inside attributes

iplist-list

Type: List

Refernce Object: */axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}*

ipv4address-list

Type: List

Refernce Object: */axapi/v3/cgnv6/fixed-nat/inside/ipv4address/{inside-start-address}+{inside-end-address}+{inside-netmask}+{partition}*

ipv6address-list

Type: List

Refernce Object: */axapi/v3/cgnv6/fixed-nat/inside/ipv6address/{inside-start-address}+{inside-end-address}+{inside-netmask}+{partition}*

iplist-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *iplist-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *iplist-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

iplist-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

iplist-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv4address-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *ipv4address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *ipv4address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

ipv4address-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

ipv4address-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv6address-list

Specification	
Type	*list*
Block object keys	

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv6 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *ipv6address-list_offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *ipv6address-list_usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

ipv6address-list_usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

ipv6address-list_offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.19.42 cgnv6 fixed-nat inside iplist

Configure Fixed NAT with Inside IP List

iplist Specification

Type	*Collection*
Object Key(s)	*inside-ip-list, partition*
Collection Name	*iplist-list*
Collection URI	/axapi/v3/cgnv6/fixed-nat/inside/iplist
Element Name	iplist
Element URI	/axapi/v3/cgnv6/fixed-nat/inside/iplist/{inside-ip-list}+{partition}

    "response": {
        "status": "OK"
    }
}
```

iplist-list

iplist-list is **JSON List** of *iplist attributes*

iplist-list : [

{ *iplist attributes* },

{ *iplist attributes* },

...

]

iplist attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-ip-list

Description Name of IP List used to specify Inside Users

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv4address-list

ipv4address-list is **JSON List** of *ipv4address attributes*

ipv4address-list : [

{ *ipv4address attributes* },

{ *ipv4address attributes* },

...

]

ipv4address attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv4 Inside User End Address

Type: string

Format: ipv4-address

inside-netmask

Description IPv4 Netmask

Type: string

Format: ipv4-netmask-brief

inside-start-address

Description IPv4 Inside User Start Address

Type: string

Format: ipv4-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv4 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

ipv6address attributes

dest-rule-list

Description Bind destination based Rule-List (Fixed NAT Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dynamic-pool-size

Description Configure size of Dynamic pool (Default: 0)

Type: number

Range: 0-64511

Default: 0

inside-end-address

Description IPv6 Inside User End Address

Type: string

Format: ipv6-address

inside-netmask

Description Inside User IPv6 Netmask

Type: number

Range: 64-128

inside-start-address

Description IPv6 Inside User Start Address

Type: string

Format: ipv6-address

method

Description 'use-all-nat-ips': Use all the NAT IP addresses configured; 'use-least-nat-ips': Use the least number of NAT IP addresses required (default);

Type: string

Supported Values: use-all-nat-ips, use-least-nat-ips

Default: use-least-nat-ips

nat-end-address

Description IPv6 End NAT Address

Type: string

Format: ipv4-address

nat-ip-list

Description Name of IP List used to specify NAT addresses

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

nat-netmask

Description NAT Addresses IP Netmask

Type: string

Format: ipv4-netmask-brief

nat-start-address

Description Start NAT Address

Type: string

Format: ipv4-address

offset

Description: offset is a **JSON Block**. Please see below for *offset*

Type: Object

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ports-per-user

Description Configure Ports per Inside User (ports-per-user)

Type: number

Range: 1-64512

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (Default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-quota

Description Configure per user quota on sessions

Type: number

Range: 1-2147483647

skip-ports-on-rollover

Description Not using the first block of ports for NAT IPs smaller than the configured offset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports

Description: usable-nat-ports is a **JSON Block**. Please see below for *usable-nat-ports*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

usable-nat-ports

Specification	
Type	*object*

usable-end-port

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-start-port

Description Start Port of Usable NAT Ports

Type: number

Range: 1024-65535

offset

Specification	
Type	*object*

numeric-offset

Description Configure a numeric offset to the first NAT IP address

Type: number

Range: 0-1024000

Default: 0

Mutual Exclusion: numeric-offset and random are mutually exclusive

random

Description Randomly choose the first NAT IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: random and numeric-offset are mutually exclusive

2.19.54 cgnv6 logging nat-quota-exceeded

Change logging level for NAT Quota Exceeded

nat-quota-exceeded Specification

Type	*Configuration Resource*
Element Name	nat-quota-exceeded
Element URI	/axapi/v3/cgnv6/logging/nat-quota-exceeded
Element Attributes	nat-quota-exceeded_attributes
Schema	`nat-quota-exceeded schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/logging/nat-quota-exceeded

nat-quota-exceeded attributes

```
POST /axapi/v3/cgnv6/logging/nat-quota-exceeded
Payload:
{
    "nat-quota-exceeded": {
        "level": "warning"
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/logging/nat-quota-exceeded

nat-quota-exceeded attributes

```
GET /axapi/v3/cgnv6/logging/nat-quota-exceeded
Reponse:
{
    "nat-quota-exceeded": {
        "level": "warning",
        "uuid": "5abf9934-5c04-11d9-835e-001fa00680a0",
        "a10-url": "/axapi/v3/cgnv6/logging/nat-quota-exceeded"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/logging/nat-quota-exceeded

nat-quota-exceeded attributes

Replace Object

PUT

/axapi/v3/cgnv6/logging/nat-quota-exceeded

nat-quota-exceeded attributes

```
PUT /axapi/v3/cgnv6/logging/nat-quota-exceeded
Payload:
{
    "nat-quota-exceeded": {
        "level": "warning"
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/logging/nat-quota-exceeded

nat-quota-exceeded attributes

```
DELETE /axapi/v3/cgnv6/logging/nat-quota-exceeded
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

nat-quota-exceeded attributes

level

Description 'warning': Log level Warning (Default); 'critical': Log level Critical; 'notice': Log level Notice;

Type: string

Supported Values: warning, critical, notice

Default: warning

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.55 cgnv6 logging nat-resource-exhausted

Change logging level for NAT Resource Exhausted

nat-resource-exhausted Specification

Type	*Configuration Resource*
Element Name	nat-resource-exhausted
Element URI	/axapi/v3/cgnv6/logging/nat-resource-exhausted
Element Attributes	nat-resource-exhausted_attributes
Schema	`nat-resource-exhausted schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/logging/nat-resource-exhausted

nat-resource-exhausted attributes

```
POST /axapi/v3/cgnv6/logging/nat-resource-exhausted
Payload:
{
    "nat-resource-exhausted": {
        "level": "warning"
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/logging/nat-resource-exhausted

