb_req, slb_resp, slb_no_resp, slb_req_rexmit, slb_resp_no_match, slb_no_resource, nat_req, nat_resp, nat_no_resp, nat_req_rexmit, nat_resp_no_match, nat_no_resource, nat_xid_reused, filter_type_drop, filter_class_drop, filter_type_any_drop, slb_dns_client_ssl_succ, slb_dns_server_ssl_succ, slb_dns_udp_conn, slb_dns_udp_conn_succ, slb_dns_padding_to_server_removed, slb_dns_padding_to_client_added, slb_dns_edns_subnet_to_server_removed, slb_dns_udp_retransmit, slb_dns_udp_retransmit_fail, rpz_action_drop, rpz_action_pass_thru, rpz_action_tcp_only, rpz_action_nxdomain, rpz_action_nodata, rpz_action_local_data, slb_drop, nat_slb_drop, invalid_q_len_to_udp

virtual-server-list

Specification	
Type	*list*
Block object keys	

acl-id

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-idacl-name, p-acl and shared-partition-acl are mutually exclusive

acl-id-shared

Description acl id

Type: number

Range: 1-199

Mutual Exclusion: acl-id-shared and acl-name-shared are mutually exclusive

acl-name

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-nameacl-id, p-acl and shared-partition-acl are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

acl-name-shared

Description Access List name (IPv4 Access List Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-shared and acl-id-shared are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

arp-disable

Description Disable Respond to Virtual Server ARP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Create a description for VIP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-vip-adv

Description Disable virtual server GARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server; 'disable-when-all-ports-down': Disable Virtual Server when all member ports are down; 'disable-when-any-port-down': Disable Virtual Server when any member port is down;

Type: string

Supported Values: enable, disable, disable-when-all-ports-down, disable-when-any-port-down

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

extended-stats

Description Enable extended statistics on virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-dynamic

Description Dynamic failover based on vip status

Type: number

Range: 1-255

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address ipv6-address and use-if-ip are mutually exclusive

ipv6-acl

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv6-acl p-ipv6-acl and shared-partition-ipv6-acl are mutually exclusive

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6-acl-shared

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address ip-address and use-if-ip are mutually exclusive

migrate-vip

Description: migrate-vip is a **JSON Block**. Please see below for *virtual-server-list_migrate-vip*

Type: Object

Refernce Object: */axapi/v3/slb/virtual-server/{name}/migrate-vip*

name

Description SLB Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

port-list

Type: List

Refernce Object: */axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}*

redistribute-route-map

Description Route map reference (Name of route-map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribution-flagged

Description Flag VIP for special redistribution handling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-vs-template

Description Reference a virtual-server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-vs-template and template-virtual-server are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual server; 'stats-data-disable': Disable statistical data collection for virtual server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

suppress-internal-loopback

Description Suppress VIP internal loopback programming

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-logging

Description NAT Logging template (NAT Logging template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/template/logging*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-virtual-server

Description Virtual server template (Virtual server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-virtual-server and shared-partition-vs-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/virtual-server*

template-virtual-server-shared

Description Virtual-Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/virtual-server*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip ipv6-address and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-disable-action

Description 'drop-packet': Drop packet for disabled virtual-port;

Type: string

Supported Values: drop-packet

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

virtual-server-list_port-list

Specification	
Type	*list*
Block object keys	

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable fast sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable fast sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *virtual-server-list_port-list_auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'ssh': SSH Port; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-bucket-count

Description Number of traffic buckets

Type: number

Range: 1-256

Default: 32

scaleout-device-group

Description Device group id

Type: number

Range: 1-16

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template (Client SSL Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template (HTTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL session ID persistence (Source IP Persistence Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template (Server SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Refernce Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ssli*

template-tcp

Description L4 TCP Template (TCP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template (UDP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

waf-template

Description WAF template (WAF Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

virtual-server-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'total_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Permit number; 'loc_deny': Deny number; 'loc_conn': Connection number; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, total_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time, loc_permit, loc_deny, loc_conn, curr_ssl_conn, total_ssl_conn, backend-time-to-first-byte, backend-time-to-last-byte, in-latency, out-latency, total_fwd_bytes_out, total_fwd_pkts_out, total_rev_bytes_out, total_rev_pkts_out, curr_req_rate, curr_resp, total_resp, total_resp_succ, curr_resp_rate, dnsrrl_total_allowed, dnsrrl_total_dropped, dnsrrl_total_slipped, dnsrrl_bad_fqdn, throughput-bits-per-sec, dynamic-memory-alloc, dynamic-memory-free, dynamic-memory, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts, total_dns_filter_type_drop, total_dns_filter_class_drop, dns_filter_type_a_drop, dns_filter_type_aaaa_drop, dns_filter_type_cname_drop, dns_filter_type_mx_drop, dns_filter_type_ns_drop, dns_filter_type_srv_drop, dns_filter_type_ptr_drop, dns_filter_type_soa_drop, dns_filter_type_txt_drop, dns_filter_type_any_drop, dns_filter_type_others_drop, dns_filter_class_internet_drop, dns_filter_class_chaos_drop, dns_filter_class_hesiod_drop, dns_filter_class_none_drop, dns_filter_class_any_drop, dns_filter_class_others_drop, dns_rpz_action_drop, dns_rpz_action_pass_thru, dns_rpz_action_tcp_only, dns_rpz_action_nxdomain, dns_rpz_action_nodata, dns_rpz_action_local_data, dns_rpz_trigger_client_ip, dns_rpz_trigger_resp_ip, dns_rpz_trigger_ns_ip, dns_rpz_trigger_qname, dns_rpz_trigger_ns_name

virtual-server-list_port-list_acl-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id p-acl and shared-partition-acl are mutually exclusive

