ACOS 5.2.1-P3
aXAPIv3 Reference Document

for A10 Thunder® Series

September 2021

A10

© 2021 A10 NETWORKS, INC. CONFIDENTIAL AND PROPRIETARY- ALL RIGHTS RESERVED

Information in this document is subject to change without notice.

PATENT PROTECTION

A10 Networks products are protected by patents in the U.S. and elsewhere. The following website is provided to satisfy the virtual patent marking provisions of various jurisdictions including the virtual patent marking provisions of the America Invents Act. A10 Networks' products, including all Thunder Series products, are protected by one or more of U.S. patents and patents pending listed at:

https://www.a10networks.com/company/legal-notices/a10-virtual-patent-marking

TRADEMARKS

A10 Networks trademarks are listed at:

https://www.a10networks.com/company/legal-notices/a10-trademarks

CONFIDENTIALITY

This document contains confidential materials proprietary to A10 Networks, Inc. This document and information and ideas herein may not be disclosed, copied, reproduced or distributed to anyone outside A10 Networks, Inc. without prior written consent of A10 Networks, Inc.

A10 NETWORKS INC. SOFTWARE LICENSE AND END USER AGREEMENT

Software for all A10 Networks products contains trade secrets of A10 Networks and its subsidiaries and Customer agrees to treat Software as confidential information.

Anyone who uses the Software does so only in compliance with the terms of the End User License Agreement (EULA), provided later in this document or available separately. Customer shall not:

1. Reverse engineer, reverse compile, reverse de-assemble, or otherwise translate the Software by any means.
2. Sub-license, rent, or lease the Software.

DISCLAIMER

This document does not create any express or implied warranty about A10 Networks or about its products or services, including but not limited to fitness for a particular use and non-infringement. A10 Networks has made reasonable efforts to verify that the information contained herein is accurate, but A10 Networks assumes no responsibility for its use. All information is provided "as-is." The product specifications and features described in this publication are based on the latest information available; however, specifications are subject to change without notice, and certain features may not be available upon initial product release. Contact A10 Networks for current information regarding its products or services. A10 Networks’ products and services are subject to A10 Networks’ standard terms and conditions.

ENVIRONMENTAL CONSIDERATIONS

Some electronic components may possibly contain dangerous substances. For information on specific component types, please contact the manufacturer of that component. Always consult local authorities for regulations regarding proper disposal of electronic components in your area.

FURTHER INFORMATION

For additional information about A10 products, terms and conditions of delivery, and pricing, contact your nearest A10 Networks location, which can be found by visiting www.a10networks.com.

CONTENTS

1 Overview: 1

1.1 Start Here . . . 1

1.1.1 Logging On . . . 1

1.1.2 Making an API call . . . 2

1.1.3 Logging Off . . . 3

3 Operational APIs: 9215
3.1 aam . . . 9215
3.1.1 aam access-log . . . 9215
access-log Specification . . . 9215
access-log attributes . . . 9215
operational data . . . 9216
3.1.2 aam auth-log . . . 9216
auth-log Specification . . . 9216
auth-log attributes . . . 9216
operational data . . . 9217
3.1.3 aam file-category-log count-in-interval . . . 9217
count-in-interval Specification . . . 9217
count-in-interval attributes . . . 9217
operational data . . . 9218
3.1.4 aam file-category-log log . . . 9218
log Specification . . . 9218

log attributes . . . 9218
operational data . . . 9218
3.1.5 aam file-category-log top-destip . . . 9219
top-destip Specification . . . 9219
top-destip attributes . . . 9219
operational data . . . 9219
3.1.6 aam file-category-log top-fileext . . . 9219
top-fileext Specification . . . 9220
top-fileext attributes . . . 9220
operational data . . . 9220
3.1.7 aam file-category-log top-filename . . . 9220
top-filename Specification . . . 9220
top-filename attributes . . . 9221
operational data . . . 9221
3.1.8 aam file-category-log top-srcip . . . 9221
top-srcip Specification . . . 9221
top-srcip attributes . . . 9222
operational data . . . 9222
3.1.9 aam file-category-log top-url . . . 9222
top-url Specification . . . 9222
top-url attributes . . . 9222
operational data . . . 9223
3.2 access-list . . . 9223
3.2.1 access-list summary . . . 9223
summary Specification . . . 9223
summary attributes . . . 9223
operational data . . . 9223
3.3 active-partition . . . 9224
3.3.1 active-partition . . . 9224
active-partition Specification . . . 9224
active-partition attributes . . . 9224
3.4 admin . . . 9224
3.4.1 admin aws-accesskey . . . 9225
aws-accesskey Specification . . . 9225
aws-accesskey attributes . . . 9225
3.4.2 admin azure-cred . . . 9226
azure-cred Specification . . . 9226
azure-cred attributes . . . 9226
3.4.3 admin ssh-pubkey . . . 9227
ssh-pubkey Specification . . . 9227
ssh-pubkey attributes . . . 9227
3.5 admin-detail . . . 9228
3.5.1 admin-detail . . . 9228
admin-detail Specification . . . 9228
admin-detail attributes . . . 9229
operational data . . . 9229
3.6 admin-session . . . 9229
3.6.1 admin-session . . . 9229
admin-session Specification . . . 9229
admin-session attributes . . . 9230
operational data . . . 9230
3.7 automatic-update . . . 9230
3.7.1 automatic-update check-now . . . 9230
check-now Specification . . . 9231

check-now attributes . . . 9231
3.7.2 automatic-update checknow . . . 9231
checknow Specification . . . 9231
checknow attributes . . . 9232
stats data . . . 9232
operational data . . . 9232
3.7.3 automatic-update info . . . 9232
info Specification . . . 9232
info attributes . . . 9233
stats data . . . 9233
operational data . . . 9233
3.7.4 automatic-update reset . . . 9233
reset Specification . . . 9233
reset attributes . . . 9234
3.7.5 automatic-update revert . . . 9234
revert Specification . . . 9234
revert attributes . . . 9234
3.8 axdebug . . . 9234
3.8.1 axdebug . . . 9234
axdebug Specification . . . 9235
axdebug attributes . . . 9235
3.8.2 axdebug capture . . . 9245
capture Specification . . . 9245
capture attributes . . . 9245
3.8.3 axdebug filter-config . . . 9247
filter-config Specification . . . 9247
filter-config attributes . . . 9247
3.9 backup . . . 9252
3.9.1 backup . . . 9253
backup Specification . . . 9253
backup attributes . . . 9253
3.9.2 backup log . . . 9258
log Specification . . . 9258
log attributes . . . 9258
3.9.3 backup status . . . 9260
status Specification . . . 9260
status attributes . . . 9260
operational data . . . 9261
3.9.4 backup store . . . 9261
store Specification . . . 9261
store attributes . . . 9261
3.9.5 backup system . . . 9262
system Specification . . . 9263
system attributes . . . 9263
3.10 boot-block-fix . . . 9264
3.10.1 boot-block-fix . . . 9264
boot-block-fix Specification . . . 9264
boot-block-fix attributes . . . 9264
3.11 bootimage . . . 9264
3.11.1 bootimage . . . 9265
bootimage Specification . . . 9265
bootimage attributes . . . 9265
operational data . . . 9267
3.12 cgnv6 . . . 9267

3.12.1 cgnv6 fixed-nat disable . . . 9267
disable Specification . . . 9267
disable attributes . . . 9267
3.12.2 cgnv6 lw-4o6 binding-table . . . 9269
binding-table Specification . . . 9269
binding-table-list . . . 9269
binding-table attributes . . . 9269
3.12.3 cgnv6 lw-4o6 binding-table tunnel-address . . . 9271
tunnel-address Specification . . . 9272
tunnel-address-list . . . 9272
tunnel-address attributes . . . 9272
3.12.4 cgnv6 lw-4o6 binding-table tunnel-address nat-address . . . 9274
nat-address Specification . . . 9274
nat-address-list . . . 9274
nat-address attributes . . . 9274
3.12.5 cgnv6 lw-4o6 binding-table tunnel-address nat-address port-range . . . 9275
port-range Specification . . . 9276
port-range-list . . . 9276
port-range attributes . . . 9276
3.12.6 cgnv6 lw-4o6 binding-table-validate . . . 9277
binding-table-validate Specification . . . 9277
binding-table-validate attributes . . . 9277
3.12.7 cgnv6 scaleout address-mapping . . . 9277
address-mapping Specification . . . 9278
address-mapping attributes . . . 9278
operational data . . . 9278
3.13 chassis-info . . . 9278
3.13.1 chassis-info . . . 9278
chassis-info Specification . . . 9279
chassis-info attributes . . . 9279
3.14 chassis-infra . . . 9279
3.14.1 chassis-infra . . . 9279
chassis-infra Specification . . . 9279
chassis-infra attributes . . . 9280
3.15 clock . . . 9281
3.15.1 clock . . . 9281
clock Specification . . . 9281
clock attributes . . . 9281
3.15.2 clock set . . . 9283
set Specification . . . 9283
set attributes . . . 9283
3.15.3 clock show . . . 9284
show Specification . . . 9285
show attributes . . . 9285
operational data . . . 9285
3.16 cmcov . . . 9285
3.16.1 cmcov . . . 9285
cmcov Specification . . . 9286
cmcov attributes . . . 9286
3.17 config-filter . . . 9286
3.17.1 config-filter . . . 9286
config-filter Specification . . . 9287
config-filter attributes . . . 9287
3.18 config-sync-status . . . 9287

3.18.1 config-sync-status . . . 9287
config-sync-status Specification . . . 9288
config-sync-status attributes . . . 9288
operational data . . . 9288
3.19 configure . . . 9288
3.19.1 configure . . . 9288
configure Specification . . . 9289
configure attributes . . . 9289
3.19.2 configure sync . . . 9291
sync Specification . . . 9291
sync attributes . . . 9291
3.20 copy . . . 9292
3.20.1 copy . . . 9292
copy Specification . . . 9293
copy attributes . . . 9293
3.21 debug . . . 9295
3.21.1 debug . . . 9295
debug Specification . . . 9295
debug attributes . . . 9295
3.21.2 debug a10support . . . 9367
a10support Specification . . . 9367
a10support attributes . . . 9367
3.21.3 debug aflex . . . 9367
aflex Specification . . . 9368
aflex attributes . . . 9368
3.21.4 debug aflow . . . 9368
aflow Specification . . . 9368
aflow attributes . . . 9369
3.21.5 debug all . . . 9369
all Specification . . . 9369
all attributes . . . 9369
3.21.6 debug appcls . . . 9369
appcls Specification . . . 9370
appcls attributes . . . 9370
3.21.7 debug auth . . . 9370
auth Specification . . . 9370
auth attributes . . . 9371
3.21.8 debug backtrace . . . 9372
backtrace Specification . . . 9372
backtrace attributes . . . 9372
3.21.9 debug bgp . . . 9372
bgp Specification . . . 9373
bgp attributes . . . 9373
3.21.10 debug bridge-vlan-group . . . 9375
bridge-vlan-group Specification . . . 9375
bridge-vlan-group attributes . . . 9375
3.21.11 debug cache . . . 9375
cache Specification . . . 9376
cache attributes . . . 9376
3.21.12 debug cgn . . . 9376
cgn Specification . . . 9376
cgn attributes . . . 9377
3.21.13 debug cli . . . 9377
cli Specification . . . 9377

cli attributes . . . 9378
3.21.14 debug conn-reuse . . . 9378
conn-reuse Specification . . . 9378
conn-reuse attributes . . . 9379

CHAPTER

ONE

OVERVIEW:

1.1 Start Here

The aXAPI version 3.0 offers an HTTP interface that can be used to configure and monitor your ACOS device. The end-user can use the following HTTP methods to operate the AXAPI:

1. POST
2. GET
3. PUT
4. DELETE

Details about the usage of the above HTTP methods are covered in the *Operations* section.

In general, the API user will perform the following sequence of steps:

1. Log in: Request an authorization signature. See *Logging On* for details.
2. Use HTTP methods (POST, GET, etc), along with the authorization signature retrieved in Step 1, to configure or monitor the ACOS device. See *Making an API call* for details.
3. Log off: Inform the API that authorization is no longer needed for the signature retrieved in Step 1. See *Logging Off* for details.

Note: aXAPIv3 operates over HTTPS

1.1.1 Logging On

This step is required to retrieve an authorization signature to be used to authenticate API calls. This is achieved by sending a POST request to the URI `/axapi/v3/auth` using using the credentials for the ACOS device, by inserting the following JSON payload:

```
curl -k https://10.100.5.71/axapi/v3/auth \
-H "Content-Type:application/json" \
-d '{
    "credentials": {
        "username": "admin",
        "password": "a10"
    }
}'
```

This example uses the default username ("admin") and default password ("a10") for the ACOS device.

If the credentials are valid, the API will return a JSON response like the one below:

```
{
  "authresponse" : {
  "signature":"ea697a2bc0eb6ec9a1ec7723a3c9b0",
  "description":"the signature should be set in Authorization header for following␣
↪request."
   }
}
```

The value of the signature attribute (ea697a2bc0eb6ec9a1ec7723a3c9b0, in this example) should be used for future aXAPI operations within an HTTP Authorization header, which will be discussed later.

1.1.2 Making an API call

As mentioned earlier, the end-user interacts with the aXAPI using the HTTP methods listed in the *Operations* section. The end-user is required to use an HTTP Header named `Authorization` with a value equal to `A10 <signature>`, where signature is the authorization signature obtained during the *Logging On* stage.

Each object is identified by a URI.

For instance, in order to create an SLB virtual server, we would make the following POST request on the object's URI `/axapi/v3/slb/virtual-server`:

```
curl -k POST https://10.100.5.71/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 ea697a2bc0eb6ec9a1ec7723a3c9b0" \
-d '{
        "virtual-server": {
                "name": "a",
                "ip-address": "4.4.4.4",
                "enable-disable-action": "enable",
                "redistribution-flagged": 0,
                "arp-disable": 0,
                "policy": 0,
                "virtual-server": 0,
                "logging": 0,
                "stats-data-action": "stats-data-enable",
                "extended-stats": 0,
                "port-list": [
                        {
                                "port-number": 0,
                                "protocol": "tcp",
                                "range": 0,
                                "conn-limit": 8000000,
                                "reset": 0,
                                "no-logging": 0,
                                "use-alternate-port": 0,
                                "action": "enable",
                                "def-selection-if-pref-failed": "def-selection-if-
↪pref-failed",
                                "ha-conn-mirror": 0,
                                "skip-rev-hash": 0,
                                "message-switching": 0,
                                "force-routing-mode": 0,
```

(continues on next page)

(continued from previous page)

```
                                "reset-on-server-selection-fail": 0,
                                "clientip-sticky-nat": 0,
                                "extended-stats": 0,
                                "snat-on-vip": 0,
                                "stats-data-action": "stats-data-enable",
                                "syn-cookie": 0,
                                "no-auto-up-on-aflex": 0,
                                "no-dest-nat": 0,
                                "enable-scaleout": 0,
                                "auto": 0,
                                "ipinip": 0,
                                "use-rcv-hop-for-resp": 0,
                                "template-tcp": "default",
                                "template-virtual-port": "default",
                                "use-default-if-no-server": 0,
                                "a10-url": "https://100.31.1.101/axapi/v3/slb/virtual-
↪server/a/port/0+tcp"
                        }
                ]
        }
}'
```

1.1.3 Logging Off

This step is required to indicate to the ACOS device that all aXAPI operations have been completed for the current authorized session. This is achieved by sending a POST request to the URI `/axapi/v3/logoff` along with the authorization header and content-type header discussed in the *Making an API call* section.

1.1.4 Contents

How to Use this Reference

This reference contains an entry for each ACOS object that can be accessed via the aXAPIv3. Each entry has the following sections:

Specification Table Provides basic information about the object, such as what type of object it is.

Operations Allowed Lists the operations that can be performed on instances of this object, along with the HTTP method and URI template required to perform each operation.

Children Provides information about children objects of this object.

Stats Data Lists the statistics available for this object.

Operational Data Lists the statistics available for this object.

Attributes Lists all attributes that can be retrieved or configured via the object's allowed operations.

Specification Table

The specification table provides the following information about the resource:

URI The URI template that can be used to access a representation of instances of this object. The template format is the same as that defined in RFC 6570.

Type Indicates what type of resource it is. For further information about resource types, see *Resources*.

Object Key(s) The object key is the unique identifier for each instance of this object. It is typically either the name or ID of the object. It is used to identify the resource in the JSON schema. You cannot change the value associated with a resource's object key. You must instead create a new resource with a different value for the object key.

Resource Name This is the name of the object, not the instance of that object. It is used to identify the object in the ACOS device's schema, in URI calls, and throughout the reference entry for this object.

List of Resources If the object is a *list* type object (see *Resources* for details), this is the resource name that will be used to access the list of all configured instances of this object.

Schema You can click this link to see the JSON schema for this object. The schema includes all information about the object. The following key:value pairs are of particular importance:

- id - contains the URI template of the object
- properties - contains all of the accessible attributes of the object. These are also listed on the reference page for the object. Each property contains type and/or format of the property, its minimum and maximum values or length, a description and whether it is optional or required.
- object-keys - contains the object key, as described above
- required - lists all properties of this object which are required when configuring the object via the aXAPI.

Operations Allowed

The operations table lists all supported operations for instances of this object. For each operation, it lists the HTTP method and URI template that are used to execute the operation.

The payload makes it clear whether the JSON payload contains the list of this type of object or the attributes of an individual instance of the object.

For information about aXAPIv3 operations, see *Operations*.

Children

This table lists the children of the current resource. It also lists the type and endpoint URI of each child object. Click on the object's name to see its reference entry.

Stats Data

This table lists all counters available for the object. Each row displays the name of the object in the JSON schema. The table also displays the size of the counter and a brief description of what it represents.

There may be additional statistics tables, depending on how many different categories of statistics are allowed for this resource.

Operational Data

This table lists any operational data attributes by name, and describes what they represent. Many objects will contain the "state" attribute, which specifies whether the object is Up or Down.

Some resources may contain session information or current mappings, such as a dynamically assigned IP or MAC address.

Attributes

This section describes each of the objects accessible attributes. In the JSON payload, the name of the attribute will be the key, and the value will either be the value you specify (POST or PUT methods) or the value currently configured on this object on the ACOS device (GET method)

Each listing will provide information about the attribute:

Description Describes the ACOS configuration feature that this attribute represents.

Supported Values Lists the supported values for boolean attributes.

Range Specifies the range of accepted integers for number attributes.

Default Describes the default configuration this attribute that will remain in effect unless it is directly configured.

Dependency Specifies whether there are any other parameters that are required before this parameter can be configured.

Mutual Exclusion Indicates other attributes that cannot be configured if this attribute is configured.

Mandatory Indicates whether or not this attribute is mandatory to configuring the object on the ACOS device.

Reference Object Includes a link to an object that must be configured before this parameter can be applied or included.

Type States what type of value the attribute requires. The following table shows the supported field types.

Type	Description
dummy	Used for fields that have no configuration significance but act as a place-holder (or intermediate node).
encrypted	Goes hand in hand with the password type. A password field must come before an encrypted-type field. You cannot configure this field, this is only to get the encrypted value of the password.
enum	Used as a variation of string. The accepted value can only be one of the values listed for that field. If three values are listed (such as Full, Half, auto) only one can be used: `"duplexity":"Full"`
enum-list	Used like enum, but an enum-list can accept multiple enumerated values, separated by a comma. If three values are listed (such as axapi, cli, web) all can be used simultaneously: `"access-type":"axapi,cli,web"`
flag	Accepts a boolean. By default, the value of 0 is assumed for the flag. To enable the attribute or property, you need to specify the the keyword along with the value of 0 or 1: `"use-if-ip":1` or `"use-if-ip":true`
interface	Accepts interfaces referring to the physical ports. It automatically builds the range of ports allowed: `"ethernet-start":1, "ethernet-end":3`
ipv4-address	Accepts the ipv4 address. The format is A.B.C.D: `"ip-address":"10.1.1.1"`
ipv4-cidr	Accepts both the IP address and the prefix length in the same field: `"ipv4addr":"10.1.1.0/24"`
ipv4-netmask	Accepts the network mask for the ipv4 network. The format is A.B.C.D or /nn: `"ipv4-netmask":"255.255.255.0"`
ipv4-netmask-brief	Same as ipv4-netmask
ipv4-rev-netmask	Same as ipv4-netmask except that it accepts the reverse mask: `0.0.0.255`
ipv6-address	Accepts the ipv6 address. The format is A:B:C:D:E:F:G:H: `"ipv6-address":"2334:1234:1234::1"`
ipv6-address-plen	Accepts the ipv6 address along with the prefix length: `"address":"2334:1234:1234::1/64"`
line	Treated just like a string in aXAPI: `"description":"This is a line long description"`
mac-address	Accepts the mac address. The format is aabb.ccdd.eeff: `"mac-addr":"2323.2323.3434"`
nasp-string	Accepts the Network Service Access Point address or Network Entity Title. The format is XX.XXXX. . . . .XXXX.XX.
number	Accepts a basic number: `"mtu":1500`
password	Accepts variety of characters that can be used in a password. The password field should always be followed by another field of type encrypted, so as not to store or display the values entered: `"passphrase":"asdbasfsdf"`
string	Accepts a sequence of characters: `"name":"acl1"`
string-rlx	Used as a variation of string type. The difference is that it accepts extra characters such as spaces, which are not allowed in basic string type: `"name":"abc def"`

Resources

The following types of resources can be accessed and configured using aXAPIv3.

Elements

An element is a specific instance of a configurable object on the ACOS device. You can typically configure more than one of each type of element on the ACOS device. All elements exist within collections.

Example

A configured virtual port on the ACOS device is an element.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

The following example shows retrieving a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "port-number": 80,
                "protocol": "tcp",
                "range": 0,
                "conn-limit": 8000000,
                "reset": 0,
                "no-logging": 0,
                "use-alternate-port": 0,
                "action": "enable",
                "def-selection-if-pref-failed": "def-selection-if-pref-failed",
                "ha-conn-mirror": 0,
                "skip-rev-hash": 0,
                "message-switching": 0,
                "force-routing-mode": 0,
                "reset-on-server-selection-fail": 0,
                "clientip-sticky-nat": 0,
                "extended-stats": 0,
                "snat-on-vip": 0,
                "stats-data-action": "stats-data-enable",
                "syn-cookie": 0,
                "no-auto-up-on-aflex": 0,
                "scaleout-bucket-count": 32,
                "auto": 0,
                "ipinip": 0,
                "rtp-sip-call-id-match": 0,
                "use-rcv-hop-for-resp": 0,
                "template-tcp": "default",
                "template-virtual-port": "default",
                "use-default-if-no-server": 0,
                "no-dest-nat": 0,
                "uuid": "fbb05d0a-4f10-11e5-ade5-79d397dc1ac7",
```

(continues on next page)

(continued from previous page)

```
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}
```

Collections

A collection is a set of a particular type of element. Whenever a new element of that type is created, it is added to the collection.

You can configure individual elements separately, or you can create or modify multiple elements at once by creating or replacing the collection in which they are contained.

New elements are created through the collection resource URI.

Example

The list of all virtual ports on a particular virtual server.

URI: /axapi/v3/slb/virtual-server/{name}/port/

The following example shows retrieving a list of configured virtual ports on the virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port-list": [{
                "port-number": 80,
                "protocol": "tcp",
                "range": 0,
                "conn-limit": 8000000,
                "reset": 0,
                "no-logging": 0,
                "use-alternate-port": 0,
                "action": "enable",
                "def-selection-if-pref-failed": "def-selection-if-pref-failed",
                "ha-conn-mirror": 0,
                "skip-rev-hash": 0,
                "message-switching": 0,
                "force-routing-mode": 0,
                "reset-on-server-selection-fail": 0,
                "clientip-sticky-nat": 0,
                "extended-stats": 0,
                "snat-on-vip": 0,
```

(continues on next page)

(continued from previous page)

```
                "stats-data-action": "stats-data-enable",
                "syn-cookie": 0,
                "no-auto-up-on-aflex": 0,
                "scaleout-bucket-count": 32,
                "auto": 0,
                "ipinip": 0,
                "rtp-sip-call-id-match": 0,
                "use-rcv-hop-for-resp": 0,
                "template-tcp": "default",
                "template-virtual-port": "default",
                "use-default-if-no-server": 0,
                "no-dest-nat": 0,
                "uuid": "fbb05d0a-4f10-11e5-ade5-79d397dc1ac7",
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp"
        }]
}
```

Intermediate Resources

An intermediate resource contains representations of all elements and collections contained within it, but does not have any configurable parameters of its own.

Example

The SLB resource, which would include all SLB configurations on the ACOS device, including its real and virtual ports and servers.

URI: /axapi/v3/slb/

The following example shows the global SLB settings:

```
curl -k GET https://10.10.10.10/axapi/v3/slb \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

See *View Entire SLB Configuration* for response.

Configuration Resources

A configuration object is used to configure settings of a particular feature on the ACOS device. Unlike elements, which exist in collections, there is only one of each type of configuration object. If you do not explicitly configure parameters for a configuration object, then the default values for those parameters will apply.

Example

The global SLB settings, which include time-outs and resource usage.

URI: /axapi/v3/slb/common/

The following example shows the global slb settings:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/common \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "common": {
                "extended-stats": 0,
                "stats-data-disable": 0,
                "graceful-shutdown-enable": 0,
                "rate-limit-logging": 0,
                "dsr-health-check-enable": 0,
                "reset-stale-session": 0,
                "dns-cache-enable": 0,
                "dns-cache-age": 300,
                "dns-cache-entry-size": 256,
                "dns-vip-stateless": 0,
                "buff-thresh": 0,
                "max-buff-queued-per-conn": 1000,
                "gateway-health-check": 0,
                "msl-time": 2,
                "fast-path-disable": 0,
                "l2l3-trunk-lb-disable": 0,
                "snat-gwy-for-l3": 0,
                "disable-server-auto-reselect": 0,
                "enable-l7-req-acct": 0,
                "disable-adaptive-resource-check": 0,
                "snat-on-vip": 0,
                "mss-table": 536,
                "no-auto-up-on-aflex": 0,
                "hw-compression": 0,
                "max-http-header-count": 90,
                "scale-out": 1,
                "sort-res": 0,
                "use-mss-tab": 0,
                "drop-icmp-to-vip-when-vip-down": 0,
                "uuid": "8efc8170-5dc0-11e5-9e23-c3d12b0485c7"
        }
}
```

Statistics Data Resources

A statistics data resource can be used to retrieve statistics of a particular element or collection. Not all elements and collections will have statistics data.

Example

The statistics data for a particular virtual port will return statistics about traffic on that port.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats

The following example shows retrieving statistics for a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/stats \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
        {
        "port": {
                "stats": {
                        "curr_conn": 0,
                        "total_l4_conn": 0,
                        "total_l7_conn": 0,
                        "total_tcp_conn": 0,
                        "total_conn": 0,
                        "total_fwd_bytes": 0,
                        "total_fwd_pkts": 0,
                        "total_rev_bytes": 0,
                        "total_rev_pkts": 0,
                        "total_dns_pkts": 0,
                        "total_mf_dns_pkts": 0,
                        "es_total_failure_actions": 0,
                        "compression_bytes_before": 0,
                        "compression_bytes_after": 0,
                        "compression_hit": 0,
                        "compression_miss": 0,
                        "compression_miss_no_client": 0,
                        "compression_miss_template_exclusion": 0,
                        "curr_req": 0,
                        "total_req": 0,
                        "total_req_succ": 0,
                        "peak_conn": 0,
                        "curr_conn_rate": 0,
                        "last_rsp_time": 0,
                        "fastest_rsp_time": 0,
                        "slowest_rsp_time": 0,
                        "loc_permit": 0,
                        "loc_deny": 0,
                        "loc_conn": 0,
                        "curr_ssl_conn": 0,
                        "total_ssl_conn": 0
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/stats",
                "port-number": 80,
```

(continues on next page)

(continued from previous page)

```
                "protocol": "tcp"
        }
}
```

Operational Data Resources

An operational data resource can be used to retrieve information about the operational status of a particular element or collection. Not all elements and collections have an operational status. Some elements will have an up/down status that cannot be altered. However, other statuses might include dynamic sessions which can be reset.

Example

The operational data resource for a virtual port will return information about whether the port is up or down.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/oper

The following example shows retrieving operational data for a configured virtual port **80+tcp** on the SLB virtual server named **vs1**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/oper \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "oper": {
                        "state": "Down",
                        "loc_list": "",
                        "geo_location": "",
                        "level_str": "",
                        "group_id": 0,
                        "loc_max_depth": 0,
                        "loc_success": 0,
                        "loc_error": 0,
                        "loc_override": 0,
                        "loc_last": ""
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/oper",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

Baseline Data Resources

Not all elements and collections will have baseline data resources. A baseline data resource can be used to retrieve the minimum, maximum, and average value for each enabled counter over the last 30 seconds. Counters will vary per object, and can be used to help troubleshoot or improve performance. To view baseline information, first use the `sampling-enable` property for the object of interest and choose from the available counters. Note that only the counters used in the `sampling-enable` property are listed in the GET response.

Example

After using the `sampling-enable` property to select counters such as current connections, total DNS packets, total SSL connections, and slowest response time, then the baseline data resource can be used to retrieve the data.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/baseline

The following example shows how to update the existing SLB virtual server named **vs1** to use the `sampling-enable` parameter on port 80 tcp:

```
curl -k PUT https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
-d '{
        "port": {
                "port-number": 80,
                "protocol": "tcp",
                "sampling-enable": [{
                        "counters1": "curr_conn"
                }, {
                        "counters1": "slowest_rsp_time"
                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}'
```

The following example shows retrieving the baseline data for the enabled counters:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/baseline \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "baseline": [{
                        "counter_name": "curr_conn",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }, {
                        "counter_name": "total_dns_pkts",
                        "min": 0,
                        "max": 0,
```

(continues on next page)

(continued from previous page)

```
                        "avg": 0
                }, {
                        "counter_name": "slowest_rsp_time",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }, {
                        "counter_name": "total_ssl_conn",
                        "min": 0,
                        "max": 0,
                        "avg": 0
                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/baseline",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

Rate Data Resources

Not all elements and collections will have rate data resources. A rate data resource can be used to retrieve the average value of each counter over the following intervals:

- last second
- last 5 seconds
- last 10 seconds
- last 30 seconds

Counters will vary per object, and can be used to help troubleshoot or improve performance. To view rate information, first use the `sampling-enable` property for the object of interest and choose from the available counters. Note that only the counters used in the `sampling-enable` property are listed in the GET response.

Example

After using the `sampling-enable` property to select counters such as current connections, total DNS packets, total SSL connections, and slowest response time, then the rate data resource can be used to retrieve the data. See *Baseline Data Resources* for the sampling-enable example.

URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/rate

The following example shows retrieving the rate data for the enabled counters:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+tcp/rate \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "rate": [{
                        "counter_name": "curr_conn",
```

(continues on next page)

(continued from previous page)

```
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "total_dns_pkts",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "slowest_rsp_time",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }, {
                        "counter_name": "total_ssl_conn",
                        "1sec_rate": 0,
                        "5sec_rate": 0,
                        "10sec_rate": 0,
                        "30sec_rate": 0
                }],
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+tcp/rate",
                "port-number": 80,
                "protocol": "tcp"
        }
}
```

UUID

Every object gets an auto-generated unique identifier assigned when it is created. Once you save the running configuration, the UUID remains the same regardless if the ACOS device is reloaded or fails over in VCS mode.

Example

When you configure a real server, the server gets a UUID. When you configure a virtual port on a virtual server, that element gets a UUID. When you add a service group, that collection gets a UUID. The UUID can be used as an endpoint to retrieve information about an object, to update an object, or to delete an object.

URI: /axapi/v3/uuid/{id}

The following example shows using the UUID of **fbb05d0a-4f10-11e5-ade5-79d397dc1ac7** to retrieve a configured virtual port 80 tcp on the SLB virtual server named vs1:

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/fbb05d0a-4f10-11e5-ade5-79d397dc1ac7 \
-H "Content-Type:application/json" \
-H "Authorization: A10 ae894d193ab92f8e1f9243296efe39"
```

If the request succeeds, the following response will be received:

```
{
        "port": {
                "port-number": 80,
```

(continues on next page)

(continued from previous page)

```
                "protocol": "tcp",
                "range": 0,
                "conn-limit": 8000000,
                "reset": 0,

                }, {
                        "counters1": "total_dns_pkts"
                }, {
                        "counters1": "total_ssl_conn"
                }]
        }
}
```

Operations

The available operations vary depending on the type of object involved. See the sections below for details about the available options for each type of resource, and the HTTP method that is used to complete each operation.

Elements

The table below lists the supported operations for element resources.

Table 1.1: Supported Operations for aXAPIv3 Elements

Operation	HTTP Method	Description
Get Object	GET	Returns the JSON data of a configured element.
Modify Object	POST	Modifies an element that has already been created. Note that this usage of the HTTP POST method is idempotent, as all elements have a unique name or identifier in the form of their Object Key.
Replace Object	PUT	Replaces a configured element's configuration with a new configuration. This operation is idempotent. However, unlike Modify Object, it is not additive. This means that if a particular parameter was previously configured, but you do not specify a value for it while performing a Replace Object operation, that parameter will be reset to its default value.
Delete Object	DELETE	Removes the element from its collection and from the ACOS device.

Collections

The table below lists the supported operations for collection resources.

Operation	HTTP Method	Description
Get List	GET	Returns a JSON representation of all elements inside a collection, and their parameters and child elements.
Create List	POST	This method allows you to either create new elements or modify existing elements in this collection.
Replace List	PUT	Similar to Replace Object, this operation replaces all values inside the collection. This means that any element not in the Replace List operation's JSON data will be removed from the collection and the ACOS device.
Delete List	DELETE	Deletes all elements within the collection, removing them from the ACOS device's configuration. Note that the collection itself cannot be deleted - it will continue to exist as an empty list.

Intermediate Resources

The table below lists the supported operations for intermediate resources.

Operation	HTTP Method	Description
Get Object	GET	Returns configuration information for the elements and collections contained in the module.

Note: You cannot modify an intermediate resource, or use it to configure any elements or collections contained within it.

Configuration Resources

The table below lists the supported operations for configuration resources.

Operation	HTTP Method	Description
Get Object	GET	Returns a representation of the current configuration of this resource.
Modify Object	POST	Specify values other than the default settings for this configuration object. You can only configure one of each configuration object. This use of the POST method is idempotent.
Replace Object	PUT	Replaces the settings object's attributes completely. This means that if a particular parameter was previously configured, and is not in the Replace Object's parameters, that parameter's values will be set to the default.
Delete Object	DELETE	Deletes the configuration resource, returning all attributes to their default values.

Statistics Data Resources

The table below lists the supported operations for statistics data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns statistics counters and their current values for the element or collection resource specified in the URI.
Modify Object	POST	Reset specific counters to zero for the element or collection resource.
Delete Object	DELETE	Clear all counters for the element or collection resource.

Note: You cannot modify statistics data resources. You can only get or reset the values of the counters.

Operational Data Resources

The table below lists the supported operations for operational data resources.

Operation	HTTP Method	Description
Get Object	GET	Return information about the operational status of the element, such as Up or Down, or any current sessions or dynamically assigned attributes.
Delete Object	DELETE	Reset the operational status of a resource that contains sessions or dynamically assigned attributes, such as IP or MAC addresses.

Note: You cannot always modify an operational data resource directly. In those cases, you would modify the element's status through the element's own URI. (For example, a virtual port can be enabled or disabled via its own URI, but its operational data resource only indicates whether it is Up or Down.)

Baseline Data Resources

The table below lists the supported operations for baseline data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns baseline counters and their current values for the element or collection resource specified in the URI.

Note: You cannot modify baseline data resources.

Rate Data Resources

The table below lists the supported operations for rate data resources.

Operation	HTTP Method	Description
Get Object	GET	Returns rate counters and their current values for the element or collection resource specified in the URI.

Note: You cannot modify rate data resources.

Example API Configuration

The following example shows a possible configuration of an HTTP Virtual Server using the aXAPI. The workflow consists of the following steps:

- Configure Real Servers - configure a real server and its ports.
- Configure Service Group - add real servers to a service group.
- Configure Virtual Server - create a virtual server, and its virtual ports, binding the service group to the virtual port.
- View Your Configuration - confirm the SLB configuration is correct.
- Edit Your Configuration - use the UUID to make configuration changes.

Note: For this example, the ACOS device will have an IP address of 10.10.10.10. To configure a virtual server on your own ACOS device, you must change the IP address in the following example cURL calls to the IP address or hostname configured on your ACOS device.

Configure Real Servers

Use the Create Object operation to create a new real server. To do so, perform an HTTP request using the POST method to https://10.10.10.10/axapi/v3/slb/server/ and include any parameters for SLB real servers that you want in your configuration. This example is fairly simple, so the server will only be configured with a name and IP address.

To configure a real server, make the following HTTP request, defining the server's name and host IP address:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server-list": [
        {
         "name":"server1",
          "host":"10.10.10.11"
        }
  ]
}'
```

The HTTP response to the above request will contain the following payload:

```
{
  "server": {
        "name":"server1",
        "host":"10.10.10.11",
        "action":"enable",
        "template-server":"default",
        "health-check-disable":0,
        "conn-limit":8000000,
        "no-logging":0,
        "weight":1,
        "slow-start":0,
        "spoofing-cache":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
```

(continues on next page)

(continued from previous page)

```
        "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding server1. See *Edit the Configuration* for further details.

Add a Port to the Server

Next, create the ports on the server. To do so, make a POST request to the following /axapi/v3/slb/server/server1/port/. Note that you could also create the ports at the same time as the server, by including a port-list object in the payload of the POST request in the previous step.

To create a port on server1, use the following HTTP request, which defines the port number and protocol for the server port:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server/server1/port/ \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port-list": [
        {
          "port-number":80,
          "protocol":"tcp"
        }
  ]
}'
```

The body of the response will look like this:

```
{
  "port": {
        "port-number":80,
        "protocol":"tcp",
        "range":0,
        "template-port":"default",
        "action":"enable",
        "no-ssl":0,
        "health-check-disable":0,
        "weight":1,
        "conn-limit":8000000,
        "no-logging":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the port. See *Edit the Configuration* for further details.

Confirm the Real Server Configuration

To confirm your configuration, you can perform a GET request for the server configuration to https://10.10.10.10/axapi/v3/slb/server/server1. Here is an example:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/server1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the configuration by using the UUID endpoint (rather than using /slb/server/server1):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If everything has been configured correctly, this request will return the following response payload:

```
{
  "server": {
        "name":"server1",
        "host":"10.10.10.11",
        "action":"enable",
        "template-server":"default",
        "health-check-disable":0,
        "conn-limit":8000000,
        "no-logging":0,
        "weight":1,
        "slow-start":0,
        "spoofing-cache":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631",
        "port-list": [
          {
                "port-number":80,
                "protocol":"tcp",
                "range":0,
                "template-port":"default",
                "action":"enable",
                "no-ssl":0,
                "health-check-disable":0,
                "weight":1,
                "conn-limit":8000000,
                "no-logging":0,
                "stats-data-action":"stats-data-enable",
                "extended-stats":0,
                "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/server/server1/port/80+tcp"
          }
        ]
  }
}
```

You can also confirm the configuration by viewing the list of all configured servers on the ACOS device. To do so, perform an HTTP GET request to https://10.10.10.10/axapi/v3/slb/server/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If everything has been configured correctly, the following HTTP response body will be returned:

```
{
  "server-list": [
        {
          "name":"server1",
          "host":"10.10.10.11",
          "action":"enable",
          "template-server":"default",
          "health-check-disable":0,
          "conn-limit":8000000,
          "no-logging":0,
          "weight":1,
          "slow-start":0,
          "spoofing-cache":0,
          "stats-data-action":"stats-data-enable",
          "extended-stats":0,
          "uuid":"a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631",
          "port-list": [
                {
                  "port-number":80,
                  "protocol":"tcp",
                  "range":0,
                  "template-port":"default",
                  "action":"enable",
                  "no-ssl":0,
                  "health-check-disable":0,
                  "weight":1,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"c12d9618-c9e4-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/server/server1/port/80+tcp"
                }
          ],
          "a10-url":/axapi/v3/slb/server/server1"
        }
  ]
}
```

Create a Second Real Server

You can repeat this process to add additional servers and/or ports. For example, the following POST request will configure a new server that will be part of the pool of servers available to the virtual server:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server-list": [
```

(continues on next page)

(continued from previous page)

```
        {
          "name":"server2",
          "host":"10.10.10.12",
          "port-list": [
                {
                  "port-number":80,
                  "protocol":"tcp"
                }
          ]
        }
  ]
}'
```

Note: This can also be fulfilled with a PUT request, but you must be certain to include the settings for server1 in the PUT request, otherwise server1 will be removed from the configuration.