nat-resource-exhausted attributes

```
GET /axapi/v3/cgnv6/logging/nat-resource-exhausted
Reponse:
{

server

Description: server is a **JSON Block**. Please see below for *radius_server*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn/radius/server*

radius_server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

radius_server_remote

Specification	
Type	*object*

ip-list

Type: List

radius_server_remote_ip-list

Specification	
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius_server_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'radius-table-full': RADIUS Request Dropped (Table Full); 'ha-standby-dropped': HA Standby Dropped; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received;

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

radius_server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

endpoint-independent-mapping

Description 'disable': Disable FTP ALG for LSN;

Type: string

Supported Values: disable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_ftp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'port-requests': PORT Requests From Client; 'eprt-requests': EPRT Requests From Client; 'lprt-requests': LPRT Requests From Client; 'pasv-replies': PASV Replies From Server; 'epsv-replies': EPSV Replies From Server; 'lpsv-replies': LPSV Replies From Server; 'port-retransmits': Port Mode Request Retransmits; 'pasv-retransmits': Passive Mode Reply Retransmits; 'port-helper-created': Port Mode Helper Created; 'pasv-helper-created': Passive Mode Helper Created; 'port-helper-freed': Port Mode Helper Freed; 'pasv-helper-freed': Passive Mode Helper Freed; 'port-helper-unused': Port Mode Helper Unused; 'pasv-helper-unused': Passive Mode Helper Unused; 'port-helper-creation-failure': Port Helper Creation Failure; 'pasv-helper-creation-failure': Passive Helper Creation Failure; 'get-conn-ext-failure': Get Conn Extension Failure; 'smp-app-type-mismatch': SMP ALG App Type Mismatch;

Type: string

Supported Values: all, port-requests, eprt-requests, lprt-requests, pasv-replies, epsv-replies, lpsv-replies, port-retransmits, pasv-retransmits, port-helper-created, pasv-helper-created, port-helper-freed, pasv-helper-freed, port-helper-unused, pasv-helper-unused, port-helper-creation-failure, pasv-helper-creation-failure, get-conn-ext-failure, smp-app-type-mismatch

alg_sip

Specification	
Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout in minutes (Default is 5 minutes)

Type: number

Range: 2-10

Default: 5

sampling-enable

Type: List

sip-value

Description 'enable': Enable SIP ALG for LSN;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_sip_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'method-register': SIP Method REGISTER; 'method-invite': SIP Method INVITE; 'method-ack': SIP Method ACK; 'method-cancel': SIP Method CANCEL; 'method-bye': SIP Method BYE; 'method-options': SIP Method OPTIONS; 'method-prack': SIP Method PRACK; 'method-subscribe': SIP Method SUBSCRIBE; 'method-notify': SIP Method NOTIFY; 'method-publish': SIP Method PUBLISH; 'method-info': SIP Method INFO; 'method-refer': SIP Method REFER; 'method-message': SIP Method MESSAGE; 'method-update': SIP Method UPDATE; 'method-unknown': SIP Method UNKNOWN; 'parse-error': SIP Message Parse Error; 'req-uri-op-failrue': SIP Operate Request Uri Failure; 'via-hdr-op-failrue': SIP Operate Via Header Failure; 'contact-hdr-op-failrue': SIP Operate Contact Header Failure; 'from-hdr-op-failrue': SIP Operate From Header Failure; 'to-hdr-op-failrue': SIP Operate To Header Failure; 'route-hdr-op-failrue': SIP Operate Route Header Failure; 'record-route-hdr-op-failrue': SIP Operate Record-Route Header

Failure; 'content-length-hdr-op-failrue': SIP Operate Content-Length Failure; 'third-party-registration': SIP Third-Party Registration; 'conn-ext-creation-failure': SIP Create Connection Extension Failure; 'alloc-contact-port-failure': SIP Alloc Contact Port Failure; 'outside-contact-port-mismatch': SIP Outside Contact Port Mismatch NAT Port; 'inside-contact-port-mismatch': SIP Inside Contact Port Mismatch; 'third-party-sdp': SIP Third-Party SDP; 'sdp-process-candidate-failure': SIP Operate SDP Media Candidate Attribute Failure; 'sdp-op-failure': SIP Operate SDP Failure; 'sdp-alloc-port-map-success': SIP Alloc SDP Port Map Success; 'sdp-alloc-port-map-failure': SIP Alloc SDP Port Map Failure; 'modify-failure': SIP Message Modify Failure; 'rewrite-failure': SIP Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop;

Type: string

Supported Values: all, method-register, method-invite, method-ack, method-cancel, method-bye, method-options, method-prack, method-subscribe, method-notify, method-publish, method-info, method-refer, method-message, method-update, method-unknown, parse-error, req-uri-op-failrue, via-hdr-op-failrue, contact-hdr-op-failrue, from-hdr-op-failrue, to-hdr-op-failrue, route-hdr-op-failrue, record-route-hdr-op-failrue, content-length-hdr-op-failrue, third-party-registration, conn-ext-creation-failure, alloc-contact-port-failure, outside-contact-port-mismatch, inside-contact-port-mismatch, third-party-sdp, sdp-process-candidate-failure, sdp-op-failure, sdp-alloc-port-map-success, sdp-alloc-port-map-failure, modify-failure, rewrite-failure, tcp-out-of-order-drop, smp-conn-alloc-failure, helper-found, helper-created, helper-deleted, helper-freed, helper-failure

alg_esp

Specification	
Type	*object*

esp-value

Description 'enable': Enable ESP ALG for LSN;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'placeholder-debug': Placeholder Debug;

Type: string

Supported Values: all, session-created, placeholder-debug, nat-ip-conflict

alg_pptp

Specification	
Type	*object*

pptp-value

Description 'enable': Enable PPTP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_pptp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'calls-established': Calls Established; 'mismatched-pns-call-id': Mismatched PNS Call ID; 'gre-sessions-created': GRE Sessions Created; 'gre-sessions-freed': GRE Sessions Freed; 'no-gre-session-match': No Matching GRE Session; 'smp-sessions-created': SMP Sessions Created; 'smp-sessions-freed': SMP Sessions Freed; 'smp-session-creation-failure': SMP Session Creation Failures; 'extension-creation-failure': Extension Creation Failures; 'ha-sent': HA Info Sent; 'ha-rcv': HA Info Received; 'ha-no-mem': HA

Memory Allocation Failure; 'ha-conflict': HA Call ID Conflicts; 'ha-overwrite': HA Call ID Overwrites; 'ha-call-sent': HA Call Sent; 'ha-call-rcv': HA Call Received; 'ha-smp-conflict': HA SMP Conflicts; 'ha-smp-in-del-q': HA SMP Deleted; 'smp-app-type-mismatch': SMP ALG App Type Mismatch; 'quota-inc': Quota Incremented; 'quota-dec': Quota Decremented; 'quota-inc-not-found': Quota Not Found on Increment; 'quota-dec-not-found': Quota Not Found on Decrement;

Type: string

Supported Values: all, calls-established, mismatched-pns-call-id, gre-sessions-created, gre-sessions-freed, no-gre-session-match, smp-sessions-created, smp-sessions-freed, smp-session-creation-failure, extension-creation-failure, ha-sent, ha-rcv, ha-no-mem, ha-conflict, ha-overwrite, ha-call-sent, ha-call-rcv, ha-smp-conflict, ha-smp-in-del-q, smp-app-type-mismatch, quota-inc, quota-dec, quota-inc-not-found, quota-dec-not-found, call-req-pns-call-id-mismatch, call-reply-pns-call-id-mismatch, call-req-retransmit, call-req-new, call-req-ext-alloc-failure, call-reply-call-id-unknown, call-reply-retransmit, call-reply-retransmit-wrong-control, call-reply-retransmit-acquired, call-reply-ext-alloc-failure, smp-client-call-id-mismatch, smp-alloc-failure, gre-conn-creation-failure, gre-conn-ext-creation-failure, gre-no-fwd-route, gre-no-rev-route, gre-no-control-conn, gre-conn-already-exists, gre-free-no-ext, gre-free-no-smp, gre-free-smp-app-type-mismatch, control-freed, control-free-no-ext, control-free-no-smp, control-free-smp-app-type-mismatch

alg_rtsp

Specification	
Type	*object*

rtsp-value

Description 'enable': Enable RTSP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_rtsp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'streams-created': Streams Created; 'streams-freed': Streams Freed; 'stream-creation-failure': Stream Creation Failures; 'ports-allocated': Stream Client Ports Allocated; 'ports-freed': Stream Client Ports Freed; 'port-allocation-failure': Stream Client Port Allocation Failures; 'unknown-client-port-from-server': Server Replies With Unknown Client Ports; 'data-session-created': Data Session Created; 'data-session-freed': Data Session Freed; 'no-session-mem': Data Session Creation Failures; 'ha-sent': HA Sent; 'ha-rcv': HA RCV; 'smp-inserted': SMP Session Inserted; 'smp-removed': SMP Session Removed; 'smp-reused': SMP Session Reused; 'nat-pool-standby': New Session NAT Pool Standby; 'smp-deleted': New Session SMP Already Deleted; 'control-closed': New Session Closed; 'data-session-exists': New Session Already Exists; 'data-session-creation-failure': New Data Session Creation Failure; 'rtp-reversed': RTP Reverse Creation; 'rtcp-reversed': RTCP Reverse Creation; 'cross-cpu-sent': Cross CPU Sent; 'cross-cpu-rcv': Cross CPU Received; 'cross-cpu-no-session': Cross CPU No Session Found; 'cross-cpu-created': Cross CPU Creation; 'cross-cpu-rcv-failure': Cross CPU Receive Failure; 'data-free-smp-retry-lookup': Data Session Free SMP Retry Lookup; 'data-free-smp-not-found': Data Session Free SMP Not Found; 'ha-streams-sent': HA Streams Sent; 'ha-streams-rcv': HA Streams Received; 'ha-stream-incompatible': HA Incompatible Streams Received; 'ha-stream-exists': HA Stream Already Exists; 'ha-port-allocation-failure': HA Stream Port Allocation Failure; 'ha-data-session-sent': HA Data Session Sent; 'ha-data-session-rcv': HA Data Session Received; 'ha-data-no-smp': HA Data Session SMP Not Found; 'ha-control-closed': HA New Data Control Session Closed; 'ha-data-exists': HA New Data Session Already Exists; 'ha-extension-failure': HA Conn Extension Failure; 'ha-stream-smp-reused': HA SMP Session Reused; 'ha-stream-smp-acquire-failure': HA SMP Session Acquire Failure; 'smp-app-type-mismatch': SMP ALG App Type Mismatch;

Type: string

Supported Values: all, streams-created, streams-freed, stream-creation-failure, ports-allocated, ports-freed, port-allocation-failure, unknown-client-port-from-server, data-session-created, data-session-freed, no-session-mem, ha-sent, ha-rcv, smp-inserted, smp-removed, smp-reused, nat-pool-standby, smp-deleted, control-closed, data-session-exists, data-session-creation-failure, rtp-reversed, rtcp-reversed, cross-cpu-sent, cross-cpu-rcv, cross-cpu-no-session, cross-cpu-created, cross-cpu-rcv-failure, data-free-smp-retry-lookup, data-free-smp-not-found, ha-streams-sent, ha-streams-rcv, ha-stream-incompatible, ha-stream-exists, ha-port-allocation-failure, ha-data-session-sent, ha-data-session-rcv, ha-data-no-smp, ha-control-closed, ha-data-exists, ha-extension-failure, ha-stream-smp-reused, ha-stream-smp-acquire-failure, smp-app-type-mismatch

alg_h323

Specification	
Type	*object*

h323-value

Description 'enable': Enable H323 ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_h323_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'h225ras-message': H323 H225 RAS Message; 'h225cs-message': H323 H225 Call Signaling Message; 'h245ctl-message': H323 H245 Media Control Message; 'h245-tunneled': H323 H245 Tunnelled Message; 'fast-start': H323 FastStart; 'parse-error': Message Parse Error; 'message-cross-multi-packets': H323 Message Cross Multiple Packets; 'conn-ext-creation-failure': H323 Packet Rewrite Failure; 'rewrite-failure': H323 Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop; 'h245-dynamic-addr-exceed': H323 H245 Dynamic Address Exceed;

Type: string

Supported Values: all, h225ras-message, h225cs-message, h245ctl-message, h245-tunneled, fast-start, parse-error, message-cross-multi-packets, conn-ext-creation-failure, rewrite-failure, tcp-out-of-order-drop, h245-dynamic-addr-exceed

alg_rtp

Specification	
Type	*object*

rtp-stun-timeout

Description RTP/RTCP STUN timeout (default: 5 minutes)}

Type: number

Range: 2-10

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp

Specification	
Type	*object*

sampling-enable

Type: List

tftp-value

Description 'enable': Enable TFTP ALG for LSN;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': TFTP Client Sessions Created; 'placeholder-debug': Placeholder Debug;

Type: string

Supported Values: all, session-created, helper-created, helper-freed, helper-freed-used, helper-freed-unused, helper-already-used, helper-in-rml

alg_mgcp

Specification	
Type	*object*

mgcp-value

Description 'enable': Enable MGCP ALG for LSN;

Type: string

Supported Values: enable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_mgcp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'auep': MGCP AUEP; 'aucx': MGCP AUCX; 'crcx': MGCP CRCX; 'dlcx': MGCP DLCX; 'epcf': MGCP EPCF; 'mdcx': MGCP MDCX; 'ntfy': MGCP NTFY; 'rqnt': MGCP RQNT; 'rsip': MGCP RSIP; 'parse-error': MGCP Message Parse Error; 'conn-ext-creation-failure': MGCP Create Connection Extension Failure; 'third-party-sdp': MGCP

Third-Party SDP; 'sdp-process-candidate-failure': MGCP Operate SDP Media Candidate Attribute Failure; 'sdp-op-failure': MGCP Operate SDP Failure; 'sdp-alloc-port-map-success': MGCP Alloc SDP Port Map Success; 'sdp-alloc-port-map-failure': MGCP Alloc SDP Port Map Failure; 'modify-failure': MGCP Message Modify Failure; 'rewrite-failure': MGCP Message Rewrite Failure; 'tcp-out-of-order-drop': TCP Out-of-Order Drop;

Type: string

Supported Values: all, auep, aucx, crcx, dlcx, epcf, mdcx, ntfy, rqnt, rsip, parse-error, conn-ext-creation-failure, third-party-sdp, sdp-process-candidate-failure, sdp-op-failure, sdp-alloc-port-map-success, sdp-alloc-port-map-failure, modify-failure, rewrite-failure, tcp-out-of-order-drop

inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn/inside/source*

inside_source

Specification	
Type	*object*

class-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	
Type	*object*

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *global_icmp*

Type: Object

inbound-refresh

Description 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: disable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Description: logging is a **JSON Block**. Please see below for *global_logging*

Type: Object

port-batching

Description: port-batching is a **JSON Block**. Please see below for *global_port-batching*

Type: Object

sampling-enable

Type: List

strictly-sticky-nat

Description Strictly adheres to sticky-nat (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

global_logging

Specification	
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Refernce Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

global_logging_pool

Specification	
Type	*list*
Block object keys	

pool-name

Description NAT pool

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/nat/pool*

template

Description Bind a NAT logging template

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/logging*

global_port-batching

Specification	
Type	*object*

size

Description '1': Allocate 1 port at a time (default); '8': Allocate 8 ports at a time; '16': Allocate 16 ports at a time; '32': Allocate 32 ports at a time; '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time;

Type: string

Supported Values: 1, 8, 16, 32, 64, 128, 256, 512

Default: 1

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused (default: 2)

Type: number

Range: 0-10

Default: 2

global_sampling-enable

Specification	
Type	*list*
Block object keys

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

Refernce Object: */axapi/v3/cgnv6/lsn/tcp/reset-on-error*

tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Description Inside User Address and Port Range (Inside User IP address)

Type: string

Format: ipv4-address

inside-port-end

Description Inside End Port

Type: number

Range: 1-65535

inside-port-start

Description Inside Start Port

Type: number

Range: 1-65535

nat

Description NAT IP address

Type: string

Format: ipv4-address

nat-port-end

Description NAT End Port

Type: number

Range: 1-65535

nat-port-start

Description NAT Start Port

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global attributes

attempt-port-preservation

Description 'disable': Don't attempt port preservation for NAT allocation;

Type: string

Supported Values: disable

enhanced-user-tracking

Description Enable enhanced user tracking and visibility (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hairpinning

Description 'filter-none': Allow self-hairpinning (default). Warning: Only applies to UDP. TCP will use filter-self-ip-port; 'filter-self-ip': Block hairpinning to the user's own IP; 'filter-self-ip-port': Block hairpinning to the user's same IP and port combination;

Type: string

Supported Values: filter-none, filter-self-ip, filter-self-ip-port

Default: filter-none

half-close-timeout

Description Set LSN Half close timeout (Half close timeout in seconds (default not set))

Type: number

Range: 2-3000

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

inbound-refresh

Description 'disable': Disable NAT Inbound Refresh Behavior;

Type: string

Supported Values: disable

ip-selection

Description 'random': Random (long-run uniformly distributed) NAT IP selection (default); 'round-robin': Round-robin; 'least-used-strict': Fewest NAT ports used; 'least-udp-used-strict': Fewest UDP NAT ports used; 'least-tcp-used-strict': Fewest TCP NAT ports used; 'least-reserved-strict': Fewest NAT ports reserved; 'least-udp-reserved-strict': Fewest UDP NAT ports reserved; 'least-tcp-reserved-strict': Fewest TCP NAT ports reserved; 'least-users-strict': Fewest number of users;

Type: string

Supported Values: random, round-robin, least-used-strict, least-udp-used-strict, least-tcp-used-strict, least-reserved-strict, least-udp-reserved-strict, least-tcp-reserved-strict, least-users-strict

Default: random

logging

Description: logging is a **JSON Block**. Please see below for *logging*

Type: Object

port-batching

Description: port-batching is a **JSON Block**. Please see below for *port-batching*

Type: Object

sampling-enable

Type: List

strictly-sticky-nat

Description Strictly adheres to sticky-nat (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-timeout

Description Set LSN SYN timeout (SYN idle-timeout in seconds (default: 4 seconds))

Type: number

Range: 2-30

Default: 4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

logging

Specification	
Type	*object*

default-template

Description Bind the default NAT logging template for LSN (Bind a NAT logging template)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/template/logging*

partition-name

Description Select partition name for logging

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Mutual Exclusion: partition-name and shared are mutually exclusive

Refernce Object: */axapi/v3/partition*

pool

Type: List

shared

Description Select shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared and partition-name are mutually exclusive

logging_pool

Specification

Type: Object

extended-user-quota

Description: extended-user-quota is a **JSON Block**. Please see below for *extended-user-quota*

Type: Object

lid-number

Description LSN Lid

Type: number

Range: 1-1023

lsn-rule-list

Description: lsn-rule-list is a **JSON Block**. Please see below for *lsn-rule-list*

Type: Object

name

Description LSN Lid Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

override

Description 'none': Apply source NAT if configured (default); 'drop': Drop packets that match this LSN lid; 'pass-through': Layer-3 route packets that match this LSN lid and do not apply source NAT;

Type: string

Supported Values: none, drop, pass-through

Default: none

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat-pool

Description: source-nat-pool is a **JSON Block**. Please see below for *source-nat-pool*

Type: Object

user-quota

Description: user-quota is a **JSON Block**. Please see below for *user-quota*

Type: Object

user-quota-prefix-length

Description NAT64 user quota prefix length (Prefix Length (Default: Uses the global NAT64 configured value))

Type: number

Range: 1-128

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Specification	
Type	*object*

tcp

Type: List

udp

Type: List

extended-user-quota_udp

Specification	
Type	*list*
Block object keys	

udp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

udp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

extended-user-quota_tcp

Specification	
Type	*list*
Block object keys	

tcp-service-port

Description Port (Port Value)

Type: number

Range: 1-65535

tcp-sessions

Description Number of Extended Quota sessions allowed for this service

Type: number

Range: 1-255

ds-lite

Specification	
Type	*object*

inside-src-permit-list

Description Class-List of IPv4 addresses permitted (Class-list to match for DS-Lite)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-quota

Specification	
Type	*object*

icmp

Description User Quota for ICMP identifiers (NAT port quota per user (default: not configured))

Type: number

Range: 1-64000

quota-tcp

Description: quota-tcp is a **JSON Block**. Please see below for *user-quota_quota-tcp*

Type: Object

quota-udp

Description: quota-udp is a **JSON Block**. Please see below for *user-quota_quota-udp*

Type: Object

session

Description User Quota for number of data sessions

Type: number

Range: 1-2147483647

user-quota_quota-tcp

Specification	
Type	*object*

tcp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

tcp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

user-quota_quota-udp

Specification	
Type	*object*

udp-quota

Description NAT port quota per user (default: not configured)

Type: number

Range: 1-64000

udp-reserve

Description Number of ports to reserve per user (default: same as user-quota value) (Reserved quota per user (default: same as user-quota value))

Type: number

Range: 0-64000

source-nat-pool

Specification	
Type	*object*

pool-name

Description Source NAT Pool or Pool-Group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Use a shared source NAT pool or pool-group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Specification	
Type	*object*

conn-rate-limit-val

Description Maximum connections per second (Default: No limit)

Type: number

Range: 1-65535

lsn-rule-list

Specification	
Type	*object*

destination

Description Apply LSN Rule-List on Destination (LSN Rule-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/cgnv6/lsn-rule-list*

server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

server attributes

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated;

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

remote

Specification	
Type	*object*

ip-list

Type: List

remote_ip-list

Specification	
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'radius-table-full': RADIUS Request Dropped (Table Full); 'ha-standby-dropped': HA Standby Dropped; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received;

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber

Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

stats data

	Counter	Size	Description
	secret-not-configured-dropped	8	RADIUS Secret Not Configured Dropped
	smp-created	8	RADIUS SMP Created
	radius-request-dropped	8	RADIUS Request Dropped (Malformed Packet)
	imsi-received	8	IMSI Received
	invalid-key	8	Radius Request has Invalid Key Field

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

default_rule-cfg_tcp-cfg

Specification

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

default_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000;

'1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

default_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list

Specification	
Type	*list*
Block object keys	

ipv4-addr

Description Configure a Specific Rule-Set (IP Network Address)

Type: string

Format: ipv4-cidr

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

ip-list_rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *ip-list_rule-cfg_udp-cfg*

Type: Object

ip-list_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16,

17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

ip-list_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ip-list_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list

Specification	
Type	*list*
Block object keys	

name-domain-list

Description Configure a Specific Rule-Set (Domain List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-list-name-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

domain-list-name-list_rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protocol; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocol; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *domain-list-name-list_rule-cfg_udp-cfg*

Type: Object

domain-list-name-list_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-list-name-list_rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

domain-list-name-list_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list

Specification	
Type	*list*
Block object keys	

name-domain

Description Configure a Specific Rule-Set (Domain Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-name-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

domain-name-list_rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *domain-name-list_rule-cfg_udp-cfg*

Type: Object

domain-name-list_rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55':

110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list_rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

010000; ‘17’: 010001; ‘18’: 010010; ‘19’: 010011; ‘20’: 010100; ‘21’: 010101; ‘22’: 010110; ‘23’: 010111; ‘24’: 011000; ‘25’: 011001; ‘26’: 011010; ‘27’: 011011; ‘28’: 011100; ‘29’: 011101; ‘30’: 011110; ‘31’: 011111; ‘32’: 100000; ‘33’: 100001; ‘34’: 100010; ‘35’: 100011; ‘36’: 100100; ‘37’: 100101; ‘38’: 100110; ‘39’: 100111; ‘40’: 101000; ‘41’: 101001; ‘42’: 101010; ‘43’: 101011; ‘44’: 101100; ‘45’: 101101; ‘46’: 101110; ‘47’: 101111; ‘48’: 110000; ‘49’: 110001; ‘50’: 110010; ‘51’: 110011; ‘52’: 110100; ‘53’: 110101; ‘54’: 110110; ‘55’: 110111; ‘56’: 111000; ‘57’: 111001; ‘58’: 111010; ‘59’: 111011; ‘60’: 111100; ‘61’: 111101; ‘62’: 111110; ‘63’: 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

domain-name-list_rule-cfg_dscp-cfg

Specification

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

domain-name-list_rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

2.19.97 cgnv6 lsn-rule-list default

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110;

'23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Replace List

PUT

/axapi/v3/cgnv6/lsn-rule-list/{name}/domain-list-name

domain-list-name-list

Delete Object

DELETE

/axapi/v3/cgnv6/lsn-rule-list/{name}/domain-list-name/{name-domain-list}

domain-list-name attributes

domain-list-name-list

domain-list-name-list is **JSON List** of *domain-list-name attributes*

domain-list-name-list : [

{ *domain-list-name attributes* },

{ *domain-list-name attributes* },

...

]

domain-list-name attributes

name-domain-list

Description Configure a Specific Rule-Set (Domain List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *rule-cfg_udp-cfg*

Type: Object

rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

Replace List

PUT

/axapi/v3/cgnv6/lsn-rule-list/{name}/domain-name

domain-name-list

Delete Object

DELETE

/axapi/v3/cgnv6/lsn-rule-list/{name}/domain-name/{name-domain}

domain-name attributes

domain-name-list

domain-name-list is **JSON List** of *domain-name attributes*

domain-name-list : [

{ *domain-name attributes* },

{ *domain-name attributes* },

...

]

domain-name attributes

name-domain

Description Configure a Specific Rule-Set (Domain Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *rule-cfg_udp-cfg*

Type: Object

rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

vrid

Description VRRP-A vrid

Type: number

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

operational data

	rule-list		rule-list

2.19.101 cgnv6 lsn-rule-list ip

Configure a Specific Rule-Set (IP Network Address)

ip Specification

Type	*Collection*
Object Key(s)	*ipv4-addr*
Collection Name	*ip-list*
Collection URI	/axapi/v3/cgnv6/lsn-rule-list/{name}/ip
Element Name	ip
Element URI	/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}
Element Attributes	ip_attributes
Statistics Data URI	/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}/stats
Operational Data URI	/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}/oper
Schema	`ip schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip

ip attributes

Create List

POST

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip

ip attributes

Get Object

GET

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}

ip attributes

Get List

GET

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip

ip-list

Modify Object

POST

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}

ip attributes

Replace Object

PUT

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}

ip attributes

Replace List

PUT

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip

ip-list

Delete Object

DELETE

/axapi/v3/cgnv6/lsn-rule-list/{name}/ip/{ipv4-addr}

ip attributes

ip-list

ip-list is **JSON List** of *ip attributes*

ip-list : [

{ *ip attributes* },

{ *ip attributes* },

...

]

ip attributes

ipv4-addr

Description Configure a Specific Rule-Set (IP Network Address)

Type: string

Format: ipv4-cidr

rule-cfg

Type: List

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'placeholder': placeholder;

Type: string

Supported Values: all, placeholder

rule-cfg

Specification	
Type	*list*
Block object keys	

dscp-cfg

Description: dscp-cfg is a **JSON Block**. Please see below for *rule-cfg_dscp-cfg*

Type: Object

icmp-others-cfg

Description: icmp-others-cfg is a **JSON Block**. Please see below for *rule-cfg_icmp-others-cfg*

Type: Object

proto

Description 'tcp': TCP L4 Protoco; 'udp': UDP L4 Protocol; 'icmp': ICMP L4 Protocol; 'others': Other L4 Protocl; 'dscp': Match dscp value;

Type: string

Supported Values: tcp, udp, icmp, others, dscp

tcp-cfg

Description: tcp-cfg is a **JSON Block**. Please see below for *rule-cfg_tcp-cfg*

Type: Object

udp-cfg

Description: udp-cfg is a **JSON Block**. Please see below for *rule-cfg_udp-cfg*

Type: Object

rule-cfg_udp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_tcp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets; 'template': Template; 'idle-timeout': Configure idle timeout;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp, template, idle-timeout

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

end-port

Description End of Port Range (inclusive)

Type: number

Range: 1-65535

fast

Description 'fast': Fast Aging;

Type: string

Supported Values: fast

Mutual Exclusion: fast and timeout-val are mutually exclusive

http-alg

Description HTTP-ALG Template (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Description Port-List Name

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-port

Description Single Port or Start of Port Range (inclusive), Port 0 is Match Any Port

Type: number

Range: 0-65535

timeout-val

Description Timeout in seconds

Type: number

Range: 2-129600

Mutual Exclusion: timeout-val and fast are mutually exclusive

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

rule-cfg_dscp-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action;

Type: string

Supported Values: action

action-type

Description 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-match

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); 'any': Match any dscp value; '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, any, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

rule-cfg_icmp-others-cfg

Specification	
Type	*object*

action-cfg

Description 'action': LSN Rule-List Action; 'no-action': Exclude LSN Rule-List Action;

Type: string

Supported Values: action, no-action

action-type

Description 'dnat': Apply Dest NAT; 'drop': Drop the Packets; 'one-to-one-snat': Apply one-to-one source NAT for the packets; 'pass-through': Pass the Packets Through; 'snat': Redirect the Packets to a Different Source NAT Pool; 'set-dscp': To set dscp value for the packets;

Type: string

Supported Values: dnat, drop, one-to-one-snat, pass-through, snat, set-dscp

dscp-direction

Description 'inbound': To set dscp value for inbound packets; 'outbound': To set dscp value for outbound packets;

Type: string

Supported Values: inbound, outbound

dscp-value

Description 'default': Default dscp (000000); 'af11': AF11 (001010); 'af12': AF12 (001100); 'af13': AF13 (001110); 'af21': AF21 (010010); 'af22': AF22 (010100); 'af23': AF23 (010110); 'af31': AF31 (011010); 'af32': AF32 (011100); 'af33': AF33 (011110); 'af41': AF41 (100010); 'af42': AF42 (100100); 'af43': AF43 (100110); 'cs1': CS1 (001000); 'cs2': CS2 (010000); 'cs3': CS3 (011000); 'cs4': CS4 (100000); 'cs5': CS5 (101000); 'cs6': CS6 (110000); 'cs7': CS7 (111000); 'ef': EF (101110); '0': 000000; '1': 000001; '2': 000010; '3': 000011; '4': 000100; '5': 000101; '6': 000110; '7': 000111; '8': 001000; '9': 001001; '10': 001010; '11': 001011; '12': 001100; '13': 001101; '14': 001110; '15': 001111; '16': 010000; '17': 010001; '18': 010010; '19': 010011; '20': 010100; '21': 010101; '22': 010110; '23': 010111; '24': 011000; '25': 011001; '26': 011010; '27': 011011; '28': 011100; '29': 011101; '30': 011110; '31': 011111; '32': 100000; '33': 100001; '34': 100010; '35': 100011; '36': 100100; '37': 100101; '38': 100110; '39': 100111; '40': 101000; '41': 101001; '42': 101010; '43': 101011; '44': 101100; '45': 101101; '46': 101110; '47': 101111; '48': 110000; '49': 110001; '50': 110010; '51': 110011; '52': 110100; '53': 110101; '54': 110110; '55': 110111; '56': 111000; '57': 111001; '58': 111010; '59': 111011; '60': 111100; '61': 111101; '62': 111110; '63': 111111;

Type: string

Supported Values: default, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cs1, cs2, cs3, cs4, cs5, cs6, cs7, ef, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63

ipv4-list

Description IP-List (IP-List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

no-snat

Description Disable source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pool

Description NAT Pool (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description The pool is a shared pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vrid

Description VRRP-A vrid

Type: number

Range: 1-31

operational data

    }
}
```