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool shared-partition-pool-name and v-shared-partition-pool-name are mutually exclusive

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

aflex

Description Bind aFleX Script to the Virtual Port (aFleX Script Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-shared

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

virtual-server-list_port-list_auth-cfg

Specification	
Type	*object*

aaa-policy

Description Specify AAA policy name to bind to the virtual port

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/aaa-policy*

virtual-server-list_migrate-vip

Specification	
Type	*object*

cancel-migration

Description Cancel migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cancel-migration and finish-migration are mutually exclusive

finish-migration

Description Complete the migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: finish-migration and cancel-migration are mutually exclusive

target-data-cpu

Description Number of CPUs on the target platform

Type: number

Range: 1-75

target-floating-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

Mutual Exclusion: target-floating-ipv4 and target-floating-ipv6 are mutually exclusive

target-floating-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: target-floating-ipv6 and target-floating-ipv4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-proxy

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-proxy_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num': Num; 'curr': Current proxy conns; 'total': Total proxy conns; 'svrsel_fail': Server selection failure; 'no_route': no_route; 'snat_fail': source nat failure; 'feat': feat packet; 'cc': clear ctrl port packet; 'data_ssl': data ssl force; 'line_too_long': line too long; 'line_mem_freed': request line freed; 'invalid_start_line': invalid start line; 'auth_tls': auth tls cmd; 'prot': prot cmd; 'pbsz': pbsz cmd; 'pasv': pasv cmd; 'port': port cmd; 'request_dont_care': other cmd; 'client_auth_tls': client auth tls; 'cant_find_pasv': cant find pasv; 'pasv_addr_ne_server': psv addr not equal to svr; 'smp_create_fail': smp create fail; 'data_server_conn_fail': data svr conn fail; 'data_send_fail': data send fail; 'epsv': epsv command; 'cant_find_epsv': cant find epsv; 'data_curr': Current Data Proxy; 'data_total': Total Data Proxy; 'auth_unsupported': Unsupported auth; 'adat': adat cmd; 'unsupported_pbsz_value': Unsupported PBSZ; 'unsupported_prot_value': Unsupported PROT; 'unsupported_command': Unsupported cmd; 'control_to_clear': Control chn clear txt; 'control_to_ssl': Control chn ssl; 'bad_sequence': Bad Sequence; 'rsv_persist_conn_fail': Serv Sel Persist fail; 'smp_v6_fail': Serv Sel SMPv6 fail; 'smp_v4_fail': Serv Sel SMPv4 fail; 'insert_tuple_fail': Serv Sel insert tuple fail; 'cl_est_err': Client EST state erro; 'ser_connecting_err': Serv CTNG state error; 'server_response_err': Serv RESP state error; 'cl_request_err': Client RQ state error; 'data_conn_start_err': Data Start state error; 'data_serv_connecting_err': Data Serv CTNG error; 'data_serv_connected_err': Data Serv CTED error; 'request': Total FTP Request; 'auth_req': Auth Request; 'auth_succ': Auth Success; 'auth_fail': Auth Failure; 'fwd_to_internet': Forward to Internet; 'fwd_to_sg': Total Forward to Service-group; 'drop': Total FTP Drop; 'ds_succ': Host Domain Name is resolved; 'ds_fail': Host Domain Name isn't resolved; 'open': open cmd; 'site': site cmd; 'user': user cmd; 'pass': pass cmd; 'quit': quit cmd;

Type: string

Supported Values: all, num, curr, total, svrsel_fail, no_route, snat_fail, feat, cc, data_ssl, line_too_long, line_mem_freed, invalid_start_line, auth_tls, prot, pbsz, pasv, port, request_dont_care, client_auth_tls, cant_find_pasv, pasv_addr_ne_server, smp_create_fail, data_server_conn_fail, data_send_fail, epsv, cant_find_epsv, data_curr, data_total, auth_unsupported, adat, unsupported_pbsz_value, unsupported_prot_value, unsupported_command, control_to_clear, control_to_ssl, bad_sequence, rsv_persist_conn_fail, smp_v6_fail, smp_v4_fail, insert_tuple_fail, cl_est_err, ser_connecting_err, server_response_err, cl_request_err, data_conn_start_err, data_serv_connecting_err, data_serv_connected_err, request, auth_req, auth_succ, auth_fail, fwd_to_internet, fwd_to_sg, drop, ds_succ, ds_fail, open, site, user, pass, quit, eprt, cant_find_port, cant_find_eprt

ssl-expire-check

Specification	
Type	*object*

before

Description The number of days in advance notice before expiration, default is 5

Type: number

Range: 1-60

Default: 5

exception

Description: exception is a **JSON Block**. Please see below for *ssl-expire-check_exception*