Configure a Service Group

Next we will configure the service group. This is the pool of servers (specifically the two servers created above) that will be used for load balancing the traffic to the virtual server.

To create a service group, perform a POST request to https://10.10.10.10/axapi/v3/slb/service-group/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/service-group \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "service-group-list": [
        {
          "name":"sg1",
          "protocol":"tcp"
        }
  ]
}'
```

If the request succeeds, the following response will be received:

```
{
  "service-group": {
        "name":"sg1",
        "protocol":"tcp",
        "lb-method":"round-robin",
        "stateless-auto-switch":0,
        "reset-on-server-selection-fail":0,
        "priority-affinity":0,
        "backup-server-event-log":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "traffic-replication-mirror":0,
        "traffic-replication-mirror-da-repl":0,
        "traffic-replication-mirror-ip-repl":0,
        "traffic-replication-mirror-sa-da-repl":0,
        "traffic-replication-mirror-sa-repl":0,
```

(continues on next page)

(continued from previous page)

```
        "health-check-disable":0,
        "sample-rsp-time":0,
        "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the service-group.

Add Servers to the Service Group

You can now add the servers as members of the service group. Create a POST request to https://10.10.10.10/axapi/v3/slb/service-group/sg1/member/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/service-group/sg1/member \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "member-list": [
        {
          "name":"server1",
          "port":80
        },
        {
          "name":"server2",
          "port":80
        }
  ]
}'
```

The following payload will be returned in the response:

```
{
  "member-list": [
        {
          "name":"server1",
          "port":80,
          "member-state":"enable",
          "member-stats-data-disable":0,
          "member-priority":1,
          "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631"
        },
        {
          "name":"server2",
          "port":80,
          "member-state":"enable",
          "member-stats-data-disable":0,
          "member-priority":1,
          "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631"
        }
  ]
}
```

Confirm the Service Group Configuration

To confirm the service group has been configured, you can perform a GET request to https://10.10.10.10/axapi/v3/slb/service-group/sg1/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/service-group/sg1/ \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the service group configuration by using the UUID endpoint (rather than using /slb/service-group/sg1/):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/53a24e44-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

The response should look like this:

```
{
  "service-group": {
        "name":"sg1",
        "protocol":"tcp",
        "lb-method":"round-robin",
        "stateless-auto-switch":0,
        "reset-on-server-selection-fail":0,
        "priority-affinity":0,
        "backup-server-event-log":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "traffic-replication-mirror":0,
        "traffic-replication-mirror-da-repl":0,
        "traffic-replication-mirror-ip-repl":0,
        "traffic-replication-mirror-sa-da-repl":0,
        "traffic-replication-mirror-sa-repl":0,
        "health-check-disable":0,
        "sample-rsp-time":0,
        "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631",
        "member-list": [
          {
                "name":"server1",
                "port":80,
                "member-state":"enable",
                "member-stats-data-disable":0,
                "member-priority":1,
                "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/service-group/sg1/member/server1+80"
          },
          {
                "name":"server2",
                "port":80,
                "member-state":"enable",
                "member-stats-data-disable":0,
                "member-priority":1,
                "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/service-group/sg1/member/server2+80"
          }
        ]
```

(continues on next page)

(continued from previous page)

```
  }
}
```

You can also check the list of all configured service groups using a GET request to https://10.10.10.10/axapi/v3/slb/service-group/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/service-group \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If the service group has been configured correctly, the following response will be received:

```
{
  "service-group-list": [
        {
          "name":"sg1",
          "protocol":"tcp",
          "lb-method":"round-robin",
          "stateless-auto-switch":0,
          "reset-on-server-selection-fail":0,
          "priority-affinity":0,
          "backup-server-event-log":0,
          "stats-data-action":"stats-data-enable",
          "extended-stats":0,
          "traffic-replication-mirror":0,
          "traffic-replication-mirror-da-repl":0,
          "traffic-replication-mirror-ip-repl":0,
          "traffic-replication-mirror-sa-da-repl":0,
          "traffic-replication-mirror-sa-repl":0,
          "health-check-disable":0,
          "sample-rsp-time":0,
          "uuid":"53a24e44-c9e5-11e4-b4dd-fa163eeb9631",
          "member-list": [
                {
                  "name":"server1",
                  "port":80,
                  "member-state":"enable",
                  "member-stats-data-disable":0,
                  "member-priority":1,
                  "uuid":"6afde274-c9e5-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/service-group/sg1/member/server1+80"
                },
                {
                  "name":"server2",
                  "port":80,
                  "member-state":"enable",
                  "member-stats-data-disable":0,
                  "member-priority":1,
                  "uuid":"6afe0614-c9e5-11e4-b4dd-fa163eeb9631",
                  "a10-url":"/axapi/v3/slb/service-group/sg1/member/server2+80"
                }
          ],
          "a10-url":"/axapi/v3/slb/service-group/sg1"
        }
  ]
}
```

Configure a Virtual Server

Configure the virtual server that will be receiving the traffic that will be load balanced by the back-end real servers. Use a POST request sent to https://10.10.10.10/axapi/v3/slb/virtual-server/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "virtual-server-list": [
        {
          "name":"vip1",
          "ip-address":"10.10.10.20"
        }
  ]
}'
```

The response will look like this:

```
{
  "virtual-server": {
        "name":"vip1",
        "ip-address":"10.10.10.20",
        "enable-disable-action":"enable",
        "redistribution-flagged":0,
        "arp-disable":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"de3238c6-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the virtual-server.

Add a Virtual Port

You can then configure a virtual port on the virtual server. Traffic sent to the HTTP port will be redirected to the servers in the service group, using the load-balancing algorithm specified in the service group's configuration. In this case, the default algorithm, round robin, is used.

You can either configure virtual ports while you are configuring the virtual server (using the *port-list* child element) or by sending a POST request to https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/port/:

```
curl -k POST https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/port \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port-list": [
        {
          "port-number":80,
          "protocol":"http",
          "service-group":"sg1"
        }
  ]
}'
```

The following response will be received:

```
{
  "port": {
        "port-number":80,
        "protocol":"http",
        "range":0,
        "conn-limit":8000000,
        "reset":0,
        "no-logging":0,
        "use-alternate-port":0,
        "action":"enable",
        "def-selection-if-pref-failed":"def-selection-if-pref-failed",
        "skip-rev-hash":0,
        "message-switching":0,
        "force-routing-mode":0,
        "reset-on-server-selection-fail":0,
        "clientip-sticky-nat":0,
        "extended-stats":0,
        "snat-on-vip":0,
        "stats-data-action":"stats-data-enable",
        "syn-cookie":0,
        "no-auto-up-on-aflex":0,
        "no-dest-nat":0,
        "scaleout-bucket-count":32,
        "auto":0,
        "service-group":"sg1",
        "ipinip":0,
        "rtp-sip-call-id-match":0,
        "use-rcv-hop-for-resp":0,
        "redirect-to-https":0,
        "template-virtual-port":"default",
        "uuid":"f2152182-c9e5-11e4-b4dd-fa163eeb9631"
  }
}
```

Take note of the UUID if you want to use it for subsequent calls regarding the port. See *Edit the Configuration* for further details.

Confirm the Virtual Server Configuration

To confirm the configuration of the virtual server, perform a GET request to https://10.10.10.10/axapi/v3/slb/virtual-server/vip1/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vip1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Here is an example of confirming the virtual server configuration by using the UUID endpoint (rather than using /slb/virtual-server/vip1/):

```
curl -k GET https://10.10.10.10/axapi/v3/uuid/de3238c6-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

If the virtual server has been configured as described in the steps above, the response payload will look like this:

```
{
  "virtual-server": {
        "name":"vip1",
        "ip-address":"10.10.10.20",
        "enable-disable-action":"enable",
        "redistribution-flagged":0,
        "arp-disable":0,
        "stats-data-action":"stats-data-enable",
        "extended-stats":0,
        "uuid":"de3238c6-c9e5-11e4-b4dd-fa163eeb9631",
        "port-list": [
          {
                "port-number":80,
                "protocol":"http",
                "range":0,
                "conn-limit":8000000,
                "reset":0,
                "no-logging":0,
                "use-alternate-port":0,
                "action":"enable",
                "def-selection-if-pref-failed":"def-selection-if-pref-failed",
                "skip-rev-hash":0,
                "message-switching":0,
                "force-routing-mode":0,
                "reset-on-server-selection-fail":0,
                "clientip-sticky-nat":0,
                "extended-stats":0,
                "snat-on-vip":0,
                "stats-data-action":"stats-data-enable",
                "syn-cookie":0,
                "no-auto-up-on-aflex":0,
                "no-dest-nat":0,
                "scaleout-bucket-count":32,
                "auto":0,
                "service-group":"sg1",
                "ipinip":0,
                "rtp-sip-call-id-match":0,
                "use-rcv-hop-for-resp":0,
                "redirect-to-https":0,
                "template-virtual-port":"default",
                "uuid":"f2152182-c9e5-11e4-b4dd-fa163eeb9631",
                "a10-url":"/axapi/v3/slb/virtual-server/vip1/port/80+http"
          }
        ]
  }
}
```

You can also perform a GET request to see the list of all configured virtual servers. To do so, you would perform a GET request to the URL https://10.10.10.10/axapi/v3/slb/virtual-server/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

View Entire SLB Configuration

To confirm that everything is configured correctly, you can also perform a GET on the SLB intermediate resource. This will show all SLB configurations, including the virtual and real servers, and the service group. Make a GET request to https://10.10.10.10/axapi/v3/slb/:

```
curl -k GET https://10.10.10.10/axapi/v3/slb \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"
```

Assuming everything has been configured as described in the above steps, and no other SLB items exist in the ACOS device's configuration, the HTTP response would contain the following payload:

```
{
  "slb": {
        "resource-usage": {
          "client-ssl-template-count":32,
          "conn-reuse-template-count":32,
          "fast-tcp-template-count":32,
          "fast-udp-template-count":32,
          "http-template-count":32,
          "nat-pool-addr-count":10,
          "persist-cookie-template-count":32,
          "persist-srcip-template-count":32,
          "proxy-template-count":32,
          "real-port-count":64,
          "real-server-count":1024,
          "server-ssl-template-count":32,
          "service-group-count":32,
          "stream-template-count":32,
          "virtual-port-count":32,
          "virtual-server-count":16,
          "uuid":"95c48e3c-c9b7-11e4-88c6-fa163eeb9631",
          "a10-url":"/axapi/v3/slb/resource-usage"
        },
        "server-list": [
          {
                "name":"server1",
                "host":"10.10.10.11",
                "action":"enable",
                "template-server":"default",
                "health-check-disable":0,

                    }
                ],
                "a10-url":"/axapi/v3/slb/virtual-server/vip1"
            }
        ],
        "a10-url":"/axapi/v3/slb"
    }
}
```

Edit the Configuration

In addition to accessing and editing *Resources* by URI, it is also possible to do so by UUID. The following examples show a few ways to use the UUID for updating or deleting resources.

Note: Object keys are optional when using the UUID to edit resources. Also, object keys cannot be changed by UUID (for example, you will get an error if you try to change server1 to server3).

To disable server1 by using the UUID endpoint (rather than using /slb/server/server1/):

```
curl -k POST https://10.10.10.10/axapi/v3/uuid/a9e3bba4-c9e4-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "server": {
        "action": "disable"
  }
}'
```

To delete the port on server1 by using the UUID endpoint (rather than using /slb/server/server1/port/):

```
curl -k -i -X DELETE https://10.10.10.10/axapi/v3/uuid/c12d9618-c9e4-11e4-b4dd-
↪fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 dfb4690024c8bcdeded6270534a984"
```

To revise the number of concurrent connections on the vip port by using the UUID endpoint (rather than using /slb/virtual-server/vip1/port/):

```
curl -k PUT https://10.10.10.10/axapi/v3/uuid/f2152182-c9e5-11e4-b4dd-fa163eeb9631 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b" \
-d '{
  "port": {
        "conn-limit": 4000000
  }
}'
```

Filters

aXAPI filters work with GET methods to specify that only certain records of interest will appear in the responses. Without filters, all the records are returned by default.

The aXAPI filter mechanisms provide two aspects of control for all the GET methods. Both of the following mechanisms can work together.

- *Paging Mechanism* - handles a huge amount of data records under an aXAPI endpoint.
- *Field Filtering Mechanism* - picks up special data records that match specified fields.

The stats and oper filters work a bit differently for the GET methods, so their usage is limited to a subset of URIs.

- *Statistics Data Filtering* - for use with URIs that include the `/stats` endpoint.
- *Oper Endpoint Filtering* - for use with URIs that include the `/oper` endpoint.

The user tag filters are limited to a subset of SSL Insight objects. They are used to automatically mark an object that is created in the SSLi Services GUI.

- *User Tag Filtering* - for use with SSLi objects that include the **"user-tag":"Security"** property.

Paging Mechanism

The paging mechanism helps to break up large responses into more manageable chunks.

The filter keywords `total`, `start`, and `count` are reserved for the paging mechanism.

- total - shows how many records currently exist.
- start - indicates an index from which those records will be returned.
- count - indicates a limitation. It controls how many records should be returned.

For example, if there are four slb servers, the `total=true` filter shows the total count of slb servers:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?total=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "total-count":4
}
```

If there are four slb servers, the `start=3` filter shows the server at index number 3: [d1, d2, s1, **s2**]:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?start=3 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

If there are four slb servers, the `start=1&count=1` filters show a list of servers starting at index number 1, but only a list of 1: [d1, **d2**, s1, s2]:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?start=1&count=1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"d2",
                  "host":"1.1.1.4",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"b059da1a-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/d2"
                }
        ]
}
```

Field Filtering Mechanism

Field filtering is used to select a matched set of instances as returned records. A filtering keyword is simply a field keyword defined within the schema file. Currently, only the string type field can be supported. The matching rule is that a field's value contains the specified string from filter.

For example, the field `name` is used as a filter to find slb servers whose names contain the character **s**:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s1",
                  "host":"1.1.1.1",
                  "action":"disable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s1"
                },
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

The combination of multiple fields as filters means an AND relationship, such as using the `name` & `action` fields to find slb servers that start with s and are enabled:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s&action=enable \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
```

(continues on next page)

(continued from previous page)

```
{
        "server-list": [
                {
                  "name":"s2",
                  "host":"1.1.1.2",
                  "action":"enable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a7ec1a00-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s2"
                }
        ]
}
```

It is possible to use field filtering and paging mechanisms together, such as using the `name` field with the `total` & `count` filters to find the total number of slb servers whose names start with s, starting from index number 0, but only a list of 1:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?name=s&start=0&count=1 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server-list": [
                {
                  "name":"s1",
                  "host":"1.1.1.1",
                  "action":"disable",
                  "template-server":"default",
                  "health-check-disable":0,
                  "conn-limit":8000000,
                  "no-logging":0,
                  "weight":1,
                  "slow-start":0,
                  "spoofing-cache":0,
                  "stats-data-action":"stats-data-enable",
                  "extended-stats":0,
                  "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                  "a10-url":"/axapi/v3/slb/server/s1"
                }
        ]
}
```

Statistics Data Filtering

Some schema files define extended statistics data. To get this part of the data, you need to use the corresponding filter within the URIs that include the `/stats` endpoint. For example, slb virtual port has such statistics data, according to its L7 protocol.

Basic Statistics

The basic statistics are available at the statistics data URI: /axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http/stats \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Response
{
        "port": {
                "stats": {
                        "curr_conn": 0,
                        "total_l4_conn": 0,
                        "total_l7_conn": 0,
                        "total_tcp_conn": 0,
                        "total_conn": 0,
                        "total_fwd_bytes": 0,
                        "total_fwd_pkts": 0,
                        "total_rev_bytes": 0,
                        "total_rev_pkts": 0,
                        "total_dns_pkts": 0,
                        "total_mf_dns_pkts": 0,
                        "es_total_failure_actions": 0,
                        "compression_bytes_before": 0,
                        "compression_bytes_after": 0,
                        "compression_hit": 0,
                        "compression_miss": 0,
                        "compression_miss_no_client": 0,
                        "compression_miss_template_exclusion": 0,
                        "curr_req": 0,
                        "total_req": 0,
                        "total_req_succ": 0,
                        "peak_conn": 0,
                        "curr_conn_rate": 0,
                        "last_rsp_time": 0,
                        "fastest_rsp_time": 0,
                        "slowest_rsp_time": 0
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+http/stats",
                "port-number": 80,
                "protocol": "http"
        }
}
```

Extended HTTP Statistics

The extended statistics for the slb virtual port are available with the addition of the `http_vport=true` filter:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http/stats?
↪http_vport=true \
```

(continues on next page)

(continued from previous page)

```
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response

                                "REQ_1m": 0,
                                "REQ_2m": 0,
                                "REQ_5m": 0,
                                "REQ_10m": 0,
                                "REQ_20m": 0,
                                "REQ_50m": 0,
                                "REQ_100m": 0,
                                "REQ_200m": 0,
                                "REQ_500m": 0,
                                "REQ_1s": 0,
                                "REQ_2s": 0,
                                "REQ_5s": 0,
                                "REQ_OVER_5s": 0
                        }
                },
                "a10-url": "/axapi/v3/slb/virtual-server/vs1/port/80+http/stats",
                "port-number": 80,
                "protocol": "http"
        }
}
```

Note: The paging mechanism and field filtering mechanism cannot work with extended statistics filtering.

Reserved Filter Statistics

For typical config endpoints, there is a reserved ON/OFF filter called `stats` for getting config data and basic statistics data at the same time:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/virtual-server/vs1/port/80+http?
↪stats=true \
```

(continues on next page)

(continued from previous page)

```
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response

                }
        }
}
```

Note: This is not a `/stats` endpoint, but the addition of a `?stats=true` filter. The extended statistics cannot work in this way.

Oper Endpoint Filtering

The oper endpoints end with the keyword `/oper`. These are used to retrieve dynamic operational status information from the back-end to see things like available memory, status of fans, admins logged in, etc. Filters are now also available for getting the status plus available extras such as total number of elements, a single record, and the configuration. The valid filters are defined by the oper field in the schema file. As the field filtering mechanism does, it accepts a string value. The paging mechanism is also supported. As of now, its scope is not the object instance. Instead, it works for oper fields within a multiple block.

Used by itself, the `/oper` endpoint will show operational data for each element within a collection or intermediate resource:

```
curl -k GET https://10.10.10.10/axapi/v3/admin-session/oper \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Response
{
        "admin-session": {
                "oper" : {
                  "session-list": [
                        {
                          "sid":"1",
                          "name":"admin",
                          "src_ip":"10.10.10.11",
                          "type":"WEB",
                          "cfg_mode":"No"
                        },
                        {
                          "sid":"*3",
                          "name":"admin",
                          "src_ip":"10.10.10.12",
                          "type":"WEBSERVICE",
                          "cfg_mode":"No"
                        }
                  ]
                },
                "a10-url":"/axapi/v3/admin-session/oper"
        }
}
```

Used with the `total` paging mechanism, it will find the total number of elements at an endpoint. The back-end

determines if oper field filtering mechanism works or not:

```
curl -k GET https://10.10.10.10/axapi/v3/admin-session/oper?total=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
  "total-count":2
}
```

In the following example, the `start` paging mechanism is used to find a single object instance record at an endpoint. The back-end determines if oper field filtering mechanism works or not:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/s2/oper?start=0 \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server": {
                "oper": {
                        "state": "Down"
                },
                "a10-url": "/axapi/v3/slb/server/s2/oper",
                "name": "s2"
        }
}
```

For typical config endpoints, there is a reserved ON/OFF filter called `oper` for getting config data and basic operational data at the same time:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server/s1?oper=true \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response
{
        "server": {
                "name":"s1",
                "host":"1.1.1.1",
                "action":"disable",
                "template-server":"default",
                "health-check-disable":0,
                "conn-limit":8000000,
                "no-logging":0,
                "weight":1,
                "slow-start":0,
                "spoofing-cache":0,
                "stats-data-action":"stats-data-enable",
                "extended-stats":0,
                "uuid":"a25672e8-3270-11df-a8af-000d480a65d0",
                "oper" : {
                  "state":"Disabled"
                }
        }
}
```

Note: This is not the `/oper` endpoint, but the addition of the `?oper=true` filter.

User Tag Filtering

The user tag filter is used by the GUI to group SSLi objects together by auto-configuring them with the **Security** string in the **user-tag** property. You can use these tags to filter your search results based on the string.

For example, when you create SSLi Services objects in the GUI for SSLi_vip_001, they will automatically be tagged with **user-tag Security** as seen in the `show run` command of the CLI:

```
!
slb server SSLi_vip_001_server_001 100.100.100.8
  user-tag Security
  port 0 tcp
  ...
!
slb service-group SSLi_vip_001_SSLi tcp
  user-tag Security
  member SSLi_vip_001_server_001 8080
  ...
!
slb template client-ssl SSLi_vip_001_client_ssl
  user-tag Security
  forward-proxy-bypass web-category health-and-medicine
  ...
!
slb virtual-server SSLi_vip_001 0.0.0.0 acl name acl_SSLi_vip_001
  user-tag Security
  port 0 tcp
  ...
!
end
```

In the case of searching by tag to retrieve all your SLB Security servers, you can use the `user-tag=Security` filter on your GET request. In the response, you will see the output of **"user-tag":"Security"** in the SLB servers that were auto-configured with that property:

```
curl -k GET https://10.10.10.10/axapi/v3/slb/server?user-tag=Security \
-H "Content-Type:application/json" \
-H "Authorization: A10 c223169c3ab18f9e3826b9df215c2b"

#Filtered Response

1.2 Batching Requests

Multiple GET requests for different URI's can be issued by a POST request against `/axapi/v3/batch-get`. Using batching requests reduces the number of API calling times which improves the performance on the CLIENT side.

1.2.1 Intended Use and Limitations

- Only the POST method is allowed.
- The `schema request` call should not use the Batch-Get operation as it will result in failure.

1.2.2 Error Handling

- If one of the API calls is incorrect, its corresponding response attribute `resp` will contain the error JSON data.

Example

The following example shows how to call multiple API's in a single call:

```
    POST /axapi/v3/batch-get
    {
"batch-get-list" : [
             {"uri":"/axapi/v3/interface/ethernet/1/schema"},
             {"uri":"/axapi/v3/interface/ethernet?total=true"},
             {"uri":"/axapi/v3/interface/ethernet?start=2&count=3"},
             {"uri":"/axapi/v3/interface/ethernet?start=2&count=3&wrong-filter=xxx"},
             {"uri":"/axapi/v3/interface/ethernet/1/oper"},
             {"uri":"/axapi/v3/slb/server/s1/stats"},
             {"uri":"/axapi/v3/no-such-endpoint"}
    ]
}
```

If this request succeeds, the following response will be recieved:

```
{
  "batch-get-list": [
        {
          "uri":"/axapi/v3/interface/ethernet/1/schema",
          "resp":{
                "http-status":400,
                "status":"fail",
                  "err": {
                        "code":1023524864,
                        "msg":"JSON message is wrong."
                  }
          }
        },
        {
```

(continues on next page)

(continued from previous page)

```
        "uri":"/axapi/v3/interface/ethernet?total=true",
        "resp":{
              "total-count":8
        }
      },
      {
        "uri":"/axapi/v3/interface/ethernet?start=2&count=3",
        "resp":{
              "ethernet-list": [
                {

                  }
          }
        }
  ]
}
```

1.3 Status Codes

aXAPI uses three categories of HTTP status codes - 2XX, 4XX, and 5XX.

- 2XX indicates success of request.
- 4XX indicates client side error. For example, if the JSON data is incorrect.
- 5XX indicates server (ACOS device) side error.

1.3.1 Status Code List

The returned set of status codes may keep evolving but its basic categories and meanings are as follows:

200 OK

This response indicates success and also returns a response message. The response format could be JSON data, plain text, or octet binary data.

For example:

```
GET /axapi/v3/interface/Ethernet/1 returns JSON data.
POST /axapi/v3/clideploy with a show command returns plain text.
GET /axapi/v3/file/ssl-cert returns a pem file or zipped file.
```

201 CREATED

This response is the same as 200 OK with an indication that a new resource or record has been created.

204 NO CONTENT

This response indicates success without any response data. In this case, the client has no need to parse any data. Normally, operational APIs have no response data for the client to read and the 204 status code is returned to indicate the operation is executed successfully.

For example, to import a file:

```
POST /axapi/v3/file/aflex
```

202 ACCEPTED

This response indicates that the request has been accepted and there is no error for now, but the action is still in process. Normally, this status code is returned for time-consuming tasks such as upgrading. In this case, the client might need to periodically check status.

400 BAD REQUEST

This response indicates that the API does not understand the request. Incorrect JSON syntax and not matching schemas may cause this response. All JSON properties are defined by a schema file. The client needs to follow the schema definition to send a request. For example, `ip-address` is defined as string but if the client issues it as a number, this error may be caused.

401 UNAUTHORIZED

This response indicates that the request is from an untrusted client and authentication is required. In this case, the client would need to authenticate itself and resend the request. Authentication URI `/axapi/v3/auth`

403 FORBIDDEN

This response indicates that the client does not have sufficient privileges for such a request. The relative cases include RBA control, platform control, and license control.

404 NOT FOUND

This response indicates that the requested records do not exist or the APIs are not supported. For example, GET `/axapi/abc/def` has no definition attached to it.

415 UNSUPPORTED MEDIA TYPE

This response indicates that the client sends the request with the wrong data format which cannot be accepted by the ACOS device. For example, if the ACOS device can only accept "application/json" and the client sends "plain/text".

500 INTERNAL SERVER ERROR

This response indicates that because of a server side error the request cannot be processed. For example, the system is down or the system resources are used up.

CHAPTER

TWO

CONFIGURATION APIS:

2.1 aam

Objects:

2.1.1 aam

AAM related configuration

aam Specification

Type	*Intermediate Resource*
Element Name	aam
Element URI	/axapi/v3/aam
Element Attributes	aam_attributes
Schema	`aam schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam

aam_attributes

aam attributes

aaa-policy-list

Type: List

Refernce Object: */axapi/v3/aam/aaa-policy/{name}*

access-log

Description: access-log is a **JSON Block**. Please see below for *access-log*

Type: Object

Refernce Object: */axapi/v3/aam/access-log*

auth-log

Description: auth-log is a **JSON Block**. Please see below for *auth-log*

Type: Object

Refernce Object: */axapi/v3/aam/auth-log*

authentication

Description: authentication is a **JSON Block**. Please see below for *authentication*

Type: Object

Refernce Object: */axapi/v3/aam/authentication*

authorization

Description: authorization is a **JSON Block**. Please see below for *authorization*

Type: Object

Refernce Object: */axapi/v3/aam/authorization*

jwt-authorization-list

Type: List

Refernce Object: */axapi/v3/aam/jwt-authorization/{name}*

rdns

Description: rdns is a **JSON Block**. Please see below for *rdns*

Type: Object

Refernce Object: */axapi/v3/aam/rdns*

resource-usage

Description: resource-usage is a **JSON Block**. Please see below for *resource-usage*

Type: Object

Refernce Object: */axapi/v3/aam/resource-usage*

resource-usage

Specification	
Type	*object*

identity-provider-limit

Description Total Number of Identity Provider exists in the System

Type: number

Range: 64-256

Default: 64

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

access-log

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt-authorization-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

exp-claim-requried

Description Specify the exp claim is required for JWT authorization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-cache-enable

Description Enable caching authorized JWT token and skip verification and authorization for cached tokens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-exp-default

Description Specify the default token expiration if exp claim is not available (default 1800)

Type: number

Range: 1-86400

jwt-forwarding

Description Specify JWT token will not be stripped while forwarding client request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description '0': log disable; '1': only log authorzation fail (default); '2': only log authorization success; '3': log all;

Type: string

Supported Values: 0, 1, 2, 3

name

Description Specify JWT authorization template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-jwt-authorization-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify the certificate to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert verification-jwks and verification-secret are mutually exclusive

verification-jwks

Description Specify the jwks file to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks verification-cert and verification-secret are mutually exclusive

verification-secret

Description Specify secret for verify JWT token signature

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-secret verification-cert and verification-jwks are mutually exclusive

jwt-authorization-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'jwt-request': JWT Request; 'jwt-authorize-success': JWT Authorize Success; 'jwt-authorize-failure': JWT Authorize Failure; 'jwt-missing-token': JWT Missing Token; 'jwt-missing-claim': JWT Missing Claim; 'jwt-token-expired': JWT Token Expired; 'jwt-signature-failure': JWT Signature Failure; 'jwt-other-error': JWT Other Error;

Type: string

Supported Values: all, jwt-request, jwt-authorize-success, jwt-authorize-failure, jwt-missing-token, jwt-missing-claim, jwt-token-expired, jwt-signature-failure, jwt-other-error

authentication

Specification	
Type	*object*

account

Description: account is a **JSON Block**. Please see below for *authentication_account*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/account*

captcha

Description: captcha is a **JSON Block**. Please see below for *authentication_captcha*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/captcha*

file

Description: file is a **JSON Block**. Please see below for *authentication_file*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file*

global

Description: global is a **JSON Block**. Please see below for *authentication_global*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/global*

jwks

Description: jwks is a **JSON Block**. Please see below for *authentication_jwks*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/jwks*

jwt-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/jwt/{name}*

log

Description: log is a **JSON Block**. Please see below for *authentication_log*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/log*

logon

Description: logon is a **JSON Block**. Please see below for *authentication_logon*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/logon*

oauth

Description: oauth is a **JSON Block**. Please see below for *authentication_oauth*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/oauth*

password-retry

Description: password-retry is a **JSON Block**. Please see below for *authentication_password-retry*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/password-retry*

portal-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/portal/{name}*

relay

Description: relay is a **JSON Block**. Please see below for *authentication_relay*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay*

saml

Description: saml is a **JSON Block**. Please see below for *authentication_saml*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml*

server

Description: server is a **JSON Block**. Please see below for *authentication_server*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server*

service-group-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/service-group/{name}*

session

Description: session is a **JSON Block**. Please see below for *authentication_session*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/session*

session-attr

Description: session-attr is a **JSON Block**. Please see below for *authentication_session-attr*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/session-attr*

template-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/template/{name}*

authentication_jwt-list

Specification	
Type	*list*
Block object keys	

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_account

Specification	
Type	*object*

kerberos-spn-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_account_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

authentication_account_kerberos-spn-list

Specification	
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list

Specification	
Type	*list*

Type: Object

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *authentication_portal-list_logon-fail_title-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_fail-msg-cfg

Specification	
Type	*object*

fail-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_title-cfg

Specification	
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon-fail_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_logo-cfg

Specification	
Type	*object*

height

Description Specify logo image height

Type: number

Range: 50-400

Default: 71

logo

Description Specify logo image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

width

Description Specify logo image width

Type: number

Range: 50-400

Default: 134

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_cfm-pwd-cfg*

Type: Object

change-text

Description Specify change button text in default change password notification page (Default: Change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-url

Description Specify change password action URL in default change password notification page (Default: /notify_change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password-var

Description Specify confirm password variable name in default change password notification page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-text

Description Specify continue button text in default change password notification page (Default: Continue)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-url

Description Specify continue action URL in default change password notification page (Default: /continue.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password notification page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password notification page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_notify-change-password_old-pwd-cfg*

Type: Object

username-cfg

username-var

Description Specify username variable name in default change password notification page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_notify-change-password_new-pwd-cfg

Specification	
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_notify-change-password_old-pwd-cfg

Specification

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_logon

Specification	
Type	*object*

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_logon_background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

passcode-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon_reCAPTCHA-cfg

Specification	
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

authentication_portal-list_logon_background

Specification

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_logon_fail-msg-cfg

Specification	
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_logon_password-cfg

Specification	
Type	*object*

pass-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_logon_username-cfg

Specification	
Type	*object*

user-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_change-password

Specification	
Type	*object*

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *authentication_portal-list_change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *authentication_portal-list_change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_new-pwd-cfg

Specification	
Type	*object*

new-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_title-cfg

Specification	
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_old-pwd-cfg

Specification	
Type	*object*

old-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_portal-list_change-password_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

authentication_portal-list_change-password_cfm-pwd-cfg

Specification	
Type	*object*

cfm-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_portal-list_change-password_username-cfg

Specification	
Type	*object*

user-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_log

Specification	
Type	*object*

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay

Specification	
Type	*object*

form-based

Description: form-based is a **JSON Block**. Please see below for *authentication_relay_form-based*

Supported Values: all, relay-req, relay-succ, relay-fail

authentication_relay_saml-list

Specification	
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

authentication_relay_saml-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

authentication_relay_kerberos

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_kerberos_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

authentication_relay_kerberos_instance-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_kerberos_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

authentication_relay_http-basic

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

authentication_relay_http-basic_instance-list

Specification	
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_relay_http-basic_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

authentication_jwks

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_session-attr

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon

Specification	
Type	*object*

form-based-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *authentication_logon_http-authenticate*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate*

authentication_logon_form-based-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_cp-page-cfg*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *authentication_logon_form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *authentication_logon_form-based-list_portal*

Type: Object

retry

Description Specify max. number of failure retry (Specify retry count (1 ~ 32), default is 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_notify-cp-page-cfg

Specification	
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_portal

Specification	
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page new-pin-page and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

authentication_logon_form-based-list_logon-page-cfg

Specification	
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is "Invalid username or password. Please try again.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_logon_form-based-list_cp-page-cfg

Specification	
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_logon_http-authenticate

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

authentication_logon_http-authenticate_instance-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Specify max. number of failure retry (1 ~ 32), default is 3

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_logon_http-authenticate_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

authentication_logon_http-authenticate_instance-list_auth-method

Specification	
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method_negotiate*

Type: Object

ntlm

Description: ntlm is a **JSON Block**. Please see below for *authentication_logon_http-authenticate_instance-list_auth-method_ntlm*

Type: Object

authentication_logon_http-authenticate_instance-list_auth-method_ntlm

Specification	
Type	*object*

ntlm-enable

Description Enable NTLM logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_logon_http-authenticate_instance-list_auth-method_negotiate

Specification	
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_logon_http-authenticate_instance-list_auth-method_basic

Specification	
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_service-group-list

Specification	
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

lb-method

Description 'round-robin': Round robin on server level;

Type: string

Supported Values: round-robin

member-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/service-group/{name}/member/{name}+{port}*

name

Description Specify AAM service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-tmpl*

protocol

Description 'tcp': TCP AAM service; 'udp': UDP AAM service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_service-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

authentication_service-group-list_member-list

Specification	
Type	*list*
Block object keys	

member-priority

Description Priority of Port in the Group

Type: number

Range: 1-16

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port;

Type: string

Supported Values: enable, disable

Default: enable

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-mem-tmpl*

port

Description Port number

Type: number

Range: 1-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_service-group-list_member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': peak_conn; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow

authentication_global

Specification	
Type	*object*

max-auth-resp-size

Description Specify the max auth resp size in bytes(from authd to a10lb), default is 64KB

Type: number

Range: 2048-131072

Default: 65536

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests': Total Authentication Request; 'responses': Total Authentication Response; 'misses': Total Authentication Request Missed; 'ocsp-stapling-requests-to-a10authd': Total OCSP Stapling Request; 'ocsp-stapling-responses-from-a10authd': Total OCSP Stapling Response; 'opened-socket': Total AAM Socket Opened; 'open-socket-failed': Total AAM Open Socket Failed; 'connect': Total AAM Connection; 'connect-failed': Total AAM Connect Failed; 'created-timer': Total AAM Timer Created; 'create-timer-failed': Total AAM Timer Creation Failed; 'total-request': Total Request Received by A10 Auth Service; 'get-socket-option-failed': Total AAM Get Socket Option Failed; 'aflex-authz-succ': Total Authorization success number in aFleX; 'aflex-authz-fail': Total Authorization failure number in aFleX;

Type: string

Supported Values: all, requests, responses, misses, ocsp-stapling-requests-to-a10authd, ocsp-stapling-responses-from-a10authd, opened-socket, open-socket-failed, connect, connect-failed, created-timer, create-timer-failed, total-request, get-socket-option-failed, aflex-authz-succ, aflex-authz-fail, authn-success, authn-failure, authz-success, authz-failure, active-session, active-user, dns-resolve-failed

authentication_saml

Specification

service-provider-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/saml/service-provider/{name}*

session

Description: session is a **JSON Block**. Please see below for *authentication_saml_session*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml/session*

authentication_saml_service-provider-list

Specification	
Type	*list*
Block object keys	

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *authentication_saml_service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_require-assertion-signed

Specification	
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_single-logout-service

Specification	
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_assertion-consuming-service

Specification	
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

authentication_saml_service-provider-list_saml-request-signed

Specification	
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_SP-initiated-single-logout-service

Specification	
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_adfs-ws-federation

Specification	
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_soap-tls-certificate-validate