tcp-list

tcp-list is **JSON List** of *tcp attributes*

tcp-list : [

{ *tcp attributes* },

{ *tcp attributes* },

...

]

tcp attributes

port-end

Description Port Range (Port Range End)

Type: number

Range: 1-65535

port-start

Description Port Range (Port Range Start)

Type: number

Range: 1-65535

timeout

Description STUN timeout in minutes (default: 2 minutes)

Type: number

Range: 0-60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.104 cgnv6 lsn stun-timeout udp

Set UDP STUN timeout

udp Specification

Type	*Collection*
Object Key(s)	*port-start, port-end*
Collection Name	*udp-list*
Collection URI	/axapi/v3/cgnv6/lsn/stun-timeout/udp
Element Name	udp
Element URI	/axapi/v3/cgnv6/lsn/stun-timeout/udp/{port-start}+{port-end}
Element Attributes	udp_attributes
Schema	`udp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/lsn/stun-timeout/udp

udp attributes

```
POST /axapi/v3/cgnv6/lsn/stun-timeout/udp/
Payload:
{
    "udp": {
        "port-start": 1,
        "port-end": 1,
        "timeout": 0
    }
}
```

mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS; 'none': No TCP MSS clamping (default);

Type: string

Supported Values: fixed, subtract, none

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)},

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Range: 0-23

ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-start

Description Starting Port, Must be Power of 2 value

Type: number

Range: 1-32768

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

encapsulation_domain-list_sampling-enable

Specification	
Type	*list*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

health-check-gateway_ipv6-address-list

Specification	
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

health-check-gateway_address-list

Specification	
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

stats data

	Counter	Size	Description
	interface_not_configured	8	Interfaces not Configured Dropped
	inbound_packet_received	8	Inbound IPv4 Packets Received
	frag_icmp_sent	8	ICMP Packet Too Big Sent
	outbound_dest_unreachable	8	Outbound IPv4 Destination Address Unreachable
	outbound_packet_received	8	Outbound IPv6 Packets Received
	inbound_dest_unreachable	8	Inbound IPv6 Destination Address Unreachable
	inbound_rev_lookup_failed	8	Inbound IPv4 Reverse Route Lookup Failed
	bmr_prefixrules_configured	8	BMR prefix rules configured
	outbound_frag_packet_received	8	Outbound IPv6 Fragment Packets Received
	packet_mtu_exceeded	8	Packet Exceeded MTU
	inbound_addr_port_validation_failed	8	Inbound IPv4 Destination Address Port Validation Failed
	outbound_addr_validation_failed	8	Outbound IPv6 Source Address Validation Failed
	inbound_frag_packet_received	8	Inbound IPv4 Fragment Packets Received
	outbound_rev_lookup_failed	8	Outbound IPv6 Reverse Route Lookup Failed

2.19.124 cgnv6 map encapsulation domain basic-mapping-rule

Basic mapping rule (BMR)

basic-mapping-rule Specification

Type	*Configuration Resource*

Block object keys	

counters1

Description 'all': all; 'inbound_packet_received': Inbound IPv4 Packets Received; 'inbound_frag_packet_received': Inbound IPv4 Fragment Packets Received; 'inbound_addr_port_validation_failed': Inbound IPv4 Destination Address Port Validation Failed; 'inbound_rev_lookup_failed': Inbound IPv4 Reverse Route Lookup Failed; 'inbound_dest_unreachable': Inbound IPv6 Destination Address Unreachable; 'outbound_packet_received': Outbound IPv6 Packets Received; 'outbound_frag_packet_received': Outbound IPv6 Fragment Packets Received; 'outbound_addr_validation_failed': Outbound IPv6 Source Address Validation Failed; 'outbound_rev_lookup_failed': Outbound IPv6 Reverse Route Lookup Failed; 'outbound_dest_unreachable': Outbound IPv4 Destination Address Unreachable; 'packet_mtu_exceeded': Packet Exceeded MTU; 'frag_icmp_sent': ICMP Packet Too Big Sent; 'interface_not_configured': Interfaces not Configured Dropped; 'bmr_prefixrules_configured': BMR prefix rules configured; 'helper_count': Helper Count; 'active_dhcpv6_leases': Active DHCPv6 leases; 'num_domains_configured': Total MAP Domains configured;

Type: string

Supported Values: all, inbound_packet_received, inbound_frag_packet_received, inbound_addr_port_validation_failed, inbound_rev_lookup_failed, inbound_dest_unreachable, outbound_packet_received, outbound_frag_packet_received, outbound_addr_validation_failed, outbound_rev_lookup_failed, outbound_dest_unreachable, packet_mtu_exceeded, frag_icmp_sent, interface_not_configured, bmr_prefixrules_configured, helper_count, active_dhcpv6_leases

tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 516))

Type: number

Range: 0-1440

Default: 516

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping(default); 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, none, subtract

Default: none

mss-subtract

Description Specify the value to subtract from the TCP MSS

Type: number

Range: 0-1440

mss-value

Description The max value allowed for the TCP MSS

Type: number

Range: 0-1440

health-check-gateway

Specification	
Type	*object*

address-list

Type: List

ipv6-address-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

withdraw-route

Description 'all-link-failure': Withdraw routes on health-check failure of all IPv4 gateways or all IPv6 gateways; 'any-link-failure': Withdraw routes on health-check failure of any gateway (default);

Type: string

Supported Values: all-link-failure, any-link-failure

Default: any-link-failure

health-check-gateway_ipv6-address-list

Specification	
Type	*list*
Block object keys	

ipv6-gateway

Description IPv6 Gateway

Type: string

Format: ipv6-address

Specification	
Type	*list*
Block object keys	

ipv4-gateway

Description IPv4 Gateway

Type: string

Format: ipv4-address

basic-mapping-rule

Specification	
Type	*object*

ea-length

Description Length of Embedded Address (EA) bits

Type: number

Range: 0-23

port-start

Description Starting Port, Must be Power of 2 value

Type: number

Range: 1-32768

prefix-rule-list

Type: List

Refernce Object: */axapi/v3/cgnv6/map/translation/domain/{name}/basic-mapping-rule/prefix-rule/{name}*

rule-ipv4-address-port-settings

Description 'prefix-addr': Each CE is assigned an IPv4 prefix; 'single-addr': Each CE is assigned an IPv4 address; 'shared-addr': Each CE is assigned a shared IPv4 address;

Type: string

Supported Values: prefix-addr, single-addr, shared-addr

share-ratio

Description Port sharing ratio for each NAT IP. Must be Power of 2 value

Type: number

Range: 1-65536

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

basic-mapping-rule_prefix-rule-list

Specification	
Type	*list*
Block object keys	

ipv4-netmask

Description Subnet mask (subnet bigger than /8 is not allowed)

Type: string

Format: ipv4-netmask-brief

name

Description MAP BMR prefix rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rule-ipv4-prefix

Description IPv4 prefix of BMR

Type: string

Format: ipv4-address

rule-ipv6-prefix

Description IPv6 prefix of BMR

Type: string

Format: ipv6-address-plen

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	interface_not_configured	8	Interfaces not Configured Dropped
	inbound_packet_received	8	Inbound IPv4 Packets Received
	frag_icmp_sent	8	ICMP Packet Too Big Sent
	outbound_dest_unreachable	8	Outbound IPv4 Destination Address Unreachable
	outbound_packet_received	8	Outbound IPv6 Packets Received
	inbound_dest_unreachable	8	Inbound IPv6 Destination Address Unreachable
	inbound_rev_lookup_failed	8	Inbound IPv4 Reverse Route Lookup Failed
	bmr_prefixrules_configured	8	BMR prefix rules configured
	outbound_frag_packet_received	8	Outbound IPv6 Fragment Packets Received
	packet_mtu_exceeded	8	Packet Exceeded MTU
	inbound_addr_port_validation_failed	8	Inbound IPv4 Destination Address Port Validation Failed
	outbound_addr_validation_failed	8	Outbound IPv6 Source Address Validation Failed
	inbound_frag_packet_received	8	Inbound IPv4 Fragment Packets Received
	outbound_rev_lookup_failed	8	Outbound IPv6 Reverse Route Lookup Failed

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Specify VRRP-A vrid

Type: number

Range: 1-31

pool-group-list_member-list

Specification	
Type	*list*
Block object keys	

pool-name

Description Specify CGNv6 NAT pool name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

histogram

Specification	
Type	*object*

bin-count

Description Number of bins in the histogram (default: 50)

Type: number

Range: 10-100

Default: 50

bin-skew

Description Percentage of bins that represent the upper bound (default: 75)

Type: number

Range: 50-80

Default: 75

data-skew

Description Percentage of data that represents the upper bound (default: 25)

Type: number

Range: 5-50

Default: 25

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmpv6

Specification	
Type	*object*

respond-to-ping

Description Respond to ICMPv6 echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

range-list-list

Specification	
Type	*list*
Block object keys	

global-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

global-start-ipv4-addr

Description Global Start IPv4 Address of this list

Type: string

Format: ipv4-address

local-netmaskv4

Description Mask for this Address range

Type: string

Format: ipv4-netmask

local-start-ipv4-addr

Description Local Start IPv4 Address of this list

Type: string

Format: ipv4-address

name

Description Name for this Static List

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-count

Description Number of addresses to be translated in this range

Type: number

Range: 1-200000

v4-vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

exclude-port

Specification	
Type	*object*

tcp

Description: tcp is a **JSON Block**. Please see below for *exclude-port_tcp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat/exclude-port/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *exclude-port_udp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat/exclude-port/udp*

exclude-port_udp

Specification	
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exclude-port_udp_port-list

Specification	
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

exclude-port_tcp

Specification	
Type	*object*

port-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exclude-port_tcp_port-list

Specification	
Type	*list*
Block object keys	

port

Description Single Port or Port Range Start

Type: number

port-end

Description Port Range End

Type: number

icmp

Specification	
Type	*object*

always-source-nat-errors

Description Source NAT intermediate routers' IPs for ICMP errors (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respond-to-ping

Description Respond to ICMP echo requests to NAT pool IPs (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside

Specification	
Type	*object*

source

Description: source is a **JSON Block**. Please see below for *inside_source*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat/inside/source*

inside_source

Specification	
Type	*object*

static-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat/inside/source/static/{src-address}+{partition}*

statistics

Description: statistics is a **JSON Block**. Please see below for *inside_source_statistics*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat/inside/source/statistics*

inside_source_statistics

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inside_source_static-list

Specification	
Type	*list*
Block object keys	

nat-address

Description NAT Address

Type: string

Format: ipv4-address

partition

Description Inside User Partition (Partition Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

src-address

Description Original Source Address

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list

Specification	
Type	*list*
Block object keys	

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

pool-list_exclude-ip

Specification	
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

2.19.141 cgnv6 nat46-stateless

Configure Stateless NAT46

nat46-stateless Specification

Type	*Intermediate Resource*
Element Name	nat46-stateless
Element URI	/axapi/v3/cgnv6/nat46-stateless
Element Attributes	nat46-stateless_attributes
Schema	`nat46-stateless schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/nat46-stateless

nat46-stateless attributes

fragmentation

Description: fragmentation is a **JSON Block**. Please see below for *fragmentation*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation*

global

Description: global is a **JSON Block**. Please see below for *global*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/global*

partition-prefix-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}*

prefix

Description: prefix is a **JSON Block**. Please see below for *prefix*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/prefix*

static-dest-mapping-list

Type: List

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/static-dest-mapping/{v4-address}+{v6-address}*

static-dest-mapping-list

Specification	
Type	*list*
Block object keys	

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

fragmentation

Specification	
Type	*object*

inbound

Description: inbound is a **JSON Block**. Please see below for *fragmentation_inbound*

Description: outbound is a **JSON Block**. Please see below for *fragmentation_outbound*