Type: Object

Refernce Object: */axapi/v3/slb/ssl-expire-check/exception*

expire-address1

Description Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

interval-days

Description The interval of days notice after expiration, default is 2

Type: number

Range: 1-5

Default: 2

ssl-expire-email-address

Description Config Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-expire-check_exception

Specification	
Type	*object*

action

Description 'add': Add an exception; 'delete': Delete an exception; 'clean': Delete all exception;

Type: string

Supported Values: add, delete, clean

certificate-name

Description The certificate name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

rate-limit-log

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rate-limit-log_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_log_times': Total log times; 'total_log_msg': Total log messages; 'local_log_msg': Local log messages; 'remote_log_msg': Remote log messages; 'local_log_rate': Local rate (per sec); 'remote_log_rate': Remote rate (per sec); 'msg_too_big': Log message too big; 'buff_alloc_fail': Buffer alloc fail; 'no_route': No route;

'buff_send_fail': Buffer send fail; 'alloc_conn': Log-session alloc; 'free_conn': Log-session free; 'conn_alloc_fail': Log-session alloc fail; 'no_repeat_msg': No repeat message;

Type: string

Supported Values: all, total_log_times, total_log_msg, local_log_msg, remote_log_msg, local_log_rate, remote_log_rate, msg_too_big, buff_alloc_fail, no_route, buff_send_fail, alloc_conn, free_conn, conn_alloc_fail, no_repeat_msg, local_log_dropped

ssl-ocsp

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Block object keys	

counters1

Description 'all': all; 'total_q': Total query; 'total_r': Total server response; 'hit': Total cache hit; 'bad_q': Query not passed; 'encode_q': Query encoded; 'multiple_q': Query with multiple questions; 'oversize_q': Query exceed cache size; 'bad_r': Response not passed; 'oversize_r': Response exceed cache size; 'encode_r': Response encoded; 'multiple_r': Response with multiple questions; 'answer_r': Response with multiple answers; 'ttl_r': Response with short TTL; 'ageout': Total aged out; 'bad_answer': Bad Answer; 'ageout_weight': Total aged for lower weight; 'total_log': Total stats log sent; 'total_alloc': Total allocated; 'total_freed': Total freed; 'current_allocate': Current allocate; 'current_data_allocate': Current data allocate;

Type: string

Supported Values: all, total_q, total_r, hit, bad_q, encode_q, multiple_q, oversize_q, bad_r, oversize_r, encode_r, multiple_r, answer_r, ttl_r, ageout, bad_answer, ageout_weight, total_log, total_alloc, total_freed, current_allocate, current_data_allocate, resolver_queue_full

ipv6-class-list-list

Specification	
Type	*list*
Block object keys	

ipv6-list

Type: List

name

Description Specify name of the class list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: test

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ipv6-class-list-list_ipv6-list

Specification	
Type	*list*
Block object keys	

action

Description 'add': Add the entry; 'delete': Delete the entry;

Type: string

Supported Values: add, delete

glid

Description Use global Limit ID (Specify global LID index)

Type: number

Range: 1-1023

Mutual Exclusion: glidlid, lsn-lid and lsn-radius-profile are mutually exclusive

ipv6-addr

Description Specify IPv6 host or subnet

Type: string

Format: ipv6-address-plen

lid

Description Use Limit ID defined in template (Specify LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lidglid, lsn-lid and lsn-radius-profile are mutually exclusive

lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

Mutual Exclusion: lsn-lidlid, glid and lsn-radius-profile are mutually exclusive

lsn-radius-profile

Description LSN RADIUS Profile Index

Type: number

Range: 1-16

Mutual Exclusion: lsn-radius-profilelid, glid and lsn-lid are mutually exclusive

ssl-crl

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-dns-cache

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-counters

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hw-compress

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hw-compress_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request_count': Total request count; 'submit_count': Total submit count; 'response_count': Total response count; 'failure_count': Total failure count; 'failure_code': Last failure code; 'ring_full_count': Compression queue full; 'max_outstanding_request_count': Max queued request count; 'max_outstanding_submit_count': Max queued submit count;

Type: string

Supported Values: all, request_count, submit_count, response_count, failure_count, failure_code, ring_full_count, max_outstanding_request_count, max_outstanding_submit_count

transparent-acl-template

Specification	
Type	*object*

name

Description Specify template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/tcp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

player-id-global

Specification	
Type	*object*

abs-max-expiration

Description Absolute max record expiration value (default 10 minutes) (Absolute max record expiration time in minutes, default 10)

Type: number

Range: 1-32767

Default: 10

enable-64bit-player-id

Description Enable 64 bit player id check. Default is 32 bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforcement-timer

Description Time to playerid enforcement after bootup (default 480 seconds) (Time to playerid enforcement in seconds, default 480)

Type: number

Range: 1-32767

Default: 480

force-passive

Description Forces the device to be in passive mode (Only stats and no packet drops)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

min-expiration

Description Minimum record expiration value (default 1 min) (Min record expiration time in minutes, default 1)