Specification	
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_service-provider-list_artifact-resolution-service

Specification	
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

authentication_saml_service-provider-list_metadata-export-service

Specification	
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication_saml_identity-provider-list

Specification	
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

authentication_saml_session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_metadata-monitor

Specification	
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_saml_metadata

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server

Specification	
Type	*object*

ldap

Description: ldap is a **JSON Block**. Please see below for *authentication_server_ldap*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

ocsp

Description: ocsp is a **JSON Block**. Please see below for *authentication_server_ocsp*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

radius

Description: radius is a **JSON Block**. Please see below for *authentication_server_radius*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/radius*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows

Description: windows is a **JSON Block**. Please see below for *authentication_server_windows*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/windows*

authentication_server_windows

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/windows/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_windows_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'kerberos-request-send': Total Kerberos Request; 'kerberos-response-get': Total Kerberos Response; 'kerberos-timeout-error': Total Kerberos Timeout; 'kerberos-other-error': Total Kerberos Other Error; 'ntlm-authentication-success': Total NTLM Authentication Success; 'ntlm-authentication-failure': Total NTLM Authentication Failure; 'ntlm-proto-negotiation-success': Total NTLM Protocol Negotiation Success; 'ntlm-proto-negotiation-failure': Total NTLM Protocol Negotiation Failure; 'ntlm-session-setup-success': Total NTLM Session Setup Success; 'ntlm-session-setup-failed': Total NTLM Session Setup Failure; 'kerberos-request-normal': Total Kerberos Normal Request; 'kerberos-request-dropped': Total Kerberos Dropped Request; 'kerberos-response-success': Total Kerberos Success Response; 'kerberos-response-failure': Total Kerberos Failure Response; 'kerberos-response-error': Total Kerberos Error Response; 'kerberos-response-timeout': Total Kerberos Timeout Response; 'kerberos-response-other': Total Kerberos Other Response; 'kerberos-job-start-error': Total Kerberos Job Start Error; 'kerberos-polling-control-error': Total Kerberos Polling Control Error; 'ntlm-prepare-req-success': Total NTLM Prepare Request Success; 'ntlm-prepare-req-failed': Total NTLM Prepare Request Failed; 'ntlm-timeout-error': Total

NTLM Timeout; 'ntlm-other-error': Total NTLM Other Error; 'ntlm-request-normal': Total NTLM Normal Request; 'ntlm-request-dropped': Total NTLM Dropped Request; 'ntlm-response-success': Total NTLM Success Response; 'ntlm-response-failure': Total NTLM Failure Response; 'ntlm-response-error': Total NTLM Error Response; 'ntlm-response-timeout': Total NTLM Timeout Response; 'ntlm-response-other': Total NTLM Other Response; 'ntlm-job-start-error': Total NTLM Job Start Error; 'ntlm-polling-control-error': Total NTLM Polling Control Error;

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, ntlm-authentication-success, ntlm-authentication-failure, ntlm-proto-negotiation-success, ntlm-proto-negotiation-failure, ntlm-session-setup-success, ntlm-session-setup-failed, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, ntlm-prepare-req-success, ntlm-prepare-req-failed, ntlm-timeout-error, ntlm-other-error, ntlm-request-normal, ntlm-request-dropped, ntlm-response-success, ntlm-response-failure, ntlm-response-error, ntlm-response-timeout, ntlm-response-other, ntlm-job-start-error, ntlm-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure

authentication_server_windows_instance-list

Specification	
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *authentication_server_windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_windows_instance-list_host

Specification	
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_server_windows_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure':

NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, ntlm_proto_nego_success, ntlm_proto_nego_failure, ntlm_session_setup_success, ntlm_session_setup_failure, ntlm_prepare_req_success, ntlm_prepare_req_error, ntlm_auth_success, ntlm_auth_failure, ntlm_timeout_error, ntlm_other_error

authentication_server_windows_instance-list_auth-protocol

Specification	
Type	*object*

kerberos-disable

Description Disable Kerberos authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerbros port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

ntlm-disable

Description Disable NTLM authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntlm-health-check

Description Check NTLM port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ntlm-health-check and ntlm-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

ntlm-health-check-disable

Description Disable configured NTLM port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ntlm-health-check-disable and ntlm-health-check are mutually exclusive

ntlm-version

Description Specify NTLM version, default is 2

Type: number

Range: 1-2

Default: 2

authentication_server_ocsp

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_ocsp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stapling-certificate-good': Total OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': Total OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': Total OCSP Stapling Unknown Certificate Response; 'stapling-request-normal': Total OSCP Stapling Normal Request; 'stapling-request-dropped': Total OCSP Stapling Dropped Request; 'stapling-response-success': Total OCSP Stapling Success Response; 'stapling-response-failure': Total OCSP Stapling Failure Response; 'stapling-response-error': Total OCSP Stapling Error Response; 'stapling-response-timeout': Total OCSP Stapling Timeout Response; 'stapling-response-other': Total OCSP Stapling Other Response; 'request-normal': Total OSCP Normal Request; 'request-dropped': Total OCSP Dropped Request; 'response-success': Total OCSP Success Response; 'response-failure': Total OCSP Failure Response; 'response-error': Total OCSP Error Response; 'response-timeout': Total OCSP Timeout Response; 'response-other': Total OCSP Other Response; 'job-start-error': Total OCSP Job Start Error; 'polling-control-error': Total OCSP Polling Control Error;

Type: string

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

authentication_server_ocsp_instance-list

Specification	
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

authentication_server_ocsp_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

authentication_server_radius

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/radius/instance/{name}*

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

authentication_server_radius_instance-list

Specification	
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_radius_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_server_radius_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

authentication_server_ldap

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_ldap_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

authentication_server_ldap_instance-list

Specification	
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *authentication_server_ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *authentication_server_ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_server_ldap_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error,

other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

authentication_server_ldap_instance-list_derive-bind-dn

Specification	
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authentication_server_ldap_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

authentication_captcha

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/captcha/instance/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_captcha_instance-list

Specification	
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_file

Specification	
Type	*object*

portal

Description: portal is a **JSON Block**. Please see below for *authentication_file_portal*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file/portal*

portal-image

Description: portal-image is a **JSON Block**. Please see below for *authentication_file_portal-image*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file/portal-image*

authentication_file_portal

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_file_portal-image

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth

Specification	
Type	*object*

authorization-server-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/oauth/authorization-server/{name}*

client-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/oauth/client/{name}*

global

Description: global is a **JSON Block**. Please see below for *authentication_oauth_global*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/oauth/global*

authentication_oauth_global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': auth-req; 'auth-succ': auth-succ; 'auth-fail': auth-fail; 'auth-error': auth-error; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail; 'other-error': other-error;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

authentication_oauth_client-list

Specification	
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL, this URL will plus /js automatically when authorization-endpoint using GET metho

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_oauth_authorization-server-list

Specification	
Type	*list*
Block object keys	

authorization-endpoint

Description Specify URI for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-method

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

authentication_oauth_authorization-server-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': auth-req; 'auth-succ': auth-succ; 'auth-fail': auth-fail; 'auth-error': auth-error; 'other-error': other-error;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, other-error

authentication_password-retry

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_template-list

Specification	
Type	*list*
Block object keys	

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify SameSite attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logut-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributs, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirct-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authentication_template-list_chain

Specification	
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server service-group and chain-sg are mutually exclusive

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

authentication_template-list_cookie-domain-group

Specification	
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

authentication_template-list_cookie-domain

Specification	
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

rdns

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list

Specification	
Type	*list*
Block object keys	

aaa-rule-list

Type: List

Refernce Object: */axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}*

name

Description Specify AAA policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-aaa-policy-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *aaa-policy-list_aaa-rule-list_access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client's request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': total_count; 'hit_count': hit_count;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

aaa-policy-list_aaa-rule-list_uri

Specification	
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_user-agent

Specification	
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_host

Specification	
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-policy-list_aaa-rule-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

aaa-policy-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'req': Request; 'req-reject': Request Rejected; 'req-auth': Request Matching Authentication Template; 'req-allow': Request Allowed; 'req-skip': Request Skipped; 'error': Error;

Type: string

Supported Values: all, req, req-reject, req-auth, req-bypass, req-skip, error, failure-bypass

authorization

Specification	
Type	*object*

jwt

Description: jwt is a **JSON Block**. Please see below for *authorization_jwt*

Type: Object

Refernce Object: */axapi/v3/aam/authorization/jwt*

policy-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}*

authorization_policy-list

Specification	
Type	*list*
Block object keys	

attribute-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}*

attribute-rule

Description Define attribute rule for authorization policy

Type: string

Format: string-rlx

extended-filter

Description Extended search filter. EX: Check whether user belongs to a nested group. (memberOf:1.2.840.113556.1.4.1941:=$GROUP-DN)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

forward-policy-authorize-only

Description This policy only provides server info for forward policy feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-authorization

Description Specify JWT authorization template (Specify JWT authorization template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: jwt-authorization server and service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/jwt-authorization*

jwt-claim-map-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}*

name

Description Specify authorization policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify a LDAP or RADIUS server for authorization (Specify a LDAP or RADIUS server name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server service-group and jwt-authorization are mutually exclusive

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and jwt-authorization are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_policy-list_jwt-claim-map-list

Specification	
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type string-type and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type string-type and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type number-type and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_policy-list_attribute-list

Specification	
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-typestring-type, ip-type and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-typestring-type, integer-type and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-typestring-type, integer-type and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-typeinteger-type, ip-type and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization_jwt

Specification	
Type	*object*

cache

Description: cache is a **JSON Block**. Please see below for *authorization_jwt_cache*

Type: Object

Refernce Object: */axapi/v3/aam/authorization/jwt/cache*

authorization_jwt_cache

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-log

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.2 aam aaa-policy

AAM AAA policy configuration

aaa-policy Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*aaa-policy-list*
Collection URI	/axapi/v3/aam/aaa-policy
Element Name	aaa-policy
Element URI	/axapi/v3/aam/aaa-policy/{name}
Element Attributes	aaa-policy_attributes
Statistics Data URI	/axapi/v3/aam/aaa-policy/{name}/stats
Schema	`aaa-policy schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/aaa-policy

aaa-policy attributes

```
POST /axapi/v3/aam/aaa-policy/
Payload:
{
    "aaa-policy": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/aam/aaa-policy

aaa-policy attributes

Get Object

GET

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
GET /axapi/v3/aam/aaa-policy/a
Reponse:
{
    "aaa-policy": {
        "name": "a",
        "uuid": "b4d3a784-6001-11d9-9363-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/aam/aaa-policy/a"
    }
}
```

Get List

GET

/axapi/v3/aam/aaa-policy

aaa-policy-list

Modify Object

POST

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

Replace Object

PUT

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
PUT /axapi/v3/aam/aaa-policy/a
Payload:
{
    "aaa-policy": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/aam/aaa-policy

aaa-policy-list

Delete Object

DELETE

/axapi/v3/aam/aaa-policy/{name}

aaa-policy attributes

```
DELETE /axapi/v3/aam/aaa-policy/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

aaa-policy-list

aaa-policy-list is **JSON List** of *aaa-policy attributes*

aaa-policy-list : [

{ *aaa-policy attributes* },

{ *aaa-policy attributes* },

...

]

aaa-policy attributes

aaa-rule-list

Type: List

Refernce Object: */axapi/v3/aam/aaa-policy/{name}/aaa-rule/{index}*

name

Description Specify AAA policy name - test

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-aaa-policy-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-rule-list

Specification	
Type	*list*
Block object keys	

access-list

Description: access-list is a **JSON Block**. Please see below for *aaa-rule-list_access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client's request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aaa-rule-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': total_count; 'hit_count': hit_count;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

aaa-rule-list_uri

Specification	
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-rule-list_user-agent

Specification	
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

aaa-rule-list_host

Specification	
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

aaa-rule-list_access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'req': Request; 'req-reject': Request Rejected; 'req-auth': Request Matching Authentication Template; 'req-allow': Request Allowed; 'req-skip': Request Skipped; 'error': Error;

Type: string

Supported Values: all, req, req-reject, req-auth, req-bypass, req-skip, error, failure-bypass

stats data

	Counter	Size	Description
	req-bypass	8	Request Bypassed
	req	8	Request
	failure-bypass	8	Auth Failure Bypass
	req-auth	8	Request Matching Authentication Template
	req-skip	8	Request Skipped
	error	8	Error
	req-reject	8	Request Rejected

2.1.3 aam aaa-policy aaa-rule

Rules of AAA policy

aaa-rule Specification

```

aaa-rule attributes

access-list

Description: access-list is a **JSON Block**. Please see below for *access-list*

Type: Object

action

Description 'allow': Allow traffic that matches this rule; 'deny': Deny traffic that matches this rule;

Type: string

Supported Values: allow, deny

auth-failure-bypass

Description Forward client request even though authentication has failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

authentication-template

Description Specify authentication template name to bind to the AAA rule

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/template*

authorize-policy

Description Specify authorization policy to bind to the AAA rule

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

captcha-authz-policy

Description Specify authorization policy for CAPTCHA (Authorization policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

domain-name

Description Specify domain name to bind to the AAA rule (ex: a10networks.com, www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Type: List

index

Description Specify AAA rule index

Type: number

Range: 1-256

match-encoded-uri

Description Enable URL decoding for URI matching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify port number for aaa-rule, default is 0 for all port numbers

Type: number

Range: 1-65535

sampling-enable

Type: List

uri

Type: List

user-agent

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_count': total_count; 'hit_count': hit_count;

Type: string

Supported Values: all, total_count, hit_deny, hit_auth, hit_bypass, failure_bypass

uri

Specification	
Type	*list*
Block object keys	

match-type

Description 'contains': Match URI if request URI contains specified URI; 'ends-with': Match URI if request URI ends with specified URI; 'equals': Match URI if request URI equals specified URI; 'starts-with': Match URI if request URI starts with specified URI;

Type: string

Supported Values: contains, ends-with, equals, starts-with

uri-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

user-agent

Specification	
Type	*list*
Block object keys	

user-agent-match-type

Description 'contains': Match request User-Agent header if it contains specified string; 'ends-with': Match request User-Agent header if it ends with specified string; 'equals': Match request User-Agent header if it equals specified string; 'starts-with': Match request User-Agent header if it starts with specified string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

user-agent-str

Description Specify request User-Agent string

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

host

Specification	
Type	*list*
Block object keys	

host-match-type

Description 'contains': Match HOST if request HTTP HOST header contains specified hostname; 'ends-with': Match HOST if request HTTP HOST header ends with specified hostname; 'equals': Match HOST if request HTTP HOST header equals specified hostname; 'starts-with': Match HOST if request HTTP HOST header starts with specified hostname;

Type: string

Supported Values: contains, ends-with, equals, starts-with

host-str

Description Specify URI string

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

access-list

Specification	
Type	*object*

acl-id

Description ACL id

Type: number

Range: 1-199

Mutual Exclusion: acl-id and acl-name are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-name

Description 'ip-name': Apply an IP named access list; 'ipv6-name': Apply an IPv6 named access list;

Type: string

Supported Values: ip-name, ipv6-name

Mutual Exclusion: acl-name and acl-id are mutually exclusive

name

Description Specify Named Access List

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	total_count	8	total_count
	hit_auth	8	hit_auth
	hit_deny	8	hit_deny
	hit_bypass	8	hit_bypass
	fail-ure_bypass	8	failure_bypass

2.1.4 aam authentication

AAM authentication related configuration

authentication Specification

Type	*Intermediate Resource*
Element Name	authentication
Element URI	/axapi/v3/aam/authentication
Element Attributes	authentication_attributes
Schema	`authentication schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication

authentication_attributes

authentication attributes

account

Description: account is a **JSON Block**. Please see below for *account*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/account*

captcha

Description: captcha is a **JSON Block**. Please see below for *captcha*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/captcha*

file

Description: file is a **JSON Block**. Please see below for *file*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file*

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/global*

jwks

Description: jwks is a **JSON Block**. Please see below for *jwks*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/jwks*

jwt-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/jwt/{name}*

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/log*

logon

Description: logon is a **JSON Block**. Please see below for *logon*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/logon*

oauth

Description: oauth is a **JSON Block**. Please see below for *oauth*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/oauth*

password-retry

Description: password-retry is a **JSON Block**. Please see below for *password-retry*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/password-retry*

portal-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/portal/{name}*

relay

Description: relay is a **JSON Block**. Please see below for *relay*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay*

saml

Description: saml is a **JSON Block**. Please see below for *saml*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml*

server

Description: server is a **JSON Block**. Please see below for *server*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server*

service-group-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/service-group/{name}*

session

Description: session is a **JSON Block**. Please see below for *session*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/session*

session-attr

Description: session-attr is a **JSON Block**. Please see below for *session-attr*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/session-attr*

template-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/template/{name}*

jwt-list

Specification	
Type	*list*
Block object keys	

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

account

Specification	
Type	*object*

kerberos-spn-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

account_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

account_kerberos-spn-list

Specification	
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list

Specification	
Type	*list*
Block object keys	

change-password

Description: change-password is a **JSON Block**. Please see below for *portal-list_change-password*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/portal/{name}/change-password*

logo-cfg

Description: logo-cfg is a **JSON Block**. Please see below for *portal-list_logo-cfg*

Type: Object

logon

Description: logon is a **JSON Block**. Please see below for *portal-list_logon*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/portal/{name}/logon*

logon-fail

Description: logon-fail is a **JSON Block**. Please see below for *portal-list_logon-fail*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/portal/{name}/logon-fail*

name

Description 'default-portal': Default portal configuration;

Type: string

Supported Values: default-portal

notify-change-password

Description: notify-change-password is a **JSON Block**. Please see below for *portal-list_notify-change-password*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/portal/{name}/notify-change-password*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_logon-fail

Specification	
Type	*object*

background

Description: background is a **JSON Block**. Please see below for *portal-list_logon-fail_background*

Type: Object

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *portal-list_logon-fail_fail-msg-cfg*

Type: Object

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *portal-list_logon-fail_title-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_logon-fail_fail-msg-cfg

Specification	
Type	*object*

fail-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_logon-fail_title-cfg

Specification	
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_logon-fail_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

portal-list_logo-cfg

Specification	
Type	*object*

height

Description Specify logo image height

Type: number

Range: 50-400

Default: 71

logo

Description Specify logo image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

width

Description Specify logo image width

Type: number

Range: 50-400

Default: 134

portal-list_notify-change-password

Specification	
Type	*object*

background

Description: background is a **JSON Block**. Please see below for *portal-list_notify-change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *portal-list_notify-change-password_cfm-pwd-cfg*

Type: Object

change-text

Description Specify change button text in default change password notification page (Default: Change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-url

Description Specify change password action URL in default change password notification page (Default: /notify_change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password-var

Description Specify confirm password variable name in default change password notification page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-text

Description Specify continue button text in default change password notification page (Default: Continue)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-url

Description Specify continue action URL in default change password notification page (Default: /continue.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password notification page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *portal-list_notify-change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password notification page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *portal-list_notify-change-password_old-pwd-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *portal-list_notify-change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password notification page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_notify-change-password_new-pwd-cfg

Specification	
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_notify-change-password_old-pwd-cfg

Specification

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

portal-list_logon

Specification	
Type	*object*

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *portal-list_logon_background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *portal-list_logon_fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *portal-list_logon_passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *portal-list_logon_password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *portal-list_logon_reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *portal-list_logon_username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

portal-list_logon_passcode-cfg

Specification	
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_logon_reCAPTCHA-cfg

Specification	
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

portal-list_logon_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

portal-list_logon_fail-msg-cfg

Specification	
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-list_logon_password-cfg

Specification	
Type	*object*

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Specification	
Type	*object*

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay

Specification	
Type	*object*

form-based

Description: form-based is a **JSON Block**. Please see below for *relay_form-based*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/form-based*

http-basic

Description: http-basic is a **JSON Block**. Please see below for *relay_http-basic*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic*

kerberos

Description: kerberos is a **JSON Block**. Please see below for *relay_kerberos*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/kerberos*

ntlm-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/ntlm/{name}*

oauth-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/oauth/{name}*

saml-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/saml/{name}*

ws-federation-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/ws-federation/{name}*

relay_ntlm-list

Specification	
Type	*list*
Block object keys	

domain

Description Specify NTLM domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-request-disable

Description Disable NTLM relay processing for large requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify NTLM authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ntlm-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Specify NTLM version, default is NTLM 2

Type: number

Range: 1-2

Default: 2

relay_ntlm-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'failure': Failure; 'request': Request; 'response': Response; 'http-code-200': HTTP 200 OK; 'http-code-400': HTTP 400 Bad Request; 'http-code-401': HTTP 401 Unauthorized; 'http-code-403': HTTP 403 Forbidden; 'http-code-404': HTTP 404 Not Found; 'http-code-500': HTTP 500 Internal Server Error; 'http-code-503': HTTP 503 Service Unavailable; 'http-code-other': Other HTTP Response; 'buffer-alloc-fail': Buffer Allocation Failure; 'encoding-fail': Encoding Failure; 'insert-header-fail': Insert Header Failure; 'parse-header-fail': Parse Header Failure; 'internal-error': Internal Error;

Type: string

Supported Values: all, success, failure, request, response, http-code-200, http-code-400, http-code-401, http-code-403, http-code-404, http-code-500, http-code-503, http-code-other, buffer-alloc-fail, encoding-fail, insert-header-fail, parse-header-fail, internal-error, ntlm-auth-skipped, large-request-processing, large-request-flushed, head-negotiate-request-sent, head-auth-request-sent

relay_form-based

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}*

relay_form-based_instance-list

Specification	
Type	*list*
Block object keys	

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_form-based_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

relay_form-based_instance-list_request-uri-list

Specification	
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *relay_form-based_instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_form-based_instance-list_request-uri-list_cookie

Specification	
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *relay_form-based_instance-list_request-uri-list_cookie_cookie-value*

Type: Object

relay_form-based_instance-list_request-uri-list_cookie_cookie-value

Specification	
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

relay_ws-federation-list

Specification	
Type	*list*
Block object keys	

application-server

Description 'sharepoint': Microsoft SharePoint; 'exchange-owa': Microsoft Exchange OWA;

Type: string

Supported Values: sharepoint, exchange-owa

authentication-uri

Description Specify WS-Federation relay URI, default is /_trust/

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify WS-Federation authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_ws-federation-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure;

Type: string

Supported Values: all, request, success, failure

relay_oauth-list

Specification	
Type	*list*
Block object keys	

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_oauth-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

relay_saml-list

Specification	
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

relay_saml-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

relay_kerberos

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_kerberos_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

relay_kerberos_instance-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_kerberos_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

relay_http-basic

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

relay_http-basic_instance-list

Specification	
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

relay_http-basic_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

jwks

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-attr

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon

Specification	
Type	*object*

form-based-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *logon_http-authenticate*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate*

logon_form-based-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_cp-page-cfg*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *logon_form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *logon_form-based-list_portal*

Type: Object

retry

Description Specify max. number of failure retry (Specify retry count (1 ~ 32), default is 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_form-based-list_notify-cp-page-cfg

Specification	
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

logon_form-based-list_portal

Specification	
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page new-pin-page and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

logon_form-based-list_logon-page-cfg

Specification	
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is "Invalid username or password. Please try again.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_form-based-list_cp-page-cfg

Specification	
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_http-authenticate

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

logon_http-authenticate_instance-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Specify max. number of failure retry (1 ~ 32), default is 3

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_http-authenticate_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

logon_http-authenticate_instance-list_auth-method

Specification	
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method_negotiate*

Type: Object

ntlm

Description: ntlm is a **JSON Block**. Please see below for *logon_http-authenticate_instance-list_auth-method_ntlm*

Type: Object

logon_http-authenticate_instance-list_auth-method_ntlm

Specification	
Type	*object*

ntlm-enable

Description Enable NTLM logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon_http-authenticate_instance-list_auth-method_negotiate

Specification	
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon_http-authenticate_instance-list_auth-method_basic

Specification	
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group-list

Specification	
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

lb-method

Description 'round-robin': Round robin on server level;

Type: string

Supported Values: round-robin

member-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/service-group/{name}/member/{name}+{port}*

name

Description Specify AAM service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-tmpl*

protocol

Description 'tcp': TCP AAM service; 'udp': UDP AAM service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Drops due to Service selection failure; 'server_selection_fail_reset': Resets sent out for Service selection failure; 'service_peak_conn': Peak connection count for the Service Group; 'service_healthy_host': Service Group healthy host count; 'service_unhealthy_host': Service Group unhealthy host count; 'service_req_count': Service Group request count; 'service_resp_count': Service Group response count; 'service_resp_2xx': Service Group response 2xx count; 'service_resp_3xx': Service Group response 3xx count; 'service_resp_4xx': Service Group response 4xx count; 'service_resp_5xx': Service Group response 5xx count; 'service_curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

service-group-list_member-list

Specification	
Type	*list*
Block object keys	

member-priority

Description Priority of Port in the Group

Type: number

Range: 1-16

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port;

Type: string

Supported Values: enable, disable

Default: enable

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-mem-tmpl*

port

Description Port number

Type: number

Range: 1-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Bytes processed in forward direction; 'total_fwd_pkts': Packets processed in forward direction; 'total_rev_bytes': Bytes processed in reverse direction; 'total_rev_pkts': Packets processed in reverse direction; 'total_conn': Total established connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': peak_conn; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow

global

Specification	
Type	*object*

max-auth-resp-size

Description Specify the max auth resp size in bytes(from authd to a10lb), default is 64KB

Type: number

Range: 2048-131072

Default: 65536

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests': Total Authentication Request; 'responses': Total Authentication Response; 'misses': Total Authentication Request Missed; 'ocsp-stapling-requests-to-a10authd': Total OCSP Stapling Request; 'ocsp-stapling-responses-from-a10authd': Total OCSP Stapling Response; 'opened-socket': Total AAM Socket Opened; 'open-socket-failed': Total AAM Open Socket Failed; 'connect': Total AAM Connection; 'connect-failed': Total AAM Connect Failed; 'created-timer': Total AAM Timer Created; 'create-timer-failed': Total AAM Timer Creation Failed; 'total-request': Total Request Received by A10 Auth Service; 'get-socket-option-failed': Total AAM Get Socket Option Failed; 'aflex-authz-succ': Total Authorization success number in aFleX; 'aflex-authz-fail': Total Authorization failure number in aFleX;

Type: string

Supported Values: all, requests, responses, misses, ocsp-stapling-requests-to-a10authd, ocsp-stapling-responses-from-a10authd, opened-socket, open-socket-failed, connect, connect-failed, created-timer, create-timer-failed, total-request, get-socket-option-failed, aflex-authz-succ, aflex-authz-fail, authn-success, authn-failure, authz-success, authz-failure, active-session, active-user, dns-resolve-failed

saml

Specification	
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *saml_global*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml/global*

identity-provider-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/saml/identity-provider/{name}*

metadata

Description: metadata is a **JSON Block**. Please see below for *saml_metadata*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml/metadata*

metadata-monitor

Description: metadata-monitor is a **JSON Block**. Please see below for *saml_metadata-monitor*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml/metadata-monitor*

service-provider-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/saml/service-provider/{name}*

session

Description: session is a **JSON Block**. Please see below for *saml_session*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/saml/session*

saml_service-provider-list

Specification	
Type	*list*
Block object keys	

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *saml_service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *saml_service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *saml_service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *saml_service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *saml_service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_service-provider-list_require-assertion-signed

Specification	
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_single-logout-service

Specification	
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_assertion-consuming-service

Specification	
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request;

'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

saml_service-provider-list_saml-request-signed

Specification	
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_SP-initiated-single-logout-service

Specification	
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_adfs-ws-federation

Specification	
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_soap-tls-certificate-validate

Specification	
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_service-provider-list_artifact-resolution-service

Specification	
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

saml_service-provider-list_metadata-export-service

Specification	
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml_identity-provider-list

Specification	
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

saml_session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_metadata-monitor

Specification	
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

saml_metadata

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server

Specification	
Type	*object*

ldap

Description: ldap is a **JSON Block**. Please see below for *server_ldap*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

ocsp

Description: ocsp is a **JSON Block**. Please see below for *server_ocsp*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

radius

Description: radius is a **JSON Block**. Please see below for *server_radius*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/radius*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows

Description: windows is a **JSON Block**. Please see below for *server_windows*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/server/windows*

server_windows

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/windows/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_windows_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'kerberos-request-send': Total Kerberos Request; 'kerberos-response-get': Total Kerberos Response; 'kerberos-timeout-error': Total Kerberos Timeout; 'kerberos-other-error': Total Kerberos Other Error; 'ntlm-authentication-success': Total NTLM Authentication Success; 'ntlm-authentication-failure': Total NTLM Authentication Failure; 'ntlm-proto-negotiation-success': Total NTLM Protocol Negotiation Success; 'ntlm-proto-negotiation-failure': Total NTLM Protocol Negotiation Failure; 'ntlm-session-setup-success': Total NTLM Session Setup Success; 'ntlm-session-setup-failed': Total NTLM Session Setup Failure; 'kerberos-request-normal': Total Kerberos Normal Request; 'kerberos-request-dropped': Total Kerberos Dropped Request; 'kerberos-response-success': Total Kerberos Success Response; 'kerberos-response-failure': Total Kerberos Failure Response; 'kerberos-response-error': Total Kerberos Error Response; 'kerberos-response-timeout': Total Kerberos Timeout Response; 'kerberos-response-other': Total Kerberos Other Response; 'kerberos-job-start-error': Total Kerberos Job Start Error; 'kerberos-polling-control-error': Total Kerberos Polling Control Error; 'ntlm-prepare-req-success': Total NTLM Prepare Request Success; 'ntlm-prepare-req-failed': Total NTLM Prepare Request Failed; 'ntlm-timeout-error': Total NTLM Timeout; 'ntlm-other-error': Total NTLM Other Error; 'ntlm-request-normal': Total NTLM Normal Request; 'ntlm-request-dropped': Total NTLM Dropped Request; 'ntlm-response-success': Total NTLM Success Response; 'ntlm-response-failure': Total NTLM Failure Response; 'ntlm-response-error': Total NTLM Error Response; 'ntlm-response-timeout': Total NTLM Timeout Response; 'ntlm-response-other': Total NTLM Other Response; 'ntlm-job-start-error': Total NTLM Job Start Error; 'ntlm-polling-control-error': Total NTLM Polling Control Error;

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, ntlm-authentication-success, ntlm-authentication-failure, ntlm-proto-negotiation-success, ntlm-proto-negotiation-failure, ntlm-session-setup-success, ntlm-session-setup-failed, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, ntlm-prepare-req-success, ntlm-prepare-req-failed, ntlm-timeout-error, ntlm-other-error, ntlm-request-normal, ntlm-request-dropped, ntlm-response-success, ntlm-response-failure, ntlm-response-error, ntlm-response-timeout, ntlm-response-other, ntlm-job-start-error, ntlm-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure

server_windows_instance-list

Specification	
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *server_windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_windows_instance-list_host

Specification	
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

server_windows_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, ntlm_proto_nego_success, ntlm_proto_nego_failure, ntlm_session_setup_success, ntlm_session_setup_failure, ntlm_prepare_req_success, ntlm_prepare_req_error, ntlm_auth_success, ntlm_auth_failure, ntlm_timeout_error, ntlm_other_error

server_windows_instance-list_auth-protocol

Specification	
Type	*object*

kerberos-disable

Description Disable Kerberos authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerbros port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

ntlm-disable

Description Disable NTLM authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntlm-health-check

Description Check NTLM port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ntlm-health-check and ntlm-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

ntlm-health-check-disable

Description Disable configured NTLM port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ntlm-health-check-disable and ntlm-health-check are mutually exclusive

ntlm-version

Description Specify NTLM version, default is 2

Type: number

Range: 1-2

Default: 2

server_ocsp

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ocsp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stapling-certificate-good': Total OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': Total OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': Total OCSP Stapling Unknown Certificate Response; 'stapling-request-normal': Total OSCP Stapling Normal Request; 'stapling-request-dropped': Total OCSP Stapling Dropped Request; 'stapling-response-success': Total OCSP Stapling Success Response; 'stapling-response-failure': Total OCSP Stapling Failure Response; 'stapling-response-error': Total OCSP Stapling Error Response; 'stapling-response-timeout': Total OCSP Stapling Timeout Response; 'stapling-response-other': Total OCSP Stapling Other Response; 'request-normal': Total OSCP Normal Request; 'request-dropped': Total OCSP Dropped Request; 'response-success': Total OCSP Success Response; 'response-failure': Total OCSP Failure Response; 'response-error': Total OCSP Error Response; 'response-timeout': Total OCSP Timeout Response; 'response-other': Total OCSP Other Response; 'job-start-error': Total OCSP Job Start Error; 'polling-control-error': Total OCSP Polling Control Error;

Type: string

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

server_ocsp_instance-list

Specification	
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

server_ocsp_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

server_radius

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/radius/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_radius_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

server_radius_instance-list

Specification	
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_radius_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

server_radius_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

server_ldap

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ldap_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

server_ldap_instance-list

Specification	
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *server_ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *server_ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server_ldap_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error,

other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

server_ldap_instance-list_derive-bind-dn

Specification	
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

server_ldap_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

captcha

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/captcha/instance/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

captcha_instance-list

Specification	
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

file

Specification	
Type	*object*

portal

Description: portal is a **JSON Block**. Please see below for *file_portal*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file/portal*

portal-image

Description: portal-image is a **JSON Block**. Please see below for *file_portal-image*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/file/portal-image*

file_portal

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

file_portal-image

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth

Specification	
Type	*object*

authorization-server-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/oauth/authorization-server/{name}*

client-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/oauth/client/{name}*

global

Description: global is a **JSON Block**. Please see below for *oauth_global*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/oauth/global*

oauth_global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': auth-req; 'auth-succ': auth-succ; 'auth-fail': auth-fail; 'auth-error': auth-error; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail; 'other-error': other-error;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

oauth_client-list

Specification	
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL, this URL will plus /js automatically when authorization-endpoint using GET metho

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth_authorization-server-list

Specification	
Type	*list*
Block object keys	

authorization-endpoint

Description Specify URI for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-method

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

oauth_authorization-server-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': auth-req; 'auth-succ': auth-succ; 'auth-fail': auth-fail; 'auth-error': auth-error; 'other-error': other-error;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, other-error

password-retry

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

Specification	
Type	*list*
Block object keys	

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify SameSite attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logut-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/logon/form-based*

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributs, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirct-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic/instance*

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_chain

Specification	
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server service-group and chain-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

template-list_cookie-domain-group

Specification	
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

template-list_cookie-domain

Specification	
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

2.1.5 aam authentication account

Authentication account configuration

account Specification

kerberos-spn-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response;

Type: string

Supported Values: all, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other

kerberos-spn-list

Specification	
Type	*list*
Block object keys	

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	request-normal	8	Total Normal Request
	response-success	8	Total Success Response
	response-other	8	Total Other Response
	response-failure	8	Total Failure Response
	request-dropped	8	Total Dropped Request
	response-timeout	8	Total Timeout Response
	response-error	8	Total Error Response

2.1.6 aam authentication account kerberos-spn

AD domain account associated with a SPN

kerberos-spn Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*kerberos-spn-list*

kerberos-spn-list

kerberos-spn-list is **JSON List** of *kerberos-spn attributes*

kerberos-spn-list : [

{ *kerberos-spn attributes* },

{ *kerberos-spn attributes* },

...

]

kerberos-spn attributes

account

Description Specify domain account for SPN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.)

name

Description Specify AD account name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of domain account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

realm

Description Specify Kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description Password of AD account

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

service-principal-name

Description Specify service principal name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.7 aam authentication captcha

CAPTCHA Profile

captcha Specification

Specification	
Type	*list*
Block object keys	

client-ip-param-name

Description Specify client ip parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

method

Description 'POST': API uses POST method; 'GET': API uses GET method;

Type: string

Supported Values: POST, GET

Default: POST

name

Description Specify captcha profile name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-error-code-field-name

Description Specify error code field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

resp-result-field-name

Description Specify result field name used in JSON response (Set field name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key

Description Specify secret key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-key-param-name

Description Specify secret key parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-key-string

Description Secret key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

send-client-ip

Description Send client IP address in API

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stats data

Default: 0

timeout

Description Specify timeout for verify API response (Specify timeout value, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

token-param-name

Description Specify token parameter name used in API (Set parameter name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

url

Description Specify verify API URL, default scheme is https

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt attributes

jwt-list

jwt-list is **JSON List** of *jwt attributes*

```
jwt-list : [
        { jwt attributes },
        { jwt attributes },
        ...
    ]
```

jwt attributes

action

Description 'redirect': redirect JWT to specific URI; 'relay': relay JWT to back-end;

Type: string

Supported Values: redirect, relay

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

issuer

Description Specify JWT issuer claim value

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

jwt-relay-uri

Description Specify JWT relay URI (for relay action)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

name

Description Specify JWT issuer template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

secret-string

Description The JWT signature secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

signature-secret

Description Specify the JWT signature secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token-lifetime

Description Specify JWT token lifetime (Specify lifetime (in seconds), default is 300.)

Type: number

Range: 0-86400

Default: 300

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.15 aam authentication log

Authentication log configuration

log Specification

Type	*Configuration Resource*
Element Name	log

        "status": "OK"
    }
}
```

log attributes

enable

Description Enable authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

facility

Description 'local0': Local use; 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use;

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': Syslog Format (default); 'cef': Common Event Format;

Type: string

Supported Values: syslog, cef

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.16 aam authentication logon

Authentication logon configuration

logon Specification

Type	*Intermediate Resource*
Element Name	logon

Element Attributes	logon_attributes
Schema	`logon schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/logon

logon_attributes

logon attributes

form-based-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/form-based/{name}*

http-authenticate

Description: http-authenticate is a **JSON Block**. Please see below for *http-authenticate*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate*

form-based-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *form-based-list_cp-page-cfg*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *form-based-list_logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *form-based-list_notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *form-based-list_portal*

Type: Object

retry

Description Specify max. number of failure retry (Specify retry count (1 ~ 32), default is 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based-list_notify-cp-page-cfg

Specification	
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

form-based-list_portal

Specification	
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page new-pin-page and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

form-based-list_logon-page-cfg

Specification	
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is "Invalid username or password. Please try again.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

form-based-list_cp-page-cfg

Specification	
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-authenticate

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

http-authenticate_instance-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Specify max. number of failure retry (1 ~ 32), default is 3

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-authenticate_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

http-authenticate_instance-list_auth-method

Specification	
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method_negotiate*

Type: Object

ntlm

Description: ntlm is a **JSON Block**. Please see below for *http-authenticate_instance-list_auth-method_ntlm*

Type: Object

http-authenticate_instance-list_auth-method_ntlm

Specification	
Type	*object*

ntlm-enable

Description Enable NTLM logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-authenticate_instance-list_auth-method_negotiate

Specification	
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http-authenticate_instance-list_auth-method_basic

Specification	
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

{
    "response": {
        "status": "OK"
    }
}
```

form-based-list

form-based-list is **JSON List** of *form-based attributes*

form-based-list : [

{ *form-based attributes* },

{ *form-based attributes* },

...