Type: Object

Refernce Object: */axapi/v3/cgnv6/nat46-stateless/fragmentation/outbound*

fragmentation_inbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation for oversize packets (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fragmentation_outbound

Specification	
Type	*object*

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	inbound_ipv6_fragment_received	8	Inbound IPv6 fragment packets received
	inbound_ipv4_unreachable	8	Inbound IPv4 destination unreachable
	icmp_to_icmpv6	8	ICMP to ICMPv6
	outbound_ipv4_fragment_received	8	Outbound IPv4 fragment packets received
	outbound_ipv4_received	8	Outbound IPv4 packets received
	outbound_ipv6_fragmented	8	Outbound IPv6 packets fragmented
	ha_standby	8	HA is standby
	packet_too_big	8	Packet too big
	inbound_ipv6_received	8	Inbound IPv6 packets received
	fragment_error	8	Fragment processing errors
	inbound_ipv6_drop	8	Inbound IPv6 packets dropped
	icmpv6_to_icmp	8	ICMPv6 to ICMP
	outbound_ipv4_drop	8	Outbound IPv4 packets dropped
	icmpv6_to_icmp_error	8	ICMPv6 to ICMP errors
	inbound_ipv4_fragmented	8	Inbound IPv4 packets fragmented
	outbound_ipv6_unreachable	8	Outbound IPv6 destination unreachable
	conn_count	8	conn count
	other_error	8	Other errors
	icmp_to_icmpv6_error	8	ICMP to ICMPv6 errors

2.19.146 cgnv6 nat46-stateless partition-prefix

Configure NAT46 prefix for a L3V partition traffic

partition-prefix Specification

Type	*Collection*
Object Key(s)	*partition*
Collection Name	*partition-prefix-list*
Collection URI	/axapi/v3/cgnv6/nat46-stateless/partition-prefix
Element Name	partition-prefix
Element URI	/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}
Element Attributes	partition-prefix_attributes
Schema	`partition-prefix schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/nat46-stateless/partition-prefix

partition-prefix attributes

Create List

POST

/axapi/v3/cgnv6/nat46-stateless/partition-prefix

partition-prefix attributes

Get Object

GET

/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}

partition-prefix attributes

Get List

GET

/axapi/v3/cgnv6/nat46-stateless/partition-prefix

partition-prefix-list

Modify Object

POST

/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}

partition-prefix attributes

Replace Object

PUT

/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}

partition-prefix attributes

Replace List

PUT

partition-prefix-list

Delete Object

DELETE

/axapi/v3/cgnv6/nat46-stateless/partition-prefix/{partition}

partition-prefix attributes

partition-prefix-list

partition-prefix-list is **JSON List** of *partition-prefix attributes*

partition-prefix-list : [

{ *partition-prefix attributes* },

{ *partition-prefix attributes* },

...

]

partition-prefix attributes

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

partition

Description Partition Name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.19.147 cgnv6 nat46-stateless prefix

Enable Stateless NAT46 IPv6 source address

prefix Specification

Type	*Configuration Resource*
Element Name	prefix
Element URI	/axapi/v3/cgnv6/nat46-stateless/prefix
Element Attributes	prefix_attributes
Schema	`prefix schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/nat46-stateless/prefix

prefix attributes

```
POST /axapi/v3/cgnv6/nat46-stateless/prefix
Payload:
{
    "prefix": {
        "ipv6-prefix": "2003::1/96"
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/nat46-stateless/prefix

prefix attributes

```
GET /axapi/v3/cgnv6/nat46-stateless/prefix
Reponse:
{
    "prefix": {
        "ipv6-prefix": "2003::1/96",
        "uuid": "02a20f58-6027-11d9-b5c1-001fa00680a0",
        "a10-url": "/axapi/v3/cgnv6/nat46-stateless/prefix"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/nat46-stateless/prefix

prefix attributes

Replace Object

PUT

/axapi/v3/cgnv6/nat46-stateless/prefix

prefix attributes

```
PUT /axapi/v3/cgnv6/nat46-stateless/prefix
Payload:
{
    "prefix": {
        "ipv6-prefix": "2003::2/96"
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/nat46-stateless/prefix

prefix attributes

```
DELETE /axapi/v3/cgnv6/nat46-stateless/prefix
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

prefix attributes

ipv6-prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.19.148 cgnv6 nat46-stateless static-dest-mapping

Stateless NAT46 mapping (IPv4 <-> IPv6)

static-dest-mapping Specification

Type	*Collection*
Object Key(s)	*v4-address, v6-address*
Collection Name	*static-dest-mapping-list*
Collection URI	/axapi/v3/cgnv6/nat46-stateless/static-dest-mapping

    }
}
```

static-dest-mapping-list

static-dest-mapping-list is **JSON List** of *static-dest-mapping attributes*

static-dest-mapping-list : [

{ *static-dest-mapping attributes* },

{ *static-dest-mapping attributes* },

...

]

static-dest-mapping attributes

count

Description Set number of consecutive mappings (Number of mappings)

Type: number

shared

Description Share/Expose this mapping with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

to-shared

Description Send NATed traffic through shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-address

Description IPv4 address

Type: string

Format: ipv4-address

v6-address

Description IPv6 address

Type: string

Format: ipv6-address

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.19.149 cgnv6 nat64

fragmentation_inbound

Specification	
Type	*object*

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

Default: 1

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default);

Type: string

Supported Values: drop, ipv6, send-icmp

Default: send-icmp

frag-action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 fragmentation for oversize packets (default);

Type: string

Supported Values: drop, ipv6

Default: ipv6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fragmentation_outbound

Specification	
Type	*object*

frag-action

Description 'drop': Drop Silently; 'ipv4': Use IPv4 fragmentation (default); 'send-icmpv6': Send ICMPv6 Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv4, send-icmpv6

Default: ipv4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fragmentation_df-bit-transparency

Specification	
Type	*object*

df-bit-value

Description 'enable': Add an empty IPv6 fragmentation header if IPv4 DF bit is zero;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

full-cone-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Maximum Length: 64 characters

Maximum Length: 1 characters

xlat-no-trans-pasv

Description 'enable': enable;

Type: string

Supported Values: enable

alg_sip

Specification	
Type	*object*

sip-enable

Description 'enable': Enable NAT64 SIP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp

Specification	
Type	*object*

esp-enable

Description 'enable': Enable NAT64 ESP ALG;

Type: string

Supported Values: enable, enable-with-ctrl

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_esp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'session-created': ESP Sessions Created; 'nat-ip-conflict': NAT IP Conflict;

Type: string

Supported Values: all, session-created, nat-ip-conflict

alg_pptp

Specification	
Type	*object*

pptp-enable

Description 'enable': Enable NAT64 PPTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_rtsp

Specification	
Type	*object*

rtsp-enable

Description 'enable': Enable NAT64 RTSP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_h323

Specification	
Type	*object*

h323-enable

Description 'enable': Enable NAT64 H323 ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_tftp

Specification	
Type	*object*

tftp-enable

Description 'enable': Enable NAT64 TFTP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

alg_mgcp

Specification	
Type	*object*

mgcp-enable

Description 'enable': Enable NAT64 MGCP ALG;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	
Type	*object*

all

Description All packet sizes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-non-zero-ipv4-id

Description Enable non-zero ID field in IPv4 header when no IPv6 Fragment for packet size more than 88 & less than or equal to 1280 bytes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmp

Description: icmp is a **JSON Block**. Please see below for *global_icmp*

global_tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *global_tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *global_tcp_reset-on-error*

Type: Object

global_tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

global_tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

global_icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

prefix-list

Specification	
Type	*list*
Block object keys	

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-val

Description NAT64 Prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

user-quota-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enhanced-user-tracking

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: 476))

Type: number

Range: 0-1420

Default: 476

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'none': No TCP MSS clamping; 'subtract': Specify the value to subtract from the TCP MSS (default: 20);

Type: string

Supported Values: fixed, none, subtract

Default: subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: 20)

Type: number

Range: 0-1420

Default: 20

mss-value

Description The max value allowed for the TCP MSS (default: not configured)

Type: number

Range: 0-1420

tcp_reset-on-error

Specification	
Type	*object*

outbound

Description 'disable': Disable send TCP reset on error;

Type: string

Supported Values: disable

icmp

Specification	
Type	*object*

send-on-port-unavailable

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered; 'disable': Disable ICMP port unavailable message (default);

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: disable

send-on-user-quota-exceeded

Description 'host-unreachable': Send ICMP destination host unreachable; 'admin-filtered': Send ICMP admin filtered (default); 'disable': Disable ICMP quota exceeded message;

Type: string

Supported Values: host-unreachable, admin-filtered, disable

Default: admin-filtered

}
```

prefix-list

prefix-list is **JSON List** of *prefix attributes*

prefix-list : [

{ *prefix attributes* },

{ *prefix attributes* },

...

]

prefix attributes

class-list

Description Class-list to match for NAT64

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

prefix-val

Description NAT64 Prefix

Type: string

Format: ipv6-address-plen

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

2.19.167 cgnv6 nat64 user-quota-session

LSN Per User Statistics

user-quota-session Specification

Type	*Configuration Resource*

pool attributes

all

Description Share with all partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

exclude-ip

Type: List

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

max-users-per-ip

Description Number of users that can be assigned to a NAT IP

Type: number

Range: 1-64512

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

per-batch-port-usage-warning-threshold

Description Configure warning log threshold for per batch port usage (default: disabled) (Number of ports)

Type: number

Range: 32-4096

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-batch-v2-size

Description '64': Allocate 64 ports at a time; '128': Allocate 128 ports at a time; '256': Allocate 256 ports at a time; '512': Allocate 512 ports at a time; '1024': Allocate 1024 ports at a time; '2048': Allocate 2048 ports at a time; '4096': Allocate 4096 ports at a time;

Type: string

Supported Values: 64, 128, 256, 512, 1024, 2048, 4096

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

simultaneous-batch-allocation

Description Allocate same TCP and UDP batches at once

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

tcp-time-wait-interval

Description Minutes before TCP NAT ports can be reused

Type: number

Range: 0-10

usable-nat-ports

Description Configure usable NAT ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

usable-nat-ports-end

Description End Port of Usable NAT Ports

Type: number

Range: 1024-65535

usable-nat-ports-start

Description Start Port of Usable NAT Ports (needs to be even)

Type: number

Range: 1024-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

exclude-ip

Specification	
Type	*list*
Block object keys	

exclude-ip-end

Description Address range end

Type: string

Format: ipv4-address

exclude-ip-start

Description Single IP address or IP address range start

Type: string

Format: ipv4-address

end-address

Description Configure end IP address of NAT pool

Type: string

Format: ipv4-address

group

Description Share with a partition group (Partition Group Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

netmask

Description Configure mask for pool

Type: string

Format: ipv4-netmask-brief

partition

Description Share with a single partition (Partition Name)

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

pool-name

Description Specify pool name or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Share this pool with other partitions (default: not shared)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start-address

Description Configure start IP address of NAT pool

Type: string

Format: ipv4-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Configure VRRP-A vrid (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

outbound attributes

action

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets (default); 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: ipv6

count

Description Configure number of ICMP messages sent when DF set. Default is 1

Type: number

Range: 1-5

df-set

Description 'drop': Drop Silently; 'ipv6': Use IPv6 Fragmentation for oversize packets; 'send-icmp': Send ICMP Type 3 Code 4 (Fragmentation Needed and DF Set) (default); 'send-icmpv6': Send ICMP Type 2 Code 0 (Packet Too Big);

Type: string

Supported Values: drop, ipv6, send-icmp, send-icmpv6

Default: send-icmp

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description: tftp is a **JSON Block**. Please see below for *tftp*

Type: Object

Refernce Object: */axapi/v3/cgnv6/stateful-firewall/alg/tftp*

ftp

Specification	
Type	*object*

ftp-value

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'client-port-request': PORT Requests From Client; 'client-eprt-request': EPRT Requests From Client; 'server-pasv-reply': PASV Replies From Server; 'server-epsv-reply': EPSV Replies From Server; 'port-retransmits': PORT Retransmits; 'pasv-retransmits': PASV Retransmits; 'smp-app-type-mismatch': SMP App Type Mismatch; 'retransmit-sanity-check-failure': Retransmit Sanity Check Failure; 'smp-conn-alloc-failure': SMP Helper Conn Alloc Failure; 'port-helper-created': PORT Helper Created; 'pasv-helper-created': PASV Helper Created; 'port-helper-acquire-in-del-q': PORT Helper Acquire In Del Queue; 'port-helper-acquire-already-used': PORT Helper Acquire Already Used; 'pasv-helper-acquire-in-del-q': PASV Helper Acquire In Del Queue; 'pasv-helper-acquire-already-used': PASV Helper Acquire Already Used; 'port-helper-freed-used': PORT Helper Freed Used; 'port-helper-freed-unused': PORT Helper Freed Unused; 'pasv-helper-freed-used': PASV Helper Freed Used; 'pasv-helper-freed-unused': PASV Helper Freed Unused;

Type: string

Supported Values: all, client-port-request, client-eprt-request, server-pasv-reply, server-epsv-reply, port-retransmits, pasv-retransmits, smp-app-type-mismatch, retransmit-sanity-check-failure, smp-conn-alloc-failure, port-helper-created, pasv-helper-created, port-helper-acquire-in-del-q, port-helper-acquire-already-used, pasv-helper-acquire-in-del-q, pasv-helper-acquire-already-used, port-helper-freed-used, port-helper-freed-unused, pasv-helper-freed-used, pasv-helper-freed-unused

sip

Specification	
Type	*object*

sampling-enable

Type: List

sip-value

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'stat-request': Request Received; 'stat-response': Response Received; 'method-register': Method REGISTER; 'method-invite': Method INVITE; 'method-ack': Method ACK; 'method-cancel': Method CANCEL; 'method-bye': Method BYE; 'method-port-config': Method OPTIONS; 'method-prack': Method PRACK; 'method-subscribe': Method SUBSCRIBE; 'method-notify': Method NOTIFY; 'method-publish': Method PUBLISH; 'method-info': Method INFO; 'method-refer': Method REFER; 'method-message': Method MESSAGE; 'method-update': Method UPDATE; 'method-unknown': Method Unknown; 'parse-error': Message Parse Error; 'keep-alive': Keep Alive; 'contact-error': Contact Process Error; 'sdp-error': SDP Process Error; 'rtp-port-no-op': RTP Port No Op; 'rtp-rtcp-port-success': RTP RTCP Port Success; 'rtp-port-failure': RTP Port Failure; 'rtcp-port-failure': RTCP Port Failure; 'contact-port-no-op': Contact Port No Op; 'contact-port-success': Contact Port Success; 'contact-port-failure': Contact Port Failure; 'contact-new': Contact Alloc; 'contact-alloc-failure': Contact Alloc Failure; 'contact-eim': Contact EIM; 'contact-eim-set': Contact EIM Set; 'rtp-new': RTP Alloc; 'rtp-alloc-failure': RTP Alloc Failure; 'rtp-eim': RTP EIM;

Type: string

Supported Values: all, stat-request, stat-response, method-register, method-invite, method-ack, method-cancel, method-bye, method-port-config, method-prack, method-subscribe, method-notify, method-publish, method-info, method-refer, method-message, method-update, method-unknown, parse-error, keep-alive, contact-error, sdp-error, rtp-port-no-op, rtp-rtcp-port-success, rtp-port-failure, rtcp-port-failure, contact-port-no-op, contact-port-success, contact-port-failure, contact-new, contact-alloc-failure, contact-eim, contact-eim-set, rtp-new, rtp-alloc-failure, rtp-eim

pptp

Specification	
Type	*object*

pptp-value

Description 'disable': Disable ALG;

Type: string

Supported Values: disable

sampling-enable

Type: List

uuid

Description uuid of the object

stun-timeout-list

stun-timeout-list is **JSON List** of *stun-timeout attributes*

stun-timeout-list : [

{ *stun-timeout attributes* },

{ *stun-timeout attributes* },

...