Type: number

Range: 1-32767

Default: 1

pkt-activity-expiration

Description Packet activity record expiration value (default 5 minutes) (Packet activity record expiration time in minutes, default 5)

Type: number

Range: 1-32767

Default: 5

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

player-id-global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_playerids_created': Playerid records created; 'total_playerids_deleted': Playerid records deleted; 'total_abs_max_age_outs': Playerid records max time aged out; 'total_pkt_activity_age_outs': Playerid records idle timeout; 'total_invalid_playerid_pkts': Invalid playerid packets; 'total_invalid_playerid_drops': Invalid playerid packet drops; 'total_valid_playerid_pkts': Valid playerid packets;

Type: string

Supported Values: all, total_playerids_created, total_playerids_deleted, total_abs_max_age_outs, total_pkt_activity_age_outs, total_invalid_playerid_pkts, total_invalid_playerid_drops, total_valid_playerid_pkts

service-group-list

Specification	
Type	*list*
Block object keys	

backup-server-event-log

Description Send log info on back up server events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate

Description Dynamically enable stateless method by conn-rate (Rate to trigger stateless method(conn/sec))

Type: number

Range: 1-1000000

Mutual Exclusion: conn-rate and l4-session-usage are mutually exclusive

conn-rate-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

conn-rate-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

conn-rate-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

conn-revert-rate

Description Rate to revert to statelful method (conn/sec)

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check shared-partition-svcgrp-health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-partition-svcgrp-health-check and svcgrp-health-check-shared are mutually exclusive

l4-session-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage

Description Dynamically enable stateless method by session usage (Usage to trigger stateless method)

Type: number

Range: 1-100

Mutual Exclusion: l4-session-usage and conn-rate are mutually exclusive

l4-session-usage-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

l4-session-usage-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-session-usage-revert-rate

Description Usage to revert to statelful method

Type: number

Range: 1-100

lb-method

Description 'dst-ip-hash': Load-balancing based on only Dst IP and Port hash; 'dst-ip-only-hash': Load-balancing based on only Dst IP hash; 'fastest-response': Fastest response time on service port level; 'least-request': Least request on service port level; 'src-ip-hash': Load-balancing based on only Src IP and Port hash; 'src-ip-only-hash': Load-balancing based on only Src IP hash; 'weighted-rr': Weighted round robin on server level; 'round-robin': Round robin on server level; 'round-robin-strict': Strict mode round robin on server level;

Type: string

Supported Values: dst-ip-hash, dst-ip-only-hash, fastest-response, least-request, src-ip-hash, src-ip-only-hash, weighted-rr, service-weighted-rr, round-robin, round-robin-strict, odd-even-hash

Default: round-robin

Mutual Exclusion: lb-methodlc-method, stateless-lb-method, llb-method and lclb-method are mutually exclusive

lc-method

Description 'least-connection': Least connection on server level; 'service-least-connection': Least connection on service port level; 'weighted-least-connection': Weighted least connection on server level; 'service-weighted-least-connection': Weighted least connection on service port level;

Type: string

Supported Values: least-connection, service-least-connection, weighted-least-connection, service-weighted-least-connection

Mutual Exclusion: lc-methodlb-method, stateless-lb-method, llb-method and lclb-method are mutually exclusive

lclb-method

Description 'link-cost-load-balance': Link cost load balance;

Type: string

Supported Values: link-cost-load-balance

Mutual Exclusion: lclb-methodlb-method, lc-method, stateless-lb-method and llb-method are mutually exclusive

link-probe-template

Description Link Probe template (Link Probe template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/link-probe*

llb-method

Description 'fastest-link-only': Fastest server selection w/ Link probe template on service port level;

Type: string

Supported Values: next-hop-link

Mutual Exclusion: llb-methodlb-method, lc-method, stateless-lb-method and lclb-method are mutually exclusive

member-list

Type: List

Refernce Object: */axapi/v3/slb/service-group/{name}/member/{name}+{port}*

min-active-member

Description Minimum Active Member Per Priority (Minimum Active Member before Action)

Type: number

Range: 1-1024

min-active-member-action

Description 'dynamic-priority': dynamic change member priority to met the min-active-member requirement; 'skip-pri-set': Skip Current Priority Set If Min not met;

Type: string

Supported Values: dynamic-priority, skip-pri-set

name

Description SLB Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

persist-scoring

Description 'global': Use Global Configuration; 'enable': Enable persist-scoring; 'disable': Disable persist-scoring;

Type: string

Supported Values: global, enable, disable

Default: global

priorities

Type: List

priority-affinity

Description Priority affinity. Persist to the same priority if possible.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

pseudo-round-robin

Description PRR, select the oldest node for sub-select

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

report-delay

Description Reporting frequency (in minutes)

Type: number

Range: 1-7200

reset

Description: reset is a **JSON Block**. Please see below for *service-group-list_reset*

Type: Object

Refernce Object: */axapi/v3/slb/service-group/{name}/reset*

reset-on-server-selection-fail

Description Send reset to client if server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-priority-affinity