]

form-based attributes

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

challenge-variable

Description Specify challenge variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Description: cp-page-cfg is a **JSON Block**. Please see below for *cp-page-cfg*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

logon-page-cfg

Description: logon-page-cfg is a **JSON Block**. Please see below for *logon-page-cfg*

Type: Object

name

Description Specify form-based authentication logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-variable

Description Specify new-pin variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Description: notify-cp-page-cfg is a **JSON Block**. Please see below for *notify-cp-page-cfg*

Type: Object

portal

Description: portal is a **JSON Block**. Please see below for *portal*

Type: Object

retry

Description Specify max. number of failure retry (Specify retry count (1 ~ 32), default is 3)

Type: number

Range: 1-32

Default: 3

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

notify-cp-page-cfg

Specification	
Type	*object*

notifychangepassword-change-url

Description Specify change password action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

notifychangepassword-continue-url

Description Specify continue action url for notifychangepassword form

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

portal

Specification	
Type	*object*

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page new-pin-page and next-token-page are mutually exclusive

changepasswordpage

Description Specify change password page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default-portal

Description Use default portal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: default-portal and portal-name are mutually exclusive

failpage

Description Specify logon fail page name (portal fail page name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon

Description Specify logon page name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

next-token-page

Description Specify next token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: next-token-page and challenge-page are mutually exclusive

notifychangepasswordpage

Description Specify change password notification page name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

portal-name

Description Specify portal name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: portal-name and default-portal are mutually exclusive

logon-page-cfg

Specification	
Type	*object*

action-url

Description Specify form submission action url

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

authz-failure-message

Description Specify authorization failure message shown in logon page (Specify error string, default is "Authorization failed. Please contact your system administrator.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

captcha-variable

Description Specify captcha variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-change-password-link

Description Don't display change password link on logon page forcibly even backend authentication server supports it (LDAP or Kerberos)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-failure-message

Description Specify login failure message shown in logon page (Specify error string, default is "Invalid username or password. Please try again.")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passcode-variable

Description Specify passcode variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-variable

Description Specify username variable name in form submission

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-page-cfg

Specification	
Type	*object*

changepassword-url

Description Specify changepassword form submission action url (changepassword action url)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cp-cfm-pwd-enum

Description 'changepassword-password-confirm-variable': Specify password confirm variable name in form submission;

Type: string

Supported Values: changepassword-password-confirm-variable

cp-cfm-pwd-var

Description Specify password confirm variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-new-pwd-enum

Description 'changepassword-new-password-variable': Specify new password variable name in form submission;

Type: string

Supported Values: changepassword-new-password-variable

cp-new-pwd-var

Description Specify new password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-old-pwd-enum

Description 'changepassword-old-password-variable': Specify old password variable name in form submission;

Type: string

Supported Values: changepassword-old-password-variable

cp-old-pwd-var

Description Specify old password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cp-user-enum

Description 'changepassword-username-variable': Specify username variable name in form submission;

Type: string

Supported Values: changepassword-username-variable

cp-user-var

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.1.18 aam authentication logon http-authenticate

HTTP-authenticate Logon

http-authenticate Specification

Type	*Intermediate Resource*

http-authenticate_attributes

http-authenticate attributes

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/logon/http-authenticate/instance/{name}*

instance-list

Specification	
Type	*list*
Block object keys	

account-lock

Description Lock the account when the failed logon attempts is exceeded

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method

Description: auth-method is a **JSON Block**. Please see below for *instance-list_auth-method*

Type: Object

duration

Description The time an account remains locked in seconds (default 1800)

Type: number

Range: 1-86400

Default: 1800

name

Description Specify HTTP-Authenticate logon name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-logon-http-ins-tmpl*

retry

Description Specify max. number of failure retry (1 ~ 32), default is 3

Type: number

Range: 1-32

Default: 3

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'spn_krb_request': SPN Kerberos Request; 'spn_krb_success': SPN Kerberos Success; 'spn_krb_faiure': SPN Kerberos Failure;

Type: string

Supported Values: all, spn_krb_request, spn_krb_success, spn_krb_faiure

instance-list_auth-method

Specification	
Type	*object*

basic

Description: basic is a **JSON Block**. Please see below for *instance-list_auth-method_basic*

Type: Object

negotiate

Description: negotiate is a **JSON Block**. Please see below for *instance-list_auth-method_negotiate*

Type: Object

ntlm

Description: ntlm is a **JSON Block**. Please see below for *instance-list_auth-method_ntlm*

Type: Object

instance-list_auth-method_ntlm

Specification	
Type	*object*

ntlm-enable

Description Enable NTLM logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

instance-list_auth-method_negotiate

Specification	
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

instance-list_auth-method_basic

Specification	
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-method_ntlm

Specification	
Type	*object*

ntlm-enable

Description Enable NTLM logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method_negotiate

Specification	
Type	*object*

negotiate-enable

Description Enable SPENGO logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-method_basic

Specification	
Type	*object*

basic-enable

Description Enable Basic logon

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-realm

Description Specify realm for basic logon

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-page

Description Specify challenge page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: challenge-page and new-pin-page are mutually exclusive

challenge-response-form

Description Specify challenge-response form for RSA-RADIUS authentication

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

challenge-variable

Description Specify challenge variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pin-page

Description Specify new PIN page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-pin-page and challenge-page are mutually exclusive

new-pin-variable

Description Specify new PIN variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-page

Description Specify next-token page name for RSA-RADIUS

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

next-token-variable

Description Specify next-token variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	spn_krb_success	8	SPN Kerberos Success
	spn_krb_request	8	SPN Kerberos Request
	spn_krb_faiure	8	SPN Kerberos Failure

2.1.20 aam authentication oauth

AAM Oauth 2.0 related configuration

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auth-req': auth-req; 'auth-succ': auth-succ; 'auth-fail': auth-fail; 'auth-error': auth-error; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail; 'other-error': other-error;

Type: string

Supported Values: all, auth-req, auth-succ, auth-fail, auth-error, relay-req, relay-succ, relay-fail, other-error

client-list

Specification	
Type	*list*
Block object keys	

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL, this URL will plus /js automatically when authorization-endpoint using GET metho

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

authorization-server-list

Description 'ignored': Clients' browser will send data according to server spec (default); 'post': Clients' browser will send data by POST; 'get': Clients' browser will send data by GET;

Type: string

Supported Values: ignored, post, get

issuer

Description Specify openid provider name for authorization

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify authorization server object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

server-method

Description 'post': AX will send data to server by POST (default); 'get': AX will send data to server by GET;

Type: string

Supported Values: post, get

token-endpoint

Description Specify URI for token exchange

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify certificate to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert and verification-jwks are mutually exclusive

verification-jwks

Description Specify jwks file to verify ID token signature

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks and verification-cert are mutually exclusive

authorization-server-list_sampling-enable

Specification

client attributes

client-list

client-list is **JSON List** of *client attributes*

client-list : [

{ *client attributes* },

{ *client attributes* },

...

]

client attributes

client-id

Description Specify oauth client-id

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-secret

Description

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

grant-type

Description 'implicit': The authorization server will return access token directly.; 'authorization-code': The authorization server will respond with code which can be exchange for access token.; 'hybrid-code-id-token': The authorization server will respond with both code and id token.; 'hybrid-code-token': The authorization server will respond with both code and access token.; 'hybrid-all': The authorization server will respond with code, access token and id token;

Type: string

Supported Values: implicit, authorization-code, hybrid-code-id-token, hybrid-code-token, hybrid-all

infinity

Description Auth session never time out whatever value oauth servers' response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: infinity and token-lifetime are mutually exclusive

name

Description Specify client object name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

parameter-nonce-enable

Description Enable nonce parameter for authorization and token request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirection-endpoint

Description Oauth client redirection endpoint service URL, this URL will plus /js automatically when authorization-endpoint using GET metho

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

scope

Description Specify request scope parameters (e.g. profile email address phone)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

session-init-ttl

Description TTL for Thunder to wait for first response from authorization server

Type: number

Range: 1-60

token-lifetime

Description

Type: number

Range: 1-2592000

Mutual Exclusion: token-lifetime and infinity are mutually exclusive

type

Description 'openid-connect': openid-connect;

Type: string

Supported Values: openid-connect

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Maximum Length: 64 characters

Maximum Length: 1 characters

logon-fail_fail-msg-cfg

Specification	
Type	*object*

fail-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon-fail_title-cfg

Specification	
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Try Too Many Times)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon-fail_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

logo-cfg

Specification	
Type	*object*

height

Description Specify logo image height (Default: 71)

Type: number

Range: 50-400

Default: 71

logo

Description Specify logo image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

width

Description Specify logo image width (Default: 134)

Type: number

Range: 50-400

Default: 134

notify-change-password

Specification

Description: background is a **JSON Block**. Please see below for *notify-change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *notify-change-password_cfm-pwd-cfg*

Type: Object

change-text

Description Specify change button text in default change password notification page (Default: Change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-url

Description Specify change password action URL in default change password notification page (Default: /notify_change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password-var

Description Specify confirm password variable name in default change password notification page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-text

Description Specify continue button text in default change password notification page (Default: Continue)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

continue-url

Description Specify continue action URL in default change password notification page (Default: /continue.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password notification page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *notify-change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password notification page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *notify-change-password_old-pwd-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *notify-change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password notification page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

notify-change-password_new-pwd-cfg

Specification

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-change-password_old-pwd-cfg

Specification	
Type	*object*

old-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

notify-change-password_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

notify-change-password_cfm-pwd-cfg

Specification	
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notify-change-password_username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon

Specification	
Type	*object*

action-url

Description Specify form action URL in default logon page (Default: /logon.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *logon_background*

Type: Object

captcha-type

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *logon_fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *logon_passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *logon_password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *logon_reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *logon_username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logon_passcode-cfg

Specification	
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_reCAPTCHA-cfg

Specification	
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

logon_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

logon_fail-msg-cfg

Specification	
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color (Default: red)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logon_password-cfg

Specification	
Type	*object*

pass-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logon_username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-password

Specification	
Type	*object*

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *change-password_background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *change-password_cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *change-password_new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *change-password_old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *change-password_title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *change-password_username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

change-password_new-pwd-cfg

Specification	
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

change-password_background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

change-password_cfm-pwd-cfg

Specification	
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-password_username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.1.26 aam authentication portal change-password

Change password page configuration

change-password Specification

Type	*Configuration Resource*
Element Name	change-password
Element URI	/axapi/v3/aam/authentication/portal/{name}/change-password
Element Attributes	change-password_attributes
Schema	`change-password schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authentication/portal/{name}/change-password

change-password attributes

```
POST /axapi/v3/aam/authentication/portal/default-portal/change-password
Payload:
{
    "change-password": {
        "background": {
            "bgfile": "a"
        }
    }
}
```

Get Object

GET

/axapi/v3/aam/authentication/portal/{name}/change-password

change-password attributes

```
GET /axapi/v3/aam/authentication/portal/default-portal/change-password
Reponse:

Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

change-password attributes

action-url

Description Specify form action URL in default change password page (Default: /change.fo)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Description: background is a **JSON Block**. Please see below for *background*

Type: Object

cfm-pwd-cfg

Description: cfm-pwd-cfg is a **JSON Block**. Please see below for *cfm-pwd-cfg*

Type: Object

confirm-password-var

Description Specify confirm password variable name in default change password page (Default: cp_cfm_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-password-var

Description Specify new password variable name in default change password page (Default: cp_new_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

new-pwd-cfg

Description: new-pwd-cfg is a **JSON Block**. Please see below for *new-pwd-cfg*

Type: Object

old-password-var

Description Specify old password variable name in default change password page (Default: cp_old_pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Description: old-pwd-cfg is a **JSON Block**. Please see below for *old-pwd-cfg*

Type: Object

reset-text

Description Specify reset button text in default change password page (Default: Reset)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default change password page (Default: Submit)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Description: title-cfg is a **JSON Block**. Please see below for *title-cfg*

Type: Object

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

username-var

Description Specify username variable name in default change password page (Default: cp_usr)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

new-pwd-cfg

Specification	
Type	*object*

new-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: new-color-name and new-color-value are mutually exclusive

new-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: new-color-value and new-color-name are mutually exclusive

new-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: new-face and new-font-custom are mutually exclusive

new-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

new-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: new-font-custom and new-face are mutually exclusive

new-password

Description Configure new password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

new-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

new-text

Description Specify new password text (Default: New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Specification	
Type	*object*

title

Description Configure title in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: title-color-name and title-color-value are mutually exclusive

title-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: title-color-value and title-color-name are mutually exclusive

title-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: title-face and title-font-custom are mutually exclusive

title-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: title-font-custom and title-face are mutually exclusive

title-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

title-text

Description Specify title (Default: Please Change Your Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

old-pwd-cfg

Specification	
Type	*object*

old-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: old-color-name and old-color-value are mutually exclusive

old-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: old-color-value and old-color-name are mutually exclusive

old-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: old-face and old-font-custom are mutually exclusive

old-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

old-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: old-font-custom and old-face are mutually exclusive

old-password

Description Configure old password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

old-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

cfm-pwd-cfg

Specification	
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Description 'reCAPTCHAv2-checkbox': Google reCAPTCHAv2 Checkbox; 'reCAPTCHAv2-invisible': Google reCAPTCHAv2 Invisible; 'reCAPTCHAv3': Google reCAPTCHAv3;

Type: string

Supported Values: reCAPTCHAv2-checkbox, reCAPTCHAv2-invisible, reCAPTCHAv3

enable-CAPTCHA

Description Enable CAPTCHA in deafult logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-passcode

Description Enable passcode field in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

fail-msg-cfg

Description: fail-msg-cfg is a **JSON Block**. Please see below for *fail-msg-cfg*

Type: Object

passcode-cfg

Description: passcode-cfg is a **JSON Block**. Please see below for *passcode-cfg*

Type: Object

passcode-var

Description Specify passcode variable name in default logon page (Default: passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Description: password-cfg is a **JSON Block**. Please see below for *password-cfg*

Type: Object

password-var

Description Specify password variable name in default logon page (Default: pwd)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Description: reCAPTCHA-cfg is a **JSON Block**. Please see below for *reCAPTCHA-cfg*

Type: Object

site-key-string

Description Site key string

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

submit-text

Description Specify submit button text in default logon page (Default: Log In)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

username-var

Description Specify username variable name in default logon page (Default: user)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

passcode-cfg

Specification	
Type	*object*

passcode

Description Configure passcode text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passcode-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: passcode-color-name and passcode-color-value are mutually exclusive

passcode-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: passcode-color-value and passcode-color-name are mutually exclusive

passcode-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: passcode-face and passcode-font-custom are mutually exclusive

passcode-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

passcode-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: passcode-font-custom and passcode-face are mutually exclusive

passcode-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

passcode-text

Description Specify passcode text (Default: Passcode)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

reCAPTCHA-cfg

Specification	
Type	*object*

reCAPTCHA-action

Description Specify reCAPTCHA action (Specify action string, only accept alphanumeric, underscore, and slash (Default: A10_DEFAULT_LOGON))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: A10_DEFAULT_LOGON

reCAPTCHA-badge

Description 'bottom-left': bottom left corner; 'bottom-right': bottom right corner;

Type: string

Supported Values: bottom-left, bottom-right

Default: bottom-right

reCAPTCHA-size

Description 'normal': normal size; 'compact': compact size;

Type: string

Supported Values: normal, compact

Default: normal

reCAPTCHA-theme

Description 'light': light theme; 'dark': dark theme;

Type: string

Supported Values: light, dark

Default: light

background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

fail-msg-cfg

Specification	
Type	*object*

authz-fail-msg

Description Configure authorization failure message in default logon page, its text attributes follow fail-msg's (Specify authorization failure message (Default: Authorization failed. Please contact your system administrator.))

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

fail-color

Description Specify font color (Default: red)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: red

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure login failure message in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 5)

Type: number

Range: 1-7

Default: 5

fail-text

Description Specify login failure message (Default: Invalid username or password. Please try again.)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password-cfg

Specification	
Type	*object*

pass-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: pass-color-name and pass-color-value are mutually exclusive

pass-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: pass-color-value and pass-color-name are mutually exclusive

pass-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: pass-face and pass-font-custom are mutually exclusive

pass-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

pass-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pass-font-custom and pass-face are mutually exclusive

pass-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

pass-text

Description Specify password text (Default: Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Configure password text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: User Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default logon page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.1.28 aam authentication portal logon-fail

Logon fail page configuration

logon-fail Specification

Specification	
Type	*object*

fail-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: fail-color-name and fail-color-value are mutually exclusive

fail-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: fail-color-value and fail-color-name are mutually exclusive

fail-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: fail-face and fail-font-custom are mutually exclusive

fail-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fail-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fail-font-custom and fail-face are mutually exclusive

fail-msg

Description Configure logon failure message in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

fail-text

Description Specify logon failure message (Default: Login Failed!!)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

title-cfg

Specification	
Type	*object*

title

Description Configure title in default logon fail page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

title-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

title-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Default: 3

old-text

Description Specify old password text (Default: Old Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

background

Specification	
Type	*object*

bgcolor-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: white

Mutual Exclusion: bgcolor-name bgfile and bgcolor-value are mutually exclusive

bgcolor-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: bgcolor-value bgfile and bgcolor-name are mutually exclusive

bgfile

Description Specify background image filename

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bgfile bgcolor-name and bgcolor-value are mutually exclusive

bgstyle

Description 'tile': Tile; 'stretch': Stretch; 'fit': Fit;

Type: string

Supported Values: tile, stretch, fit

Default: tile

cfm-pwd-cfg

Specification	
Type	*object*

cfm-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: cfm-color-name and cfm-color-value are mutually exclusive

cfm-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: cfm-color-value and cfm-color-name are mutually exclusive

cfm-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: cfm-face and cfm-font-custom are mutually exclusive

cfm-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cfm-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: cfm-font-custom and cfm-face are mutually exclusive

cfm-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

cfm-text

Description Specify confirm password text (Default: Confirm New Password)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

confirm-password

Description Configure confirm password text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Specification	
Type	*object*

user-color

Description Specify font color (Default: black)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-color-name

Description 'aqua': aqua; 'black': black; 'blue': blue; 'fuchsia': fuchsia; 'gray': gray; 'green': green; 'lime': lime; 'maroon': maroon; 'navy': navy; 'olive': olive; 'orange': orange; 'purple': purple; 'red': red; 'silver': silver; 'teal': teal; 'white': white; 'yellow': yellow;

Type: string

Supported Values: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, orange, purple, red, silver, teal, white, yellow

Default: black

Mutual Exclusion: user-color-name and user-color-value are mutually exclusive

user-color-value

Description Specify 6-digit HEX color value

Type: string

Maximum Length: 6 characters

Maximum Length: 6 characters

Mutual Exclusion: user-color-value and user-color-name are mutually exclusive

user-face

Description 'Arial': Arial; 'Courier_New': Courier New; 'Georgia': Georgia; 'Times_New_Roman': Times New Roman; 'Verdana': Verdana;

Type: string

Supported Values: Arial, Courier_New, Georgia, Times_New_Roman, Verdana

Default: Arial

Mutual Exclusion: user-face and user-font-custom are mutually exclusive

user-font

Description Sepcify font (Default: Arial)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-font-custom

Description Specify custom font

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: user-font-custom and user-face are mutually exclusive

user-size

Description Specify font size (Default: 3)

Type: number

Range: 1-7

Default: 3

user-text

Description Specify username text (Default: Username)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Configure username text in default change password notification page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.1.30 aam authentication relay

Authentication relay configuration

relay Specification

Type	*Intermediate Resource*
Element Name	relay
Element URI	/axapi/v3/aam/authentication/relay
Element Attributes	relay_attributes
Schema	`relay schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authentication/relay

relay_attributes

relay attributes

form-based

Description: form-based is a **JSON Block**. Please see below for *form-based*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/form-based*

http-basic

Description: http-basic is a **JSON Block**. Please see below for *http-basic*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic*

kerberos

Description: kerberos is a **JSON Block**. Please see below for *kerberos*

Type: Object

Refernce Object: */axapi/v3/aam/authentication/relay/kerberos*

ntlm-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/ntlm/{name}*

ws-federation-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/ws-federation/{name}*

ntlm-list

Specification	
Type	*list*
Block object keys	

domain

Description Specify NTLM domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-request-disable

Description Disable NTLM relay processing for large requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify NTLM authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ntlm-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Specify NTLM version, default is NTLM 2

Type: number

Range: 1-2

Default: 2

ntlm-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'failure': Failure; 'request': Request; 'response': Response; 'http-code-200': HTTP 200 OK; 'http-code-400': HTTP 400 Bad Request; 'http-code-401': HTTP 401 Unauthorized; 'http-code-403': HTTP 403 Forbidden; 'http-code-404': HTTP 404 Not Found; 'http-code-500': HTTP 500 Internal Server Error; 'http-code-503': HTTP 503 Service Unavailable; 'http-code-other': Other HTTP Response; 'buffer-alloc-fail': Buffer Allocation Failure; 'encoding-fail': Encoding Failure; 'insert-header-fail': Insert Header Failure; 'parse-header-fail': Parse Header Failure; 'internal-error': Internal Error;

Type: string

Supported Values: all, success, failure, request, response, http-code-200, http-code-400, http-code-401, http-code-403, http-code-404, http-code-500, http-code-503, http-code-other, buffer-alloc-fail, encoding-fail, insert-header-fail, parse-header-fail, internal-error, ntlm-auth-skipped, large-request-processing, large-request-flushed, head-negotiate-request-sent, head-auth-request-sent

form-based

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

form-based_instance-list_request-uri-list

Specification	
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *form-based_instance-list_request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

form-based_instance-list_request-uri-list_cookie

Specification	
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *form-based_instance-list_request-uri-list_cookie_cookie-value*

Type: Object

form-based_instance-list_request-uri-list_cookie_cookie-value

Specification	
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ws-federation-list

Specification	
Type	*list*
Block object keys	

application-server

Description 'sharepoint': Microsoft SharePoint; 'exchange-owa': Microsoft Exchange OWA;

Type: string

Supported Values: sharepoint, exchange-owa

authentication-uri

Description Specify WS-Federation relay URI, default is /_trust/

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify WS-Federation authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ws-federation-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure;

Type: string

Supported Values: all, request, success, failure

oauth-list

Specification	
Type	*list*
Block object keys	

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oauth-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

saml-list

Specification	
Type	*list*
Block object keys	

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

saml-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

Type: string

Supported Values: all, request, success, failure, error

kerberos

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/kerberos/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Total Request Send; 'response-get': Total Response Get; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, request-send, response-get, timeout-error, other-error, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

kerberos_instance-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

kerberos_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

http-basic

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic/instance/{name}*

http-basic_instance-list

Specification	
Type	*list*
Block object keys	

domain

Description Specify user domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-format

Description 'user-principal-name': Append domain with User Principal Name format. (e.g. user@domain); 'down-level-logon-name': Append domain with Down-Level Logon Name format. (e.g. domainuser);

Type: string

Supported Values: user-principal-name, down-level-logon-name

Default: down-level-logon-name

name

Description Specify HTTP basic authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-hbase-inst-tmpl*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-basic_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'no-creds': No Credential; 'bad-req': Bad Request; 'unauth': Unauthorized; 'forbidden': Forbidden; 'not-found': Not Found; 'server-error': Internal Server Error; 'unavailable': Service Unavailable;

Type: string

Supported Values: all, success, no-creds, bad-req, unauth, forbidden, not-found, server-error, unavailable

2.1.31 aam authentication relay form-based

Form-based Authentication Relay

form-based Specification

Type	*Intermediate Resource*

instance attributes

name

Description Specify form-based authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-form-inst-tmpl*

request-uri-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/relay/form-based/instance/{name}/request-uri/{match-type}+{uri}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'invalid_srv_rsp': Invalid Server Response; 'post_fail': POST Failed; 'invalid_cred': Invalid Credential; 'bad_req': Bad Request; 'not_fnd': Not Found; 'error': Internal Server Error; 'other_error': Other Error;

Type: string

Supported Values: all, request, invalid_srv_rsp, post_fail, invalid_cred, bad_req, not_fnd, error, other_error

request-uri-list

Specification	
Type	*list*
Block object keys	

action-uri

Description Specify the action-URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

cookie

Description: cookie is a **JSON Block**. Please see below for *request-uri-list_cookie*

Type: Object

domain-variable

Description Specify domain variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

max-packet-collect-size

Description Specify the max packet collection size in bytes, default is 1MB

Type: number

Range: 1024-2097152

Default: 1048576

other-variables

Description Specify other variables (n1=v1&n2=v2) in form relay

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password-variable

Description Specify password variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uri

Description Specify request URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-variable

Description Specify username variable name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

request-uri-list_cookie

Specification	
Type	*object*

cookie-value

Description: cookie-value is a **JSON Block**. Please see below for *request-uri-list_cookie_cookie-value*

Type: Object

request-uri-list_cookie_cookie-value

Specification	
Type	*object*

cookie-value

Description Specify cookie in POST packet

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	invalid_cred	8	Invalid Credential
	bad_req	8	Bad Request

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

instance attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

kerberos-account

Description Specify the kerberos account name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

kerberos-kdc

Description Specify the kerberos kdc ip or host name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc and kerberos-kdc-service-group are mutually exclusive

kerberos-kdc-service-group

Description Specify an authentication service group as multiple KDCs

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: kerberos-kdc-service-group and kerberos-kdc are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

kerberos-realm

Description Specify the kerberos realm

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description Specify Kerberos authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

password

Description Specify password of Kerberos password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Specify The KDC port, default is 88

Type: number

Range: 1-65535

Default: 88

sampling-enable

Type: List

secret-string

Description The kerberos client password

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

timeout

Description Specify timeout for kerberos transport, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-send': Request Send; 'response-receive': Response Receive; 'current-requests-of-user': Current Pending Requests of User; 'tickets': Tickets;

Type: string

Supported Values: all, request-send, response-receive, current-requests-of-user, tickets

stats data

	Counter	Size	Description
	current-requests-of-user	8	Current Pending Requests of User
	response-receive	8	Response Receive
	request-send	8	Request Send
	tickets	8	Tickets

operational data

	Counter	Size	Description
	ticket-cache	string	ticket-cache
	item-list		item-list
	default-principal	string	default-principal

2.1.38 aam authentication relay ntlm

NTLM Authentication Relay

ntlm Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*ntlm-list*
Collection URI	/axapi/v3/aam/authentication/relay/ntlm
Element Name	ntlm
Element URI	/axapi/v3/aam/authentication/relay/ntlm/{name}

    }
}
```

ntlm-list

ntlm-list is **JSON List** of *ntlm attributes*

ntlm-list : [

{ *ntlm attributes* },

{ *ntlm attributes* },

...

]

ntlm attributes

domain

Description Specify NTLM domain, default is null

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

large-request-disable

Description Disable NTLM relay processing for large requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify NTLM authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-relay-ntlm-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description Specify NTLM version, default is NTLM 2

Type: number

Range: 1-2

Default: 2

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'success': Success; 'failure': Failure; 'request': Request; 'response': Response; 'http-code-200': HTTP 200 OK; 'http-code-400': HTTP 400 Bad Request; 'http-code-401': HTTP 401 Unauthorized; 'http-code-403': HTTP 403 Forbidden; 'http-code-404': HTTP 404 Not Found; 'http-code-500': HTTP 500 Internal Server Error; 'http-code-503': HTTP 503 Service Unavailable; 'http-code-other': Other HTTP Response; 'buffer-alloc-fail': Buffer Allocation Failure; 'encoding-fail': Encoding Failure; 'insert-header-fail': Insert Header Failure; 'parse-header-fail': Parse Header Failure; 'internal-error': Internal Error;

Type: string

Supported Values: all, success, failure, request, response, http-code-200, http-code-400, http-code-401, http-code-403, http-code-404, http-code-500, http-code-503, http-code-other, buffer-alloc-fail, encoding-fail, insert-header-fail, parse-header-fail, internal-error, ntlm-auth-skipped, large-request-processing, large-request-flushed, head-negotiate-request-sent, head-auth-request-sent

stats data

	Counter	Size	Description
	parse-header-fail	8	Parse Header Failure
	ntlm-auth-skipped	8	Requests for which NTLM relay is skipped
	head-negotiate-request-sent	8	HEAD requests sent with NEGOTIATE header
	http-code-other	8	Other HTTP Response
	internal-error	8	Internal Error
	buffer-alloc-fail	8	Buffer Allocation Failure
	failure	8	Failure
	http-code-400	8	HTTP 400 Bad Request
	http-code-401	8	HTTP 401 Unauthorized
	http-code-403	8	HTTP 403 Forbidden
	http-code-404	8	HTTP 404 Not Found
	http-code-500	8	HTTP 500 Internal Server Error
	http-code-503	8	HTTP 503 Service Unavailable
	large-request-processing	8	Requests invoking large request processing
	response	8	Response
	head-auth-request-sent	8	HEAD requests sent with AUTH header
	http-code-200	8	HTTP 200 OK
	success	8	Success
	encoding-fail	8	Encoding Failure
	request	8	Request
	large-request-flushed	8	Large requests sent to server
	insert-header-fail	8	Insert Header Failure

2.1.39 aam authentication relay oauth

all

Description All URI can be relay

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and match-type are mutually exclusive

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

Mutual Exclusion: match-type and all are mutually exclusive

match-uri

Description

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description Specify oauth authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-type

Description 'access-token': Relay access token to backend; 'id-token': Relay JWT to backend;

Type: string

Supported Values: access-token, id-token

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'relay-req': relay-req; 'relay-succ': relay-succ; 'relay-fail': relay-fail;

Type: string

Supported Values: all, relay-req, relay-succ, relay-fail

stats data

	Counter	Size	Description
	relay-succ	8	relay-succ
	relay-fail	8	relay-fail
	relay-req	8	relay-req

2.1.40 aam authentication relay saml

SAML Authentication Relay

saml Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*saml-list*
Collection URI	/axapi/v3/aam/authentication/relay/saml
Element Name	saml

{ *saml attributes* },

...

]

saml attributes

idp-auth-uri

Description Specify the URI for IDP to handle SAML authentication request

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

match-type

Description 'equals': URI exactly matches the string; 'contains': URI string contains another sub string; 'starts-with': URI string starts with sub string; 'ends-with': URI string ends with sub string;

Type: string

Supported Values: equals, contains, starts-with, ends-with

match-uri

Description Match URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

method

Description 'get-from-backend': Get RelayState parameter from backend server; 'request-uri': Use the (URL encoded) current request-uri as the RelayState;

Type: string

Supported Values: get-from-backend, request-uri

Mutual Exclusion: method and value are mutually exclusive

name

Description Specify SAML authentication relay name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

relay-acs-uri

Description Specify the backend server assertion consuming service URI

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

retry-number

Description Specify how many continuous fail for SAML relay will trigger. Default will not retry.

Type: number

Range: 0-10

Default: 0

sampling-enable

Type: List

server-cookie-name

Description Specify the cookie name that used by backend server for authenticated users

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Use the fixed string as the RelayState

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: value and method are mutually exclusive

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'success': Success; 'failure': Failure; 'error': Error;

SP-initiated-single-logout-service

Type: List

acs-uri-bypass

Description After user authenticated, bypass requests with assertion-consuming-service location URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Description: adfs-ws-federation is a **JSON Block**. Please see below for *service-provider-list_adfs-ws-federation*

Type: Object

artifact-resolution-service

Type: List

assertion-consuming-service

Type: List

bad-request-redirect-url

Description Specify URL to redirect

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

certificate

Description SAML service provider certificate file (PFX format is required.)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

entity-id

Description SAML service provider entity ID

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

metadata-export-service

Description: metadata-export-service is a **JSON Block**. Please see below for *service-provider-list_metadata-export-service*

Type: Object

name

Description Specify SAML authentication service provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-saml-service-prov-tmpl*

require-assertion-signed

Description: require-assertion-signed is a **JSON Block**. Please see below for *service-provider-list_require-assertion-signed*

Type: Object

saml-request-signed

Description: saml-request-signed is a **JSON Block**. Please see below for *service-provider-list_saml-request-signed*

Type: Object

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *service-provider-list_soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-provider-list_require-assertion-signed

Specification	
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_single-logout-service

Specification	
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_assertion-consuming-service

Specification	
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

service-provider-list_saml-request-signed

Specification	
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_SP-initiated-single-logout-service

Specification	
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_adfs-ws-federation

Specification	
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_soap-tls-certificate-validate

Specification	
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-provider-list_artifact-resolution-service

Specification	
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

service-provider-list_metadata-export-service

Specification	
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

identity-provider-list

Specification	
Type	*list*
Block object keys	

metadata

Description URL of SAML identity provider's metadata file

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

name

Description SAML authentication identity provider name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

reload-interval

Description Specify URI metadata reload period (Specify URI metadata reload period in seconds, default is 28800)

Type: number

Range: 1-86400

Default: 28800

reload-metadata

Description Reload IdP's metadata immediately

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'requests-to-a10saml': Total Request to A10 SAML Service; 'responses-from-a10saml': Total Response from A10 SAML Service; 'sp-metadata-export-req': Total Metadata Export Request; 'sp-metadata-export-success': Toal Metadata Export Success; 'login-auth-req': Total Login Authentication Request; 'login-auth-resp': Total Login Authentication Response; 'acs-req': Total SAML Single-Sign-On Request; 'acs-success': Total SAML Single-Sign-On Success; 'acs-authz-fail': Total SAML Single-Sign-On Authorization Fail; 'acs-error': Total SAML Single-Sign-On Error; 'slo-req': Total Single Logout Request; 'slo-success': Total Single Logout Success; 'slo-error': Total Single Logout Error; 'other-error': Total Other Error;

Type: string

Supported Values: all, requests-to-a10saml, responses-from-a10saml, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, relay-req, relay-success, relay-fail, relay-error, other-error

session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metadata-monitor

Specification	
Type	*object*

acs-continuous-fail-threshold

Description Specify how many ACS continuous fails will trigger metadata reload (ACS continuous fail threshold (default: 10))

Type: number

Range: 2-254

acs-missing-period

Description Specify how long no acs request will trigger metadata reload (in seconds (default: 60))

Type: number

Range: 1-254

acs-missing-threshold

Description Specify how many ACS request missing in the period will trigger metadata reload (ACS request missing threshold (default: 100))

Type: number

Range: 10-254

status

Description 'enable': Enable SAML metadata out-of-sync detection; 'disable': Disable SAML metadata out-of-sync detection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

metadata

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-url

Description SAML service provider service URL (ex. https://www.a10networks.com/saml.sso)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

signature-algorithm

Description 'SHA1': use SHA1 as signature algorithm (default); 'SHA256': use SHA256 as signature algorithm;

Type: string

Supported Values: SHA1, SHA256

Default: SHA1

single-logout-service

Type: List

soap-tls-certificate-validate

Description: soap-tls-certificate-validate is a **JSON Block**. Please see below for *soap-tls-certificate-validate*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

require-assertion-signed

Specification	
Type	*object*

require-assertion-signed-enable

Description Enable required signing of SAML assertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

single-logout-service

Specification	
Type	*list*
Block object keys	

SLO-binding

Description 'post': POST binding of single logout service; 'redirect': Redirect binding of single logout service; 'soap': SOAP binding of single logout service;

Type: string

Supported Values: post, redirect, soap

SLO-location

Description The location of name-id management service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

assertion-consuming-service

Specification	
Type	*list*
Block object keys	

assertion-binding

Description 'artifact': Artifact binding of assertion consuming service; 'paos': PAOS binding of assertion consuming service; 'post': POST binding of assertion consuming service;

Type: string

Supported Values: artifact, paos, post

assertion-index

Description The index of assertion consuming service

Type: number

Range: 0-5

assertion-location

Description The location of assertion consuming service endpoint. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'sp-metadata-export-req': Metadata Export Request; 'sp-metadata-export-success': Metadata Export Success; 'login-auth-req': Login Authentication Request; 'login-auth-resp': Login Authentication Response; 'acs-req': SAML Single-Sign-On Request; 'acs-success': SAML Single-Sign-On Success; 'acs-authz-fail': SAML Single-Sign-On Authorization Fail; 'acs-error': SAML Single-Sign-On Error; 'slo-req': Single Logout Request; 'slo-success': Single Logout Success; 'slo-error': Single Logout Error; 'other-error': Other Error;

Type: string

Supported Values: all, sp-metadata-export-req, sp-metadata-export-success, login-auth-req, login-auth-resp, acs-req, acs-success, acs-authz-fail, acs-error, slo-req, slo-success, slo-error, sp-slo-req, glo-slo-success, loc-slo-success, par-slo-success, other-error

saml-request-signed

Specification	
Type	*object*

saml-request-signed-disable

Description Disable signing signature for SAML (Authn/Artifact Resolve) requests

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

SP-initiated-single-logout-service

Specification	
Type	*list*
Block object keys	

SP-SLO-location

Description The location of SP-initiated single logout service endpoint. (ex. /Logout)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

asynchronous

Description the IDP will not send a logout response to AX

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adfs-ws-federation

Specification	
Type	*object*

ws-federation-enable

Description Enable ADFS WS-Federation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

soap-tls-certificate-validate

Specification	
Type	*object*

soap-tls-certificate-validate-disable

Description Disable verification for server certificate in TLS session when resolving artificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

artifact-resolution-service

Specification	
Type	*list*
Block object keys	

artifact-binding

Description 'soap': SOAP binding of artifact resolution service;

Type: string

Supported Values: soap

artifact-index

Description The index of artifact resolution service

Type: number

Range: 0-5

artifact-location

Description The location of artifact resolution service. (ex. /SAML/POST)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

metadata-export-service

Specification	
Type	*object*

md-export-location

Description Specify the URI to export SP metadata (Export URI. Default is /A10SP_Metadata)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sign-xml

Description Sign exported SP metadata XML with SP's certificate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats data

	Counter	Size	Description
	login-auth-req	8	Login Authentication Request
	slo-error	8	Single Logout Error
	sp-metadata-export-success	8	Metadata Export Success
	par-slo-success	8	Total Partial Logout Success
	acs-authz-fail	8	SAML Single-Sign-On Authorization Fail
	loc-slo-success	8	Total Local Logout Success
	slo-req	8	Single Logout Request
	login-auth-resp	8	Login Authentication Response
	slo-success	8	Single Logout Success
	acs-success	8	SAML Single-Sign-On Success
	acs-error	8	SAML Single-Sign-On Error
	other-error	8	Other Error
	glo-slo-success	8	Total Global Logout Success
	acs-req	8	SAML Single-Sign-On Request
	sp-metadata-export-req	8	Metadata Export Request
	sp-slo-req	8	SP-initiated Single Logout Request