]

stun-timeout attributes

port

Description Single Destination Port or Port Range Start

Type: number

Range: 1-65535

port-end

Description Port Range End

Type: number

Range: 1-65535

stun-timeout-val-port-range

Description STUN timeout (default: 2 minutes)

Type: number

Range: 0-60

Default: 2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.243 cgnv6 stateful-firewall vrid

Set VRRP-A vrid for stateful firewall

vrid Specification

Type	*Configuration Resource*
Element Name	vrid
Element URI	/axapi/v3/cgnv6/stateful-firewall/vrid
Element Attributes	vrid_attributes
Schema	`vrid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
POST /axapi/v3/cgnv6/stateful-firewall/vrid
Payload:
{
    "vrid": {
        "vrid-value": 1
    }
}
```

Get Object

GET

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
GET /axapi/v3/cgnv6/stateful-firewall/vrid
Reponse:
{
    "vrid": {
        "vrid-value": 1,
        "uuid": "d7e0a6ce-602d-11d9-b769-001fa00680a0",
        "a10-url": "/axapi/v3/cgnv6/stateful-firewall/vrid"
    }
}
```

Modify Object

POST

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

Replace Object

PUT

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
PUT /axapi/v3/cgnv6/stateful-firewall/vrid
Payload:
{
    "vrid": {
        "vrid-value": 1
    }
}
```

Delete Object

DELETE

/axapi/v3/cgnv6/stateful-firewall/vrid

vrid attributes

```
DELETE /axapi/v3/cgnv6/stateful-firewall/vrid
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

vrid attributes

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid-value

Description Set VRRP-A vrid for stateful firewall (IPv4 and IPv6)

Type: number

Range: 1-31

2.19.244 cgnv6 template

Define a CGNv6 template

template Specification

Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/cgnv6/template
Element Attributes	template_attributes
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cgnv6/template

template_attributes

template attributes

dns-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}*

Specification	
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *policy-list_class-list*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/policy/{name}/class-list*

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list

Specification	
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

logging-list

Specification	
Type	*list*
Block object keys	

batched-logging-disable

Description Disable multiple logs per packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

custom

Description: custom is a **JSON Block**. Please see below for *logging-list_custom*

Type: Object

disable-log-by-destination

Description: disable-log-by-destination is a **JSON Block**. Please see below for *logging-list_disable-log-by-destination*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *logging-list_include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *logging-list_include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *logging-list_log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *logging-list_log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *logging-list_rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *logging-list_rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *logging-list_severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *logging-list_source-address*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *logging-list_source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_include-http

Specification	
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-http_header-cfg

Specification	
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

logging-list_severity

Specification	
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

logging-list_custom

Specification	
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *logging-list_custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

logging-list_custom_custom-message

Specification	
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

logging-list_source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_log

Specification	
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *logging-list_log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *logging-list_log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *logging-list_log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_log_one-to-one-nat

Specification	
Type	*object*

one-to-one-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat-sessions

Description Log all One-to-One NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_log_map-dhcpv6

Specification	
Type	*object*

map-dhcpv6-msg-type

Type: List

map-dhcpv6-prefix-all

Description Log MAP DHCPv6 prefix assignment/renewal/release

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: map-dhcpv6-prefix-all and map-dhcpv6-msg-type are mutually exclusive

logging-list_log_map-dhcpv6_map-dhcpv6-msg-type

Specification	
Type	*list*
Block object keys	

map-dhcpv6-msg-type

Description 'prefix-assignment': Log MAP DHCPv6 prefix assignment; 'prefix-renewal': Log MAP DHCPv6 prefix renewal; 'prefix-release': Log MAP DHCPv6 prefix release;

Type: string

Supported Values: prefix-assignment, prefix-renewal, prefix-release

Mutual Exclusion: map-dhcpv6-msg-type and map-dhcpv6-prefix-all are mutually exclusive

logging-list_log_fixed-nat

Specification	
Type	*object*

fixed-nat-http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

fixed-nat-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mappings

Description 'both': Log creation and deletion of NAT mappings; 'creation': Log creation of NAT mappings;

Type: string

Supported Values: both, creation

fixed-nat-sessions

Description Log all Fixed NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-ports

Description: user-ports is a **JSON Block**. Please see below for *logging-list_log_fixed-nat_user-ports*

Type: Object

logging-list_log_fixed-nat_user-ports

Specification	
Type	*object*

days

Description Specify period in days

Type: number

Range: 1-30

start-time

Description Time when periodic logging starts (Specify start time(hh:mm))

Type: string

Format: time-hhmm

user-ports

Description Log Fixed NAT User Ports Configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_source-port

Specification	
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

logging-list_log-receiver

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

radius

Description Use RADIUS server for NAT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

logging-list_include-radius-attribute

Specification	
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-radius-attribute_attr-cfg

Specification	
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'port-mappings': Include in port-mapping logs; 'sessions': Include in session logs;

Type: string

Supported Values: http-requests, port-mappings, sessions, user-data

logging-list_rule

Specification	
Type	*object*

interim-update-interval

Description Log interim update of NAT mappings (Interim update interval in minutes(Interval is floored to a multiple of 5))

Type: number

Range: 15-120

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *logging-list_rule_rule-http-requests*

Type: Object

logging-list_rule_rule-http-requests

Specification	
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 100 char))

Type: number

Range: 100-1000

Default: 128

logging-list_rule_rule-http-requests_dest-port

Specification	
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in CGN session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_disable-log-by-destination

Specification	
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_disable-log-by-destination_ip6-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_ip6-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_disable-log-by-destination_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

logging-list_rfc-custom

Specification	
Type	*object*

header

Description: header is a **JSON Block**. Please see below for *logging-list_rfc-custom_header*

Type: Object

message

Description: message is a **JSON Block**. Please see below for *logging-list_rfc-custom_message*

Type: Object

logging-list_rfc-custom_header

Specification	
Type	*object*

use-alternate-timestamp

Description Use alternate non-RFC5424 compliant timestamp. Ex: 1990 Jan 15 12:30:30

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_rfc-custom_message

Specification	
Type	*object*

dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-request-got

Description HTTP request got (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ipv6-tech

Type: List

session-created

Description Session created (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

session-deleted

Description Session deleted (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

logging-list_rfc-custom_message_ipv6-tech

Specification	
Type	*list*
Block object keys	

fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fixed-nat-freed

Description Fixed-NAT freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-allocated

Description Port allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-allocated

Description Port Batch allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-freed

Description Port Batch freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-freed

Description Port Batch v2 freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-freed

Description Port freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

tech-type

Description 'lsn': LSN; 'nat64': NAT64; 'ds-lite': DS-Lite; 'sixrd-nat64': 6rd-NAT64;

Type: string

Supported Values: lsn, nat64, ds-lite, sixrd-nat64

pcp-list

Specification	
Type	*list*
Block object keys	

allow-third-party-from-lan

Description Allow third party request coming from LAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-third-party-from-wan

Description Allow third party request coming from WAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

announce

Description PCP ANNOUNCE Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-client-nonce

Description To validate NONCE value in PCP request (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-map-filter

Description To disable processing of FILTER options in MAP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map

Description PCP MAP Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum

Description To set maximum lifetime of PCP mappings (default 1440 minutes)

Type: number

Range: 2-1440

Default: 1440

minimum

Description To set minimum lifetime of PCP mappings (default 2 minutes)

Type: number

Range: 2-1440

Default: 2

name

Description PCP Template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pcp-server-port

Description PCP server listening port (default 5351) (PCP UDP destination port)

Type: number

Range: 1024-65535

Default: 5351

peer

Description PCP PEER Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-ip

Description Specify source IP address for IPv4 ANNOUNCE message

Type: string

Format: ipv4-address

source-ipv6

Description Specify source IPv6 address for IPv6 ANNOUNCE message

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-alg-list

Specification	
Type	*list*
Block object keys	

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list

Specification	
Type	*list*
Block object keys	

class-list

Description: class-list is a **JSON Block**. Please see below for *dns-list_class-list*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns-list_dns64*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns-list_dns64

Specification	
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Generate Response by DNS Cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.19.245 cgnv6 template dns

DNS template

dns Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*dns-list*
Collection URI	/axapi/v3/cgnv6/template/dns
Element Name	dns
Element URI	/axapi/v3/cgnv6/template/dns/{name}
Element Attributes	dns_attributes
Schema	`dns schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/template/dns

dns attributes

```
POST /axapi/v3/cgnv6/template/dns/
Payload:
{
    "dns": {
        "name": "a",
        "user-tag": "a"
```

(continues on next page)

(continued from previous page)

```
    }
}
```

Create List

POST

/axapi/v3/cgnv6/template/dns

dns attributes

Get Object

GET

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
GET /axapi/v3/cgnv6/template/dns/a
Reponse:
{
    "dns": {
        "name": "a",
        "default-policy": "nocache",
        "disable-dns-template": 0,
        "drop": 0,
        "uuid": "f66b14f8-602d-11d9-b769-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/cgnv6/template/dns/a"
    }
}
```

Get List

GET

/axapi/v3/cgnv6/template/dns

dns-list

Modify Object

POST

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

Replace Object

PUT

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
PUT /axapi/v3/cgnv6/template/dns/a
Payload:
{
    "dns": {
```

(continues on next page)

(continued from previous page)

```
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/cgnv6/template/dns

dns-list

Delete Object

DELETE

/axapi/v3/cgnv6/template/dns/{name}

dns attributes

```
DELETE /axapi/v3/cgnv6/template/dns/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

dns-list

dns-list is **JSON List** of *dns attributes*

dns-list : [

{ *dns attributes* },

{ *dns attributes* },

...

]

dns attributes

class-list

Description: class-list is a **JSON Block**. Please see below for *class-list*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/dns64*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

forward

Description Forward to service group (Service group name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns64

Specification	
Type	*object*

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Generate Response by DNS Cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list attributes