Description Reset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpt-ext-server

Description Report top 10 fastest/slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sample-rsp-time

Description sample server response time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-svcgrp-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-svcgrp-health-check health-check and health-check-disable are mutually exclusive

stateless-auto-switch

Description Enable auto stateless method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-lb-method

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

Mutual Exclusion: stateless-lb-methodlb-method, lc-method, llb-method and lclb-method are mutually exclusive

stateless-lb-method2

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for service group; 'stats-data-disable': Disable statistical data collection for service group;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

strict-select

Description strict selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svcgrp-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: svcgrp-health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server*

top-fastest

Description Report top 10 fastest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

top-slowest

Description Report top 10 slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-replication-mirror

Description Mirror Bi-directional Packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirrortraffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-da-repl

Description Replace Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-da-repltraffic-replication-mirror, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-ip-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-da-repl

Description Replace Source MAC and Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-da-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-repl

Description Replace Source MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl and traffic-replication-mirror-sa-da-repl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list

Specification	
Type	*list*
Block object keys	

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Refernce Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': peak_conn; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

service-group-list_reset

Specification	
Type	*object*

auto-switch

Description Reset auto stateless state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-list_priorities

Specification	
Type	*list*
Block object keys	

priority

Description Priority option. Define different action for each priority node. (Priority in the Group)

Type: number

Range: 1-16

priority-action

Description 'drop': Drop request when all priority nodes fail; 'drop-if-exceed-limit': Drop request when connection over limit; 'proceed': Proceed to next priority when all priority nodes fail(default); 'reset': Send client reset when all priority nodes fail; 'reset-if-exceed-limit': Send client reset when connection over limit;

Type: string

Supported Values: drop, drop-if-exceed-limit, proceed, reset, reset-if-exceed-limit

Default: proceed

service-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Service selection fail drop; 'server_selection_fail_reset': Service selection fail reset; 'service_peak_conn': Service peak connection;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

ssl-error

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icap_http

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icap_http_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'status_200': Status code 200; 'status_201': Status code 201; 'status_202': Status code 202; 'status_203': Status code 203; 'status_204': Status code 204; 'status_205': Status code 205; 'status_206': Status code 206; 'status_207': Status code 207; 'status_100': Status code 100; 'status_101': Status code 101; 'status_102': Status code 102; 'status_300': Status code 300; 'status_301': Status code 301; 'status_302': Status code 302; 'status_303': Status code 303; 'status_304': Status code 304; 'status_305': Status code 305; 'status_306': Status code 306; 'status_307': Status code 307; 'status_400': Status code 400; 'status_401': Status code 401; 'status_402': Status code 402; 'status_403': Status code 403; 'status_404': Status code 404; 'status_405': Status code 405; 'status_406': Status code 406; 'status_407': Status code 407; 'status_408': Status code 408; 'status_409': Status code 409; 'status_410': Status code 410; 'status_411': Status code 411; 'status_412': Status code 412; 'status_413': Status code 413; 'status_414': Status code 414; 'status_415': Status code 415; 'status_416': Status code 416; 'status_417': Status code 417; 'status_418': Status code 418; 'status_422': Status code 422; 'status_423': Status code 423; 'status_424': Status code 424; 'status_425': Status code 425; 'status_426': Status code 426; 'status_449': Status code 449; 'status_450': Status code 450; 'status_500': Status code 500; 'status_501': Status code 501; 'status_502': Status code 502; 'status_503': Status code 503; 'status_504': Status code 504; 'status_505': Status code 505; 'status_506': Status code 506; 'status_507': Status code 507; 'status_508': Status code 508; 'status_509': Status code 509; 'status_510': Status code 510; 'status_1xx': status code 1XX; 'status_2xx': status code 2XX; 'status_3xx': status code 3XX; 'status_4xx': status code 4XX; 'status_5xx': status code 5XX; 'status_6xx': status code 6XX; 'status_unknown': Status code unknown;

Type: string

Supported Values: all, status_200, status_201, status_202, status_203, status_204, status_205, status_206, status_207, status_100, status_101, status_102, status_300, status_301, status_302, status_303, status_304, status_305, status_306, status_307, status_400, status_401, status_402, status_403, status_404, status_405, status_406, status_407, status_408, status_409, status_410, status_411, status_412, status_413, status_414, status_415, status_416, status_417, status_418, status_422, status_423, status_424, status_425, status_426, status_449, status_450, status_500, status_501, status_502, status_503, status_504, status_505, status_506, status_507, status_508, status_509, status_510, status_1xx, status_2xx, status_3xx, status_4xx, status_5xx, status_6xx, status_unknown

server-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server; 'disable-with-health-check': disable real server, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-server

Type: List

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume (Connection Resume (min active conn before resume taking new conn))

Type: number

Range: 1-1000000

ethernet

Description ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description External IP address for NAT of GSLB

Type: string

Format: ipv4-address

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fqdn-name server-ipv6-addr and host are mutually exclusive