Description 'all': all; 'kerberos-request-send': Total Kerberos Request; 'kerberos-response-get': Total Kerberos Response; 'kerberos-timeout-error': Total Kerberos Timeout; 'kerberos-other-error': Total Kerberos Other Error; 'ntlm-authentication-success': Total NTLM Authentication Success; 'ntlm-authentication-failure': Total NTLM Authentication Failure; 'ntlm-proto-negotiation-success': Total NTLM Protocol Negotiation Success; 'ntlm-proto-negotiation-failure': Total NTLM Protocol Negotiation Failure; 'ntlm-session-setup-success': Total NTLM Session Setup Success; 'ntlm-session-setup-failed': Total NTLM Session Setup Failure; 'kerberos-request-normal': Total Kerberos Normal Request; 'kerberos-request-dropped': Total Kerberos Dropped Request; 'kerberos-response-success': Total Kerberos Success Response; 'kerberos-response-failure': Total Kerberos Failure Response; 'kerberos-response-error': Total Kerberos Error Response; 'kerberos-response-timeout': Total Kerberos Timeout Response; 'kerberos-response-other': Total Kerberos Other Response; 'kerberos-job-start-error': Total Kerberos Job Start Error; 'kerberos-polling-control-error': Total Kerberos Polling Control Error; 'ntlm-prepare-req-success': Total NTLM Prepare Request Success; 'ntlm-prepare-req-failed': Total NTLM Prepare Request Failed; 'ntlm-timeout-error': Total NTLM Timeout; 'ntlm-other-error': Total NTLM Other Error; 'ntlm-request-normal': Total NTLM Normal Request; 'ntlm-request-dropped': Total NTLM Dropped Request; 'ntlm-response-success': Total NTLM Success Response; 'ntlm-response-failure': Total NTLM Failure Response; 'ntlm-response-error': Total NTLM Error Response; 'ntlm-response-timeout': Total NTLM Timeout Response; 'ntlm-response-other': Total NTLM Other Response; 'ntlm-job-start-error': Total NTLM Job Start Error; 'ntlm-polling-control-error': Total NTLM Polling Control Error;

Type: string

Supported Values: all, kerberos-request-send, kerberos-response-get, kerberos-timeout-error, kerberos-other-error, ntlm-authentication-success, ntlm-authentication-failure, ntlm-proto-negotiation-success, ntlm-proto-negotiation-failure, ntlm-session-setup-success, ntlm-session-setup-failed, kerberos-request-normal, kerberos-request-dropped, kerberos-response-success, kerberos-response-failure, kerberos-response-error, kerberos-response-timeout, kerberos-response-other, kerberos-job-start-error, kerberos-polling-control-error, ntlm-prepare-req-success, ntlm-prepare-req-failed, ntlm-timeout-error, ntlm-other-error, ntlm-request-normal, ntlm-request-dropped, ntlm-response-success, ntlm-response-failure, ntlm-response-error,

ntlm-response-timeout, ntlm-response-other, ntlm-job-start-error, ntlm-polling-control-error, kerberos-pw-expiry, kerberos-pw-change-success, kerberos-pw-change-failure

windows_instance-list

Specification	
Type	*list*
Block object keys	

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *windows_instance-list_auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *windows_instance-list_host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

windows_instance-list_host

Specification	
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

windows_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, ntlm_proto_nego_success, ntlm_proto_nego_failure, ntlm_session_setup_success, ntlm_session_setup_failure, ntlm_prepare_req_success, ntlm_prepare_req_error, ntlm_auth_success, ntlm_auth_failure, ntlm_timeout_error, ntlm_other_error

windows_instance-list_auth-protocol

Specification	
Type	*object*

kerberos-disable

Description Disable Kerberos authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerbros port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

ntlm-disable

Description Disable NTLM authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntlm-health-check

Description Check NTLM port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ntlm-health-check and ntlm-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

ntlm-health-check-disable

Description Disable configured NTLM port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ntlm-health-check-disable and ntlm-health-check are mutually exclusive

ntlm-version

Description Specify NTLM version, default is 2

Type: number

Range: 1-2

Default: 2

ocsp

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance/{name}*

Maximum Length: 1 characters

ocsp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stapling-certificate-good': Total OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': Total OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': Total OCSP Stapling Unknown Certificate Response; 'stapling-request-normal': Total OSCP Stapling Normal Request; 'stapling-request-dropped': Total OCSP Stapling Dropped Request; 'stapling-response-success': Total OCSP Stapling Success Response; 'stapling-response-failure': Total OCSP Stapling Failure Response; 'stapling-response-error': Total OCSP Stapling Error Response; 'stapling-response-timeout': Total OCSP Stapling Timeout Response; 'stapling-response-other': Total OCSP Stapling Other Response; 'request-normal': Total OSCP Normal Request; 'request-dropped': Total OCSP Dropped Request; 'response-success': Total OCSP Success Response; 'response-failure': Total OCSP Failure Response; 'response-error': Total OCSP Error Response; 'response-timeout': Total OCSP Timeout Response; 'response-other': Total OCSP Other Response; 'job-start-error': Total OCSP Job Start Error; 'polling-control-error': Total OCSP Polling Control Error;

Type: string

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

ocsp_instance-list

Specification	
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

ocsp_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request': Request; 'certificate-good': Good Certificate Response; 'certificate-revoked': Revoked Certificate Response; 'certificate-unknown': Unknown Certificate Response; 'timeout': Timeout; 'fail': Handle OCSP response failed; 'stapling-request': OCSP Stapling Request Send; 'stapling-certificate-good': OCSP Stapling Good Certificate Response; 'stapling-certificate-revoked': OCSP Stapling Revoked Certificate Response; 'stapling-certificate-unknown': OCSP Stapling Unknown Certificate Response; 'stapling-timeout': OCSP Stapling Timeout; 'stapling-fail': Handle OCSP response failed;

Type: string

Supported Values: all, request, certificate-good, certificate-revoked, certificate-unknown, timeout, fail, stapling-request, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-timeout, stapling-fail

radius

Specification	
Type	*object*

Block object keys	

counters1

Description 'all': all; 'authen_success': Total Authentication Success; 'authen_failure': Total Authentication Failure; 'authorize_success': Total Authorization Success; 'authorize_failure': Total Authorization Failure; 'access_challenge': Total Access-Challenge Message Receive; 'timeout_error': Total Timeout; 'other_error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, accounting-request-sent, accounting-success, accounting-failure

radius_instance-list

Specification	
Type	*list*
Block object keys	

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *radius_instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

radius_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

ldap

Specification	
Type	*object*

instance-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance/{name}*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ldap_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

ldap_instance-list

Specification	
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *ldap_instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *ldap_instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ldap_instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error,

other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

ldap_instance-list_derive-bind-dn

Specification	
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

ldap_instance-list_host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

operational data

	Counter	Size	Description
	rserver-count	number	rserver-count
	name	string	name
	get-count	string	get-count
	part-id	number	part-id
	rport-count	number	rport-count
	rserver-list		rserver-list

2.1.50 aam authentication server ldap

LDAP Authentication Server

ldap Specification

Type	*Configuration Resource*
Element Name	ldap
Element URI	/axapi/v3/aam/authentication/server/ldap

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Total Admin Bind Success; 'admin-bind-failure': Total Admin Bind Failure; 'bind-success': Total User Bind Success; 'bind-failure': Total User Bind Failure; 'search-success': Total Search Success; 'search-failure': Total Search Failure; 'authorize-success': Total Authorization Success; 'authorize-failure': Total Authorization Failure; 'timeout-error': Total Timeout; 'other-error': Total Other Error; 'request': Total Request; 'request-normal': Total Normal Request; 'request-dropped': Total Dropped Request; 'response-success': Total Success Response; 'response-failure': Total Failure Response; 'response-error': Total Error Response; 'response-timeout': Total Timeout Response; 'response-other': Total Other Response; 'job-start-error': Total Job Start Error; 'polling-control-error': Total Polling Control Error;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error, ssl-session-created, ssl-session-failure, ldaps-idle-conn-num, ldaps-inuse-conn-num, pw-expiry, pw-change-success, pw-change-failure

instance-list

Specification	
Type	*list*
Block object keys	

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *instance-list_derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *instance-list_host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

instance-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

instance-list_derive-bind-dn

Specification

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

admin-dn

Description The LDAP server's admin DN

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

admin-secret

Description Specify the LDAP server's admin secret password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-type

Description 'ad': Active Directory. Default; 'open-ldap': OpenLDAP;

Type: string

Supported Values: ad, open-ldap

base

Description Specify the LDAP server's search base

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

bind-with-dn

Description Enforce using DN for LDAP binding(All user input name will be used to create DN)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ca-cert

Description Specify the LDAPS CA cert filename (Trusted LDAPS CA cert filename)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

default-domain

Description Specify default domain for LDAP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

derive-bind-dn

Description: derive-bind-dn is a **JSON Block**. Please see below for *derive-bind-dn*

Type: Object

dn-attribute

Description Specify Distinguished Name attribute, default is CN

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: cn

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

ldaps-conn-reuse-idle-timeout

Description Specify LDAPS connection reuse idle timeout value (in seconds) (Specify idle timeout value (in seconds), default is 0 (not reuse LDAPS connection))

Type: number

Range: 0-86400

Default: 0

name

Description Specify LDAP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ldap-inst-tmpl*

port

Description Specify the LDAP server's authentication port, default is 389

Type: number

Range: 1-65534

Default: 389

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

prompt-pw-change-before-exp

Description Prompt user to change password before expiration in N days. This option only takes effect when server type is AD (Prompt user to change password before expiration in N days, default is not to prompt the user)

Type: number

Range: 1-999

protocol

Description 'ldap': Use LDAP (default); 'ldaps': Use LDAP over SSL; 'starttls': Use LDAP StartTLS;

Type: string

Supported Values: ldap, ldaps, starttls

Default: ldap

pwdmaxage

Description Specify the LDAP server's default password expiration time (in seconds) (The LDAP server's default password expiration time (in seconds), default is 0 (no expiration))

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

secret-string

Description secret password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description Specify timout for LDAP, default is 10 seconds (The timeout, default is 10 seconds)

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'admin-bind-success': Admin Bind Success; 'admin-bind-failure': Admin Bind Failure; 'bind-success': User Bind Success; 'bind-failure': User Bind Failure; 'search-success': Search Success; 'search-failure': Search Failure; 'authorize-success': Authorization Success; 'authorize-failure': Authorization Failure; 'timeout-error': Timeout; 'other-error': Other Error; 'request': Request;

Type: string

Supported Values: all, admin-bind-success, admin-bind-failure, bind-success, bind-failure, search-success, search-failure, authorize-success, authorize-failure, timeout-error, other-error, request, ssl-session-created, ssl-session-failure, pw_expiry, pw_change_success, pw_change_failure

derive-bind-dn

Specification	
Type	*object*

username-attr

Description Specify attribute name of username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

stats data

	Counter	Size	Description
	bind-failure	8	User Bind Failure
	authorize-failure	8	Authorization Failure
	ssl-session-failure	8	TLS/SSL Session Failure
	admin-bind-failure	8	Admin Bind Failure
	authorize-success	8	Authorization Success
	pw_change_success	8	Password change success
	timeout-error	8	Timeout
	request	8	Request
	pw_expiry	8	Password expiry
	admin-bind-success	8	Admin Bind Success
	search-success	8	Search Success
	other-error	8	Other Error
	ssl-session-created	8	TLS/SSL Session Created
	pw_change_failure	8	Password change failure
	bind-success	8	User Bind Success
	search-failure	8	Search Failure

2.1.52 aam authentication server ocsp

OCSP Authentication Server

Supported Values: all, stapling-certificate-good, stapling-certificate-revoked, stapling-certificate-unknown, stapling-request-normal, stapling-request-dropped, stapling-response-success, stapling-response-failure, stapling-response-error, stapling-response-timeout, stapling-response-other, request-normal, request-dropped, response-success, response-failure, response-error, response-timeout, response-other, job-start-error, polling-control-error

instance-list

Specification	
Type	*list*
Block object keys	

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

http-version

Description Set HTTP version (default 1.0)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify OCSP authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-ocsp-inst-tmpl*

port-health-check

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-health-check and port-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-health-check-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-health-check-disable and port-health-check are mutually exclusive

responder-ca

Description Specify the trusted OCSP responder's CA cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

responder-cert

Description Specify the trusted OCSP responder's cert filename

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

sampling-enable

Type: List

url

Description Specify the OCSP server's address (Format: http://host{[}:port{]}/) (The OCSP server's address(Format: http://host{[}:port{]}/))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version-type

Description '1.1': HTTP version 1.1;

Type: string

Supported Values: 1.1

instance-list_sampling-enable

Specification	
Type	*list*

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *instance-list_host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

accounting-port

Description Specify the RADIUS server's accounting port, default is 1813

Type: number

Range: 1-65534

Default: 1813

acct-port-hm

Description Specify accounting port health check method

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acct-port-hm and acct-port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

acct-port-hm-disable

Description Disable configured accounting port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: acct-port-hm-disable and acct-port-hm are mutually exclusive

auth-type

Description 'pap': PAP authentication. Default; 'mschapv2': MS-CHAPv2 authentication; 'mschapv2-pap': Use MS-CHAPv2 first. If server doesn't support it, try PAP;

Type: string

Supported Values: pap, mschapv2, mschapv2-pap

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

interval

Description Specify the interval time for resend the request (second), default is 3 seconds (The interval time(second), default is 3 seconds)

Type: number

Range: 1-1024

Default: 3

name

Description Specify RADIUS authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-rad-inst-tmpl*

port

Description Specify the RADIUS server's authentication port, default is 1812

Type: number

Range: 1-65534

Default: 1812

port-hm

Description Check port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: port-hm and port-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

port-hm-disable

Description Disable configured port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port-hm-disable and port-hm are mutually exclusive

retry

Description Specify the retry number for resend the request, default is 5 (The retry number, default is 5)

Type: number

Range: 1-32

Default: 5

sampling-enable

Type: List

secret

Description Specify the RADIUS server's secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

hostip

Description Server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'authen_success': Authentication Success; 'authen_failure': Authentication Failure; 'authorize_success': Authorization Success; 'authorize_failure': Authorization Failure; 'access_challenge': Access-Challenge Message Receive; 'timeout_error': Timeout; 'other_error': Other Error; 'request': Request; 'accounting-request-sent': Accounting-Request Sent; 'accounting-success': Accounting Success; 'accounting-failure': Accounting Failure;

Type: string

Supported Values: all, authen_success, authen_failure, authorize_success, authorize_failure, access_challenge, timeout_error, other_error, request, accounting-request-sent, accounting-success, accounting-failure

stats data

	Counter	Size	Description
	autho-rize_failure	8	Authorization Failure
	accounting-request-sent	8	Accounting-Request Sent
	other_error	8	Other Error
	request	8	Request
	accounting-success	8	Accounting Success
	accounting-failure	8	Accounting Failure
	au-then_success	8	Authentication Success
	ac-cess_challenge	8	Access-Challenge Message Receive
	au-then_failure	8	Authentication Failure
	time-out_error	8	Timeout
	autho-rize_success	8	Authorization Success

DELETE /axapi/v3/aam/authentication/server/windows/instance/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

instance-list

instance-list is **JSON List** of *instance attributes*

instance-list : [

{ *instance attributes* },

{ *instance attributes* },

...

]

instance attributes

auth-protocol

Description: auth-protocol is a **JSON Block**. Please see below for *auth-protocol*

Type: Object

health-check

Description Check server's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-string

Description Health monitor name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

name

Description Specify Windows authentication server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-server-win-inst-tmpl*

realm

Description Specify realm of Windows server

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-apacheds-kdc

Description Enable weak cipher (DES CRC/MD5/MD4) and merge AS-REQ in single packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Specify connection timeout to server, default is 10 seconds

Type: number

Range: 1-255

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

hostip

Description Specify the Windows server's hostname(Length 1-31) or IP address

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: hostip and hostipv6 are mutually exclusive

hostipv6

Description Specify the Windows server's IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: hostipv6 and hostip are mutually exclusive

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'krb_send_req_success': Kerberos Request; 'krb_get_resp_success': Kerberos Response; 'krb_timeout_error': Kerberos Timeout; 'krb_other_error': Kerberos Other Error; 'ntlm_proto_nego_success': NTLM Protocol Negotiation Success; 'ntlm_proto_nego_failure': NTLM Protocol Negotiation Failure; 'ntlm_session_setup_success': NTLM Session Setup Success; 'ntlm_session_setup_failure': NTLM Session Setup Failure; 'ntlm_prepare_req_success': NTLM Prepare Request Success; 'ntlm_prepare_req_error': NTLM Prepare Request Error; 'ntlm_auth_success': NTLM Authentication Success; 'ntlm_auth_failure': NTLM Authentication Failure; 'ntlm_timeout_error': NTLM Timeout; 'ntlm_other_error': NTLM Other Error;

Type: string

Supported Values: all, krb_send_req_success, krb_get_resp_success, krb_timeout_error, krb_other_error, krb_pw_expiry, krb_pw_change_success, krb_pw_change_failure, ntlm_proto_nego_success, ntlm_proto_nego_failure, ntlm_session_setup_success, ntlm_session_setup_failure, ntlm_prepare_req_success, ntlm_prepare_req_error, ntlm_auth_success, ntlm_auth_failure, ntlm_timeout_error, ntlm_other_error

auth-protocol

Specification	
Type	*object*

kerberos-disable

Description Disable Kerberos authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

kerberos-password-change-port

Description Specify the Kerbros password change port, default is 464

Type: number

Range: 1-65534

Default: 464

kerberos-port

Description Specify the Kerbros port, default is 88

Type: number

Range: 1-65534

Default: 88

kport-hm

Description Check Kerberos port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: kport-hm and kport-hm-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

kport-hm-disable

Description Disable configured Kerberos port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kport-hm-disable and kport-hm are mutually exclusive

ntlm-disable

Description Disable NTLM authentication protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ntlm-health-check

Description Check NTLM port's health status

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ntlm-health-check and ntlm-health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

ntlm-health-check-disable

Description Disable configured NTLM port health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ntlm-health-check-disable and ntlm-health-check are mutually exclusive

ntlm-version

Description Specify NTLM version, default is 2

Type: number

Range: 1-2

Default: 2

stats data

	Counter	Size	Description
	krb_send_req_success	8	Kerberos Request
	ntlm_other_error	8	NTLM Other Error
	ntlm_auth_success	8	NTLM Authentication Success
	krb_timeout_error	8	Kerberos Timeout
	ntlm_prepare_req_error	8	NTLM Prepare Request Error
	ntlm_auth_failure	8	NTLM Authentication Failure
	krb_pw_change_success	8	Kerberos password change success
	ntlm_session_setup_success	8	NTLM Session Setup Success
	ntlm_timeout_error	8	NTLM Timeout
	krb_other_error	8	Kerberos Other Error
	ntlm_proto_nego_failure	8	NTLM Protocol Negotiation Failure
	krb_pw_expiry	8	Kerberos password expiry
	ntlm_session_setup_failure	8	NTLM Session Setup Failure
	krb_pw_change_failure	8	Kerberos password change failure
	krb_get_resp_success	8	Kerberos Response
	ntlm_proto_nego_success	8	NTLM Protocol Negotiation Success
	ntlm_prepare_req_success	8	NTLM Prepare Request Success

    }
}
```

service-group-list

service-group-list is **JSON List** of *service-group attributes*

service-group-list : [

{ *service-group attributes* },

{ *service-group attributes* },

...

]

service-group attributes

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

lb-method

Description 'round-robin': Round robin on server level;

Type: string

Supported Values: round-robin

member-list

Type: List

Refernce Object: */axapi/v3/aam/authentication/service-group/{name}/member/{name}+{port}*

name

Description Specify AAM service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-auth-service-group-tmpl*

protocol

Description 'tcp': TCP AAM service; 'udp': UDP AAM service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

account

Description Specify AD domain account

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/account/kerberos-spn*

accounting-server

Description Specify a RADIUS accounting server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-server and accounting-service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/radius/instance*

accounting-service-group

Description Specify an authentication service group for RADIUS accounting

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: accounting-service-group and accounting-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sess-mode

Description 'cookie-based': Track auth-session by cookie (default); 'ip-based': Track auth-session by client IP;

Type: string

Supported Values: cookie-based, ip-based

captcha

Description Specify captcha profile (Specify captcha proflie name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/captcha/instance*

chain

Type: List

cookie-domain

Type: List

cookie-domain-group

Type: List

cookie-httponly-enable

Description Enable httponly attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cookie-max-age

Description Configure Max-Age for authentication session cookie (Configure Max-Age in seconds. Default is 604800 (1 week).)

Type: number

Range: 0-2592000

Default: 604800

cookie-samesite

Description 'strict': Specify SameSite attribute as Strict for AAM cookie; 'lax': Specify SameSite attribute as Lax for AAM cookie; 'none': Specify SameSite attribute as None for AAM cookie;

Type: string

Supported Values: strict, lax, none

cookie-secure-enable

Description Enable secure attribute for AAM cookies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-logout-disable

Description Disable forward logout request to backend application server. The config-field logut-url must be configured first

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt

Description Specify authentication jwt template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/jwt*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description 'use-partition-level-config': Use configuration of authentication-log enable command; 'enable': Enable authentication logs for this template; 'disable': Disable authentication logs for this template;

Type: string

Supported Values: use-partition-level-config, enable, disable

Default: use-partition-level-config

logon

Description Specify authentication logon (Specify authentication logon template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/logon/form-based*

logout-idle-timeout

Description Specify idle logout time (Specify idle timeout in seconds, default is 300)

Type: number

Range: 1-86400

Default: 300

logout-url

Description Specify logout url (Specify logout url string)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

max-session-time

Description Specify default SAML token lifetime (Specify lifetime (in seconds) of SAML token when it not provided by token attributes, default is 28800. (0 for indefinite))

Type: number

Range: 0-86400

modify-content-security-policy

Description Put redirect-uri or service-principal-name into CSP header to avoid CPS break authentication process

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Authentication template name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

oauth-authorization-server

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

oauth-client

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-hostname

Description Hostname(Length 1-31) for transparent-proxy authentication

Type: string

Format: host

Maximum Length: 31 characters

Maximum Length: 1 characters

relay

Description Specify authentication relay (Specify authentication relay template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/relay/http-basic/instance*

saml-idp

Description Specify SAML identity provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

saml-sp

Description Specify SAML service provider

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server and service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

type

Description 'saml': SAML authentication template; 'standard': Standard authentication template;

Type: string

Supported Values: saml, standard, oauth

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

chain

Specification	
Type	*list*
Block object keys	

chain-server

Description Specify authentication server (Specify authentication server template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-server service-group and chain-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

chain-server-priority

Description Set server priority, higher the number higher the priority. Default is 3. (Chain server priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

chain-sg

Description Bind an authentication service group to this template (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-sg and chain-server are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

chain-sg-priority

Description Set service-group priority, higher the number higher the priority. Default is 3. (Chain service-group priority, higher the number higher the priority. Default is 3.)

Type: number

Range: 1-5

Default: 3

cookie-domain-group

Specification	
Type	*list*
Block object keys	

cookie-dmngrp

Description Specify group id to join in the cookie-domain

Type: number

Range: 0-31

cookie-domain

Specification	
Type	*list*
Block object keys	

cookie-dmn

Description Specify domain scope for the authentication (ex: .a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 2 characters

2.1.63 aam authorization

AAM authorization related configuration

authorization Specification

Type	*Intermediate Resource*
Element Name	authorization
Element URI	/axapi/v3/aam/authorization
Element Attributes	authorization_attributes
Schema	`authorization schema`

Operations Allowed:

Get Object

GET

/axapi/v3/aam/authorization

authorization_attributes

authorization attributes

jwt

Description: jwt is a **JSON Block**. Please see below for *jwt*

Type: Object

Refernce Object: */axapi/v3/aam/authorization/jwt*

policy-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}*

policy-list

Specification	
Type	*list*
Block object keys	

attribute-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}*

attribute-rule

Description Define attribute rule for authorization policy

Type: string

Format: string-rlx

extended-filter

Description Extended search filter. EX: Check whether user belongs to a nested group. (memberOf:1.2.840.113556.1.4.1941:=$GROUP-DN)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

forward-policy-authorize-only

Description This policy only provides server info for forward policy feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-authorization

Description Specify JWT authorization template (Specify JWT authorization template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: jwt-authorization server and service-group are mutually exclusive

Refernce Object: */axapi/v3/aam/jwt-authorization*

jwt-claim-map-list

Type: List

Refernce Object: */axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}*

name

Description Specify authorization policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server

Description Specify a LDAP or RADIUS server for authorization (Specify a LDAP or RADIUS server name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: server service-group and jwt-authorization are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and jwt-authorization are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_jwt-claim-map-list

Specification	
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type string-type and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type string-type and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type number-type and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_attribute-list

Specification	
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-typestring-type, ip-type and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-typestring-type, integer-type and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-typestring-type, integer-type and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-typeinteger-type, ip-type and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt

Specification	
Type	*object*

cache

Description: cache is a **JSON Block**. Please see below for *jwt_cache*

Type: Object

Refernce Object: */axapi/v3/aam/authorization/jwt/cache*

jwt_cache

Specification	
Type	*object*

uuid

Description uuid of the object

Refernce Object: */axapi/v3/aam/authentication/server/ldap/instance*

service-group

Description Specify an authentication service group for authorization (Specify authentication service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group server and jwt-authorization are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

jwt-claim-map-list

Specification	
Type	*list*
Block object keys	

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type string-type and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type string-type and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type number-type and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

attribute-list

Specification	
Type	*list*
Block object keys	

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-typestring-type, ip-type and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-typestring-type, integer-type and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-typestring-type, integer-type and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-typeinteger-type, ip-type and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.67 aam authorization policy attribute

Authorization-policy attribute configuration

attribute Specification

Type	*Collection*
Object Key(s)	*attr-num*
Collection Name	*attribute-list*
Collection URI	/axapi/v3/aam/authorization/policy/{name}/attribute
Element Name	attribute
Element URI	/axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}
Element Attributes	attribute_attributes
Schema	`attribute schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authorization/policy/{name}/attribute

attribute attributes

Create List

POST

/axapi/v3/aam/authorization/policy/{name}/attribute

attribute attributes

Get Object

GET

/axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}

attribute attributes

Get List

GET

/axapi/v3/aam/authorization/policy/{name}/attribute

attribute-list

Modify Object

POST

/axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}

attribute attributes

Replace Object

PUT

/axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}

attribute attributes

Replace List

PUT

/axapi/v3/aam/authorization/policy/{name}/attribute

attribute-list

Delete Object

DELETE

/axapi/v3/aam/authorization/policy/{name}/attribute/{attr-num}

attribute attributes

attribute-list

attribute-list is **JSON List** of *attribute attributes*

attribute-list : [

{ *attribute attributes* },

{ *attribute attributes* },

...

]

attribute attributes

A10-AX-AUTH-URI

Description Custom-defined attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: A10-AX-AUTH-URI and attribute-name are mutually exclusive

a10-dynamic-defined

Description The value of this attribute will depend on AX configuration instead of user configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any

Description Matched when attribute is present (with any value).

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and attr-type are mutually exclusive

attr-int

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-int-val

Description Set attribute value

Type: number

Range: 0-4294967295

attr-ip

Description 'equal': Operation type is equal; 'not-equal': Operation type is not-equal;

Type: string

Supported Values: equal, not-equal

attr-ipv4

Description IPv4 address

Type: string

Format: ipv4-address

attr-num

Description Set attribute ID for authorization policy

Type: number

Range: 1-32

attr-number

Description 'equal': Operation type is equal; 'not-equal': Operation type is not equal; 'less-than': Operation type is less-than; 'more-than': Operation type is more-than; 'less-than-equal-to': Operation type is less-than-equal-to; 'more-than-equal-to': Operation type is more-thatn-equal-to;

Type: string

Supported Values: equal, not-equal, less-than, more-than, less-than-equal-to, more-than-equal-to

attr-number-val

Description Set attribute value

Type: string

Maximum Length: 20 characters

Maximum Length: 1 characters

attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

attr-str-val

Description Set attribute value

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: attr-type and any are mutually exclusive

attribute-name

Description Specify attribute name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: attribute-name and A10-AX-AUTH-URI are mutually exclusive

custom-attr-str

Description 'match': Operation type is match; 'sub-string': Operation type is sub-string;

Type: string

Supported Values: match, sub-string

custom-attr-type

Description Specify attribute type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

integer-type

Description Attribute type is integer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integer-typestring-type, ip-type and number-type are mutually exclusive

ip-type

Description IP address is transformed into network byte order

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip-typestring-type, integer-type and number-type are mutually exclusive

number-type

Description Attribute type is decimal number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-typestring-type, integer-type and ip-type are mutually exclusive

string-type

Description Attribute type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-typeinteger-type, ip-type and number-type are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.68 aam authorization policy jwt-claim-map

Map attributes to JWT claims

jwt-claim-map Specification

Type	*Collection*
Object Key(s)	*attr-num*
Collection Name	*jwt-claim-map-list*
Collection URI	/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map
Element Name	jwt-claim-map
Element URI	/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}
Element Attributes	jwt-claim-map_attributes
Schema	`jwt-claim-map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map

jwt-claim-map attributes

Create List

POST

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map

jwt-claim-map attributes

Get Object

GET

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}

jwt-claim-map attributes

Get List

GET

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map

jwt-claim-map-list

Modify Object

POST

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}

jwt-claim-map attributes

Replace Object

PUT

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}

jwt-claim-map attributes

Replace List

PUT

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map

jwt-claim-map-list

Delete Object

DELETE

/axapi/v3/aam/authorization/policy/{name}/jwt-claim-map/{attr-num}

jwt-claim-map attributes

jwt-claim-map-list

jwt-claim-map-list is **JSON List** of *jwt-claim-map attributes*

```
jwt-claim-map-list : [
        { jwt-claim-map attributes },
        { jwt-claim-map attributes },
        ...
    ]
```

jwt-claim-map attributes

attr-num

Description Spcify attribute ID for claim mapping

Type: number

Range: 1-32

bool-val

Description 'true': True; 'false': False;

Type: string

Supported Values: true, false

boolean-type

Description Claim type is boolean

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: boolean-type string-type and number-type are mutually exclusive

claim

Description Specify JWT claim name to map to.

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

num-val

Description Specify JWT claim value.

Type: number

Range: 0-4294967295

number-type

Description Claim type is number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: number-type string-type and boolean-type are mutually exclusive

str-val

Description Specify JWT claim value.

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

string-type

Description Claim type is string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: string-type number-type and boolean-type are mutually exclusive

type

Description Specify claim type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.1.69 aam file-category-log

File Category Log Info

file-category-log Specification

Type	*Intermediate Resource*
Element Name	file-category-log
Element URI	/axapi/v3/aam/file-category-log
Element Attributes	file-category-log_attributes
Schema	`file-category-log schema`

Operations Allowed:

Get Object

GET

DELETE

/axapi/v3/aam/jwt-authorization/{name}

jwt-authorization attributes

jwt-authorization-list

jwt-authorization-list is **JSON List** of *jwt-authorization attributes*

jwt-authorization-list : [

{ *jwt-authorization attributes* },

{ *jwt-authorization attributes* },

...

]

jwt-authorization attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

exp-claim-requried

Description Specify the exp claim is required for JWT authorization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-cache-enable

Description Enable caching authorized JWT token and skip verification and authorization for cached tokens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

jwt-exp-default

Description Specify the default token expiration if exp claim is not available (default 1800)

Type: number

Range: 1-86400

jwt-forwarding

Description Specify JWT token will not be stripped while forwarding client request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-level

Description '0': log disable; '1': only log authorzation fail (default); '2': only log authorization success; '3': log all;

Type: string

Supported Values: 0, 1, 2, 3

name

Description Specify JWT authorization template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/aam-jwt-authorization-tmpl*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verification-cert

Description Specify the certificate to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-cert verification-jwks and verification-secret are mutually exclusive

verification-jwks

Description Specify the jwks file to verify JWT token signature

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-jwks verification-cert and verification-secret are mutually exclusive

verification-secret

Description Specify secret for verify JWT token signature

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: verification-secret verification-cert and verification-jwks are mutually exclusive

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'jwt-request': JWT Request; 'jwt-authorize-success': JWT Authorize Success; 'jwt-authorize-failure': JWT Authorize Failure; 'jwt-missing-token': JWT Missing Token; 'jwt-missing-claim': JWT Missing Claim; 'jwt-token-expired': JWT Token Expired; 'jwt-signature-failure': JWT Signature Failure; 'jwt-other-error': JWT Other Error;

Type: string

Supported Values: all, jwt-request, jwt-authorize-success, jwt-authorize-failure, jwt-missing-token, jwt-missing-claim, jwt-token-expired, jwt-signature-failure, jwt-other-error

stats data

	Counter	Size	Description
	jwt-request	8	JWT Request
	jwt-authorize-success	8	JWT Authorize Success
	jwt-token-expired	8	JWT Token Expired
	jwt-authorize-failure	8	JWT Authorize Failure
	jwt-missing-claim	8	JWT Missing Claim
	jwt-signature-failure	8	JWT Signature Failure
	jwt-other-error	8	JWT Other Error
	jwt-missing-token	8	JWT Missing Token

acl-log

Description Log matches against this entry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

extd-action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

extd-remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

extd-seq-num

Description Sequence number

Type: number

Range: 1-8192

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ip and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipicmp, tcp, udp and service-obj-group are mutually exclusive

service-obj-group

Description Service object group (Source object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ip and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ip and service-obj-group are mutually exclusive

vlan

Description VLAN ID

Type: number

Range: 1-4094

any-code

Description Any ICMP code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-code icmp-code and special-code are mutually exclusive

any-type

Description Any ICMP type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any-type icmp-type and special-type are mutually exclusive

dscp

Description DSCP

Type: number

Range: 1-63

dst-any

Description Any destination host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst-anydst-host, dst-subnet and dst-object-group are mutually exclusive

dst-eq

Description Match only packets on a given destination port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-eqdst-gt, dst-lt and dst-range are mutually exclusive

dst-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: dst-gtdst-eq, dst-lt and dst-range are mutually exclusive

dst-host

Description A single destination host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: dst-hostdst-any, dst-subnet and dst-object-group are mutually exclusive

dst-lt

Description Match only packets with a lesser port number

Type: number

Range: 2-65535

Mutual Exclusion: dst-ltdst-eq, dst-gt and dst-range are mutually exclusive

dst-mask

Description Destination Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

dst-object-group

Description Destination network object group name (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: dst-object-groupdst-any, dst-host and dst-subnet are mutually exclusive

dst-port-end

Description Edning Destination Port Number

Type: number

Range: 1-65535

dst-range

Description Match only packets in the range of port numbers (Starting Destination Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: dst-rangedst-eq, dst-gt and dst-lt are mutually exclusive

dst-subnet

Description Destination Address

Type: string

Format: ipv4-address

Mutual Exclusion: dst-subnetdst-any, dst-host and dst-object-group are mutually exclusive

established

Description TCP established

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface (Port number)

Type: number

Format: interface

extd-action

Description 'deny': Deny; 'permit': Permit; 'l3-vlan-fwd-disable': Disable L3 forwarding between VLANs;

Type: string

Supported Values: deny, permit, l3-vlan-fwd-disable

extd-remark

Description Access list entry comment (Notes for this ACL)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

extd-seq-num

Description Sequence number

Type: number

Range: 1-8192

fragments

Description IP fragments

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description Internet Control Message Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: icmptcp, udp, ip and service-obj-group are mutually exclusive

icmp-code

Description ICMP code number

Type: number

Range: 0-254

Mutual Exclusion: icmp-code any-code and special-code are mutually exclusive

icmp-type

Description ICMP type number

Type: number

Range: 0-254

Mutual Exclusion: icmp-type any-type and special-type are mutually exclusive

ip

Description Any Internet Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipicmp, tcp, udp and service-obj-group are mutually exclusive

service-obj-group

Description Service object group (Source object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: service-obj-groupicmp, tcp, udp and ip are mutually exclusive

special-code

Description 'frag-required': Code 4, fragmentation required; 'host-unreachable': Code 1, destination host unreachable; 'network-unreachable': Code 0, destination network unreachable; 'port-unreachable': Code 3, destination port unreachable; 'proto-unreachable': Code 2, destination protocol unreachable; 'route-failed': Code 5, source route failed;

Type: string

Supported Values: frag-required, host-unreachable, network-unreachable, port-unreachable, proto-unreachable, route-failed

Mutual Exclusion: special-code any-code and icmp-code are mutually exclusive

special-type

Description 'echo-reply': Type 0, echo reply; 'echo-request': Type 8, echo request; 'info-reply': Type 16, information reply; 'info-request': Type 15, information request; 'mask-reply': Type 18, address mask reply; 'mask-request': Type 17, address mask request; 'parameter-problem': Type 12, parameter problem; 'redirect': Type 5, redirect message; 'source-quench': Type 4, source quench; 'time-exceeded': Type 11, time exceeded; 'timestamp': Type 13, timestamp; 'timestamp-reply': Type 14, timestamp reply; 'dest-unreachable': Type 3, destination unreachable;

Type: string

Supported Values: echo-reply, echo-request, info-reply, info-request, mask-reply, mask-request, parameter-problem, redirect, source-quench, time-exceeded, timestamp, timestamp-reply, dest-unreachable

Mutual Exclusion: special-type icmp-type and any-type are mutually exclusive

src-any

Description Any source host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src-anysrc-host, src-subnet and src-object-group are mutually exclusive

src-eq

Description Match only packets on a given source port (port number)

Type: number

Range: 1-65535

Mutual Exclusion: src-eqsrc-gt, src-lt and src-range are mutually exclusive

src-gt

Description Match only packets with a greater port number

Type: number

Range: 1-65534

Mutual Exclusion: src-gtsrc-eq, src-lt and src-range are mutually exclusive

src-host

Description A single source host (Host address)

Type: string

Format: ipv4-address

Mutual Exclusion: src-hostsrc-any, src-subnet and src-object-group are mutually exclusive

src-lt

Description Match only packets with a lower port number

Type: number

Range: 2-65535

Mutual Exclusion: src-ltsrc-eq, src-gt and src-range are mutually exclusive

src-mask

Description Source Mask 0=apply 255=ignore

Type: string

Format: ipv4-rev-netmask

src-object-group

Description Network object group (Source network object group name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: src-object-groupsrc-any, src-host and src-subnet are mutually exclusive

src-port-end

Description Ending Port Number

Type: number

Range: 1-65535

src-range

Description match only packets in the range of port numbers (Starting Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: src-rangesrc-eq, src-gt and src-lt are mutually exclusive

src-subnet

Description Source Address

Type: string

Format: ipv4-address

Mutual Exclusion: src-subnetsrc-any, src-host and src-object-group are mutually exclusive

tcp

Description protocol TCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: tcpicmp, udp, ip and service-obj-group are mutually exclusive

transparent-session-only

Description Only log transparent sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Description Ethernet trunk (trunk number)

Type: number

Format: interface

udp

Description protocol UDP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: udpicmp, tcp, ip and service-obj-group are mutually exclusive

vlan