lid-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

}
```

dns64 attributes

answer-only-disable

Description Disable Only translate the Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-data

Description Set AA flag in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Generate Response by DNS Cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

change-query

Description Always change incoming AAAA DNS Query to A

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compress-disable

Description Disable Always try DNS Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-qr

Description Check DNS Question Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-check-rr-disable

Description Disable Check DNS Response Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-cname-disable

Description Disable Drop DNS CNAME Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

edns-append

Description Append EDNS Record when send A Query to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable DNS64 (Need to config this option before config any other dns64 options)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fast-append

Description Append translated Records when original Response only has Answer Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-rcode3-disable

Description Disable Ignore DNS error Response with rcode 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-qr-length

Description Max Question Record Length, default is 128

Type: number

Range: 1-1023

Default: 128

parallel-query

Description Forward AAAA Query & generate A Query in parallel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

passive-query-disable

Description Disable Generate A query upon empty or error Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retry

Description Retry count, default is 3 (Retry Number)

Type: number

Range: 0-15

Default: 3

single-response-disable

Description Disable Single Response which is used to avoid ambiguity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout to send additional Queries, unit: second, default is 1

Type: number

Range: 0-15

Default: 1

trans-ptr

Description Translate DNS PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trans-ptr-query

Description Translate DNS PTR Query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Max TTL in DNS Response, unit: second

Type: number

Range: 1-1000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

header-name-client-ip

Description Header name (default: X-Forwarded-For)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-Forwarded-For

header-name-msisdn

Description Header name (default: X-MSISDN)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: X-MSISDN

include-tunnel-ip

Description Include the tunnel IP (applies to DS-Lite and 6RD-NAT64 sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description 'append': Append if there is already a header (default); 'replace': Replace if there is already a header;

Type: string

Supported Values: append, replace

Default: append

name

Description HTTP-ALG template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

request-insert-client-ip

Description Insert Client IP into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-insert-msisdn

Description Insert MSISDN into HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination*

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'binary': Binary logging format; 'compact': Compact ASCII logging format (Hex format with compact representation); 'custom': Arbitrary custom logging format; 'default': Default A10 logging format (ASCII); 'rfc5424': RFC5424 compliant logging format; 'cef': Common Event Format for logging;

Type: string

Supported Values: binary, compact, custom, default, rfc5424, cef

Default: default

include-destination

Description Include the destination IP and port in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *include-http*

Type: Object

include-inside-user-mac

Description Include the inside user MAC address in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-partition-name

Description Include partition name in logging events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-port-block-account

Description include bytes accounting information in port-batch-v2 port-mapping and fixed-nat user-ports messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *include-radius-attribute*

Type: Object

include-session-byte-count

Description include byte count in session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log

Description: log is a **JSON Block**. Please see below for *log*

Type: Object

log-receiver

Description: log-receiver is a **JSON Block**. Please see below for *log-receiver*

Type: Object

name

Description Logging template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rfc-custom

Description: rfc-custom is a **JSON Block**. Please see below for *rfc-custom*

Type: Object

rule

Description: rule is a **JSON Block**. Please see below for *rule*

Type: Object

service-group

Description Set NAT logging service-group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description: severity is a **JSON Block**. Please see below for *severity*

Type: Object

shared

Description Service group is in shared patition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-address

Description: source-address is a **JSON Block**. Please see below for *source-address*

Type: Object

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/source-address*

source-port

Description: source-port is a **JSON Block**. Please see below for *source-port*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

include-http

Specification	
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http_header-cfg

Specification	
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

severity

Specification	
Type	*object*

severity-string

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: debug

Mutual Exclusion: severity-string and severity-val are mutually exclusive

severity-val

Description Logging severity level

Type: number

Range: 0-7

Default: 7

Mutual Exclusion: severity-val and severity-string are mutually exclusive

custom

Specification	
Type	*object*

custom-header

Description 'use-syslog-header': Use syslog header as custom log header;

Type: string

Supported Values: use-syslog-header

custom-message

Description: custom-message is a **JSON Block**. Please see below for *custom_custom-message*

Type: Object

custom-time-stamp-format

Description Customize the time stamp format (Customize the time-stamp format. Default:%Y%m%d%H%M%S)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

custom_custom-message

Specification	
Type	*object*

custom-dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-freed

Description Fixed-NAT freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-fixed-nat-interim-update

Description Fixed-NAT interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-http-request-got

Description HTTP request got (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-allocated

Description Port allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-allocated

Description Port Batch allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-freed

Description Port Batch freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-freed

Description Port Batch v2 freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-batch-v2-interim-update

Description Port Batch v2 interim update (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-port-freed

Description Port freed (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-created

Description Session created (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

custom-session-deleted

Description Session deleted (Custom message string)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

log

Specification	
Type	*object*

fixed-nat

Description: fixed-nat is a **JSON Block**. Please see below for *log_fixed-nat*

Type: Object

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

map-dhcpv6

Description: map-dhcpv6 is a **JSON Block**. Please see below for *log_map-dhcpv6*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat

Description: one-to-one-nat is a **JSON Block**. Please see below for *log_one-to-one-nat*

Type: Object

port-mappings

Description 'creation': Log only creation of NAT mappgins; 'disable': Disable Log creation and deletion of NAT mappings;

Type: string

Supported Values: creation, disable, both

Default: both

port-overloading

Description Force logging of all port-overloading sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sessions

Description Log all data sessions created using NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-data

Description Log LSN Subscriber Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log_one-to-one-nat

Specification	
Type	*object*

one-to-one-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-to-one-nat-sessions

Description Log all One-to-One NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log_map-dhcpv6

Specification	
Type	*object*

map-dhcpv6-msg-type

Type: List

map-dhcpv6-prefix-all

Description Log MAP DHCPv6 prefix assignment/renewal/release

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: map-dhcpv6-prefix-all and map-dhcpv6-msg-type are mutually exclusive

log_map-dhcpv6_map-dhcpv6-msg-type

Specification	
Type	*list*
Block object keys	

map-dhcpv6-msg-type

Description 'prefix-assignment': Log MAP DHCPv6 prefix assignment; 'prefix-renewal': Log MAP DHCPv6 prefix renewal; 'prefix-release': Log MAP DHCPv6 prefix release;

Type: string

Supported Values: prefix-assignment, prefix-renewal, prefix-release

Mutual Exclusion: map-dhcpv6-msg-type and map-dhcpv6-prefix-all are mutually exclusive

log_fixed-nat

Specification	
Type	*object*

fixed-nat-http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

fixed-nat-merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mappings

Description 'both': Log creation and deletion of NAT mappings; 'creation': Log creation of NAT mappings;

Type: string

Supported Values: both, creation

fixed-nat-sessions

Description Log all Fixed NAT sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-ports

Description: user-ports is a **JSON Block**. Please see below for *log_fixed-nat_user-ports*

Type: Object

log_fixed-nat_user-ports

Specification	
Type	*object*

days

Description Specify period in days

Type: number

Range: 1-30

start-time

Description Time when periodic logging starts (Specify start time(hh:mm))

Type: string

Format: time-hhmm

user-ports

Description Log Fixed NAT User Ports Configured

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-port

Specification	
Type	*object*

any

Description Use any source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and source-port-num are mutually exclusive

source-port-num

Description Set source port for sending NAT syslogs (default: 514)

Type: number

Range: 1-65535

Default: 514

Mutual Exclusion: source-port-num and any are mutually exclusive

log-receiver

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

radius

Description Use RADIUS server for NAT logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS server's secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

include-radius-attribute

Specification	
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-radius-attribute_attr-cfg

Specification	
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'port-mappings': Include in port-mapping logs; 'sessions': Include in session logs;

Type: string

Supported Values: http-requests, port-mappings, sessions, user-data

rule

Specification	
Type	*object*

interim-update-interval

Description Log interim update of NAT mappings (Interim update interval in minutes(Interval is floored to a multiple of 5))

Type: number

Range: 15-120

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *rule_rule-http-requests*

Type: Object

rule_rule-http-requests

Specification	
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 100 char))

Type: number

Range: 100-1000

Default: 128

rule_rule-http-requests_dest-port

Specification	
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in CGN session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-log-by-destination

Specification	
Type	*object*

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6-addr

Description Configure an IPv6 subnet

Type: string

Format: ipv6-address-plen

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-log-by-destination_ip6-list_tcp-list

Specification	
Type	*list*
Block object keys	

tcp-port-end

Description Port Range End

Type: number

tcp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_ip6-list_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

disable-log-by-destination_udp-list

Specification	
Type	*list*
Block object keys	

udp-port-end

Description Port Range End

Type: number

udp-port-start

Description Destination Port (Single Destination Port or Port Range Start)

Type: number

rfc-custom

Specification	
Type	*object*

header

Description: header is a **JSON Block**. Please see below for *rfc-custom_header*

Type: Object

message

Description: message is a **JSON Block**. Please see below for *rfc-custom_message*

Type: Object

rfc-custom_header

Specification	
Type	*object*

use-alternate-timestamp

Description Use alternate non-RFC5424 compliant timestamp. Ex: 1990 Jan 15 12:30:30

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rfc-custom_message

Specification	
Type	*object*

dhcpv6-map-prefix-assigned

Description MAP DHCPv6 prefix assigned

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-released

Description MAP DHCPv6 prefix released

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

dhcpv6-map-prefix-renewed

Description MAP DHCPv6 prefix renewed

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

http-request-got

Description HTTP request got (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ipv6-tech

Type: List

session-created

Description Session created (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

session-deleted

Description Session deleted (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

rfc-custom_message_ipv6-tech

Specification	
Type	*list*
Block object keys	

fixed-nat-allocated

Description Fixed-NAT allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fixed-nat-freed

Description Fixed-NAT freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-allocated

Description Port allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-allocated

Description Port Batch allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-freed

Description Port Batch freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-allocated

Description Port Batch v2 allocated (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-batch-v2-freed

Description Port Batch v2 freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

port-freed

Description Port freed (Custom message string. Should be in the format of "MSGID [STRUCTURED-DATA] MSG")

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

tech-type

Description 'lsn': LSN; 'nat64': NAT64; 'ds-lite': DS-Lite; 'sixrd-nat64': 6rd-NAT64;

Type: string

Supported Values: lsn, nat64, ds-lite, sixrd-nat64

2.19.251 cgnv6 template logging disable-log-by-destination

Disable logging by destination protocol and port

disable-log-by-destination Specification

Type	*Configuration Resource*
Element Name	disable-log-by-destination
Element URI	/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination
Element Attributes	disable-log-by-destination_attributes
Schema	`disable-log-by-destination schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination

disable-log-by-destination attributes

Get Object

GET

/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination

disable-log-by-destination attributes

Modify Object

POST

/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination

disable-log-by-destination attributes

Replace Object

PUT

/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination

disable-log-by-destination attributes

Delete Object

DELETE

/axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination

disable-log-by-destination attributes

disable-log-by-destination attributes

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip/{ipv4-addr}*

ip6-list

Type: List

Refernce Object: */axapi/v3/cgnv6/template/logging/{name}/disable-log-by-destination/ip6/{ipv6-addr}*

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list

Specification	
Type	*list*
Block object keys	

icmp

Description Disable logging for icmp traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4-addr

Description Configure an IP subnet

Type: string

Format: ipv4-cidr

others

Description Disable logging for other L4 protocols

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-list

Type: List

udp-list

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

]

pcp attributes

allow-third-party-from-lan

Description Allow third party request coming from LAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-third-party-from-wan

Description Allow third party request coming from WAN (default is disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

announce

Description PCP ANNOUNCE Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-client-nonce

Description To validate NONCE value in PCP request (default: disabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-map-filter

Description To disable processing of FILTER options in MAP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

map

Description PCP MAP Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maximum

Description To set maximum lifetime of PCP mappings (default 1440 minutes)

Type: number

Range: 2-1440

Default: 1440

minimum

Description To set minimum lifetime of PCP mappings (default 2 minutes)

Type: number

Range: 2-1440

Default: 2

name

Description PCP Template name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pcp-server-port

Description PCP server listening port (default 5351) (PCP UDP destination port)

Type: number

Range: 1024-65535

Default: 5351

peer

Description PCP PEER Opcode (default is enabled)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-ip

Description Specify source IP address for IPv4 ANNOUNCE message

Type: string

Format: ipv4-address

source-ipv6

Description Specify source IPv6 address for IPv6 ANNOUNCE message

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

2.19.258 cgnv6 template policy class-list lid

Limit ID

lid attributes

lid-list

lid-list is **JSON List** of *lid attributes*

lid-list : [

{ *lid attributes* },

{ *lid attributes* },

...

]

lid attributes

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-31

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 0-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

	ipv4-total-subnet	number	ipv4-total-subnet
	dns-entries		dns-entries
	ipv4-entries		ipv4-entries
	ipv4-total-single-ip	number	ipv4-total-single-ip
	user-tag	string	user-tag
	geo-total-entries	number	geo-total-entries
	string-total-entries	number	string-total-entries
	ac-entries		ac-entries
	type	enum	Output contains one of the following values: - ac, dns, ipv4, ipv6, string, string-case-insensitive, [ipv4], [ipv6], [dns], [dns, ipv4], [dns, ipv6]
	string-entries		string-entries
	ipv6-total-single-ip	number	ipv6-total-single-ip

2.22 cloud-services

Objects:

2.22.1 cloud-services

Cloud Services configuration

cloud-services Specification

Type	*Intermediate Resource*
Element Name	cloud-services
Element URI	/axapi/v3/cloud-services
Element Attributes	cloud-services_attributes
Schema	`cloud-services schema`

Operations Allowed:

Get Object

GET

/axapi/v3/cloud-services

cloud-services_attributes

cloud-services attributes

meta-data

Description: meta-data is a **JSON Block**. Please see below for *meta-data*

Type: Object

Refernce Object: */axapi/v3/cloud-services/meta-data*

meta-data

Specification	
Type	*object*

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: disable

prevent-admin-passwd

Description Prevents admin password from being changed if in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-admin-ssh-key

Description Prevents admin ssh-key from being added if in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-autofill

Description prevents use of meta-data to complete user_data configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-blob

Description Prevents a10_blob from loading in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-cloud-service

Description Prevents cloud-service configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-license

Description Prevents a10_license configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-user-ops

Description Prevents user from being added command is in user-data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-webservice

Description Prevents a10_license configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

provider

Description 'aws': AWS user-data services; 'openstack': OpenStack user-data services;

Type: string

Supported Values: aws, openstack

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.22.2 cloud-services meta-data

user-data Services configuration only works in shared partition

meta-data Specification

Type	*Configuration Resource*
Element Name	meta-data
Element URI	/axapi/v3/cloud-services/meta-data
Element Attributes	meta-data_attributes
Schema	`meta-data schema`

Operations Allowed:

Create Object

POST

/axapi/v3/cloud-services/meta-data

meta-data attributes

Get Object

GET

/axapi/v3/cloud-services/meta-data

meta-data attributes

Modify Object

POST

/axapi/v3/cloud-services/meta-data

meta-data attributes

Replace Object

PUT

/axapi/v3/cloud-services/meta-data

meta-data attributes

Delete Object

DELETE

/axapi/v3/cloud-services/meta-data

meta-data attributes

meta-data attributes

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: disable

prevent-admin-passwd

Description Prevents admin password from being changed if in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-admin-ssh-key

Description Prevents admin ssh-key from being added if in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-autofill

Description prevents use of meta-data to complete user_data configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-blob

Description Prevents a10_blob from loading in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-cloud-service

Description Prevents cloud-service configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-license

Description Prevents a10_license configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-user-ops

Description Prevents user from being added command is in user-data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prevent-webservice

Description Prevents a10_license configuration in YAML config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

provider

Description 'aws': AWS user-data services; 'openstack': OpenStack user-data services;

Type: string

Supported Values: aws, openstack

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.23 debug

Objects:

2.23.1 debug

Debugging functions

debug Specification

Type	*operational*
Element Name	debug
Element URI	/axapi/v3/debug
Element Attributes	debug_attributes
Schema	`debug schema`

Operations Allowed:

EXECUTE Object

POST

/axapi/v3/debug

debug attributes

debug attributes

a10support

Description: a10support is a **JSON Block**. Please see below for *a10support*

Type: Object

Refernce Object: */axapi/v3/debug/a10support*

aflex

Description: aflex is a **JSON Block**. Please see below for *aflex*

Type: Object

Refernce Object: */axapi/v3/debug/aflex*

aflow

Description: aflow is a **JSON Block**. Please see below for *aflow*

Type: Object

Refernce Object: */axapi/v3/debug/aflow*

appcls

Description: appcls is a **JSON Block**. Please see below for *appcls*

Type: Object

Refernce Object: */axapi/v3/debug/appcls*

auth

Description: auth is a **JSON Block**. Please see below for *auth*

Type: Object

Refernce Object: */axapi/v3/debug/auth*

backtrace

Description: backtrace is a **JSON Block**. Please see below for *backtrace*

Type: Object

Refernce Object: */axapi/v3/debug/backtrace*

bgp

Description: bgp is a **JSON Block**. Please see below for *bgp*

Type: Object

Refernce Object: */axapi/v3/debug/bgp*

bridge-vlan-group

Description: bridge-vlan-group is a **JSON Block**. Please see below for *bridge-vlan-group*

Type: Object

Refernce Object: */axapi/v3/debug/bridge-vlan-group*

cache

Description: cache is a **JSON Block**. Please see below for *cache*

Type: Object

Refernce Object: */axapi/v3/debug/cache*

cgn

Description: cgn is a **JSON Block**. Please see below for *cgn*

Type: Object

Refernce Object: */axapi/v3/debug/cgn*

cli

Description: cli is a **JSON Block**. Please see below for *cli*

Type: Object

Refernce Object: */axapi/v3/debug/cli*

conn-reuse

Description: conn-reuse is a **JSON Block**. Please see below for *conn-reuse*

Type: Object

Refernce Object: */axapi/v3/debug/conn-reuse*

cpu

Description: cpu is a **JSON Block**. Please see below for *cpu*

Type: Object

Refernce Object: */axapi/v3/debug/cpu*

diameter

Description: diameter is a **JSON Block**. Please see below for *diameter*

Type: Object

Refernce Object: */axapi/v3/debug/diameter*

dns-cache

Description: dns-cache is a **JSON Block**. Please see below for *dns-cache*

Type: Object

Refernce Object: */axapi/v3/debug/dns-cache*

dns-rrl

Description: dns-rrl is a **JSON Block**. Please see below for *dns-rrl*

Type: Object

Refernce Object: */axapi/v3/debug/dns-rrl*

drop

Description: drop is a **JSON Block**. Please see below for *drop*

Type: Object

Refernce Object: */axapi/v3/debug/drop*

dumpthread

Description: dumpthread is a **JSON Block**. Please see below for *dumpthread*

Type: Object

Refernce Object: */axapi/v3/debug/dumpthread*

es

Description: es is a **JSON Block**. Please see below for *es*

Type: Object

Refernce Object: */axapi/v3/debug/es*

fix

Description: fix is a **JSON Block**. Please see below for *fix*

Type: Object

Refernce Object: */axapi/v3/debug/fix*

ftp

Description: ftp is a **JSON Block**. Please see below for *ftp*

Type: Object

Refernce Object: */axapi/v3/debug/ftp*

ftp-proxy

Description: ftp-proxy is a **JSON Block**. Please see below for *ftp-proxy*

Type: Object

Refernce Object: */axapi/v3/debug/ftp-proxy*

fw

Description: fw is a **JSON Block**. Please see below for *fw*

Type: Object

Refernce Object: */axapi/v3/debug/fw*

generic-proxy

Description: generic-proxy is a **JSON Block**. Please see below for *generic-proxy*

Type: Object

Refernce Object: */axapi/v3/debug/generic-proxy*

gslb

Description: gslb is a **JSON Block**. Please see below for *gslb*

Type: Object

Refernce Object: */axapi/v3/debug/gslb*

gtp

Description: gtp is a **JSON Block**. Please see below for *gtp*

Type: Object

Refernce Object: */axapi/v3/debug/gtp*

h323

Description: h323 is a **JSON Block**. Please see below for *h323*

Type: Object

Refernce Object: */axapi/v3/debug/h323*

ha

Description: ha is a **JSON Block**. Please see below for *ha*

Type: Object

Refernce Object: */axapi/v3/debug/ha*

hc

Description: hc is a **JSON Block**. Please see below for *hc*

Type: Object

Refernce Object: */axapi/v3/debug/hc*

hm

Description: hm is a **JSON Block**. Please see below for *hm*

Type: Object

Refernce Object: */axapi/v3/debug/hm*

http-proxy

Description: http-proxy is a **JSON Block**. Please see below for *http-proxy*

Type: Object

Refernce Object: */axapi/v3/debug/http-proxy*

http2

Description: http2 is a **JSON Block**. Please see below for *http2*

Type: Object

Refernce Object: */axapi/v3/debug/http2*

hw-compression

Description: hw-compression is a **JSON Block**. Please see below for *hw-compression*

Type: Object

Refernce Object: */axapi/v3/debug/hw-compression*

imap-proxy

Description: imap-proxy is a **JSON Block**. Please see below for *imap-proxy*

Type: Object

Refernce Object: */axapi/v3/debug/imap-proxy*

imish

Description: imish is a **JSON Block**. Please see below for *imish*

Type: Object

Refernce Object: */axapi/v3/debug/imish*

imish-profile

Description: imish-profile is a **JSON Block**. Please see below for *imish-profile*

Type: Object

Refernce Object: */axapi/v3/debug/imish-profile*

ip

Description: ip is a **JSON Block**. Please see below for *ip*

Type: Object

Refernce Object: */axapi/v3/debug/ip*

ipv6

Description: ipv6 is a **JSON Block**. Please see below for *ipv6*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6*

isis

Description: isis is a **JSON Block**. Please see below for *isis*

Type: Object

Refernce Object: */axapi/v3/debug/isis*

l2-redirect

Description: l2-redirect is a **JSON Block**. Please see below for *l2-redirect*

auth

Specification	
Type	*object*

authd

Description enable detail authd log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-addr

Description Filter SAML logs by client IP address

Type: string

Format: ipv4-address

level

Description '1': Diagnose Problems; '2': Detail packet flow;

Type: string

Supported Values: 1, 2

saml

Description Enable debug SAML authentication logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

saml-sp

Description Filter SAML logs by SAML service provider name (SAML SP name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

username

Description Show the logs of specific username (User name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-server

Description Show the logs of specific virtual-server (Virtual-server name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ssl

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

stack

Description Debug TCP stack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

layer2

Specification	
Type	*object*

all

Description Layer2 all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

arp

Description Layer2 debug arp switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interface

Description Layer2 debug interface switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

misc

Description Layer2 debug misc switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trace

Description Layer2 debug trace switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlan

Description Layer2 debug vlan switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

l4

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vector

Specification	
Type	*object*

error

Description Debug logs for vector errors