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check shared-partition-health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-partition-health-check and health-check-shared are mutually exclusive

health-check-shared

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

host

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: host server-ipv6-addr and fqdn-name are mutually exclusive

ipv6

Description IPv6 address Mapping of GSLB

Type: string

Format: ipv6-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Refernce Object: */axapi/v3/slb/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: server-ipv6-addr host and fqdn-name are mutually exclusive

shared-partition-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-health-check health-check and health-check-disable are mutually exclusive

shared-partition-server-template

Description Reference a server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-template and template-server are mutually exclusive

slow-start

Description Slowly ramp up the connection number after server is up (start from 128, then double every 10 sec till 4096)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description This server is a spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

template-link-cost

Description Link-Cost template (Link-Cost template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/link-cost*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-server and shared-partition-server-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/server*

template-server-shared

Description Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server*

trunk

Description trunk interface

Type: number

Range: 1-4096

Refernce Object: */axapi/v3/interface/trunk*

use-aam-server

Description Using aam server. For health check, please configure it in aam server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for this Real Server (Connection Weight)

Type: number

Range: 1-1000

Default: 1

server-list_port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *server-list_port-list_auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-checkshared-rport-health-check, health-check-follow-port and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-rport-health-check, rport-health-check-shared and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port health-check and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check health-check and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

server-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Forward bytes; 'total_fwd_pkts': Forward packets; 'total_rev_bytes': Reverse bytes; 'total_rev_pkts': Reverse packets; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy request; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

server-list_port-list_alternate-port

Specification	
Type	*list*
Block object keys	

alternate

Description Alternate Server Number

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

alternate-server-port

Description Port (Alternate Server Port Value)

Type: number

Range: 1-65535

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'pause_conn': Pause connection; 'pause_conn_fail': Pause connection fail; 'resume_conn': Resume connection; 'event_resume_conn': Resume conn by event; 'timer_resume_conn': Resume conn by timer; 'try_to_resume_conn': Resume conn by trying; 'retry_resume_conn': Resume conn by retry; 'error_resume_conn': Resume conn by error;

'open_new_server_conn': Open new server conn; 'reuse_server_idle_conn': Reuse idle server conn; 'inc_aflow_limit': Inc aFlow limit;

Type: string

Supported Values: all, pause_conn, pause_conn_fail, resume_conn, event_resume_conn, timer_resume_conn, try_to_resume_conn, retry_resume_conn, error_resume_conn, open_new_server_conn, reuse_server_idle_conn, inc_aflow_limit

stats data

	Counter	Size	Description
	open_new_server_conn	8	Open new server conn
	reuse_server_idle_conn	8	Reuse idle server conn
	inc_aflow_limit	8	Inc aFlow limit
	pause_conn_fail	8	Pause connection fail
	pause_conn	8	Pause connection
	event_resume_conn	8	Resume conn by event
	try_to_resume_conn	8	Resume conn by trying
	resume_conn	8	Resume connection
	retry_resume_conn	8	Resume conn by retry
	error_resume_conn	8	Resume conn by error
	timer_resume_conn	8	Resume conn by timer

common attributes

N5-new

Description HW assisted N5 SSL module with TLS 1.3 and TLS 1.2 support using OpenSSL 1.1.1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-newsoftware, software-tls13, QAT and N5-old are mutually exclusive

N5-old

Description HW assisted N5 SSL module with TLS 1.2 support using OpenSSL 0.9.7

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: N5-oldsoftware, software-tls13, QAT and N5-new are mutually exclusive

QAT

Description HW assisted QAT SSL module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: QATsoftware, software-tls13, N5-new and N5-old are mutually exclusive

aflex-table-entry-aging-interval

Description aFleX table entry aging interval in second

Type: number

Range: 1-3600

Default: 1

aflex-table-entry-sync

Description: aflex-table-entry-sync is a **JSON Block**. Please see below for *aflex-table-entry-sync*

Type: Object

Refernce Object: */axapi/v3/slb/common/aflex-table-entry-sync*

after-disable

Description Graceful shutdown after disable server/port and/or virtual server/port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-in-gateway-mode

Description Use source NAT gateway for L3 traffic for gateway mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-nat-no-ip-refresh

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

auto-translate-port

Description Auto Translate Port range

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh

Description Set buffer threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

buff-thresh-hw-buff

Description Set hardware buffer threshold

Type: number

Range: 1-2147483647

buff-thresh-relieve-thresh

Description Relieve threshold

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-high

Description Set high water mark of system buffer

Type: number

Range: 0-2147483647

buff-thresh-sys-buff-low

Description Set low water mark of system buffer

Type: number

Range: 0-2147483647

compress-block-size

Description Set compression block size (Compression block size in bytes)

Type: number

Range: 6000-131008

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *conn-rate-limit*

Type: Object

Refernce Object: */axapi/v3/slb/common/conn-rate-limit*

ddos-pkt-count-thresh

Description Set packet count threshold for DDOS, default is 100

Type: number

Range: 1-256

Default: 100

ddos-pkt-size-thresh

Description Set data packet size threshold for DDOS, default is 64 bytes

Type: number

Range: 1-256

Default: 64

ddos-protection

Description: ddos-protection is a **JSON Block**. Please see below for *ddos-protection*

Type: Object

disable-adaptive-resource-check

Description Disable adaptive resource check based on buffer usage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-persist-scoring

Description Disable Persist Scoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-port-masking

Description Disable masking of ports for CPU hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-server-auto-reselect

Description Disable auto reselection of server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-age

Description Set DNS cache entry age, default is 300 seconds (1-1000000 seconds, default is 300 seconds)

Type: number

Range: 1-1000000

Default: 300

dns-cache-enable

Description Enable DNS cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-cache-entry-size

Description Set DNS cache entry size, default is 256 bytes (1-4096 bytes, default is 256 bytes)

Type: number

Range: 1-4096

Default: 256

dns-response-rate-limiting

Description: dns-response-rate-limiting is a **JSON Block**. Please see below for *dns-response-rate-limiting*

Type: Object

Refernce Object: */axapi/v3/slb/common/dns-response-rate-limiting*

dns-vip-stateless

Description Enable DNS VIP stateless mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-icmp-to-vip-when-vip-down

Description Drop ICMP to VIP when VIP down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dsr-health-check-enable

Description Enable dsr-health-check (direct server return health check)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ecmp-hash

Description 'system-default': Use system default ecmp hashing algorithm; 'connection-based': Use connection information for hashing;

Type: string

Supported Values: system-default, connection-based

Default: system-default

enable-l7-req-acct

Description Enable L7 request accounting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

entity

Description 'server': Graceful shutdown server/port only; 'virtual-server': Graceful shutdown virtual server/port only;

Type: string

Supported Values: server, virtual-server

exclude-destination

Description 'local': Maximum local rate; 'remote': Maximum remote rate; (Maximum rates)

Type: string

Supported Values: local, remote

extended-stats

Description Enable global slb extended statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-path-disable

Description Disable fast path in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-health-check

Description Enable gateway health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

graceful-shutdown

Description 1-65535, in unit of seconds

Type: number

Range: 1-65535

graceful-shutdown-enable

Description Enable graceful shutdown

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-to-all-vip

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-fast-enable

Description Enable Http Fast in SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-compression

Description Use hardware compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hw-syn-rr

Description Configure hardware SYN round robin (range 1-500000)

Type: number

Range: 1-500000

interval

Description Specify the healthcheck interval, default is 5 seconds (Interval Value, in seconds (default 5))

Type: number

Range: 1-180

Default: 5

ipv4-offset

Description IPv4 Octet Offset for Hash

Type: number

Range: 0-3

Default: 0

l2l3-trunk-lb-disable

Description Disable L2/L3 trunk LB

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-for-reset-unknown-conn

Description Log when rate exceed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-latency

Description Enable low latency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-buff-queued-per-conn

Description Set per connection buffer threshold (Buffer value range 128-4096)

Type: number

Range: 128-4096

Default: 1000

max-http-header-count

Description Set maximum number of HTTP headers allowed

Type: number

Range: 90-255

Default: 90

max-local-rate

Description Set maximum local rate

Type: number

Range: 1-100

Default: 32

max-remote-rate

Description Set maximum remote rate

Type: number

Range: 1-1000000

Default: 15000

msl-time

Description Configure maximum session life, default is 2 seconds (1-40 seconds, default is 2 seconds)

Type: number

Range: 1-40

Default: 2

mss-table

Description Set MSS table (128-750, default is 536)

Type: number

Range: 128-750

Default: 536

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn-hm-rate

Description One Server Conn Health Check Rate

Type: number

Range: 1-60

override-port

Description Enable override port in DSR health check mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per-thr-percent

Description Percentage of default session count to use for per thread session table size

Type: number

Range: 1-100

ping-sweep-detection

Description 'enable': Enable ping sweep detection; 'disable': Disable ping sweep detection(default);

Type: string

Supported Values: enable, disable

Default: disable

pkt-rate-for-reset-unknown-conn

Description

Type: number

Range: 1-1048575

player-id-check-enable

Description Enable the Player id check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-scan-detection

Description 'enable': Enable port scan detection; 'disable': Disable port scan detection(default);

Type: string

Supported Values: enable, disable

Default: disable

range

Description auto translate port range

Type: number

Range: 1-3

range-end

Description port range end

Type: number

Range: 0-65535

range-start

Description port range start

Type: number

Range: 0-65535

rate-limit-logging

Description Configure rate limit logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-stale-session

Description Send reset if session in delete queue receives a SYN packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-port-conflict

Description Enable client port service port conflicts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-type

Description 'single-answer': Only cache DNS response with single answer; 'round-robin': Round robin;

Type: string

Supported Values: single-answer, round-robin

scale-out

Description Enable SLB scale out

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

scale-out-traffic-map

Description Set SLB scaleout traffic-map

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-on-no-dest-nat-vports

Description 'allow-same': Allow the binding service-group on no-dest-nat virtual ports; 'enforce-different': Enforce that the same service-group can not be bound on different no-dest-nat virtual ports;

Type: string

Supported Values: allow-same, enforce-different

Default: enforce-different

show-slb-server-legacy-cmd

Description Enable show slb server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-service-group-legacy-cmd

Description Enable show slb service-group legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show-slb-virtual-server-legacy-cmd

Description Enable show slb virtual-server legacy command

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-gwy-for-l3

Description Use source NAT gateway for L3 traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-preserve

Description: snat-preserve is a **JSON Block**. Please see below for *snat-preserve*

Type: Object

software

Description Software

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: softwaresoftware-tls13, QAT, N5-new and N5-old are mutually exclusive

software-tls13

Description Software TLS1.3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: software-tls13software, QAT, N5-new and N5-old are mutually exclusive

sort-res

Description Enable SLB sorting of resource names

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-sni-hash-enable

Description Enable SSLi SNI hash table

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-sg-multi-binding

Description Enable stateless service groups to be assigned to multiple L2/L3 DSR VIPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-disable

Description Disable global slb data statistics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify the healthcheck timeout value, default is 15 seconds (Timeout Value, in seconds (default 15))

Type: number

Range: 1-360

Default: 15

traffic-map-type

Description 'vport': traffic-map per vport; 'global': global traffic-map;

Type: string

Supported Values: vport, global

Default: vport

ttl-threshold

Description Only cache DNS response with longer TTL

Type: number

Range: 1-10000000

use-default-sess-count

Description Use default session count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mss-tab

Description Use MSS based on internal table for SLB processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aflex-table-entry-sync

Specification	
Type	*object*

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-response-rate-limiting

Specification	
Type	*object*

max-table-entries

Description Maximum number of entries allowed

Type: number

Range: 1000-4194304

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

conn-rate-limit

Specification	
Type	*object*

src-ip-list

Type: List

Refernce Object: */axapi/v3/slb/common/conn-rate-limit/src-ip/{protocol}*

conn-rate-limit_src-ip-list

Specification	
Type	*list*
Block object keys	

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection

Specification	
Type	*object*

ipd-enable-toggle

Description 'enable': Enable SLB DDoS protection; 'disable': Disable SLB DDoS protection (default);

Type: string

Supported Values: enable, disable

Default: disable

logging

Description: logging is a **JSON Block**. Please see below for *ddos-protection_logging*

Type: Object

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *ddos-protection_packets-per-second*

Type: Object

ddos-protection_packets-per-second

Specification	
Type	*object*

ipd-tcp

Description Configure packets-per-second threshold per TCP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ipd-udp

Description Configure packets-per-second threshold per UDP port (default: 200)

Type: number

Range: 0-65535

Default: 200

ddos-protection_logging

Specification	
Type	*object*

ipd-logging-toggle

Description 'enable': Enable SLB DDoS protection logging (default); 'disable': Disable SLB DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

snat-preserve

Specification	
Type	*object*

range

Type: List

snat-preserve_range

Specification	
Type	*list*
Block object keys	

port1

Description start port

Type: number

Range: 1025-65535

Default: 1025

port2

Description end port which is greater than start

Type: number

Range: 1025-65535

Default: 1025

operational data

	Counter	Size	Description
	server-auto-reselect	number	server-auto-reselect

2.92.6 slb common aflex-table-entry-sync

aflex table entry sync commands

aflex-table-entry-sync Specification

Type	*Configuration Resource*
Element Name	aflex-table-entry-sync

aflex-table-entry-sync attributes

aflex-table-entry-sync attributes

aflex-table-entry-sync-enable

Description Enable aflex table sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aflex-table-entry-sync-max-key-len

Description aflex table entry max key length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-max-value-len

Description aflex table entry max value length to sync

Type: number

Range: 0-1000

Default: 1000

aflex-table-entry-sync-min-lifetime

Description aflex table entry minimum lifetime to sync

Type: number

Range: 0-65535

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.7 slb common conn-rate-limit

Set rate limiting on virtual ports

conn-rate-limit Specification

Type	*Intermediate Resource*

Block object keys	

exceed-action

Description Set action if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Set max connections per period

Type: number

Range: 1-1000000

limit-period

Description '100': 100 ms; '1000': 1000 ms;

Type: string

Supported Values: 100, 1000

lock-out

Description Set lockout period in seconds if threshold exceeded

Type: number

Range: 1-3600

log

Description Send log if threshold exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': Set TCP connection rate limit; 'udp': Set UDP packet rate limit;

Type: string

Supported Values: tcp, udp

shared

Description Set threshold shared amongst all virtual ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.8 slb common conn-rate-limit src-ip

Set connection limit based on source IP address

src-ip Specification

Type	*Collection*
Object Key(s)	*protocol*
Collection Name	*src-ip-list*
Collection URI	/axapi/v3/slb/common/conn-rate-limit/src-ip
Element Name	src-ip
Element URI	/axapi/v3/slb/common/conn-rate-limit/src-ip/{protocol}
Element Attributes	src-ip_attributes
Schema	`src-ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/common/conn-rate-limit/src-ip

src-ip attributes

```
POST /axapi/v3/slb/common/conn-rate-limit/src-ip/
Payload:
{
    "src-ip": {
        "limit": 1,
        "protocol": "tcp",
        "limit-period": "100",
        "exceed-action": 1,
        "log": 1
    }
}
```

Create List

POST

/axapi/v3/slb/common/conn-rate-limit/src-ip