```
DELETE /axapi/v3/accounting
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

accounting attributes

commands

Description Enable level for commands accounting

Type: number

Range: 0-15

Default: 0

debug

Description Specify the debug level for accounting (Debug level for command accounting. bitwise OR of the following: 1(common), 2(packet),4(packet detail), 8(md5))

Type: number

Range: 1-15

exec

Description: exec is a **JSON Block**. Please see below for *exec*

Type: Object

Refernce Object: */axapi/v3/accounting/exec*

stop-only

Description Record stop when service terminates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus

Description Use TACACS+ servers for accounting

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exec

Specification	
Type	*object*

accounting-exec-method

Description 'tacplus': Use TACACS+ servers for accounting; 'radius': Use radius servers for accounting;

Type: string

Supported Values: tacplus, radius

accounting-exec-type

Description 'start-stop': Record start and stop without waiting; 'stop-only': Record stop when service terminates;

Type: string

Supported Values: start-stop, stop-only

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.3.2 accounting exec

Configuration for EXEC <shell> accounting

exec Specification

Type	*Configuration Resource*
Element Name	exec
Element URI	/axapi/v3/accounting/exec
Element Attributes	exec_attributes
Schema	`exec schema`

Operations Allowed:

Create Object

POST

/axapi/v3/accounting/exec

exec attributes

```
POST /axapi/v3/accounting/exec
Payload:
{
    "exec": {
        "accounting-exec-type": "start-stop",
        "accounting-exec-method": "tacplus"
    }
}
```

Get Object

GET

/axapi/v3/accounting/exec

exec attributes

```
GET /axapi/v3/accounting/exec
Reponse:
{
    "exec": {
        "accounting-exec-type": "start-stop",
        "accounting-exec-method": "tacplus",
        "uuid": "a24a90ae-600c-11d9-9363-001fa00680a0",

Maximum Length: 64 characters

Maximum Length: 1 characters

ecosystem_oracle

Specification	
Type	*object*

action

Description 'enable': Enable Configuration; 'disable': Disable Configuration;

Type: string

Supported Values: enable, disable

Default: disable

compartment-id

Description OCI compartment id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

fingerprint

Description

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

health-check-interval

Description '5': 5 seconds; '10': 10 seconds; '15': 15 seconds; '20': 20 seconds;

Type: string

Supported Values: 5, 10, 15, 20

host-name

Description Configure the host name for bootstrap server(e.g www.a10networks.com)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: host-name ipv4-address and ipv6-address are mutually exclusive

ipv4-address

Description Configure the bootstrap server's IPv4 address (the host IPv4 address)

Type: string

Format: ipv4-address

Mutual Exclusion: ipv4-address ipv6-address and host-name are mutually exclusive

ipv6-address

Description Configure the bootstrap server's IPv6 address (the host IPv6 address)

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address ipv4-address and host-name are mutually exclusive

port

Description Configure the http port to use (port 8500)

Type: number

Range: 1-65535

private-key-path

Description

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

service-label

Type: List

tenancy-id

Description OCI tenancy id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

user-id

Description OCI user id

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msg_dropped_malloc_failure': Messages Dropped due to malloc failure; 'msg_dropped_no_template': Messages Dropped, no active template; 'msg_dropped_selector': Messages Dropped, selector does not enable msg; 'msg_dropped_too_long': Messages Dropped, invalid length; 'msg_dropped_other': Messages Dropped, unexpected error;

Type: string

Supported Values: all, msg_sent, msg_sent_logdb, msg_dropped_format_not_defined, msg_dropped_malloc_failure, msg_dropped_no_template, msg_dropped_selector, msg_dropped_too_long, msg_dropped_craft_fail, msg_dropped_local_log_ratelimit, msg_dropped_remote_log_ratelimit, msg_dropped_send_failed, msg_dropped_no_active_member, msg_dropped_route_fail, msg_dropped_other, no_template, msg_dropped_lost_during_config_change, local_enqueue_pass, msg_sent_to_logd, msg_retry_after_socket_fail, msg_sent_direct_syslog, msg_dropped_send_to_logd_fail, msg_dropped_trylock_fail, msg_dropped_remote_cplane_log_ratelimit, msg_dropped_remote_dplane_log_ratelimit, msg_dropped_local_enqueue_failed, msg_dropped_grp_not_used, msg_sent_remote_cplane, msg_dropped_no_template_logd, msg_dropped_lost_during_config_change_logd, msg_dropped_craft_fail_logd, msg_dropped_send_failed_logd, msg_dropped_no_active_member_logd, msg_dropped_other_logd, msg_dropped_invalid_part, acos_evt_test_logs_ticks

use-partition

Specification	
Type	*object*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-template

Specification	
Type	*object*

name

Description Specify the logging template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/acos-events/template*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logdb

Specification	
Type	*object*

enable-all

Description Enable logging for all widgets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cgn

Description Enable CGN logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-fw

Description Enable Firewall logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-http-forward-proxy

Description Enable HTTP forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-link-cost

Description Enable link-cost logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-mqtt

Description Enable MQTT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-smtp

Description Enable SMTP logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-ssli

Description Enable SSLi logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-logging

Specification	
Type	*object*

debug-logs

Description Enable debug logs in var log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete-old-logs-in-disk

Description Operational command to delete the old logs stored in disk

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable local-logging when FW log servers are down (Default: Not enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-backlog-memory

Description Configure Max memory in MB to be used for processing backlogs (Default: 10MB)

Type: number

Range: 5-500

Default: 10

max-disk-space

Description Configure Max disk space in MB to be used for storing the logs (Default: 100MB)

Type: number

Range: 50-20000

Default: 100

max-memory

Description Configure Max memory in MB to be used for processing the logs (Default: 30MB)

Type: number

Range: 5-500

Default: 30

queue-limit

Description Configure Max number of blocks that can be busy being scheduled (Default: 10, 0 to disable)

Type: number

Range: 0-100

Default: 10

rate-limit

Description Configure number of logs per second to be stored in disk (Default: 1000)

Type: number

Range: 1-60000

Default: 1000

sampling-enable

Type: List

send-if-all-servers-up

Description Start sending the stored logs only when all log servers are up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string-decode-special-char

Description Enable processing special characters before storing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-logging_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'init-pass': Local logging Init Successful; 'init-fail': Local logging Init Fail; 'freed': Local logging Stopped; 'disk-over-thres': Number of logs Dropped, Disk reached threshold; 'rate-limited': Number of logs Dropped, Rate limited; 'not-inited': Number of logs Dropped, Local logging not inited; 'sent-to-store': Number of logs sent to be

stored; 'sent-to-store-fail': Number of Logs sent to be stored Failed; 'store-fail': Number of logs failed to be stored; 'in-logs': Number of logs successfully stored; 'in-bytes': Number of bytes successfully stored; 'in-logs-backlog': Number of backlogs loaded from disk; 'in-bytes-backlog': Number of backlog bytes loaded from disk; 'in-store-fail-no-space': Number of logs Dropped, failed without disk space; 'in-discard-logs': Number of old logs discarded to fit in new logs; 'in-discard-bytes': Number of old bytes discarded to fit in new logs; 'out-logs': Number of logs sent to log servers; 'out-bytes': Number of bytes sent to log-servers; 'out-error': Number of errors during send; 'remaining-logs': Total number of remaining logs yet to be sent; 'remaining-bytes': Total number of remaining bytes yet to be sent; 'moved-to-delq': Local Logging moved to delq to be deleted; 'out-retry': Number of attempted retries to send logs; 'out-retry-fail': Number of retries failed with error; 'curr-total-chunks': Current Number of blocks; 'curr-mem-chunks': Current blocks in memory; 'curr-fs-chunks': Current blocks in file system; 'curr-fs-chunks-up': Current blocks in file system loaded in memory; 'curr-fs-chunks-down': Current blocks in file system not loaded in memory; 'in-logs-agg': Total Aggregate, Number of logs successfully stored; 'in-bytes-agg': Total Aggregate, Number of bytes successfully stored; 'in-logs-backlog-agg': Total Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-agg': Total Aggregate, Number of backlog bytes loaded from disk; 'in-store-fail-no-space-agg': Total Aggregate, Number of logs Dropped, failed without disk space; 'in-discard-logs-agg': Total Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-agg': Total Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-agg': Total Aggregate, Number of logs sent to log servers; 'out-bytes-agg': Total Aggregate, Number of bytes sent to log-servers; 'out-error-agg': Total Aggregate, Number of errors during send; 'out-retry-agg': Total Aggregate, Number of attempted retries to send logs; 'out-retry-fail-agg': Total Aggregate, Number of retries failed with error; 'in-logs-curr-agg': Current Aggregate, Number of logs successfully stored; 'in-bytes-curr-agg': Current Aggregate, Number of bytes successfully stored; 'in-logs-backlog-curr-agg': Current Aggregate, Number of backlogs loaded from disk; 'in-bytes-backlog-curr-agg': Current Aggregate, Number of backlog bytes loaded from disk; 'in-discard-logs-curr-agg': Current Aggregate, Number of old logs discarded to fit in new logs; 'in-discard-bytes-curr-agg': Current Aggregate, Number of old bytes discarded to fit in new logs; 'out-logs-curr-agg': Current Aggregate, Number of logs sent to log servers; 'out-bytes-curr-agg': Current Aggregate, Number of bytes sent to log-servers;

Type: string

Supported Values: all, init-pass, init-fail, freed, disk-over-thres, rate-limited, not-inited, sent-to-store, sent-to-store-fail, store-fail, in-logs, in-bytes, in-logs-backlog, in-bytes-backlog, in-store-fail-no-space, in-discard-logs, in-discard-bytes, out-logs, out-bytes, out-error, remaining-logs, remaining-bytes, moved-to-delq, out-retry, out-retry-fail, curr-total-chunks, curr-mem-chunks, curr-fs-chunks, curr-fs-chunks-up, curr-fs-chunks-down, in-logs-agg, in-bytes-agg, in-logs-backlog-agg, in-bytes-backlog-agg, in-store-fail-no-space-agg, in-discard-logs-agg, in-discard-bytes-agg, out-logs-agg, out-bytes-agg, out-error-agg, out-retry-agg, out-retry-fail-agg, in-logs-curr-agg, in-bytes-curr-agg, in-logs-backlog-curr-agg, in-bytes-backlog-curr-agg, in-discard-logs-curr-agg, in-discard-bytes-curr-agg, out-logs-curr-agg, out-bytes-curr-agg

message-id-list

Specification	
Type	*list*
Block object keys	

log-msg

Description Specify log message-id lineage

Type: string

Maximum Length: 512 characters

Maximum Length: 1 characters

message-id-scope-route

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees only; 'log-field-only': This is a log-field (Default);

Type: string

Supported Values: all, node-only, children-only, log-field-only

Default: log-field-only

property

Description: property is a **JSON Block**. Please see below for *message-id-list_property*

Type: Object

Refernce Object: */axapi/v3/acos-events/message-id/{log-msg}+{message-id-scope-route}/property*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-id-list_property

Specification	
Type	*object*

log-route

Description: log-route is a **JSON Block**. Please see below for *message-id-list_property_log-route*

Type: Object

Refernce Object: */axapi/v3/acos-events/message-id/{log-msg}+{message-id-scope-route}/property/log-route*

severity

Description: severity is a **JSON Block**. Please see below for *message-id-list_property_severity*

Type: Object

Refernce Object: */axapi/v3/acos-events/message-id/{log-msg}+{message-id-scope-route}/property/severity*

message-id-list_property_log-route

Specification	
Type	*object*

log-route-val

Description 'local-only': send logs to local-only; 'remote-only': send logs to remote-only; 'local-and-remote': send logs to both local and remote;

Type: string

Supported Values: local-only, remote-only, local-and-remote

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-id-list_property_severity

Specification	
Type	*object*

severity-val

Description 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-properties

Specification	
Type	*object*

add-msgid-in-header

Description Add Message ID in log messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-old-descriptive-name

Description Use the old descriptive name for CEF and LEEF logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-syslog-standard-header

Description Send syslog messages with Standard Header format

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-server-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this Logging Server; 'disable': Disable this Logging Server;

Type: string

Supported Values: enable, disable

Default: enable

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Type: List

Refernce Object: */axapi/v3/acos-events/log-server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-server-list_port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log-server-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent;

Type: string

Supported Values: all, msgs_sent

log-server-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent;

Type: string

Supported Values: all, msgs_sent

rate-limit-local

Specification	
Type	*object*

limit

Description Configure Rate Limit for Local logs

Type: number

Range: 0-100

Default: 32

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector-group-list

Specification	
Type	*list*
Block object keys	

facility

Description 'local0': Local use(Default); 'local1': Local use; 'local2': Local use; 'local3': Local use; 'local4': Local use; 'local5': Local use; 'local6': Local use; 'local7': Local use; (Facility parameter for syslog messages)

Type: string

Supported Values: local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'syslog': syslog is the only format supported at this time;

Type: string

Supported Values: syslog, cef, leef

Default: syslog

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

log-server-list

Type: List

Refernce Object: */axapi/v3/acos-events/collector-group/{name}/log-server/{name}+{port}*

name

Description Specify log server group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

protocol

Description 'udp': use udp syslog protocol to send messages to log collector; 'tcp': use tcp syslog protocol to send messages to log collector;

Type: string

Supported Values: udp, tcp

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

Default: 500

sampling-enable

Type: List

use-mgmt-port

Description Use managament port to connect to the log servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

collector-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msgs_sent': Number of log messages sent; 'msgs_rate_limited': Number of rate limted log messages; 'msgs_dropped': Number of messages droppped for other reasons;

Type: string

Supported Values: all, msgs_sent, msgs_rate_limited, msgs_dropped

collector-group-list_log-server-list

Specification	
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/acos-events/log-server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Refernce Object: */axapi/v3/acos-events/log-server/port*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list

Specification	
Type	*list*
Block object keys	

message-selector-list

Type: List

Refernce Object: */axapi/v3/acos-events/template/{name}/message-selector/{name}*

name

Description Specify logging template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_message-selector-list

Specification	
Type	*list*
Block object keys	

collector-group-list

Type: List

Refernce Object: */axapi/v3/acos-events/template/{name}/message-selector/{name}/collector-group/{name}*

name

Description Specify the message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/acos-events/message-selector*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_message-selector-list_collector-group-list

Specification	
Type	*list*
Block object keys	

name

Description Specify the log server group for receiving log messages

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/acos-events/collector-group*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector-list

Specification	
Type	*list*
Block object keys	

name

Description Specify message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list

Type: List

Refernce Object: */axapi/v3/acos-events/message-selector/{name}/rule/{index}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

message-selector-list_rule-list

Specification	
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent; 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.5.2 acos-events active-template

Configure global logging template

active-template Specification

Type	*Configuration Resource*
Element Name	active-template
Element URI	/axapi/v3/acos-events/active-template
Element Attributes	active-template_attributes
Schema	`active-template schema`

Operations Allowed:

Create Object

POST

/axapi/v3/acos-events/active-template

active-template attributes

local-logging attributes

local-logging attributes

debug-logs

Description Enable debug logs in var log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

delete-old-logs-in-disk

Description Operational command to delete the old logs stored in disk

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable local-logging when FW log servers are down (Default: Not enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-backlog-memory

Description Configure Max memory in MB to be used for processing backlogs (Default: 10MB)

Type: number

Range: 5-500

Default: 10

max-disk-space

Description Configure Max disk space in MB to be used for storing the logs (Default: 100MB)

Type: number

Range: 50-20000

Default: 100

max-memory

Description Configure Max memory in MB to be used for processing the logs (Default: 30MB)

Type: number

Range: 5-500

Default: 30

queue-limit

Description Configure Max number of blocks that can be busy being scheduled (Default: 10, 0 to disable)

Type: number

Range: 0-100

Default: 10

rate-limit

Description Configure number of logs per second to be stored in disk (Default: 1000)

Type: number

Range: 1-60000

Default: 1000

sampling-enable

Type: List

send-if-all-servers-up

Description Start sending the stored logs only when all log servers are up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string-decode-special-char

Description Enable processing special characters before storing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

{ *message-selector attributes* },

{ *message-selector attributes* },

...

]

message-selector attributes

name

Description Specify message selector name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-list

Type: List

Refernce Object: */axapi/v3/acos-events/message-selector/{name}/rule/{index}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rule-list

Specification	
Type	*list*
Block object keys	

action

Description 'send': log messages selected by this rule will be sent; 'drop': log messages selected by this rule will be dropped;

Type: string

Supported Values: send, drop

Default: send

index

Description Specify rule index - rules are applied in numeric order

Type: number

Range: 1-256

message-id

Description Select a specific message by message-id and optionally severity

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

message-id-scope

Description 'all': Log messages at this level and all sub-trees; 'node-only': Log messages at this node only; 'children-only': Log messages at all sub-trees;

Type: string

Supported Values: all, node-only, children-only, log-field-only

severity-oper

Description 'equal-and-higher': emergency is highest, debugging lowest; 'equal': single severity;

Type: string

Supported Values: equal-and-higher, equal

severity-val

Description 'emergency': System unusable log messages (severity=0); 'alert': Action must be taken immediately (severity=1); 'critical': Critical conditions (severity=2); 'error': Error conditions (severity=3); 'warning': Warning conditions (severity=4); 'notification': Normal but significant conditions (severity=5); 'information': Informational messages (severity=6); 'debugging': Debug level messages (severity=7);

Type: string

Supported Values: emergency, alert, critical, error, warning, notification, information, debugging

admin-list

admin-list is **JSON List** of *admin attributes*

admin-list : [

{ *admin attributes* },

{ *admin attributes* },

...

]

admin attributes

access

Description: access is a **JSON Block**. Please see below for *access*

Type: Object

Refernce Object: */axapi/v3/admin/{user}/access*

access-list

Description Specify an ACL to classify a trusted host

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: access-list and trusted-host-cidr are mutually exclusive

action

Description 'enable': Enable user; 'disable': Disable user;

Type: string

Supported Values: enable, disable

Default: enable

aws-accesskey

Description: aws-accesskey is a **JSON Block**. Please see below for *aws-accesskey*

Type: Object

Refernce Object: */axapi/v3/admin/{user}/aws-accesskey*

azure-cred

Description: azure-cred is a **JSON Block**. Please see below for *azure-cred*

Type: Object

Refernce Object: */axapi/v3/admin/{user}/azure-cred*

encrypted

Description Specify an ENCRYPTED password string (System admin user password)

passwd-string

Description Config admin user password

Type: string

Format: password

password

Description: password is a **JSON Block**. Please see below for *password*

Type: Object

Refernce Object: */axapi/v3/admin/{user}/password*

password-key

Description Config admin user password

Type: boolean

Supported Values: true, false, 1, 0

privilege-global

Description 'read': Set read privilege; 'write': Set write privilege;

Type: string

Supported Values: read, write, hm

privilege-list

Type: List

privilege-shell

Description Set shell privilege

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

privilege-shell-root

Description Set shell root privilege

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssh-pubkey

Description: ssh-pubkey is a **JSON Block**. Please see below for *ssh-pubkey*

Type: Object

Refernce Object: */axapi/v3/admin/{user}/ssh-pubkey*

trusted-host

Description Set trusted network administrator can login in

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trusted-host-acl-id

Description ACL ID

Type: number

Range: 1-99

trusted-host-cidr

Description Trusted IP Address with network mask

Type: string

Format: ipv4-cidr

Mutual Exclusion: trusted-host-cidr and access-list are mutually exclusive

user

Description System admin user name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

azure-cred

Specification	
Type	*object*

delete

Description Delete an authorized Azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an azure-credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized azure credentials

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

privilege-list

Specification	
Type	*list*
Block object keys	

partition-name

Description Partition Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

privilege-partition

Description 'partition-enable-disable': Set per-partition enable/disable privilege; 'partition-read': Set per-partition read privilege; 'partition-write': Set per-partition write privilege;

Type: string

Supported Values: partition-enable-disable, partition-read, partition-write

aws-accesskey

Specification	
Type	*object*

delete

Description Delete an authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-url

Description File URL

Type: string

Format: url

import

Description Import an aws-accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

show

Description Show authorized aws accesskey

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

access

Specification	
Type	*object*

access-type

Description

Type: string

Format: enum-list

Default: axapi,cli,web

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssh-pubkey

Specification	
Type	*object*

delete

Description Delete an authorized public key (SSH key index)

Type: number

Range: 1-1000000

file-url

Description File URL

Type: string

Format: url

import

Description Import an authorized public key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

list

Description List all authorized public keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Specification	
Type	*object*

encrypted-in-module

Description Specify an ENCRYPTED password string (System admin user password)

password-in-module

Description Config admin user password

Type: string

Format: password

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.6.2 admin access

Config access type

access Specification

Type	*Configuration Resource*
Element Name	access
Element URI	/axapi/v3/admin/{user}/access
Element Attributes	access_attributes
Schema	`access schema`

Operations Allowed:

Create Object

POST

/axapi/v3/admin/{user}/access

access attributes

Get Object

GET

/axapi/v3/admin/{user}/access

access attributes

Modify Object

POST

/axapi/v3/admin/{user}/access

access attributes

Replace Object

PUT

/axapi/v3/admin/{user}/access

access attributes

Delete Object

DELETE

/axapi/v3/admin/{user}/access

access attributes

access attributes

access-type

Description

Type: string

Format: enum-list

Default: axapi,cli,web

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.6.3 admin password

Config admin user password

password Specification

Type	*Configuration Resource*
Element Name	password
Element URI	/axapi/v3/admin/{user}/password
Element Attributes	password_attributes
Schema	`password schema`

Operations Allowed:

Create Object

POST

/axapi/v3/admin/{user}/password

password attributes

Get Object

GET

/axapi/v3/admin/{user}/password

password attributes

Modify Object

POST

/axapi/v3/admin/{user}/password

password attributes

Replace Object

PUT

/axapi/v3/admin/{user}/password

password attributes

Delete Object

DELETE

/axapi/v3/admin/{user}/password

password attributes

password attributes

encrypted-in-module

Description Specify an ENCRYPTED password string (System admin user password)

password-in-module

Description Config admin user password

Type: string

Format: password

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.7 admin-lockout

Objects:

2.7.1 admin-lockout

Admin user lockout configuration

admin-lockout Specification

Type	*Configuration Resource*
Element Name	admin-lockout
Element URI	/axapi/v3/admin-lockout
Element Attributes	admin-lockout_attributes
Schema	`admin-lockout schema`

Operations Allowed:

Create Object

POST

/axapi/v3/admin-lockout

admin-lockout attributes

Get Object

GET

/axapi/v3/admin-lockout

admin-lockout attributes

Modify Object

POST

/axapi/v3/admin-lockout

admin-lockout attributes

Replace Object

PUT

/axapi/v3/admin-lockout

admin-lockout attributes

Delete Object

DELETE

/axapi/v3/admin-lockout

admin-lockout attributes

admin-lockout attributes

duration

Description Admin user lockout duration, in minutes, by default 10 (Admin user lockout duration in minutes, 0 means forever)

Type: number

Range: 0-1440

Default: 10

enable

Description Enable admin user lockout

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-time

Description After how long to reset the lockout counter, in minutes, by default 10 (Time in minutes after which to reset the lockout counter)

Type: number

Range: 1-1440

Default: 10

threshold

Description Admin user lockout threshold, by default 5

Type: number

Range: 1-10

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.8 allow-slb-cfg

Objects:

2.8.1 allow-slb-cfg

allow-slb-cfg Specification

Type	*Configuration Resource*
Element Name	allow-slb-cfg
Element URI	/axapi/v3/allow-slb-cfg
Element Attributes	allow-slb-cfg_attributes
Schema	`allow-slb-cfg schema`

Operations Allowed:

Create Object

POST

/axapi/v3/allow-slb-cfg

allow-slb-cfg attributes

Get Object

GET

/axapi/v3/allow-slb-cfg

allow-slb-cfg attributes

Modify Object

POST

/axapi/v3/allow-slb-cfg

allow-slb-cfg attributes

Replace Object

PUT

/axapi/v3/allow-slb-cfg

allow-slb-cfg attributes

Delete Object

DELETE

/axapi/v3/allow-slb-cfg

allow-slb-cfg attributes

allow-slb-cfg attributes

enable

Description Enable configuration of SLB objects in CGN partition. Please follow documentation on allowed configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.9 application-type

Objects:

2.9.1 application-type

Configure application to be used in partition (ADC/CGNV6)

application-type Specification

Type	*Configuration Resource*
Element Name	application-type
Element URI	/axapi/v3/application-type
Element Attributes	application-type_attributes
Schema	`application-type schema`

Operations Allowed:

Create Object

POST

/axapi/v3/application-type

application-type attributes

```
POST /axapi/v3/application-type
Payload:
{
    "application-type": {
        "type": "adc"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Get Object

GET

/axapi/v3/application-type

application-type attributes

```
GET /axapi/v3/application-type
Reponse:
{
    "application-type": {
        "type": "adc",
        "uuid": "0dfde060-5df3-11d9-abbd-001fa00680a0",
        "a10-url": "/axapi/v3/application-type"
    }
}
```

Modify Object

POST

/axapi/v3/application-type

application-type attributes

Replace Object

PUT

/axapi/v3/application-type

application-type attributes

```
PUT /axapi/v3/application-type
Payload:
{
    "application-type": {
        "type": "adc"
    }
}
```

Delete Object

DELETE

/axapi/v3/application-type

application-type attributes

```
DELETE /axapi/v3/application-type
Reponse:
{
    "response": {
        "status": "OK"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

application-type attributes

type

Description 'adc': Application type ADC; 'cgnv6': Application type CGNv6;

Type: string

Supported Values: adc, cgnv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.10 audit

Objects:

2.10.1 audit

Configure audit

audit Specification

Type	*Configuration Resource*
Element Name	audit
Element URI	/axapi/v3/audit
Element Attributes	audit_attributes
Schema	`audit schema`

Operations Allowed:

Create Object

POST

/axapi/v3/audit

audit attributes

```
POST /axapi/v3/audit
Payload:
{
    "audit": {
        "enable": 1,
        "privilege": 1
    }
}
```

Get Object

GET

/axapi/v3/audit

audit attributes

```
GET /axapi/v3/audit
Reponse:
{
    "audit": {
        "enable": 1,
        "privilege": 1,
        "uuid": "587b2544-3b55-11ea-834e-3399029c19ac",
        "a10-url": "/axapi/v3/audit"
    }
}
```

Modify Object

POST

/axapi/v3/audit

audit attributes

Replace Object

PUT

/axapi/v3/audit

audit attributes

```
PUT /axapi/v3/audit
Payload:
{
    "audit": {
        "enable": 1,
        "privilege": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/audit

audit attributes

```
DELETE /axapi/v3/audit
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

audit attributes

enable

Description Enable audit service

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

privilege

Description Enable privilege command for audit service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

size

Description Config audit buffer size, default is 20,000 (Audit buffer size(in items), default is 20,000)

Type: number

Range: 1000-30000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.11 authentication

Objects:

2.11.1 authentication

Configure authentication feature

authentication Specification

Type	*Configuration Resource*
Element Name	authentication
Element URI	/axapi/v3/authentication
Element Attributes	authentication_attributes
Schema	`authentication schema`

Operations Allowed:

Create Object

POST

/axapi/v3/authentication

authentication attributes

```
POST /axapi/v3/authentication
Payload:
{
    "authentication": {

mode-cfg

Description: mode-cfg is a **JSON Block**. Please see below for *mode-cfg*

Type: Object

multiple-auth-reject

Description Multiple same user login reject

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

type-cfg

Description: type-cfg is a **JSON Block**. Please see below for *type-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

console

Specification	
Type	*object*

type-cfg

Description: type-cfg is a **JSON Block**. Please see below for *console_type-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

console_type-cfg

Specification	
Type	*object*

console-type

Description

Type: string

Format: enum-list

type

Description The login authentication type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mode-cfg

Specification	
Type	*object*

mode

Description 'multiple': Multiple authentication mode. If an authentication method rejected, try next one; 'single': Single authentication mode. If an authentication method rejected, don't try next one;

Type: string

Supported Values: multiple, single

Default: single

type-cfg

Specification	
Type	*object*

type

Description The login authentication type

Type: string

Format: enum-list

Default: local

login-cfg

Specification	
Type	*object*

local

Description Configure local user to enter privilege-mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

privilege-mode

Description Configure to enter privilege-mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-cfg

Specification	
Type	*object*

enable-auth-type

Description The enable-password authentication type

Type: string

Format: enum-list

Default: local

2.11.2 authentication console

Configure console authentication type

console Specification

Type	*Configuration Resource*
Element Name	console
Element URI	/axapi/v3/authentication/console
Element Attributes	console_attributes
Schema	`console schema`

Operations Allowed:

Create Object

POST

/axapi/v3/authentication/console

console attributes

```
POST /axapi/v3/authentication/console
Payload:
{
    "console": {
        "type-cfg": {
            "console-type": "ldap",

        "status": "OK"
    }
}
```

authorization attributes

commands

Description Commands level for authorization

Type: number

Range: 0-15

debug

Description Specify the debug level for authorization (Debug level for command authorization. bitwise OR of the following: 1(common), 2(packet),4(packet detail), 8(md5))

Type: number

Range: 1-15

method

Description: method is a **JSON Block**. Please see below for *method*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

method

Specification	
Type	*object*

none

Description No command authorization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacplus

Description Using TACACS+ protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.13 automatic-update

Maximum Length: 64 characters

Maximum Length: 1 characters

revert

Specification	
Type	*object*

feature-name

Description 'app-fw': Application Firewall;

Type: string

Supported Values: app-fw, a10-threat-intel

proxy-server

Specification	
Type	*object*

auth-type

Description 'ntlm': NTLM authentication(default); 'basic': Basic authentication;

Type: string

Supported Values: ntlm, basic

Default: ntlm

domain

Description Realm for NTLM authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

https-port

Description Proxy server HTTPs port

Type: number

Range: 1-65535

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

check-now

Specification

feature-name

Description 'app-fw': Application Firewall;

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel

from-staging-server

Description Get files from GLM Staging storage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prod-ver

Description update to this specific version, if this option is not configured, update to the latest version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

stage-ver

Description update this specific version

Type: string

Maximum Length: 70 characters

Maximum Length: 1 characters

config-list

Specification	
Type	*list*
Block object keys	

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

debug

Description Enable libcurl debug option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ssl-verify

Description Disable peer server certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

feature-name

Description 'app-fw': Application Firewall Configuration;

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel

schedule

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

2.13.2 automatic-update config

Configure software update schedule

config Specification

Type	*Collection*
Object Key(s)	*feature-name*
Collection Name	*config-list*
Collection URI	/axapi/v3/automatic-update/config
Element Name	config
Element URI	/axapi/v3/automatic-update/config/{feature-name}
Element Attributes	config_attributes
Schema	`config schema`

Operations Allowed:

Create Object

POST

/axapi/v3/automatic-update/config

config attributes

Create List

POST

/axapi/v3/automatic-update/config

config attributes

Get Object

GET

/axapi/v3/automatic-update/config/{feature-name}

config attributes

Get List

GET

/axapi/v3/automatic-update/config

config-list

Modify Object

POST

/axapi/v3/automatic-update/config/{feature-name}

config attributes

Replace Object

PUT

/axapi/v3/automatic-update/config/{feature-name}

config attributes

Replace List

PUT

/axapi/v3/automatic-update/config

config-list

Delete Object

DELETE

/axapi/v3/automatic-update/config/{feature-name}

config attributes

config-list

config-list is **JSON List** of *config attributes*

```
config-list : [
        { config attributes },
        { config attributes },
        ...
    ]
```

config attributes

daily

Description Every day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: daily and weekly are mutually exclusive

day-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

debug

Description Enable libcurl debug option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ssl-verify

Description Disable peer server certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

feature-name

Description 'app-fw': Application Firewall Configuration;

Type: string

Supported Values: app-fw, ca-bundle, a10-threat-intel

schedule

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week-day

Description 'Monday': Monday; 'Tuesday': Tuesday; 'Wednesday': Wednesday; 'Thursday': Thursday; 'Friday': Friday; 'Saturday': Saturday; 'Sunday': Sunday;

Type: string

Supported Values: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday

week-time

Description Time of day to update (hh:mm) in 24 hour local time

Type: string

Format: time-hhmm

weekly

Description Every week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: weekly and daily are mutually exclusive

2.13.3 automatic-update proxy-server

Connect through proxy server

proxy-server Specification

Type	*Configuration Resource*
Element Name	proxy-server
Element URI	/axapi/v3/automatic-update/proxy-server
Element Attributes	proxy-server_attributes
Schema	`proxy-server schema`

Operations Allowed:

Create Object

POST

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

Get Object

GET

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

Modify Object

POST

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

Replace Object

PUT

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

Delete Object

DELETE

/axapi/v3/automatic-update/proxy-server

proxy-server attributes

proxy-server attributes

auth-type

Description 'ntlm': NTLM authentication(default); 'basic': Basic authentication;

Type: string

Supported Values: ntlm, basic

Default: ntlm

domain

Description Realm for NTLM authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

https-port

Description Proxy server HTTPs port

Type: number

Range: 1-65535

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.14 axdebug

Objects:

2.14.1 axdebug

Packet Trace Options

axdebug Specification

Type	*Configuration Resource*
Element Name	axdebug
Element URI	/axapi/v3/axdebug
Element Attributes	axdebug_attributes
Schema	`axdebug schema`

Operations Allowed:

Create Object

POST

/axapi/v3/axdebug

axdebug attributes

Get Object

GET

/axapi/v3/axdebug

axdebug attributes

Modify Object

POST

/axapi/v3/axdebug

axdebug attributes

Replace Object

PUT

/axapi/v3/axdebug

axdebug attributes

Delete Object

DELETE

/axapi/v3/axdebug

axdebug attributes

axdebug attributes

apply-config

Description: apply-config is a **JSON Block**. Please see below for *apply-config*

Type: Object

Refernce Object: */axapi/v3/axdebug/apply-config*

capture

Description: capture is a **JSON Block**. Please see below for *capture*

Type: Object

Refernce Object: */axapi/v3/axdebug/capture*

count

Description Maximum packets to capture. Default is 3000. (Maximum packets to capture. For umlimited, specify 0)

Type: number

Range: 0-65535

Default: 3000

delete

Description: delete is a **JSON Block**. Please see below for *delete*

Type: Object

Refernce Object: */axapi/v3/axdebug/delete*

exit

Description: exit is a **JSON Block**. Please see below for *exit*

Type: Object

Refernce Object: */axapi/v3/axdebug/exit*

filter-config-list

Type: List

Refernce Object: */axapi/v3/axdebug/filter-config/{number}*

inc-port-num

Description Port Numbers separated by commas(,) and hyphens(-) without spaces. ex: 4,5,10-30, or separated by spaces and double-quoted(“)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

incoming

Description Incoming interface. (For all ports, don’t specify port number.)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

length

Description Packet length to capture

Type: number

Range: 64-12000

Default: 1518

maxfile

Description Maximum number of debug packet files. Default is 100

Type: number

Range: 1-65535

Default: 100

out-port-num

Description Port Numbers separated by commas(,) and hyphens(-) without spaces. ex: 4,5,10-30, or separated by spaces and double-quoted(“)

Type: string

Format: string-rlx

Maximum Length: 511 characters

Maximum Length: 1 characters

outgoing

Description Outgoing interface (For all ports, don’t specify port number.)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

save-config

Description: save-config is a **JSON Block**. Please see below for *save-config*

Type: Object

Refernce Object: */axapi/v3/axdebug/save-config*

sess-filter-dis

Description Disable session based filter

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Maximum number of minutes for a capture. Default is 5 minutes. For unlimited, specify 0

Type: number

Range: 0-65535

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

delete

Specification	
Type	*object*

capture-file

Description Delete a capture file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

config-file

Description Delete AXDebug config file (Specify target filename to change)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

apply-config

Specification	
Type	*object*

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

save-config

Specification	
Type	*object*

config-file

Description config file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

default

Description save to default config file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capture

Specification	
Type	*object*

brief

Description Print basic packet information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

current-slot

Description Only for current-slot of chassis

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Include packet payload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-stop

Description Non-stop execution

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

save

Description Save packets into file (Specify filename to save packets)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

exit

Specification	
Type	*object*

stop-capture

Description stop capture traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-config-list

Specification	
Type	*list*
Block object keys	

WORD0

Description WORD0 to compare

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: WORD0 hex and integer are mutually exclusive

WORD1

Description WORD min value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

WORD2

Description WORD max value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

comp-hex

Description value to compare

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

dst

Description Destination

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst and l3-proto are mutually exclusive

dst-ip

Description dest IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-ipv4-address

Description dest ip address

Type: string

Format: ipv4-address

dst-mac

Description dest mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-mac-addr

Description dest mac address

Type: string

Format: mac-address

dst-port

Description dest port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-port-num

Description dest Port number

Type: number

Range: 1-65535

exit

Description Exit from axdebug mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hex

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hexinteger, word and WORD0 are mutually exclusive

integer

Description Define decimal value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integerhex, word and WORD0 are mutually exclusive

integer-comp

Description value to compare

Type: number

Range: 1-255

integer-max

Description max value

Type: number

Range: 1-255

integer-min

Description min value

Type: number

Range: 1-255

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip l3-proto and ipv6 are mutually exclusive

ipv4-address

Description ip address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6 l3-proto and ip are mutually exclusive

ipv6-address

Description ipv6 address

Type: string

Format: ipv6-address

l3-proto

Description 'arp': arp; 'neighbor': neighbor;

Type: string

Supported Values: arp, neighbor

Mutual Exclusion: l3-protodst, src, ip, ipv6, mac, port, proto and offset are mutually exclusive

length

Description byte length

Type: number

Range: 1-65535

mac

Description mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: mac and l3-proto are mutually exclusive

mac-addr

Description mac address

Type: string

Format: mac-address

max-hex

Description max value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

min-hex

Description min value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

number

Description Specify filter id

Type: number

Range: 1-32

offset

Description byte offset

Type: number

Range: 0-65535

Mutual Exclusion: offset and l3-proto are mutually exclusive

oper-range

Description 'gt': greater than; 'gte': greater than or equal to; 'se': smaller than or equal to; 'st': smaller than; 'eq': equal to; 'range': select a range;

Type: string

Supported Values: gt, gte, se, st, eq, range

port

Description port configurations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port and l3-proto are mutually exclusive

port-num-max

Description max port number

Type: number

Range: 1-65535

port-num-min

Description min port number

Type: number

Range: 1-65535

prot-num

Description protocol number

Type: number

Range: 1-255

Mutual Exclusion: prot-num and proto-val are mutually exclusive

proto

Description ip protocol number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: proto and l3-proto are mutually exclusive

proto-val

Description 'icmp': icmp; 'icmpv6': icmpv6; 'tcp': tcp; 'udp': udp;

Type: string

Supported Values: icmp, icmpv6, tcp, udp

Mutual Exclusion: proto-val and prot-num are mutually exclusive

src

Description Src

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src and l3-proto are mutually exclusive

src-ip

Description src IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-ipv4-address

Description src ip address

Type: string

Format: ipv4-address

src-mac

Description src mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-mac-addr

Description src mac address

Type: string

Format: mac-address

src-port

Description src port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-port-num

Description src Port number

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

word

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: word hex and integer are mutually exclusive

2.14.2 axdebug filter-config

Global debug filter

filter-config Specification

Type	*Collection*
Object Key(s)	*number*
Collection Name	*filter-config-list*
Collection URI	/axapi/v3/axdebug/filter-config
Element Name	filter-config

filter-config-list

filter-config-list is **JSON List** of *filter-config attributes*

filter-config-list : [

{ *filter-config attributes* },

{ *filter-config attributes* },

...

]

filter-config attributes

WORD0

Description WORD0 to compare

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: WORD0 hex and integer are mutually exclusive

WORD1

Description WORD min value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

WORD2

Description WORD max value

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

comp-hex

Description value to compare

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

dst

Description Destination

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: dst and l3-proto are mutually exclusive

dst-ip

Description dest IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-ipv4-address

Description dest ip address

Type: string

Format: ipv4-address

dst-mac

Description dest mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-mac-addr

Description dest mac address

Type: string

Format: mac-address

dst-port

Description dest port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dst-port-num

Description dest Port number

Type: number

Range: 1-65535

exit

Description Exit from axdebug mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hex

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: hexinteger, word and WORD0 are mutually exclusive

integer

Description Define decimal value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: integerhex, word and WORD0 are mutually exclusive

integer-comp

Description value to compare

Type: number

Range: 1-255

integer-max

Description max value

Type: number

Range: 1-255

integer-min

Description min value

Type: number

Range: 1-255

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ip l3-proto and ipv6 are mutually exclusive

ipv4-address

Description ip address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ipv6 l3-proto and ip are mutually exclusive

ipv6-address

Description ipv6 address

Type: string

Format: ipv6-address

l3-proto

Description Layer 3 protocol

Type: string

Supported Values: arp, neighbor

Mutual Exclusion: l3-protodst, src, ip, ipv6, mac, port, proto and offset are mutually exclusive

length

Description byte length

Type: number

Range: 1-65535

mac

Description mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: mac and l3-proto are mutually exclusive

mac-addr

Description mac address

Type: string

Format: mac-address

max-hex

Description max value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

min-hex

Description min value

Type: string

Format: time-hh:mm

Maximum Length: 2 characters

Maximum Length: 1 characters

number

Description Specify filter id

Type: number

Range: 1-32

offset

Description byte offset

Type: number

Range: 0-65535

Mutual Exclusion: offset and l3-proto are mutually exclusive

oper-range

Description 'gt': greater than; 'gte': greater than or equal to; 'se': smaller than or equal to; 'st': smaller than; 'eq': equal to;

Type: string

Supported Values: gt, gte, se, st, eq, range

port

Description port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: port and l3-proto are mutually exclusive

port-num-max

Description max port number

Type: number

Range: 1-65535

port-num-min

Description min port number

Type: number

Range: 1-65535

prot-num

Description protocol number

Type: number

Range: 1-255

Mutual Exclusion: prot-num and proto-val are mutually exclusive

proto

Description ip protocol number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: proto and l3-proto are mutually exclusive

proto-val

Description 'icmp': icmp; 'icmpv6': icmpv6; 'tcp': tcp; 'udp': udp;

Type: string

Supported Values: icmp, icmpv6, tcp, udp

Mutual Exclusion: proto-val and prot-num are mutually exclusive

src

Description Source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: src and l3-proto are mutually exclusive

src-ip

Description src IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-ipv4-address

Description src ip address

Type: string

Format: ipv4-address

src-mac

Description src mac address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-mac-addr

Description src mac address

Type: string

Format: mac-address

src-port

Description src port number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

src-port-num

Description src Port number

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

word

Description Define hex value

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: word hex and integer are mutually exclusive

2.15 backup-periodic

Objects:

2.15.1 backup-periodic

Configure backup periodically

backup-periodic Specification

Type	*Configuration Resource*
Element Name	backup-periodic

backup-periodic attributes

backup-periodic attributes

day

Description Specify interval days

Type: number

Range: 1-199

Mutual Exclusion: day hour and week are mutually exclusive

encrypt

Description Encrypt the backup file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat

Description Backup fixed-nat port mapping files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hour

Description Specify interval hours

Type: number

Range: 1-65534

Mutual Exclusion: hour day and week are mutually exclusive

log

Description Backup log files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remote-file

Description profile name for remote url

Type: string

Format: url

store-name

Description profile name to store remote url

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

system

Description Backup system files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

week

Description Specify interval weeks

Type: number

Range: 1-199

Mutual Exclusion: week day and hour are mutually exclusive

2.16 banner

Objects:

2.16.1 banner

Define a login banner

exec-banner-cfg

Description: exec-banner-cfg is a **JSON Block**. Please see below for *exec-banner-cfg*

Type: Object

login-banner-cfg

Description: login-banner-cfg is a **JSON Block**. Please see below for *login-banner-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exec-banner-cfg

Specification	
Type	*object*

exec

Description Set EXEC process creation banner

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exec-banner

Description Banner text, string n is taken as line break of multi-line banner text, use \n to indicate n

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

login-banner-cfg

Specification	
Type	*object*

login

Description Set login banner

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

login-banner

Description Banner text, string n is taken as line break of multi-line banner text, use \n to indicate n

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

```

bgp attributes

extended-asn-cap

Description Enable the router to send 4-octet ASN capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nexthop-trigger

Description: nexthop-trigger is a **JSON Block**. Please see below for *nexthop-trigger*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nexthop-trigger

Specification	
Type	*object*

delay

Description Configure nexthop trigger delay time interval (Nexthop Trigger Delay time interval between 1 and 100)

Type: number

Range: 1-100

enable

Description Enable the nexthop tracking functionality

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.18 bios-prog

Objects:

2.18.1 bios-prog

Programming for BIOS

bios-prog Specification

lsn_radius_server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *lsn_radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

lsn_radius_server_remote

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

lsn_radius_server_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'radius-table-full': RADIUS Request Dropped (Table Full); 'ha-standby-dropped': HA Standby Dropped; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received;

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-

sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

lsn_radius_server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

Specification	
Type	*object*

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_global

Specification	
Type	*object*

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *lsn_global_icmp*

Type: Object

inbound-refresh

Description 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: disable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Description: logging is a **JSON Block**. Please see below for *lsn_global_logging*

Type: Object

port-batching

Description: port-batching is a **JSON Block**. Please see below for *lsn_global_port-batching*

Type: Object

sampling-enable

Type: List

strictly-sticky-nat

Description Strictly adheres to sticky-nat (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_global_icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

lsn_global_logging

Specification	
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Refernce Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

lsn_global_logging_pool

Specification	
Type	*list*
Block object keys	

pool-name

Description NAT pool

Type: string

Format: string-rlx

lsn_tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *lsn_tcp_mss-clamp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn/tcp/mss-clamp*

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *lsn_tcp_reset-on-error*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn/tcp/reset-on-error*

lsn_tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn_tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'icmp-unknown-type': ICMP Unknown Type; 'icmp-no-port-info': ICMP Port Info Not Included; 'icmp-no-session-drop': ICMP No Matching Session Drop; 'icmpv6-unknown-type': ICMPv6 Unknown Type; 'icmpv6-no-port-info': ICMPv6 Port Info Not Included; 'icmpv6-no-session-drop': ICMPv6 No Matching Session Drop; 'icmp-to-icmp': ICMP to ICMP Conversion; 'icmp-to-icmpv6': ICMP to ICMPv6 Conversion; 'icmpv6-to-icmp': ICMPv6 to ICMP Conversion; 'icmpv6-to-icmpv6': ICMPv6 to ICMPv6 Conversion; 'icmp-bad-type': Bad Embedded ICMP Type; 'icmpv6-bad-type': Bad Embedded ICMPv6 Type; '64-known-drop': NAT64 Forward Known ICMPv6 Drop; '64-unknown-drop': NAT64 Forward Unknown ICMPv6 Drop; '64-midpoint-hop': NAT64 Forward Unknown Source Drop; '46-known-drop': NAT64 Reverse Known ICMP Drop; '46-unknown-drop': NAT64 Reverse Known ICMPv6 Drop; '46-no-prefix-for-ipv4': NAT64 Reverse No Prefix Match for IPv4; '46-bad-encap-ip-header-len': 4to6 Bad Encapsulated IP Header Length; 'icmp-to-icmp-err': ICMP to ICMP Conversion Error; 'icmp-to-icmpv6-err': ICMP to ICMPv6 Conversion Error; 'icmpv6-to-icmp-err': ICMPv6 to ICMP Conversion Error; 'icmpv6-to-icmpv6-err': ICMPv6 to ICMPv6 Conversion Error; 'encap-cross-cpu-no-match': ICMP Embedded Cross CPU No Matching Session; 'encap-cross-cpu-preprocess-err': ICMP Embedded Cross CPU Preprocess Error; 'icmp-to-icmp-unknown-l4': ICMP Embedded Unknown L4 Protocol; 'icmp-to-icmpv6-unknown-l4': ICMP to ICMPv6 Embedded Unknown L4 Protocol; 'icmpv6-to-icmp-unknown-l4': ICMPv6 to ICMP Embedded Unknown L4 Protocol; 'icmpv6-to-icmpv6-unknown-l4': ICMPv6 to ICMPv6 Embedded Unknown L4 Protocol; 'static-nat': ICMP Static NAT; 'echo-to-pool-reply': Ping to Pool Reply; 'echo-to-pool-drop': Ping to Pool Drop; 'error-to-pool-drop': Error to Pool Drop; 'echo-to-pool-reply-v6': Ping6 to Pool Reply; 'echo-to-pool-drop-v6': Ping6 to Pool Drop; 'error-to-pool-drop-v6': Error to IPv6 Pool Drop;

Type: string

Supported Values: all, icmp-unknown-type, icmp-no-port-info, icmp-no-session-drop, icmpv6-unknown-type, icmpv6-no-port-info, icmpv6-no-session-drop, icmp-to-icmp, icmp-to-icmpv6, icmpv6-to-icmp, icmpv6-to-icmpv6, icmp-bad-type, icmpv6-bad-type, 64-known-drop, 64-unknown-drop, 64-midpoint-hop, 46-known-drop, 46-unknown-drop, 46-no-prefix-for-ipv4, 46-bad-encap-ip-header-len, icmp-to-icmp-err, icmp-to-icmpv6-err, icmpv6-to-icmp-err, icmpv6-to-icmpv6-err, encap-cross-cpu-no-match, encap-cross-cpu-preprocess-err, icmp-to-icmp-unknown-l4, icmp-to-icmpv6-unknown-l4, icmpv6-to-icmp-unknown-l4, icmpv6-to-icmpv6-unknown-l4, static-nat, echo-to-pool-reply, echo-to-pool-drop, error-to-pool-drop, echo-to-pool-reply-v6, echo-to-pool-drop-v6, error-to-pool-drop-v6, error-ip-mismatch

port-batch-v1

Specification	
Type	*object*

enable-port-batch-v1

Description Enable lsn port-batching v1 (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pcp

Specification	
Type	*object*

default-template

Description Bind the default template for PCP (Bind a PCP template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

pcp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'packets-rcv': Packets Received; 'lsn-map-process-success': PCP MAP Request Processing Success (NAT44); 'dslite-map-process-success': PCP MAP Request Processing Success (DS-Lite); 'nat64-map-process-success': PCP MAP Request Processing Success (NAT64); 'lsn-peer-process-success': PCP PEER Request Processing Success (NAT44); 'dslite-peer-process-success': PCP PEER Request Processing Success (DS-Lite); 'nat64-peer-process-success': PCP PEER Request Processing Success (NAT64); 'lsn-announce-process-success': PCP ANNOUNCE Request Processing Success (NAT44); 'dslite-announce-process-success': PCP ANNOUNCE Request Processing Success (DS-Lite); 'nat64-announce-process-success': PCP ANNOUNCE Request Processing Success (NAT64); 'pkt-not-request-drop': Packet Not a PCP Request; 'pkt-too-short-drop': Packet Too Short; 'noroute-drop': Response No Route; 'unsupported-version': Unsupported PCP version; 'not-authorized': PCP Request Not Authorized; 'malform-request': PCP Request Malformed; 'unsupp-opcode': Unsupported PCP Opcode; 'unsupp-option': Unsupported PCP Option; 'malform-option': PCP Option Malformed; 'no-resources': No System or NAT Resources; 'unsupp-protocol': Unsupported Mapping Protocol; 'user-quota-exceeded': User Quota Exceeded; 'cannot-provide-suggest': Cannot Provide Suggested Port When PREFER_FAILURE; 'address-mismatch': PCP Client Address Mismatch; 'excessive-remote-peers': Excessive Remote Peers; 'pkt-not-from-nat-inside': Packet Dropped For Not Coming From NAT Inside; 'l4-process-error': L3/L4 Process Error; 'internal-error-drop': Internal Error; 'unsol_ance_sent_succ': Unsolicited Announce Sent; 'unsol_ance_sent_fail': Unsolicited Announce Send Failure; 'ha_sync_epoch_sent': HA Sync PCP Epoch Sent; 'ha_sync_epoch_rcv': HA Sync PCP Epoch Recv; 'fullcone-ext-alloc': PCP Fullcone Extension Alloc; 'fullcone-ext-free': PCP Fullcone Extension Free; 'fullcone-ext-alloc-failure': PCP Fullcone Extension Alloc Failure; 'fullcone-ext-notfound': PCP Fullcone Extension Not Found; 'fullcone-ext-reuse': PCP Fullcone Extension Reuse; 'client-nonce-mismatch': PCP Client Nonce Mismatch; 'map-filter-set': PCP MAP Filter Set; 'map-filter-deny': PCP MAP Filter Deny Inbound;

Type: string

Supported Values: all, packets-rcv, lsn-map-process-success, dslite-map-process-success, nat64-map-process-success, lsn-peer-process-success, dslite-peer-process-success, nat64-peer-process-success, lsn-announce-process-success, dslite-announce-process-success, nat64-announce-process-success, pkt-not-request-drop, pkt-too-short-drop, noroute-drop, unsupported-version, not-authorized, malform-request, unsupp-opcode, unsupp-option, malform-option, no-resources, unsupp-protocol, user-quota-exceeded, cannot-provide-suggest, address-mismatch, excessive-remote-peers, pkt-not-from-nat-inside, l4-process-error, internal-error-drop, unsol_ance_sent_succ, unsol_ance_sent_fail, ha_sync_epoch_sent, ha_sync_epoch_rcv, fullcone-ext-alloc, fullcone-ext-free, fullcone-ext-alloc-failure, fullcone-ext-notfound, fullcone-ext-reuse, client-nonce-mismatch, map-filter-set, map-filter-deny, inter-board-pkts

fixed-nat

Specification	
Type	*object*

alg

Description: alg is a **JSON Block**. Please see below for *fixed-nat_alg*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/alg*

disable

Description: disable is a **JSON Block**. Please see below for *fixed-nat_disable*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/disable*

disabled-config

Description: disabled-config is a **JSON Block**. Please see below for *fixed-nat_disabled-config*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/disabled-config*

full-cone-session

Description: full-cone-session is a **JSON Block**. Please see below for *fixed-nat_full-cone-session*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/full-cone-session*

global

Description: global is a **JSON Block**. Please see below for *fixed-nat_global*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/global*

histogram

Description: histogram is a **JSON Block**. Please see below for *fixed-nat_histogram*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/histogram*

inside

Description: inside is a **JSON Block**. Please see below for *fixed-nat_inside*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/inside*

per-instance

Description: per-instance is a **JSON Block**. Please see below for *fixed-nat_per-instance*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/per-instance*

port-mapping

Description: port-mapping is a **JSON Block**. Please see below for *fixed-nat_port-mapping*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/port-mapping*

port-mapping-files

Description: port-mapping-files is a **JSON Block**. Please see below for *fixed-nat_port-mapping-files*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/port-mapping-files*

user-quota

Description: user-quota is a **JSON Block**. Please see below for *fixed-nat_user-quota*

Type: Object

Refernce Object: */axapi/v3/cgnv6/fixed-nat/user-quota*

fixed-nat_port-mapping

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_iplist-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_iplist-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_inside_ipv4address-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_ipv4address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_ipv4address-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_ipv4address-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_inside_ipv6address-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv6 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *fixed-nat_inside_ipv6address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *fixed-nat_inside_ipv6address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fixed-nat_inside_ipv6address-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

fixed-nat_inside_ipv6address-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

fixed-nat_global

Specification	
Type	*object*

create-port-mapping-file

Description Create Port Mapping File

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-mapping-files-count

Description Number of old fixed_nat files to store

Type: number

Range: 1-10

Default: 5

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fixed-nat_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Supported Values: all, transport-inserted, transport-freed, transport-alloc-failure, data-session-created, data-session-freed, ext-creation-failure, transport-add-to-ext, transport-removed-from-ext, transport-too-many, transport-already-in-ext, transport-exists, transport-link-ext-failure-control, transport-link-ext-data, transport-link-ext-failure-data, transport-inserted-shadow, transport-creation-race, transport-alloc-failure-shadow, transport-put-in-del-q, transport-freed-shadow, transport-acquired-from-control, transport-found-from-prev-control, transport-acquire-failure-from-control, transport-released-from-control, transport-double-release-from-control, transport-acquired-from-data, transport-acquire-failure-from-data, transport-released-from-data, transport-double-release-from-data, transport-retry-lookup-on-data-free, transport-not-found-on-data-free, data-session-created-shadow, data-session-freed-shadow, ha-control-ext-creation-failure, ha-control-session-created, ha-data-session-created

stateful-firewall_alg_rtp

Specification	
Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout (default: 5 minutes)}

Type: number

Range: 2-10

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_alg_tftp

Specification	
Type	*object*

sampling-enable

Type: List

tftp-value

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stateful-firewall_alg_tftp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': Session created; 'filler2': Filler2;

Type: string

Supported Values: all, session-created, helper-created, helper-freed, helper-freed-used, helper-freed-unused, helper-already-used, helper-in-rml

stateful-firewall_global

Specification	
Type	*object*

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

stateful-firewall-value

Description 'enable': Enable stateful firewall;

Type: string

Supported Values: enable

uuid

Description uuid of the object

member-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

nat_pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_histogram

Specification	
Type	*object*

bin-count

Description Number of bins in the histogram (default: 50)

Type: number

Range: 10-100

Default: 50

bin-skew

Description Percentage of bins that represent the upper bound (default: 75)

Type: number

Range: 50-80

Default: 75

data-skew

Description Percentage of data that represents the upper bound (default: 25)

Type: number

Range: 5-50

Default: 25

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_icmpv6

Specification	
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_range-list-list

Specification	
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

name

Description Name for this Static List

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

Refernce Object: */axapi/v3/cgnv6/nat/inside/source/statistics*

nat_inside_source_statistics

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat_inside_source_static-list

Specification	
Type	*list*
Block object keys	

nat-address

Description NAT Address

Type: string

Format: ipv4-address

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list

Specification	
Type	*list*
Block object keys	

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat_pool-list_exclude-ip

Specification	
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

sctp

Specification	
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *sctp_global*

Type: Object

Refernce Object: */axapi/v3/cgnv6/sctp/global*

permit-payload-protocol

Description: permit-payload-protocol is a **JSON Block**. Please see below for *sctp_permit-payload-protocol*

Type: Object

Refernce Object: */axapi/v3/cgnv6/sctp/permit-payload-protocol*

rate-limit

Description: rate-limit is a **JSON Block**. Please see below for *sctp_rate-limit*

Type: Object

Refernce Object: */axapi/v3/cgnv6/sctp/rate-limit*

rate-limit-entries

Description: rate-limit-entries is a **JSON Block**. Please see below for *sctp_rate-limit-entries*

Type: Object

Refernce Object: */axapi/v3/cgnv6/sctp/rate-limit-entries*

sctp_rate-limit-entries

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_global

Specification	
Type	*object*

half-open-timeout

Description Set SCTP half-open timeout (SCTP half-open timeout in seconds (default 4))

Type: number

Range: 2-30

Default: 4

idle-timeout

Description SCTP idle timeout in minutes (default 5)

Type: number

Range: 1-63

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp_rate-limit

Specification	
Type	*object*

destination-list

Type: List

Refernce Object: */axapi/v3/cgnv6/sctp/rate-limit/destination/{ip}*

source-list

static-dest-mapping-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/static-dest-mapping/{v4-address}+{v6-address}*

nat46-stateless_static-dest-mapping-list

Specification	
Type	*list*
Block object keys	

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat46-stateless_fragmentation

Specification	
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *nat46-stateless_fragmentation_inbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *nat46-stateless_fragmentation_outbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/outbound*

nat46-stateless_fragmentation_inbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_fragmentation_outbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_global

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat46-stateless_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound_ipv4_received': Outbound IPv4 packets received; 'outbound_ipv4_drop': Outbound IPv4 packets dropped; 'outbound_ipv4_fragment_received': Outbound IPv4 fragment packets received; 'outbound_ipv6_unreachable': Outbound IPv6 destination unreachable; 'outbound_ipv6_fragmented': Outbound IPv6 packets fragmented; 'inbound_ipv6_received': Inbound IPv6 packets received; 'inbound_ipv6_drop': Inbound IPv6 packets dropped; 'inbound_ipv6_fragment_received': Inbound IPv6 fragment packets received; 'inbound_ipv4_unreachable': Inbound IPv4 destination unreachable; 'inbound_ipv4_fragmented': Inbound IPv4 packets fragmented; 'packet_too_big': Packet

too big; 'fragment_error': Fragment processing errors; 'icmpv6_to_icmp': ICMPv6 to ICMP; 'icmpv6_to_icmp_error': ICMPv6 to ICMP errors; 'icmp_to_icmpv6': ICMP to ICMPv6; 'icmp_to_icmpv6_error': ICMP to ICMPv6 errors; 'ha_standby': HA is standby; 'other_error': Other errors;

Type: string

Supported Values: all, outbound_ipv4_received, outbound_ipv4_drop, outbound_ipv4_fragment_received, outbound_ipv6_unreachable, outbound_ipv6_fragmented, inbound_ipv6_received, inbound_ipv6_drop, inbound_ipv6_fragment_received, inbound_ipv4_unreachable, inbound_ipv4_fragmented, packet_too_big, fragment_error, icmpv6_to_icmp, icmpv6_to_icmp_error, icmp_to_icmpv6, icmp_to_icmpv6_error, ha_standby, other_error, conn_count

nat46-stateless_prefix

Specification	
Type	*object*

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat46-stateless_partition-prefix-list

Specification	
Type	*list*

Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

map_translation_domain-list_tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *map_translation_domain-list_tcp_mss-clamp*

Type: Object

map_translation_domain-list_tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 516))

Type: number

Range: 0-1440

Default: 516

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping(default); 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, none, subtract

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS

Type: number

Range: 0-1440

mss-value

Description The max value allowed for the TCP MSS

Type: number

Range: 0-1440

map_translation_domain-list_health-check-gateway

Specification	
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

map_translation_domain-list_health-check-gateway_ipv6-address-list

Specification	
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

map_translation_domain-list_health-check-gateway_address-list

Specification	
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

map_translation_domain-list_basic-mapping-rule

Specification	
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value

Type: number

Range: 1-32768

prefix-rule-list

Type: List

Refernce Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_translation_domain-list_basic-mapping-rule_prefix-rule-list

Specification	
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

map_translation_default-domain

Specification	
Type	*object*

name

Description MAP-T domain name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/map/translation/domain*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	
Type	*object*

dns-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}*

http-alg-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/http-alg/{name}*

logging-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}*

pcp-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/pcp/{name}*

policy-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/policy/{name}*

template_policy-list

Specification	
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *template_policy-list_class-list*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/policy/{name}/class-list*

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list

Specification	
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_policy-list_class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

template_logging-list

Specification	
Type	*list*
Block object keys	

batched-logging-disable

Description Disable multiple logs per packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom

Description: custom is a **JSON Block**. Please see below for *template_logging-list_custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *template_logging-list_disable-log-by-destination*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *template_logging-list_include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *template_logging-list_include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *template_logging-list_log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *template_logging-list_log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *template_logging-list_rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *template_logging-list_rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *template_logging-list_severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *template_logging-list_source-address*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *template_logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_include-http

Specification	
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-http_header-cfg

Specification	
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

template_logging-list_severity

Specification	
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

template_logging-list_custom

Specification	
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *template_logging-list_custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

template_logging-list_custom_custom-message

Specification	
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

template_logging-list_source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_log

Specification	
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *template_logging-list_log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *template_logging-list_log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *template_logging-list_log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_log_one-to-one-nat

Specification	
Type	*object*

one-to-one-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat-sessions

Description Log all One-to-One NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_log_map-dhcpv6

Specification	
Type	*object*

map-dhcpv6-msg-type

Type: List

map-dhcpv6-prefix-all

Description Log MAP DHCPv6 prefix assignment/renewal/release

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: map-dhcpv6-prefix-all and map-dhcpv6-msg-type are mutually exclusive

template_logging-list_log_map-dhcpv6_map-dhcpv6-msg-type

Specification	
Type	*list*
Block object keys	

map-dhcpv6-msg-type

Description 'prefix-assignment': Log MAP DHCPv6 prefix assignment; 'prefix-renewal': Log MAP DHCPv6 prefix renewal; 'prefix-release': Log MAP DHCPv6 prefix release;

Type: string

Supported Values: prefix-assignment, prefix-renewal, prefix-release

Mutual Exclusion: map-dhcpv6-msg-type and map-dhcpv6-prefix-all are mutually exclusive

template_logging-list_log_fixed-nat

Specification	
Type	*object*

fixed-nat-http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

fixed-nat-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mappings

Description 'both': Log creation and deletion of NAT mappings; 'creation': Log creation of NAT mappings;

Type: string

Supported Values: both, creation

fixed-nat-sessions

Description Log all Fixed NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-ports

Description: user-ports is a **JSON Block**. Please see below for *template_logging-list_log_fixed-nat_user-ports*

Type: Object

template_logging-list_log_fixed-nat_user-ports

Specification	
Type	*object*

days

Description Specify period in days

Type: number

Range: 1-30

start-time

Description Time when periodic logging starts (Specify start time(hh:mm))

Type: string

Format: time-hhmm

user-ports

Description Log Fixed NAT User Ports Configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_source-port

Specification	
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

template_logging-list_log-receiver

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

radius

Description Use RADIUS server for NAT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

template_logging-list_include-radius-attribute

Specification	
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-radius-attribute_attr-cfg

Specification	
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'port-mappings': Include in port-mapping logs; 'sessions': Include in session logs;

Type: string

Supported Values: http-requests, port-mappings, sessions, user-data

template_logging-list_rule

Specification	
Type	*object*

interim-update-interval

Description Log interim update of NAT mappings (Interim update interval in minutes(Interval is floored to a multiple of 5))

Type: number

Range: 15-120

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *template_logging-list_rule_rule-http-requests*

Type: Object

template_logging-list_rule_rule-http-requests

Specification	
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 100 char))

Type: number

Range: 100-1000

Default: 128

template_logging-list_rule_rule-http-requests_dest-port

Specification	
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in CGN session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_disable-log-by-destination

Specification	
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip6-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_disable-log-by-destination_ip6-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_ip6-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_disable-log-by-destination_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

template_logging-list_rfc-custom

Specification	
Type	*object*

header

Description: header is a **JSON Block**. Please see below for *template_logging-list_rfc-custom_header*

Type: Object

message

Description: message is a **JSON Block**. Please see below for *template_logging-list_rfc-custom_message*

Type: Object

template_logging-list_rfc-custom_header

Specification	
Type	*object*

use-alternate-timestamp

Description Use alternate non-RFC5424 compliant timestamp. Ex: 1990 Jan 15 12:30:30

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_rfc-custom_message

Specification	
Type	*object*

dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-request-got

Description HTTP request got (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ipv6-tech

Type: List

session-created

Description Session created (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

session-deleted

Description Session deleted (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

template_logging-list_rfc-custom_message_ipv6-tech

Specification	
Type	*list*
Block object keys	

fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fixed-nat-freed

Description Fixed-NAT freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-allocated

Description Port allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-allocated

Description Port Batch allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-freed

Description Port Batch freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-freed

Description Port Batch v2 freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-freed

Description Port freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

tech-type

Description 'lsn': LSN; 'nat64': NAT64; 'ds-lite': DS-Lite; 'sixrd-nat64': 6rd-NAT64;

Type: string

Supported Values: lsn, nat64, ds-lite, sixrd-nat64

template_pcp-list

Specification	
Type	*list*
Block object keys	

allow-third-party-from-lan

Description Allow third party request coming from LAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-third-party-from-wan

Description Allow third party request coming from WAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

announce

Description PCP ANNOUNCE Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-client-nonce

Description To validate NONCE value in PCP request (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-map-filter

Description To disable processing of FILTER options in MAP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map

Description PCP MAP Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum

Description To set maximum lifetime of PCP mappings (default 1440 minutes)

Type: number

Range: 2-1440

Default: 1440

minimum

Description To set minimum lifetime of PCP mappings (default 2 minutes)

Type: number

Range: 2-1440

Default: 2

name

Description PCP Template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pcp-server-port

Description PCP server listening port (default 5351) (PCP UDP destination port)

Type: number

Range: 1024-65535

Default: 5351

peer

Description PCP PEER Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-ip

Description Specify source IP address for IPv4 ANNOUNCE message

Type: string

Format: ipv4-address

source-ipv6

Description Specify source IPv6 address for IPv6 ANNOUNCE message

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_http-alg-list

Specification	
Type	*list*
Block object keys	

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list

Specification	
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *template_dns-list_class-list*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *template_dns-list_dns64*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *template_dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_dns-list_class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

template_dns-list_dns64

Specification	
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Generate Response by DNS Cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list-list

Specification	
Type	*list*
Block object keys	

name

Description Specify name of the port list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-config

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list-list_port-config

Specification	
Type	*list*
Block object keys	

original-port

Description Original port to be translated

Type: number

Range: 0-65535

translated-port

Description Port after translation

Type: number

Range: 0-65535

nat64

Specification	
Type	*object*

alg

Description: alg is a **JSON Block**. Please see below for *nat64_alg*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg*

enhanced-user-tracking

Description: enhanced-user-tracking is a **JSON Block**. Please see below for *nat64_enhanced-user-tracking*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/enhanced-user-tracking*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *nat64_fragmentation*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/fragmentation*

full-cone-session

Description: full-cone-session is a **JSON Block**. Please see below for *nat64_full-cone-session*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/full-cone-session*

global

Description: global is a **JSON Block**. Please see below for *nat64_global*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/global*

prefix-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat64/prefix/{prefix-val}*

user-quota-session

Description: user-quota-session is a **JSON Block**. Please see below for *nat64_user-quota-session*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/user-quota-session*

nat64_fragmentation

Specification	
Type	*object*

df-bit-transparency

Description: df-bit-transparency is a **JSON Block**. Please see below for *nat64_fragmentation_df-bit-transparency*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/fragmentation/df-bit-transparency*

inbound

Description: inbound is a **JSON Block**. Please see below for *nat64_fragmentation_inbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/fragmentation/inbound*

outbound

Description: outbound is a **JSON Block**. Please see below for *nat64_fragmentation_outbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/fragmentation/outbound*

nat64_fragmentation_inbound

Specification	
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_fragmentation_outbound

Specification	
Type	*object*

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_fragmentation_df-bit-transparency

Specification	
Type	*object*

df-bit-value

Description 'enable': Add an empty IPv6 fragmentation header if IPv4 DF bit is zero;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_full-cone-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg

Specification	
Type	*object*

esp

Description: esp is a **JSON Block**. Please see below for *nat64_alg_esp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/esp*

ftp

Description: ftp is a **JSON Block**. Please see below for *nat64_alg_ftp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/ftp*

h323

Description: h323 is a **JSON Block**. Please see below for *nat64_alg_h323*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/h323*

mgcp

Description: mgcp is a **JSON Block**. Please see below for *nat64_alg_mgcp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/mgcp*

pptp

Description: pptp is a **JSON Block**. Please see below for *nat64_alg_pptp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/pptp*

rtsp

Description: rtsp is a **JSON Block**. Please see below for *nat64_alg_rtsp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/rtsp*

sip

Description: sip is a **JSON Block**. Please see below for *nat64_alg_sip*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/sip*

tftp

Description: tftp is a **JSON Block**. Please see below for *nat64_alg_tftp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat64/alg/tftp*

nat64_alg_ftp

Specification	
Type	*object*

ftp-enable

Description 'disable': Disable NAT64 FTP ALG;

Type: string

Supported Values: disable

trans-eprt-to-port

Description 'disable': disable;

Type: string

Supported Values: disable

trans-epsv-to-pasv

Description 'disable': disable;

Type: string

Supported Values: disable

trans-lprt-to-port

Description 'disable': disable;

Type: string

Supported Values: disable

trans-lpsv-to-pasv

Description 'disable': disable;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xlat-no-trans-pasv

Description 'enable': enable;

Type: string

Supported Values: enable

nat64_alg_sip

Specification	
Type	*object*

sip-enable

Description 'enable': Enable NAT64 SIP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_esp

Specification	
Type	*object*

esp-enable

Description 'enable': Enable NAT64 ESP ALG;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_esp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'nat-ip-conflict': NAT IP Conflict;

Type: string

Supported Values: all, session-created, nat-ip-conflict

nat64_alg_pptp

Specification	
Type	*object*

pptp-enable

Description 'enable': Enable NAT64 PPTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_rtsp

Specification	
Type	*object*

rtsp-enable

Description 'enable': Enable NAT64 RTSP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_h323

Specification	
Type	*object*

h323-enable

Description 'enable': Enable NAT64 H323 ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_tftp

Specification	
Type	*object*

tftp-enable

Description 'enable': Enable NAT64 TFTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_alg_mgcp

Specification	
Type	*object*

mgcp-enable

Description 'enable': Enable NAT64 MGCP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_global

Specification	
Type	*object*

all

Description All packet sizes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-non-zero-ipv4-id

Description Enable non-zero ID field in IPv4 header when no IPv6 Fragment for packet size more than 88 & less than or equal to 1280 bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description: icmp is a **JSON Block**. Please see below for *nat64_global_icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *nat64_global_inside*

Type: Object

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *nat64_global_tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_global_inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *nat64_global_inside_source*

Type: Object

nat64_global_inside_source

Specification	
Type	*object*

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat64_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

nat64_global_tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *nat64_global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *nat64_global_tcp_reset-on-error*

Type: Object

nat64_global_tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

nat64_global_tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

nat64_global_icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

nat64_prefix-list

Specification	
Type	*list*
Block object keys	

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-val

Description NAT64 Prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

nat64_user-quota-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nat64_enhanced-user-tracking

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite

Specification	
Type	*object*

alg

Description: alg is a **JSON Block**. Please see below for *ds-lite_alg*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ds-lite/alg*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *ds-lite_fragmentation*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ds-lite/fragmentation*

full-cone-session

Description: full-cone-session is a **JSON Block**. Please see below for *ds-lite_full-cone-session*

Description: outbound is a **JSON Block**. Please see below for *ds-lite_fragmentation_outbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ds-lite/fragmentation/outbound*

ds-lite_fragmentation_inbound

Specification	
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv4, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_fragmentation_outbound

Specification	
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmp, send-icmpv6

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

ds-lite_global_icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

ds-lite_port-reservation-list

Specification	
Type	*list*
Block object keys	

inside

Description Inside User Address and Port Range (DS-Lite Inside User's Tunnel Source IPv6 Address)

Type: string

Format: ipv6-address

inside-addr

Description Inside User IP address

Type: string

Format: ipv4-address

inside-end-port

Description Inside End Port

Type: number

Range: 1-65535

inside-start-port

Description Inside Start Port

Type: number

Range: 1-65535

nat

Description NAT Port Range (NAT IP address)

Type: string

Format: ipv4-address

nat-end-port

Description NAT End Port

Type: number

Range: 1-65535

nat-start-port

Description NAT Start Port

Type: number

Range: 1-65535

tunnel-dest-address

Description DS-Lite Inside User's Tunnel Destination IPv6 Address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_user-quota-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ds-lite_port-reservation-entries

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64-virtualserver-list

Specification	
Type	*list*
Block object keys	

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server;

Type: string

Supported Values: enable, disable

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address ipv6-address and use-if-ip are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address ip-address and use-if-ip are mutually exclusive

name

Description CGNV6 Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

policy

Description Policy template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Refernce Object: */axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}*

template-policy

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/policy*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip ipv6-address and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

dns64-virtualserver-list_port-list

Specification	
Type	*list*
Block object keys	

acl-id-list

Type: List

acl-name-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/service-group*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/dns*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64-virtualserver-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn':

Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

dns64-virtualserver-list_port-list_acl-name-list

Specification	
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

dns64-virtualserver-list_port-list_acl-id-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

scaleout

Specification	
Type	*object*

address-mapping

Description: address-mapping is a **JSON Block**. Please see below for *scaleout_address-mapping*

Type: Object

Refernce Object: */axapi/v3/cgnv6/scaleout/address-mapping*

nat-ip-hashing-scheme

Description: nat-ip-hashing-scheme is a **JSON Block**. Please see below for *scaleout_nat-ip-hashing-scheme*

Type: Object

Refernce Object: */axapi/v3/cgnv6/scaleout/nat-ip-hashing-scheme*

scaleout_address-mapping

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout_nat-ip-hashing-scheme

Specification	
Type	*object*

hashing-type

Description 'route-aggregation': Chunk contiguous NAT IPs for route aggregation(default); 'mod-user-groups': Hash NAT IPs by taking mod of user-groups;

Type: string

Supported Values: route-aggregation, mod-user-groups

Default: route-aggregation

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6

Specification	
Type	*object*

common

Description: common is a **JSON Block**. Please see below for *nptv6_common*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nptv6/common*

domain-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nptv6/domain/{name}*

nptv6_domain-list

Specification	
Type	*list*
Block object keys	

inside-prefix

Description Configure inside network prefix (Inside IPv6 network prefix)

Type: string

Format: ipv6-address-plen

name

Description Name of NPTv6 domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

outside-prefix

Description Configure outside network prefix (Outside IPv6 network prefix)

Type: string

Format: ipv6-address-plen

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

nptv6_domain-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outbound-packets': Outbound Packets; 'inbound-packets': Inbound Packets; 'hairpin-packets': Hairpin Packets; 'address-not-valid-for-translation': Address Not Valid For Translation; 'inbound-packets-no-map': Inbound Packets No Map; 'packets-dest-unreachable': Packets Destination Unreachable;

Type: string

Supported Values: all, outbound-packets, inbound-packets, hairpin-packets, address-not-valid-for-translation, inbound-packets-no-map, packets-dest-unreachable

nptv6_common

Specification	
Type	*object*

send-icmpv6-on-error

Description 'disable': Disable to send ICMPv6 when error discovered;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage

Specification	
Type	*object*

fixed-nat-inside-user-count

Description Total configurable CGNV6 Fixed NAT inside users

Type: number

fixed-nat-ip-addr-count

Description Total configurable CGNV6 Fixed NAT addresses

Type: number

lsn-nat-addr-count

Description Total configurable CGNV6 NAT Pool addresses

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

stateless-entries

Description: stateless-entries is a **JSON Block**. Please see below for *resource-usage_stateless-entries*

Type: Object

Refernce Object: */axapi/v3/cgnv6/resource-usage/stateless-entries*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage_stateless-entries

Specification	
Type	*object*

l4-session-count

Description Helper size for CGN Stateless Technologies

Type: number

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one

Specification	
Type	*object*

global

Description: global is a **JSON Block**. Please see below for *one-to-one_global*

Type: Object

Refernce Object: */axapi/v3/cgnv6/one-to-one/global*

mapping

Description: mapping is a **JSON Block**. Please see below for *one-to-one_mapping*

Type: Object

Refernce Object: */axapi/v3/cgnv6/one-to-one/mapping*

pool-group-list

Type: List

Refernce Object: */axapi/v3/cgnv6/one-to-one/pool-group/{pool-group-name}*

pool-list

Type: List

Refernce Object: */axapi/v3/cgnv6/one-to-one/pool/{pool-name}*

shared-pool

Description: shared-pool is a **JSON Block**. Please see below for *one-to-one_shared-pool*

Type: Object

Refernce Object: */axapi/v3/cgnv6/one-to-one/shared-pool*

shared-pool-group

Description: shared-pool-group is a **JSON Block**. Please see below for *one-to-one_shared-pool-group*

Type: Object

Refernce Object: */axapi/v3/cgnv6/one-to-one/shared-pool-group*

one-to-one_shared-pool

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_pool-group-list

Specification	
Type	*list*
Block object keys	

member-list

Type: List

Refernce Object: */axapi/v3/cgnv6/one-to-one/pool-group/{pool-group-name}/member/{pool-name}*

pool-group-name

Description Specify pool group name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

one-to-one_pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 one-to-one pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_global

Specification	
Type	*object*

mapping-timeout

Description Configure timeout for the one-to-one NAT mapping (Timeout in minutes (default: 10 minutes))

Type: number

Range: 0-180

Default: 10

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-map-allocated': Total One-to-One Address Mapping Allocated; 'total-map-freed': Total One-to-One Address Mapping Freed; 'map-alloc-failure': One-to-One Address Mapping Allocation Failure; 'map-dbl-free': Address Mapping Double Free; 'alloc-map-race': Mapping Exists When Allocating Address Mapping; 'map-not-found': Mapping to be Released Not Found; 'ha-map-mismatch': HA Standby Mapping Mismatch; 'ha-select-addr-failure': HA Standby Allocate Address Failure; 'ha-alloc-map-conflicts': HA Standby Allocate Mapping Conflicts;

Type: string

Supported Values: all, total-map-allocated, total-map-freed, map-alloc-failure, map-dbl-free, alloc-map-race, map-not-found, ha-map-mismatch, ha-select-addr-failure, ha-alloc-map-conflicts

one-to-one_mapping

Specification	
Type	*object*

uuid

Description uuid of the object

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_shared-pool-group_members

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

one-to-one_pool-list

Specification	
Type	*list*
Block object keys	

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

logging

Specification	
Type	*object*

nat-quota-exceeded

Description: nat-quota-exceeded is a **JSON Block**. Please see below for *logging_nat-quota-exceeded*

Type: Object

Refernce Object: */axapi/v3/cgnv6/logging/nat-quota-exceeded*

nat-resource-exhausted

Description: nat-resource-exhausted is a **JSON Block**. Please see below for *logging_nat-resource-exhausted*

Type: Object

Refernce Object: */axapi/v3/cgnv6/logging/nat-resource-exhausted*

sampling-enable

Type: List

source-address

Description: source-address is a **JSON Block**. Please see below for *logging_source-address*

Type: string

Supported Values: all, tcp-session-created, tcp-session-deleted, tcp-port-allocated, tcp-port-freed, tcp-port-batch-allocated, tcp-port-batch-freed, udp-session-created, udp-session-deleted, udp-port-allocated, udp-port-freed, udp-port-batch-allocated, udp-port-batch-freed, icmp-session-created, icmp-session-deleted, icmp-resource-allocated, icmp-resource-freed, icmpv6-session-created, icmpv6-session-deleted, icmpv6-resource-allocated, icmpv6-resource-freed, gre-session-created, gre-session-deleted, gre-resource-allocated, gre-resource-freed, esp-session-created, esp-session-deleted, esp-resource-allocated, esp-resource-freed, fixed-nat-user-ports, fixed-nat-disable-config-logged, fixed-nat-disable-config-logs-sent, fixed-nat-periodic-config-logs-sent, fixed-nat-periodic-config-logged, fixed-nat-interim-updated, enhanced-user-log, log-sent, log-dropped, conn-tcp-established, conn-tcp-dropped, tcp-port-overloading-allocated, tcp-port-overloading-freed, udp-port-overloading-allocated, udp-port-overloading-freed, http-request-logged, reduced-logs-by-destination, out-of-buffers, add-msg-failed, rtsp-port-allocated, rtsp-port-freed, conn-tcp-create-failed, ipv4-frag-applied, ipv4-frag-failed, ipv6-frag-applied, ipv6-frag-failed, interim-update-scheduled, interim-update-schedule-failed, interim-update-terminated, interim-update-memory-freed, interim-update-no-buff-retried, tcp-port-batch-interim-updated, udp-port-batch-interim-updated, port-block-accounting-freed, port-block-accounting-allocated, log-message-too-long, http-out-of-order-dropped, http-alloc-failed, http-frag-merge-failed-dropped, http-malloc, http-mfree, http-spm-alloc-type0, http-spm-alloc-type1, http-spm-alloc-type2, http-spm-alloc-type3, http-spm-alloc-type4, http-spm-free-type0, http-spm-free-type1, http-spm-free-type2, http-spm-free-type3, http-spm-free-type4, iddos-l3-entry-create, iddos-l3-entry-delete, iddos-l4-entry-create, iddos-l4-entry-delete

logging_nat-resource-exhausted

Specification	
Type	*object*

level

Description 'warning': Log level Warning; 'critical': Log level Critical (Default); 'notice': Log level Notice;

Type: string

Supported Values: warning, critical, notice

Default: critical

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list

Specification	
Type	*list*
Block object keys	

default

Description: default is a **JSON Block**. Please see below for *lsn-rule-list-list_default*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/default*

domain-ip

Description: domain-ip is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-ip*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-ip*

domain-list-name-list

Type: List

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-list-name/{name-domain-list}*

domain-name-list

Type: List

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/domain-name/{name-domain}*

http-match-domain-name

Description Enable match domain name in http request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}*

name

Description LSN Rule-List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_domain-ip

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_default_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_default_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_default_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description ‘default’: Default dscp (000000); ‘af11’: AF11 (001010); ‘af12’: AF12 (001100); ‘af13’: AF13 (001110); ‘af21’: AF21 (010010); ‘af22’: AF22 (010100); ‘af23’: AF23 (010110); ‘af31’: AF31 (011010); ‘af32’: AF32 (011100); ‘af33’: AF33 (011110); ‘af41’: AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_default_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description ‘action’: LSN Rule-List Action; ‘no-action’: Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description ‘dnat’: Apply Dest NAT; ‘drop’: Drop the Packets; ‘pass-through’: Pass the Packets Through; ‘snat’: Redirect the Packets to a Different Source NAT Pool; ‘set-dscp’: To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_ip-list

Specification	
Type	*list*
Block object keys	

ipv4-addr

Description Configure a Specific Rule-Set (IP Network Address)

Type: string

Format: ipv4-cidr

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_ip-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

lsn-rule-list-list_ip-list_rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_ip-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_ip-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_ip-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_ip-list_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_ip-list_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_ip-list_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_ip-list_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41':

AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’: CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_ip-list_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description ‘action’: LSN Rule-List Action; ‘no-action’: Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description ‘dnat’: Apply Dest NAT; ‘drop’: Drop the Packets; ‘one-to-one-snat’: Apply one-to-one source NAT for the packets; ‘pass-through’: Pass the Packets Through; ‘snat’: Redirect the Packets to a Different Source NAT Pool; ‘set-dscp’: To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description ‘inbound’: To set dscp value for inbound packets; ‘outbound’: To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description ‘default’: Default dscp (000000); ‘af11’: AF11 (001010); ‘af12’: AF12 (001100); ‘af13’: AF13 (001110); ‘af21’: AF21 (010010); ‘af22’: AF22 (010100); ‘af23’: AF23 (010110); ‘af31’: AF31 (011010); ‘af32’: AF32 (011100); ‘af33’: AF33 (011110); ‘af41’: AF41 (100010); ‘af42’: AF42 (100100); ‘af43’: AF43 (100110); ‘cs1’: CS1 (001000); ‘cs2’:

CS2 (010000); ‘cs3’: CS3 (011000); ‘cs4’: CS4 (100000); ‘cs5’: CS5 (101000); ‘cs6’: CS6 (110000); ‘cs7’: CS7 (111000); ‘ef’: EF (101110); ‘0’: 000000; ‘1’: 000001; ‘2’: 000010; ‘3’: 000011; ‘4’: 000100; ‘5’: 000101; ‘6’: 000110; ‘7’: 000111; ‘8’: 001000; ‘9’: 001001; ‘10’: 001010; ‘11’: 001011; ‘12’: 001100; ‘13’: 001101; ‘14’: 001110; ‘15’: 001111; ‘16’: 010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list

Specification	
Type	*list*
Block object keys	

name-domain-list

Description Configure a Specific Rule-Set (Domain List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-rule-list-list_domain-list-name-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

lsn-rule-list-list_domain-list-name-list_rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *lsn-rule-list-list_domain-list-name-list_rule-cfg_udp-cfg*

Type: Object

lsn-rule-list-list_domain-list-name-list_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list_rule-cfg_tcp-cfg

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-list-name-list_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55':

110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16':

010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

lsn-rule-list-list_domain-name-list_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

lsn-rule-list-list_domain-name-list_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

service-group-list

Specification	
Type	*list*
Block object keys	

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/health/monitor*

member-list

Type: List

Refernce Object: */axapi/v3/cgnv6/service-group/{name}/member/{name}+{port}*

name

Description CGNV6 Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

shared

Description Share with partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: shared-group and shared-partition are mutually exclusive

shared-partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: shared-partition and shared-group are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Service selection fail drop; 'server_selection_fail_reset': Service selection fail reset; 'service_peak_conn': Service peak connection;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn

service-group-list_member-list

Specification	
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests success; 'peak_conn': Peak connections; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

http-alg

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-alg_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'request-processed': HTTP Request Processed; 'request-insert-msisdn-performed': HTTP MSISDN Insertion Performed; 'request-insert-client-ip-performed': HTTP Client IP Insertion Performed; 'request-insert-msisdn-unavailable': Inserted MSISDN is 0000 (MSISDN Unavailable); 'queued-session-too-many': Queued Session Exceed Drop; 'radius-query-succeed': MSISDN Query Succeed; 'radius-query-failed': MSISDN Query Failed; 'radius-requst-sent': Query Request Sent; 'radius-requst-dropped': Query Request Dropped; 'radius-response-received': Query Response Received; 'radius-response-dropped': Query Response Dropped; 'out-of-memory-dropped': Out-of-Memory Dropped; 'queue-len-exceed-dropped': Queue Length Exceed Dropped; 'out-of-order-dropped': Packet Out-of-Order Dropped; 'buff-resent': Packet Resent from Queue; 'buff-spilt-failed': Buff Split Failed; 'header-insertion-failed': Buff Insertion Failed; 'header-removal-failed': Buff Removal Failed; 'no-queue': No Queue;

Type: string

Supported Values: all, request-processed, request-insert-msisdn-performed, request-insert-client-ip-performed, request-insert-msisdn-unavailable, queued-session-too-many, radius-query-succeed, radius-query-failed, radius-requst-sent, radius-requst-dropped, radius-response-received, radius-response-dropped, out-of-memory-dropped, queue-len-exceed-dropped, out-of-order-dropped, buff-resent, buff-spilt-failed, header-insertion-failed, header-removal-failed, no-queue

ecmp

Specification	
Type	*object*

hashing-type

Description '4-tuple-hash': Hash on Src IP , Src Port, Dest IP and Dest Port;

Type: string

Supported Values: 4-tuple-hash

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-radius-profile-list

Specification	
Type	*list*
Block object keys	

lid-profile-index

Description LSN RADIUS Profile Index

Type: number

Range: 1-16

radius

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-radius-profile-list_radius

Specification	
Type	*list*
Block object keys	

attribute

Description 'custom1': Configure RADIUS Attribute Custom 1; 'custom2': Configure RADIUS Attribute Custom 2; 'custom3': Configure RADIUS Attribute Custom 3; 'imei': Configure RADIUS Attribute IMEI; 'imsi': Configure RADIUS Attribute IMSI; 'msisdn': Configure RADIUS Attribute MSISDN; 'default': Configure default;

Type: string

Supported Values: custom1, custom2, custom3, custom4, custom5, custom6, imei, imsi, msisdn, default

default-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

exact-value

Description Value of the attribute

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

exact-value-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

starts-with

Description Value of the attribute

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

starts-with-lsn-lid

Description LSN Limit ID (LID index)

Type: number

Range: 1-1023

server-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server;

Type: string

Supported Values: enable, disable

Default: enable

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

port-list

Type: List

Refernce Object: */axapi/v3/cgnv6/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check health-check-follow-port and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port and health-check are mutually exclusive

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Specification	
Type	*object*

hairpinning

Description 'filter-all': Disable all Hairpinning; 'filter-none': Allow all Hairpinning (default); 'filter-self-ip': Block Hairpinning to same IP; 'filter-self-ip-port': Block hairpinning to same IP and Port combination;

Type: string

Supported Values: filter-all, filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

icmp-inbound

Description 'drop': Drop Inbound ICMP packets; 'handle': Handle Inbound ICMP packets(default);

Type: string

Supported Values: drop, handle

Default: handle

inside-src-access-list

Description Access List for inside IPv4 addresses (ACL ID)

Type: number

Range: 1-199

nat-prefix-list

Description Configure LW-4over6 NAT Prefix List (LW-4over6 NAT Prefix Class-list)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

no-forward-match

Description: no-forward-match is a **JSON Block**. Please see below for *lw-4o6_global_no-forward-match*

Type: Object

no-reverse-match

Description: no-reverse-match is a **JSON Block**. Please see below for *lw-4o6_global_no-reverse-match*

Type: Object

sampling-enable

Type: List

use-binding-table

Description Bind LW-4over6 binding table for use (LW-4over6 Binding Table Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lw-4o6_global_no-forward-match

Specification	
Type	*object*

send-icmpv6

Description Send ICMPv6 Type 1 Code 5

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6_global_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry_count': Total Entries Configured; 'self_hairpinning_drop': Self-Hairpinning Drops; 'all_hairpinning_drop': All Hairpinning Drops; 'no_match_icmpv6_sent': No-Forward-Match ICMPv6 Sent; 'no_match_icmp_sent': No-Reverse-Match ICMP Sent; 'icmp_inbound_drop': Inbound ICMP Drops; 'fwd_lookup_failed': Forward Route Lookup Failed; 'rev_lookup_failed': Reverse Route Lookup Failed; 'interface_not_configured': LW-4over6 Interfaces not Configured Drops; 'no_tep_drop': LW-4over6 Tunnel Endpoint not Configured Drops; 'session_count': LW-4over6 Session Count; 'system_address_drop': LW-4over6 System Address Drops;

Type: string

Supported Values: all, entry_count, self_hairpinning_drop, all_hairpinning_drop, no_match_icmpv6_sent, no_match_icmp_sent, icmp_inbound_drop, fwd_lookup_failed, rev_lookup_failed, interface_not_configured, no_binding_table_matches_fwd, no_binding_table_matches_rev, session_count, system_address_drop

lw-4o6_global_no-reverse-match

Specification	
Type	*object*

send-icmp

Description Send ICMP Type 3 Code 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6_binding-table-validate

Specification	
Type	*object*

binding-name

Description LW-4over6 Binding Table Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lw-4o6_all-binding-tables

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Maximum Length: 1 characters

lw-4o6_binding-table-list_tunnel-address-list_nat-address-list

Specification	
Type	*list*
Block object keys	

ipv4-nat-addr

Description NAT IPv4 Address

Type: string

Format: ipv4-address

port-range-list

Type: List

Refernce Object: */axapi/v3/cgnv6/lw-4o6/binding-table/{name}/tunnel-address/{ipv6-tunnel-addr}/nat-address/{ipv4-nat-addr}/port-range/{port-start}+{port-end}+{tunnel-endpoint-address}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

lw-4o6_binding-table-list_tunnel-address-list_nat-address-list_port-range-list

Specification	
Type	*list*
Block object keys	

port-end

Description Port Range End

Type: number

Range: 1-65535

port-start

Description Single Port or Port Range Start

Type: number

Range: 1-65535

tunnel-endpoint-address

Description Configure LW-4over6 IPIP Tunnel Endpoint Address (LW-4over6 Tunnel Endpoint Address)

Type: string

Format: ipv6-address

ddos-protection

Specification	
Type	*object*

disable-nat-ip-by-bgp

Description: disable-nat-ip-by-bgp is a **JSON Block**. Please see below for *ddos-protection_disable-nat-ip-by-bgp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ddos-protection/disable-nat-ip-by-bgp*

ip-entries

Description: ip-entries is a **JSON Block**. Please see below for *ddos-protection_ip-entries*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ddos-protection/ip-entries*

l4-entries

Description: l4-entries is a **JSON Block**. Please see below for *ddos-protection_l4-entries*

Type: Object

Refernce Object: */axapi/v3/cgnv6/ddos-protection/l4-entries*

logging

Description: logging is a **JSON Block**. Please see below for *ddos-protection_logging*

Type: Object

max-hw-entries

Description Configure maximum HW entries

Type: number

Range: 0-262144

Default: 262144

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *ddos-protection_packets-per-second*

Type: Object

sampling-enable

Type: List

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *ddos-protection_syn-cookie*

Type: Object

toggle

Description 'enable': Enable CGNV6 NAT pool DDoS protection (default); 'disable': Disable CGNV6 NAT pool DDoS protection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Disable NAT IP based on DDoS zone name set in BGP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ddos-protection_logging

Specification	
Type	*object*

enable-action

Description 'local': Enable local logs only; 'remote': Enable logging to remote server & IPFIX; 'both': Enable both local & remote logs;

Type: string

Supported Values: local, remote, both

Default: local

logging-action

Description 'enable': enable CGN DDoS protection logging; 'disable': Disable both local & remote CGN DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

ddos-protection_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry_added': Entry Added; 'entry_deleted': Entry Deleted; 'entry_added_to_hw': Entry added to HW; 'entry_removed_from_hw': Entry Removed From HW; 'hw_out_of_entries': HW out of Entries; 'entry_match_drop': Entry Match Drop; 'entry_match_drop_hw': HW Entry Match Drop; 'entry_list_alloc': Entry List Alloc; 'entry_list_free': Entry List Alloc Free; 'entry_list_alloc_failure': Entry List Alloc Failure; 'ip_node_alloc': Node Alloc; 'ip_node_free': Node Free; 'ip_node_alloc_failure': Node Alloc Failure; 'ip_port_block_alloc': Port Block Alloc; 'ip_port_block_free': Port Block Free; 'ip_port_block_alloc_failure': Port Block Alloc Failure; 'ip_other_block_alloc': Other Block Alloc; 'ip_other_block_free': Other Block Free; 'ip_other_block_alloc_failure': Other Block Alloc Failure; 'entry_added_shadow': Entry Added Shadow; 'entry_invalidated': Entry Invalidated;

Type: string

Supported Values: all, l3_entry_added, l3_entry_deleted, l3_entry_added_to_bgp, l3_entry_removed_from_bgp, l3_entry_added_to_hw, l3_entry_removed_from_hw, l3_entry_too_many, l3_entry_match_drop, l3_entry_match_drop_hw, l3_entry_drop_max_hw_exceeded, l4_entry_added, l4_entry_deleted, l4_entry_added_to_hw, l4_entry_removed_from_hw, l4_hw_out_of_entries, l4_entry_match_drop, l4_entry_match_drop_hw, l4_entry_drop_max_hw_exceeded, l4_entry_list_alloc, l4_entry_list_free, l4_entry_list_alloc_failure, ip_node_alloc, ip_node_free, ip_node_alloc_failure, ip_port_block_alloc, ip_port_block_free, ip_port_block_alloc_failure, ip_other_block_alloc, ip_other_block_free, ip_other_block_alloc_failure, entry_added_shadow, entry_invalidated, l3_entry_add_to_bgp_failure, l3_entry_remove_from_bgp_failure, l3_entry_add_to_hw_failure, syn_cookie_syn_ack_sent, syn_cookie_verification_passed, syn_cookie_verification_failed, syn_cookie_conn_setup_failed

ddos-protection_ip-entries

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_disable-nat-ip-by-bgp

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_l4-entries

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_packets-per-second

Specification	
Type	*object*

action

Description: action is a **JSON Block**. Please see below for *ddos-protection_packets-per-second_action*

Type: Object

include-existing-session

Description Count traffic associated with existing session into the packets-per-second (Default: Disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Configure packets-per-second threshold per IP(default 3000000)

Type: number

Range: 0-30000000

Default: 3000000

other

Description Configure packets-per-second threshold for other L4 protocols(default 10000)

Type: number

Range: 0-30000000

Default: 10000

tcp

Description Configure packets-per-second threshold per TCP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

udp

Description Configure packets-per-second threshold per UDP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

ddos-protection_packets-per-second_action

Specification	
Type	*object*

action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: log, drop, redistribute-route

Default: drop

expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

remove-wait-timer

Description Time after which IP will be removed from blackhole

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

ddos-protection_syn-cookie

Specification	
Type	*object*

syn-cookie-enable

Description Enable CGNv6 Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

lsn-lid-list

Specification	
Type	*list*
Block object keys	

conn-rate-limit

Description: conn-rate-limit is a **JSON Block**. Please see below for *lsn-lid-list_conn-rate-limit*

Type: Object

ds-lite

Description: ds-lite is a **JSON Block**. Please see below for *lsn-lid-list_ds-lite*

Type: Object

extended-user-quota

Description: extended-user-quota is a **JSON Block**. Please see below for *lsn-lid-list_extended-user-quota*

Type: Object

lid-number

Description LSN Lid

Type: number

Range: 1-1023

lsn-rule-list

Description: lsn-rule-list is a **JSON Block**. Please see below for *lsn-lid-list_lsn-rule-list*

Type: Object

name

Description LSN Lid Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

override

Description 'none': Apply source NAT if configured (default); 'drop': Drop packets that match this LSN lid; 'pass-through': Layer-3 route packets that match this LSN lid and do not apply source NAT;

Type: string

Supported Values: none, drop, pass-through

Default: none

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat-pool

Description: source-nat-pool is a **JSON Block**. Please see below for *lsn-lid-list_source-nat-pool*

Type: Object

user-quota

Description: user-quota is a **JSON Block**. Please see below for *lsn-lid-list_user-quota*

Type: Object

user-quota-prefix-length

Description NAT64 user quota prefix length (Prefix Length (Default: Uses the global NAT64 configured value))

Type: number

Range: 1-128

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lsn-lid-list_extended-user-quota

Specification	
Type	*object*

tcp

Type: List

udp

Type: List

lsn-lid-list_extended-user-quota_udp

Specification	
Type	*list*
Block object keys	

udp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

udp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

lsn-lid-list_extended-user-quota_tcp

Specification	
Type	*list*
Block object keys	

tcp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

tcp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

lsn-lid-list_ds-lite

Specification	
Type	*object*

inside-src-permit-list

Description Class-List of IPv4 addresses permitted (Class-list to match for DS-Lite)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

lsn-lid-list_user-quota

Specification	
Type	*object*

icmp

Description User Quota for ICMP identifiers (NAT port quota per user (default: not configured))

Type: number

Range: 1-64000

quota-tcp

Description: quota-tcp is a **JSON Block**. Please see below for *lsn-lid-list_user-quota_quota-tcp*

Type: Object

quota-udp

Description: quota-udp is a **JSON Block**. Please see below for *lsn-lid-list_user-quota_quota-udp*

Type: Object

session

Description User Quota for number of data sessions

Type: number

Range: 1-2147483647

lsn-lid-list_user-quota_quota-tcp

Specification	
Type	*object*

tcp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

tcp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

lsn-lid-list_user-quota_quota-udp

Specification	
Type	*object*

udp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

udp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

lsn-lid-list_source-nat-pool

Specification	
Type	*object*

pool-name

Description Source NAT Pool or Pool-Group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Use a shared source NAT pool or pool-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn-lid-list_conn-rate-limit

Specification	
Type	*object*

conn-rate-limit-val

Description Maximum connections per second (Default: No limit)

Type: number

Range: 1-65535

lsn-lid-list_lsn-rule-list

Specification	
Type	*object*

destination

Description Apply LSN Rule-List on Destination (LSN Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list*

Specification	
Type	*object*

domain-list

Type: List

Refernce Object: */axapi/v3/cgnv6/sixrd/domain/{name}*

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *sixrd_fragmentation*

Type: Object

Refernce Object: */axapi/v3/cgnv6/sixrd/fragmentation*

sixrd_domain-list

Specification	
Type	*list*
Block object keys	

br-ipv4-address

Description 6rd BR IPv4 address

Type: string

Format: ipv4-address

ce-ipv4-netmask

Description Mask length

Type: string

Format: ipv4-netmask-brief

ce-ipv4-network

Description Customer Edge IPv4 network

Type: string

Format: ipv4-address

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

mtu

Description Tunnel MTU

Type: number

Range: 1280-1480

name

Description 6rd Domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sixrd_fragmentation_inbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmpv6

Default: send-icmpv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sixrd_fragmentation_outbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default); 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/ddos-protection/l4-entries*

logging

Description: logging is a **JSON Block**. Please see below for *logging*

Type: Object

max-hw-entries

Description Configure maximum HW entries

Type: number

Range: 0-262144

Default: 262144

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *packets-per-second*

Type: Object

sampling-enable

Type: List

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *syn-cookie*

Type: Object

toggle

Description 'enable': Enable CGNV6 NAT pool DDoS protection (default); 'disable': Disable CGNV6 NAT pool DDoS protection;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Disable NAT IP based on DDoS zone name set in BGP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

logging

Specification	
Type	*object*

enable-action

Description 'local': Enable local logs only; 'remote': Enable logging to remote server & IPFIX; 'both': Enable both local & remote logs;

Type: string

Supported Values: local, remote, both

Default: local

logging-action

Description 'enable': enable CGN DDoS protection logging; 'disable': Disable both local & remote CGN DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'entry_added': Entry Added; 'entry_deleted': Entry Deleted; 'entry_added_to_hw': Entry added to HW; 'entry_removed_from_hw': Entry Removed From HW; 'hw_out_of_entries': HW out of Entries; 'entry_match_drop': Entry Match Drop; 'entry_match_drop_hw': HW Entry Match Drop; 'entry_list_alloc': Entry List Alloc; 'entry_list_free': Entry List Alloc Free; 'entry_list_alloc_failure': Entry List Alloc Failure; 'ip_node_alloc': Node Alloc; 'ip_node_free': Node Free; 'ip_node_alloc_failure': Node Alloc Failure; 'ip_port_block_alloc': Port Block Alloc; 'ip_port_block_free': Port Block Free; 'ip_port_block_alloc_failure': Port Block Alloc Failure; 'ip_other_block_alloc': Other Block Alloc; 'ip_other_block_free': Other Block Free; 'ip_other_block_alloc_failure': Other Block Alloc Failure; 'entry_added_shadow': Entry Added Shadow; 'entry_invalidated': Entry Invalidated;

Type: string

Supported Values: all, l3_entry_added, l3_entry_deleted, l3_entry_added_to_bgp, l3_entry_removed_from_bgp, l3_entry_added_to_hw, l3_entry_removed_from_hw, l3_entry_too_many, l3_entry_match_drop, l3_entry_match_drop_hw, l3_entry_drop_max_hw_exceeded, l4_entry_added, l4_entry_deleted, l4_entry_added_to_hw, l4_entry_removed_from_hw, l4_hw_out_of_entries, l4_entry_match_drop, l4_entry_match_drop_hw, l4_entry_drop_max_hw_exceeded, l4_entry_list_alloc, l4_entry_list_free, l4_entry_list_alloc_failure, ip_node_alloc, ip_node_free, ip_node_alloc_failure, ip_port_block_alloc, ip_port_block_free, ip_port_block_alloc_failure, ip_other_block_alloc, ip_other_block_free, ip_other_block_alloc_failure, entry_added_shadow, entry_invalidated, l3_entry_add_to_bgp_failure, l3_entry_remove_from_bgp_failure, l3_entry_add_to_hw_failure, syn_cookie_syn_ack_sent, syn_cookie_verification_passed, syn_cookie_verification_failed, syn_cookie_conn_setup_failed

Maximum Length: 1 characters

packets-per-second

Specification	
Type	*object*

action

Description: action is a **JSON Block**. Please see below for *packets-per-second_action*

Type: Object

include-existing-session

Description Count traffic associated with existing session into the packets-per-second (Default: Disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Configure packets-per-second threshold per IP(default 3000000)

Type: number

Range: 0-30000000

Default: 3000000

other

Description Configure packets-per-second threshold for other L4 protocols(default 10000)

Type: number

Range: 0-30000000

Default: 10000

tcp

Description Configure packets-per-second threshold per TCP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

udp

Description Configure packets-per-second threshold per UDP port (default: 3000)

Type: number

Range: 0-30000000

Default: 3000

packets-per-second_action

Specification	
Type	*object*

action-type

Description 'log': Log the event only; 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: log, drop, redistribute-route

Default: drop

expiration

Description To specify time to revert the action after pps is decreased to below threshold (Expiration time, in seconds (default is 3600 seconds))

Type: number

Range: 10-8640000

Default: 3600

remove-wait-timer

Description Time after which IP will be removed from blackhole

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

syn-cookie

Specification	
Type	*object*

syn-cookie-enable

Description Enable CGNv6 Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

stats data

	Counter	Size	Description
	ip_other_block_alloc	8	Other block alloc

]

dns64-virtualserver attributes

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server;

Type: string

Supported Values: enable, disable

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address ipv6-address and use-if-ip are mutually exclusive

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address ip-address and use-if-ip are mutually exclusive

name

Description CGNV6 Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

policy

Description Policy template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Refernce Object: */axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}*

template-policy

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/policy*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip ipv6-address and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

port-list

Specification	
Type	*list*

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/service-group*

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

port-list_acl-name-list

Specification	
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

port-list_acl-id-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

operational data

	Counter	Size	Description
	peak-conn	number	peak-conn
	conn-rate-unit	enum	Output contains one of the following values: - 100ms, second
	curr-conn-overflow	number	curr-conn-overflow
	ip-address	ipv4-address	ip-address
	icmpv6-rate-over-limit-drop	number	icmpv6-rate-over-limit-drop
	curr-conn-rate	number	curr-conn-rate
	state	enum	Output contains one of the following values: - All Up, Functional Up, Partial Up, Down, Disb, Unkn
	ip_only_lb_fwd_bytes	number	ip_only_lb_fwd_bytes
	curr-icmp-rate	number	curr-icmp-rate
	icmpv6-lockup-time-left	number	icmpv6-lockup-time-left
	mac	string	mac
	ip_only_lb_rev_bytes	number	ip_only_lb_rev_bytes
	curr-icmpv6-rate	number	curr-icmpv6-rate
	icmp-rate-over-limit-drop	number	icmp-rate-over-limit-drop
	ip_only_lb_fwd_pkts	number	ip_only_lb_fwd_pkts
	icmp-lockup-time-left	number	icmp-lockup-time-left
	ip_only_lb_rev_pkts	number	ip_only_lb_rev_pkts
	migration-status	string	migration-status

2.19.8 cgnv6 dns64-virtualserver port

Virtual Port

port Specification

Type	*Collection*
Object Key(s)	*port-number, protocol*
Collection Name	*port-list*
Collection URI	/axapi/v3/cgnv6/dns64-virtualserver/{name}/port
Element Name	port
Element URI	/axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}
Element Attributes	port_attributes
Statistics Data URI	/axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}/stats
Operational Data URI	/axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}/oper
Schema	`port schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/dns64-virtualserver/{name}/port

port attributes

Create List

port-list

Delete Object

DELETE

/axapi/v3/cgnv6/dns64-virtualserver/{name}/port/{port-number}+{protocol}

port attributes

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

...

]

port attributes

acl-id-list

Type: List

acl-name-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'dns-udp': DNS service over UDP;

Type: string

Supported Values: dns-udp

sampling-enable

Type: List

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/service-group*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/dns*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/policy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connection; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'toatal_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, toatal_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time

acl-name-list

Specification	
Type	*list*
Block object keys	

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

acl-id-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

stats data

	Counter	Size	Description
	curr_req	8	Current requests
	total_fwd_bytes	8	Total forward bytes
	compression_miss	2	Number of requests NOT compressed
	fastest_rsp_time	8	Fastest response time
	total_fwd_pkts	8	Total forward packets
	total_mf_dns_pkts	2	Total MF DNS packets
	compression_miss_template_exclusion	2	Compression miss template exclusion
	total_dns_pkts	2	Total DNS packets
	peak_conn	8	Peak connections
	compression_bytes_after	2	Data out of compression engine
	toatal_tcp_conn	8	Total TCP connections
	total_req	8	Total requests
	compression_bytes_before	2	Data into compression engine
	last_rsp_time	8	Last response time
	curr_conn	8	Current connection
	total_rev_bytes	8	Total reverse bytes
	curr_conn_rate	8	Current connection rate
	compression_miss_no_client	2	Compression miss no client
	es_total_failure_actions	2	Total failure actions
	total_conn	8	Total connections
	total_rev_pkts	8	Total reverse packets
	total_l7_conn	8	Total L7 connections
	total_req_succ	8	Total successful requests
	total_l4_conn	8	Total L4 connections
	slowest_rsp_time	8	Slowest response time
	compression_hit	2	Number of requests compressed

operational data

	Counter	Size	Description
	http_host_hits	flag	http_host_hits
	cpu-count	number	cpu-count
	loc_last	string	loc_last
	loc_list	string	loc_list
	http-hits-list		http-hits-list
	http_vport	flag	http_vport
	http_url_hits	flag	http_url_hits
	loc_max_depth	number	loc_max_depth
	level_str	string	level_str
	loc_error	number	loc_error
	state	enum	Output contains one of the following values: - All Up, Functional Up, Down, Disb, Unkn
	geo_location	string	geo_location
	http-vport-cpu-list		http-vport-cpu-list

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60 - 40))))

Type: number

Range: 0-1420

Default: 416

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 40);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 40)

Type: number

Range: 0-1420

Default: 40

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

global_tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.19 cgnv6 ds-lite fragmentation inbound

DS-Lite fragmentation rules for inbound oversize packets (default: ipv6)

inbound Specification

Type	*Configuration Resource*
Element Name	inbound
Element URI	/axapi/v3/cgnv6/ds-lite/fragmentation/inbound
Element Attributes	inbound_attributes
Schema	`inbound schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/ds-lite/fragmentation/inbound

inbound attributes

```
POST /axapi/v3/cgnv6/ds-lite/fragmentation/inbound
Payload:
{
```

(continues on next page)

(continued from previous page)

```
    "inbound": {
        "df-set": "send-icmp",
        "count": 1
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/ds-lite/fragmentation/inbound

inbound attributes

```
GET /axapi/v3/cgnv6/ds-lite/fragmentation/inbound
Reponse:
{
    "inbound": {
        "df-set": "send-icmp",
        "count": 1,
        "frag-action": "ipv6",
        "uuid": "5abeee6c-5c04-11d9-835e-001fa00680a0",
        "a10-url": "/axapi/v3/cgnv6/ds-lite/fragmentation/inbound"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/ds-lite/fragmentation/inbound

inbound attributes

Replace Object

PUT

/axapi/v3/cgnv6/ds-lite/fragmentation/inbound

inbound attributes

```
PUT /axapi/v3/cgnv6/ds-lite/fragmentation/inbound
Payload:
{
    "inbound": {
        "df-set": "send-icmp",
        "count": 2
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/ds-lite/fragmentation/inbound

inbound attributes

```
DELETE /axapi/v3/cgnv6/ds-lite/fragmentation/inbound
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

inbound attributes

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv4': Use IPv4 Fragmentation; 'ipv6': Use IPv6 fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv4, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv4, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.20 cgnv6 ds-lite fragmentation outbound

DS-Lite Outbound Fragmentation Rules (default: ipv4)

outbound Specification

Type	*Configuration Resource*
Element Name	outbound
Element URI	/axapi/v3/cgnv6/ds-lite/fragmentation/outbound
Element Attributes	outbound_attributes
Schema	`outbound schema`

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

inside

Description: inside is a **JSON Block**. Please see below for *inside*

Type: Object

ip-checksum-error

Description 'fix': Fix the bad checksum (default); 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: fix, drop

Default: fix

l4-checksum-error

Description 'propagate': Propagate the bad checksum (default); 'fix': Fix the bad checksum; 'drop': Drop packets with a bad checksum;

Type: string

Supported Values: propagate, fix, drop

Default: propagate

sampling-enable

Type: List

tcp

Description: tcp is a **JSON Block**. Please see below for *tcp*

Type: Object

user-quota-prefix-length

Description User Quota Prefix Length (Default: 128)

Type: number

Range: 1-128

Default: 128

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

inside_source

class-list

Description Class-list to match for DS-Lite

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60 - 40))))

Type: number

Range: 0-1420

Default: 416

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 40);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 40)

Type: number

Range: 0-1420

Default: 40

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

sampling-enable

icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

inside_iplist-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *inside_iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *inside_iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

inside_iplist-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

inside_iplist-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

inside_ipv4address-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *inside_ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions