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description Debug logs for vector packet flow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trace

Description Debug logs for vector callbacks

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

imish

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

msg-proxy

Specification	
Type	*object*

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

backtrace

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

packet

Specification	
Type	*object*

all

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-ipv4

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-ipv6

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-tcp-ports

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all-udp-ports

Description All

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

arp

Description ARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

count

Description Maximum packets to capture. Default is 3000 (Specify maximum packet number. For unlimited, specify 0)

Type: number

Range: 0-65535

detail

Description Print packet content

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ethernet

Description Ethernet interface number

Type: number

Format: interface

icmp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

icmpv6

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interface

Description Interface to debug

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv4ad

Description IP Address

Type: string

Format: ipv4-address

ipv6

Description IPV6

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6ad

Description IPV6 Address

Type: string

Format: ipv6-address

l3-protocol

Description Layer 3 protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-protocol

Description Layer 4 protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

neighbor

Description IPv6 Neighbor/Router

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-range

Description Port Number

Type: number

Range: 1-65535

tcp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description ve number

Type: number

Range: 2-4094

migration

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

es

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aflow

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

l2-redirect

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sctp

Specification	
Type	*object*

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cgn

Specification	
Type	*object*

drops

Description Debug logs for packet drops in CGN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

error

Description Debug logs for errors in CGN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-probe

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-packet

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rt

Specification	
Type	*object*

all

Description Routing all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check

Description ROUTING debug check switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

command

Description Routing debug command switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor

Specification	
Type	*object*

all-slots

Description Display debug output of both Master and Blade

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cpuid

Description CPU id to debug (0,1,. . .)

Type: number

Range: 0-65535

filename

Description Filename to save debug output

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

filesize

Description maximum file size to save debug messages (MB)

Type: number

Range: 1-300

Default: 1

no-stop

Description Donot spawn another rimacli

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description timeout to stop debug monitor in minutes

Type: number

Range: 1-9999

Default: 5

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging

Specification	
Type	*object*

all

Description Logging all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

command

Description Logging debug command switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

error

Description Logging debug error switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bgp

Specification	
Type	*object*

all

Description all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening

Description BGP Dampening

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description BGP events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filters

Description BGP filters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description BGP Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

in

Description Inbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keepalives

Description BGP keepalives

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nht

Description NHT message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description NSM message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

out

Description Outbound updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

updates

Description BGP updates

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf

Specification	
Type	*object*

all

Description: all is a **JSON Block**. Please see below for *ospf_all*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/all*

bfd

Description: bfd is a **JSON Block**. Please see below for *ospf_bfd*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/bfd*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description: events is a **JSON Block**. Please see below for *ospf_events*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/events*

ifsm

Description: ifsm is a **JSON Block**. Please see below for *ospf_ifsm*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/ifsm*

lsa

Description: lsa is a **JSON Block**. Please see below for *ospf_lsa*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/lsa*

nfsm

Description: nfsm is a **JSON Block**. Please see below for *ospf_nfsm*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/nfsm*

nsm

Description: nsm is a **JSON Block**. Please see below for *ospf_nsm*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/nsm*

packet

Description: packet is a **JSON Block**. Please see below for *ospf_packet*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/packet*

route

Description: route is a **JSON Block**. Please see below for *ospf_route*

Type: Object

Refernce Object: */axapi/v3/debug/ospf/route*

ospf_all

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_ifsm

Specification	
Type	*object*

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_lsa

Specification	
Type	*object*

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_route

Specification	
Type	*object*

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_bfd

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_nfsm

Specification	
Type	*object*

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_packet

Specification	
Type	*object*

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ospf_events

Specification	
Type	*object*

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospf_nsm

Specification	
Type	*object*

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

diameter

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

table-sync-event

Specification	
Type	*object*

all

Description all Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: allmac, arp, nd6, fibv4 and fibv6 are mutually exclusive

arp

Description ARP Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: arpall, mac, nd6, fibv4 and fibv6 are mutually exclusive

fibv4

Description IPv4 FIB Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fibv4all, mac, arp, nd6 and fibv6 are mutually exclusive

fibv6

Description IPv6 FIB Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fibv6all, mac, arp, nd6 and fibv4 are mutually exclusive

mac

Description MAC Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: macall, arp, nd6, fibv4 and fibv6 are mutually exclusive

nd6

Description ND6 Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: nd6all, mac, arp, fibv4 and fibv6 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

a10support

Specification	
Type	*object*

duration

Description Duration in minutes

Type: number

Range: 1-10080

Default: 2

password

Description Password to be set

Type: string

Format: password

Maximum Length: 24 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssli

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gslb

Specification	
Type	*object*

glname

Description Debug for matched Geo-location

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

group

Description: group is a **JSON Block**. Please see below for *gslb_group*

Type: Object

Refernce Object: */axapi/v3/debug/gslb/group*

id

Description Specify ID

Type: number

Range: 0-128

Default: 0

ip-addr

Description Debug for matched IP address

Type: string

Format: ipv4-address

ipv6-addr

Description Debug for matched IPv6 address

Type: string

Format: ipv6-address

memory

Description Debug GSLB memory

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-shot

Description Stop after get 64 states

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description: protocol is a **JSON Block**. Please see below for *gslb_protocol*

Type: Object

Refernce Object: */axapi/v3/debug/gslb/protocol*

state

Description Keep GSLB state information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gslb_group

Specification	
Type	*object*

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Remote IP address of GSLB controller of the group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB group message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-group

Description GMP group messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Name of GSLB group

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gslb_protocol

Specification	
Type	*object*

active-rdt

Description ARDT trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description All trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache

Description Cache trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description EVENTS trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fsm

Description FSM trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip

Description Specify the remote IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipc

Description IPC trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

keep-alive

Description KEEPALIVE trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message

Description Debug GSLB protocol message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-all

Description All messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-query

Description GMP ardt-query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-ardt-report

Description GMP ardt-report messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-control

Description GMP control messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-keepalive

Description GMP keepalive messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-notify

Description GMP notify messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-open

Description GMP open messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-query

Description GMP query messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-update

Description GMP update messages

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Specify the slb device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

normal

Description Normal trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

peer-ipv4

Description Specify remote IPv4 Address

Type: string

Format: ipv4-address

peer-ipv6

Description Specify remote IPv6 Address

Type: string

Format: ipv6-address

timer

Description Timer trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

update

Description Update trace information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hw-compression

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sess

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

management

Specification	
Type	*object*

all

Description management all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system

Description management system debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

waf

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp

Specification	
Type	*object*

all

Description SNMP all debug switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

error

Description SNMP debug error switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description SNMP debug event switch

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	
Type	*object*

debug_system_enum

Description 'all': System all debug switch; 'aaa': System debug aaa switch; 'import-export': System debug import or export switch; 'ssl': System debug ssl switch;

Type: string

Supported Values: all, aaa, import-export, ssl

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6

Specification	
Type	*object*

ospf

Description: ospf is a **JSON Block**. Please see below for *ipv6_ospf*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf*

rip

Description: rip is a **JSON Block**. Please see below for *ipv6_rip*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/rip*

ipv6_ospf

Specification	
Type	*object*

all

Description: all is a **JSON Block**. Please see below for *ipv6_ospf_all*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/all*

bfd

Description: bfd is a **JSON Block**. Please see below for *ipv6_ospf_bfd*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/bfd*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description: events is a **JSON Block**. Please see below for *ipv6_ospf_events*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/events*

ifsm

Description: ifsm is a **JSON Block**. Please see below for *ipv6_ospf_ifsm*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/ifsm*

lsa

Description: lsa is a **JSON Block**. Please see below for *ipv6_ospf_lsa*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/lsa*

nfsm

Description: nfsm is a **JSON Block**. Please see below for *ipv6_ospf_nfsm*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/nfsm*

nsm

Description: nsm is a **JSON Block**. Please see below for *ipv6_ospf_nsm*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/nsm*

packet

Description: packet is a **JSON Block**. Please see below for *ipv6_ospf_packet*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/packet*

route

Description: route is a **JSON Block**. Please see below for *ipv6_ospf_route*

Type: Object

Refernce Object: */axapi/v3/debug/ipv6/ospf/route*

ipv6_ospf_all

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_ifsm

Specification	
Type	*object*

events

Description IFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description IFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description IFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_lsa

Specification	
Type	*object*

flooding

Description LSA Flooding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gererate

Description LSA Generation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description LSA Installation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

maxage

Description LSA MaxAge processing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

refresh

Description LSA Refreshment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_route

Specification	
Type	*object*

ase

Description External route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ia

Description Inter-Area route calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

install

Description Route installation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description SPF calculation information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_bfd

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_nfsm

Specification	
Type	*object*

events

Description NFSM Event Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

status

Description NFSM Status Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timers

Description NFSM Timer Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_packet

Specification	
Type	*object*

dd

Description OSPFv3 Database Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detail information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hello

Description OSPFv3 Hello

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-ack

Description OSPFv3 Link State Acknowledgment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-request

Description OSPFv3 Link State Request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ls-update

Description OSPFv3 Link State Update

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description Packet received

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description Packet sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_ospf_events

Specification	
Type	*object*

abr

Description OSPF ABR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

asbr

Description OSPF ASBR events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

os

Description OS events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

router

Description Other router events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vlink

Description Virtual-Link event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6_ospf_nsm

Specification	
Type	*object*

interface

Description NSM interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redistribute

Description NSM redistribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6_rip

Specification	
Type	*object*

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detailed information display

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description RIPng events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description RIPng and NSM communication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description RIPng packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description RIPng receive packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description RIPng send packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

http2

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ftp-proxy

Specification	
Type	*object*

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

visibility

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

xflow

Description debug xflow monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pop3-proxy

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hm

Specification	
Type	*object*

level

Description Debug level (Level 1-3)

Type: number

Range: 1-3

method-type

Description 'icmp': ICMP type; 'tcp': TCP type; 'udp': UDP type; 'ftp': FTP type; 'http': HTTP type; 'snmp': SNMP type; 'smtp': SMTP type; 'dns': DNS type; 'dns-tcp': DNS TCP type; 'pop3': POP3 type; 'imap': IMAP type; 'sip': SIP type; 'sip-tcp': SIP TCP type; 'radius': RADIUS type; 'ldap': LDAP type; 'rtsp': RTSP type; 'kerberos-kdc': Kerberos KDC type; 'database': DATABASE type; 'external': EXTERNAL type; 'https': HTTPS type; 'ntp': NTP type; 'compound': Compound type;

Type: string

Supported Values: icmp, tcp, udp, ftp, http, snmp, smtp, dns, dns-tcp, pop3, imap, sip, sip-tcp, radius, ldap, rtsp, kerberos-kdc, database, external, https, ntp, compound

pin-uid

Description Debug Pin Unique Id

Type: number

Range: 1-2000000000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hc

Specification	
Type	*object*

anomaly

Description Dump per-request in anomaly cases only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

app-svc-id

Description Application service id (virtual-server_port_protocol)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

error

Description Debug logs for harmony controller (error)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metrics

Description Debug logs for harmony controller (metrics)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

object-uuid

Description UUID of the object to filter

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

per-connection

Description Debug logs for harmony controller (per-connection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per-request

Description Debug logs for harmony controller (per-request)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

registration

Description Debug logs for harmony controller (registration)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uri

Description URI of the object to filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

scaleout

Specification	
Type	*object*

config

Description Debug logs for scaleout config change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

debug-level

Description Debug level (Level 1-3)

Type: number

Range: 1-3

event

Description Debug logs for scaleout events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description Debug logs for scaleout packet flow

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-sync

Description Debug logs for scaleout session sync events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ha

Specification	
Type	*object*

debug-level

Description Debug level (Level 1-7)

Type: number

Range: 1-7

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mlb

Specification	
Type	*object*

dummy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bfd

Description Bidirectional Forwarding Detection (BFD)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description IS-IS Events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ifsm

Description IS-IS Interface Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsp

Description IS-IS Link State PDU

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nfsm

Description IS-IS Neighbor Finite State Machine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description IS-IS NSM information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pdu

Description IS-IS Protocol Data Unit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spf

Description IS-IS SPF Calculation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lacp

Specification	
Type	*object*

all

Description all - turn on all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cli

Description cli - echo commands to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description detail - echo timer start/stop to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

event

Description event - echo events to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha

Description ha - echo High availability events to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description packet - echo packet contents to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sync

Description sync - echo synchronization to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timer

Description timer - echo timer expiry to console

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tunnel

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smpp

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

threat-intel

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

polltech-enable

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vtep-event

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rip

Specification	
Type	*object*

all

Description Enable all debugging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

detail

Description Detailed information display

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

events

Description RIPng events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

nsm

Description RIPng and NSM communication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet

Description RIPng packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

recv

Description RIPng receive packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

send

Description RIPng send packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sip

Specification	
Type	*object*

ACK

Description Method ACK

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

BYE

Description SIP Method BYE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

CANCEL

Description SIP Method CANCEL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

INFO

Description SIP Method INFO

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

INVITE

Description Method INVITE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

MESSAGE

Description SIP Method MESSAGE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

NOTIFY

Description SIP Method NOTIFY

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

OPTIONS

Description SIP Method OPTIONS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

PRACK

Description SIP Method PRACK

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

PUBLISH

Description SIP Method PUBLISH

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

REFER

Description SIP Method REFER

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

REGISTER

Description SIP Method REGISTER

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

SUBSCRIBE

Description SIP Method SUBSCRIBE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

UPDATE

Description SIP Method UPDATE

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Set filter with SIP method types

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-rrl

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

packet-capture

Specification	
Type	*object*

capture-config

Description Specify capture-config. Default all (Capture config)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

count

Description Maximum packets to capture. Default is 10 (Specify maximum packet number. For unlimited, specify 0)

Type: number

Range: 0-1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

conn-reuse

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

l7session

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-cache

Specification	
Type	*object*

level

Description Debug level (Level 1-4)

Type: number

Range: 1-4

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fw

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-log

Specification	
Type	*object*

group

Description 'query': Debug local log query (axapi).; 'db-mgr': Debug local log database management.; 'db-write': Debug local log insert local log into database.; 'queue': Debug local log generate and inqueue/dequeue.;

Type: string

Supported Values: query, db-mgr, db-write, queue

level

Description Debug level (Level 1-3. 1:error, 2:notice, 3:Info)

Type: number

Range: 1-3

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

list_all_cli

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mgcp

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu

Specification	
Type	*object*

dumy

Description Dummy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

health-postfile

Specification	
Type	*object*

file-name

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

geo-location

Specification	
Type	*object*

all

Description Delete all files

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and filename are mutually exclusive

filename

Description Specify file to be deleted

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: filename and all are mutually exclusive

rpz

Specification	
Type	*object*

file-name

Description Response Policy Zone File

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

bw-list

Specification	
Type	*object*

file-name

Description Blacklist/whitelist Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-portal-image

Specification	
Type	*object*

image-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

partition

Specification	
Type	*object*

id

Description Specify unique Partition id

Type: number

partition-name

Description Object partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/partition*

debug-monitor

Specification	
Type	*object*

file-name

Description Local File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

glm-license

Specification	
Type	*object*

a10-ti

Description only remove A10 Threat Intel license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipsec-vpn

Description only remove IPSEC VPN license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qosmos

Description only remove QOSMOS license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threatstop

Description only remove ThreatSTOP license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

webroot

Description only remove Webroot license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

webroot-ti

Description only remove Webroot Threat Intel license

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-jwks

Specification	
Type	*object*

jwk-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

web-category

Specification	
Type	*object*

database

Description Delete web-category database

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-external

Specification	
Type	*object*

file-name

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

auth-portal

Specification	
Type	*object*

portal-name

Description Local File Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

local-uri-file

Specification	
Type	*object*

file-name

Description Local File Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

startup-config

Specification	
Type	*object*

file-name

Description Local Configuration Profile Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-partition

Specification	
Type	*object*

id

Description Specify unique service partition id

Type: number

partition-name

Description Object service partition name

Type: string

Maximum Length: 14 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/service-partition*

auth-saml-idp

Specification	
Type	*object*

saml-idp-name

Description Local IDP metadata name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

cgnv6

Specification	
Type	*object*

filename

Description Specify the port-mapping-file to be deleted

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

fixed-nat

Description Delete fixed-nat port-mapping-file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-4o6-binding-table-validation-log

Description LW-4O6 Binding Table validation log File

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lw-filename

Description LW-4O6 Binding Table Validation Log File Name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

guest-file

Specification	
Type	*object*

file-name

Description Guest-File Name

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

threat-intel

Specification	
Type	*object*

database

Description 'webroot': Delete webroot module database;

Type: string

Supported Values: webroot

2.24.2 delete license

Remove softax license

    }
}
```

http attributes

management

Description Management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.25.4 disable-management service https

HTTPS service

https Specification

Type	*Configuration Resource*
Element Name	https
Element URI	/axapi/v3/disable-management/service/https
Element Attributes	https_attributes
Schema	`https schema`

Operations Allowed:

Create Object

POST

/axapi/v3/disable-management/service/https

https attributes

Get Object

GET

/axapi/v3/disable-management/service/https

https attributes

Modify Object

POST

/axapi/v3/disable-management/service/https

https attributes

Replace Object

PUT

/axapi/v3/disable-management/service/https

https attributes

Delete Object

DELETE

/axapi/v3/disable-management/service/https

https attributes

https attributes

management

Description Management port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.25.5 disable-management service ping

Ping service

ping Specification

Type	*Configuration Resource*
Element Name	ping
Element URI	/axapi/v3/disable-management/service/ping
Element Attributes	ping_attributes
Schema	`ping schema`

Operations Allowed:

Create Object

POST

/axapi/v3/disable-management/service/ping

ping attributes

```
POST /axapi/v3/disable-management/service/ping
Payload:
{
    "ping": {
        "management": 1
    }
}
```

Get Object

GET

/axapi/v3/disable-management/service/ping

ping attributes

```
GET /axapi/v3/disable-management/service/ping
Reponse:
{

Description 'ZSK': Zone Signing Key; 'KSK': Key Signing Key;

Type: string

Supported Values: ZSK, KSK

ds-ready-in-parent-zone

Description DS RR is already ready in the parent zone

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-start

Description start KSK rollover in emergency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description Specify the name for the DNS zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

zsk-start

Description start ZSK rollover in emergency mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sign-zone-now

Specification	
Type	*object*

zone-name

Description Specify the name for the DNS zone, empty means sign all zones

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

dnskey

Specification	
Type	*object*

key-delete

Description Delete the DNSKEY file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description DNS zone name of the child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

template-list

Specification	
Type	*list*
Block object keys	

algorithm

Description 'RSASHA1': RSASHA1 algorithm; 'RSASHA256': RSASHA256 algorithm; 'RSASHA512': RSASHA512 algorithm;

Type: string

Supported Values: RSASHA1, RSASHA256, RSASHA512

combinations-limit

Description the max number of combinations per RRset (Default value is 31)

Type: number

Range: 1-65535

dnskey-ttl-k

Description The TTL value of DNSKEY RR

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnskey-ttl-v

Description in seconds, 14400 seconds by default

Type: number

Range: 1-864000

Default: 14400

dnssec-temp-name

Description DNSSEC Template Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dnssec-template-ksk

Description: dnssec-template-ksk is a **JSON Block**. Please see below for *template-list_dnssec-template-ksk*

Type: Object

dnssec-template-zsk

Description: dnssec-template-zsk is a **JSON Block**. Please see below for *template-list_dnssec-template-zsk*

Type: Object

enable-nsec3

Description enable NSEC3 support. disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm

Description specify the HSM template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/hsm/template*

return-nsec-on-failure

Description return NSEC/NSEC3 or not on failure case. return by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

signature-validity-period-k

Description The period that a signature is valid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

signature-validity-period-v

Description in days, 10 days by default

Type: number

Range: 5-30

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_dnssec-template-ksk

Specification	
Type	*object*

ksk-keysize-k

Description Specify the number of bits in the DNSSEC KSK keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-keysize-v

Description Default size is 2048 and must be an exact multiple of 64

Type: number

Range: 1024-4096

ksk-lifetime-k

Description Set the lifetime for DNSSEC KSK keys in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-lifetime-v

Description Default value is 365 days

Type: number

Range: 2-3650

ksk-rollover-time-k

Description Set the rollover time in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-rollover-time-v

Description 7 days less than the lifetime by default

Type: number

Range: 1-3650

Default: 358

template-list_dnssec-template-zsk

Specification	
Type	*object*

zsk-keysize-k

Description Specify the number of bits in the DNSSEC ZSK keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-keysize-v

Description Default size is 2048 and must be an exact multiple of 64

Type: number

Range: 1024-4096

zsk-lifetime-k

Description Set the lifetime for DNSSEC ZSK keys in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-lifetime-v

Description Default value is 90 days

Type: number

Range: 2-3650

Default: 90

zsk-rollover-time-k

Description Set the rollover time in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-rollover-time-v

Description 7 days less than the lifetime by default

Type: number

Range: 1-3650

Default: 83

ds

Specification	
Type	*object*

ds-delete

Description Delete the DS file

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zone-name

Description DNS zone name of the child zone

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description

}
```

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

algorithm

Description 'RSASHA1': RSASHA1 algorithm; 'RSASHA256': RSASHA256 algorithm; 'RSASHA512': RSASHA512 algorithm;

Type: string

Supported Values: RSASHA1, RSASHA256, RSASHA512

combinations-limit

Description the max number of combinations per RRset (Default value is 31)

Type: number

Range: 1-65535

dnskey-ttl-k

Description The TTL value of DNSKEY RR

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dnskey-ttl-v

Description in seconds, 14400 seconds by default

Type: number

Range: 1-864000

Default: 14400

dnssec-temp-name

Description DNSSEC Template Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dnssec-template-ksk

Description: dnssec-template-ksk is a **JSON Block**. Please see below for *dnssec-template-ksk*

Type: Object

dnssec-template-zsk

Description: dnssec-template-zsk is a **JSON Block**. Please see below for *dnssec-template-zsk*

Type: Object

enable-nsec3

Description enable NSEC3 support. disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm

Description specify the HSM template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/hsm/template*

return-nsec-on-failure

Description return NSEC/NSEC3 or not on failure case. return by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

signature-validity-period-k

Description The period that a signature is valid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

signature-validity-period-v

Description in days, 10 days by default

Type: number

Range: 5-30

Default: 10

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-template-ksk

Specification	
Type	*object*

ksk-keysize-k

Description Specify the number of bits in the DNSSEC KSK keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-keysize-v

Description Default size is 2048 and must be an exact multiple of 64

Type: number

Range: 1024-4096

ksk-lifetime-k

Description Set the lifetime for DNSSEC KSK keys in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ksk-lifetime-v

Description Default value is 365 days

Type: number

Range: 2-3650

ksk-rollover-time-k

Description Set the rollover time in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-rollover-time-v

Description 7 days less than the lifetime by default

Type: number

Range: 1-3650

Default: 358

dnssec-template-zsk

Specification	
Type	*object*

zsk-keysize-k

Description Specify the number of bits in the DNSSEC ZSK keys

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-keysize-v

Description Default size is 2048 and must be an exact multiple of 64

Type: number

Range: 1024-4096

zsk-lifetime-k

Description Set the lifetime for DNSSEC ZSK keys in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-lifetime-v

Description Default value is 90 days

Type: number

Range: 2-3650

Default: 90

zsk-rollover-time-k

Description Set the rollover time in days

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

zsk-rollover-time-v

Description 7 days less than the lifetime by default

Type: number

Range: 1-3650

Default: 83

2.27 domain-list

        "msg": "Enable A10 coredump."
    }
}
```

enable-core attributes

core-level

Description 'a10': Enable A10 core dump, by default; 'system': Enable system coredump;

Type: string

Supported Values: a10, system

Default: a10

Mutual Exclusion: core-level and full are mutually exclusive

full

Description Enable full system core dump

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: full and core-level are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.29 enable-management

service_http_acl-v4-list_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

service_http_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

service_ping

Specification	
Type	*object*

acl-v4-list

Type: List

Refernce Object: */axapi/v3/enable-management/service/ping/acl-v4/{acl-id}*

acl-v6-list

Type: List

Refernce Object: */axapi/v3/enable-management/service/ping/acl-v6/{acl-name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service_ping_acl-v6-list

Specification	
Type	*list*
Block object keys	

acl-name

Description ACL name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

all-data-intf

Description All Data Interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

service_ping_acl-v6-list_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel-end

Description tunnel port

Type: number

tunnel-start

Description tunnel port (tunnel Interface number)

Type: number

service_ping_acl-v6-list_ve-cfg

Specification	
Type	*list*
Block object keys	

ve-end

Description VE port

Type: number

ve-start

Description VE port (VE Interface number)

Type: number

service_ping_acl-v6-list_eth-cfg

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Ethernet Interface number)

Type: number

Format: interface

service_ping_acl-v4-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id

Type: number

Range: 1-199

all-data-intf

Description All Data Interfaces

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-cfg

Type: List

management

Description Management Interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tunnel-cfg

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-cfg

Type: List

service_ping_acl-v4-list_tunnel-cfg

Specification	
Type	*list*
Block object keys	

tunnel-end

Description tunnel port

threshold-cfg

Description: threshold-cfg is a **JSON Block**. Please see below for *threshold-cfg*

Type: Object

update-interval

Description: update-interval is a **JSON Block**. Please see below for *update-interval*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

update-interval

Specification	
Type	*object*

interval

Description Interval

Type: number

Range: 1-60

Default: 30

threshold-cfg

Specification	
Type	*object*

high

Description High threshold value in Celsius

Type: number

low

Description Low threshold value in Celsius

Type: number

medium

Description Medium threshold value in Celsius

Type: number

2.31 event

Objects:

2.31.1 event

configure event actions

event Specification

Type	*Intermediate Resource*
Element Name	event
Element URI	/axapi/v3/event
Element Attributes	event_attributes
Schema	`event schema`

Operations Allowed:

Get Object

GET

/axapi/v3/event

event_attributes

event attributes

partition-list

Type: List

Refernce Object: */axapi/v3/event/partition/{vnp-events}*

partition-list

Specification	
Type	*list*
Block object keys	

email

Description 'on': enable this action; 'off': disable this action;

Type: string

Supported Values: on, off

logging

Description 'on': enable this action; 'off': disable this action;

Type: string

Supported Values: on, off

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vnp-events

Description 'part-create': Create new partition; 'part-del': Delete a partition;

Type: string

Supported Values: part-create, part-del

2.31.2 event partition

module partition

partition Specification

Type	*Collection*
Object Key(s)	*vnp-events*
Collection Name	*partition-list*
Collection URI	/axapi/v3/event/partition
Element Name	partition
Element URI	/axapi/v3/event/partition/{vnp-events}
Element Attributes	partition_attributes
Schema	`partition schema`

Operations Allowed:

Create Object

POST

/axapi/v3/event/partition

partition attributes

```
POST /axapi/v3/event/partition/
Payload:
{
    "partition": {
        "vnp-events": "part-create",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/event/partition

partition attributes

Get Object

GET

/axapi/v3/event/partition/{vnp-events}

partition attributes

```
GET /axapi/v3/event/partition/part-create
Reponse:
{
    "partition": {
        "vnp-events": "part-create",

/axapi/v3/fail-safe

fail-safe attributes

Delete Object

DELETE

/axapi/v3/fail-safe

fail-safe attributes

fail-safe attributes

config

Description: config is a **JSON Block**. Please see below for *config*

Type: Object

Refernce Object: */axapi/v3/fail-safe/config*

dataplane-recovery-timeout

Description dataplane hung detection timeout before ACOS is restarted (in seconds)

Type: number

Range: 1-30

Default: 5

disable-failsafe

Description: disable-failsafe is a **JSON Block**. Please see below for *disable-failsafe*

Type: Object

Refernce Object: */axapi/v3/fail-safe/disable-failsafe*

fpga-buff-recovery-threshold

Description FPGA buffers recovery threshold (Units of 256 buffers (default 2))

Type: number

Range: 1-10

Default: 2

fpga-monitor-enable

Description FPGA monitor feature enable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fpga-monitor-forced-reboot

Description FPGA monitor forced reboot in error condition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fpga-monitor-interval

Description FPGA monitor packet interval (seconds) (Numbers of seconds between sending packets (default 1))

Type: number

Range: 1-60

Default: 1

fpga-monitor-threshold

Description FPGA monitor packet missed for error condition (Numbers of missed monitor packets before setting error condition (default 3))

Type: number

Range: 3-60

Default: 3

hw-error-monitor

Description 'hw-error-monitor-disable': Disable fail-safe hardware error monitor; 'hw-error-monitor-enable': Enable fail-safe hardware error monitor;

Type: string

Supported Values: hw-error-monitor-disable, hw-error-monitor-enable

Default: hw-error-monitor-enable

hw-error-recovery-timeout

Description Hardware error recovery timeout (minutes) (waiting time of recovery from hardware errors (default 0))

Type: number

Range: 1-1440

hw-ssl-timeout-monitor

Description 'hw-ssl-timeout-monitor-disable': Disable fail-safe hardware SSL timeout monitor; 'hw-ssl-timeout-monitor-enable': Enable fail-safe hardware SSL timeout monitor;

Type: string

Supported Values: hw-ssl-timeout-monitor-disable, hw-ssl-timeout-monitor-enable

Default: hw-ssl-timeout-monitor-enable

kill

Description Stop the traffic and log the event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: kill and log are mutually exclusive

log

Description Log the event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: log and kill are mutually exclusive

session-mem-recovery-threshold

Description Session memory recovery threshold (percentage) (Percentage of available session memory (default 30%))

Type: number

Range: 1-100

Default: 30

sw-error-monitor-enable

Description Enable fail-safe software error monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sw-error-recovery-timeout

Description Software error recovery timeout (minutes) (waiting time of recovery from software errors (default 3))

Type: number

Range: 1-1440

Default: 3

total-memory-size-check

Description Check total memory size of current system (Size of memory (GB))

Type: number

Range: 1-256

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable-failsafe

Specification	
Type	*object*

action

Description 'all': Disable All; 'io-buffer': Disable I/O Buffer; 'session-memory': Disable Session Memory; 'system-memory': Disable System Memory;

Type: string

Supported Values: all, io-buffer, session-memory, system-memory

Default: all

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

config

Specification	
Type	*object*

geo-location

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description geo-location database local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description geo-location database list file size in byte

Type: number

Range: 0-2147483647

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aws-accesskey

Specification	
Type	*object*

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user

Description user name of the pub key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

syslog

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description syslog local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description syslog file size in byte

Type: number

Range: 0-2147483647

health-external

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

description

Description Describe the Program Function briefly

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file

Description Specify the Program Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description syslog file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-portal

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description Authentication portal local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description Authentication portal file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-jwks

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description JWK local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description JWK file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

aflex

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description aflex local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description aflex file size in byte

Type: number

Range: 0-2147483647

skip-backup

Description Skip backup logic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

health-postfile

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 32 characters

Maximum Length: 1 characters

file

Description Specify the File Name

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description syslog file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssh-pubkey

Specification	
Type	*object*

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

user

Description user name of the pub key

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-license

Specification	
Type	*object*

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

file

Description Web-Category license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description License file size in byte

Type: number

Range: 0-2147483647

use-mgmt-port

Description Enable management port for backend

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-backup

Specification	
Type	*object*

all

Description all log

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

date

Description specify number of days

Type: number

Range: 1-31

day

Description Most recent day

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expedite

Description Expedite the Backup

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

month

Description Most recent month

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

period

Description Specify backup period

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data

Description Backup web statistical data

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

week

Description Most recent week

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

waf

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-crl

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

file

Description ssl crl local file name

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

size

Description ssl crl file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

debug-monitor

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description debug monitor local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description debug monitor file size in byte

Type: number

Range: 0-2147483647

web-service-cert-key

Specification	
Type	*object*

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

system-backup

Specification	
Type	*object*

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

template

Specification	
Type	*object*

act-type

Description Specify ACT package type (i.e. slug/destination name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description aflex local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description aflex file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description Policy local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description Policy file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

csr

Specification	
Type	*object*

action

Description 'export': export;

Type: string

Supported Values: export

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description Specify the File Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

size

Description CSR file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-portal-image

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description Authentication portal image local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description Authentication portal image file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list

Specification	
Type	*object*

action

Description 'ceate': ceate; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description class list local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description class list file size in byte

Type: number

Range: 0-2147483647

user-tag

Description Customized tag

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

glm-license

Specification	
Type	*object*

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description glm license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ssl-cert-poc

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description public-key

Type: string

Format: string-rlx

Maximum Length: 2048 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

size

Description ssl certificate file size in byte

Type: number

Range: 0-2147483647

dnssec-ds

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file

Description dnssec ds local file name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description dnssec ds file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-uri-file

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description local uri file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wsdl

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description WSDL local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description WSDL file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-key

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl key local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

secured

Description Mark as non-exportable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

size

Description ssl key file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

license

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

device

Description Device (Device ID)

Type: number

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description license file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ca-cert

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl ca certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

pfx-password-export

Description The password for exported certificate file (pfx type only)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

size

Description ssl ca certificate file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

glm-cert

Specification	
Type	*object*

action

Description 'import': import;

Type: string

Supported Values: import

device

Description Device (Device ID)

Type: number

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description glm license local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

axdebug

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description axdebug local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description axdebug file size in byte

Type: number

Range: 0-2147483647

techsupport

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description techsupport local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

size

Description techsupport file size in byte

Type: number

Range: 0-2147483647

xml-schema

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description XML-Schema local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description XML-Schema file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

startup-config

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: import

dst-file

Description destination file name for copy and rename action

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

file

Description startup-config local file name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description startup-config file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

auth-saml-idp

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description Destination file name for copy and rename action

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file

Description SAML metadata local file name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description Full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description SAML metadata file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-xml-signature

Description Verify metadata's XML signature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hc-pt-mapping

Specification	
Type	*object*

action

Description 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: import, export, copy, rename, check, replace, delete

file

Description harmony-controller local partition tenant mapping file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

ssl-cert

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

certificate-type

Description 'pem': pem; 'der': der; 'pfx': pfx; 'p7b': p7b;

Type: string

Supported Values: pem, der, pfx, p7b

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

file

Description ssl certificate local file name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 300 characters

Maximum Length: 1 characters

pfx-password

Description The password for certificate file (pfx type only)

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

pfx-password-export

Description The password for exported certificate file (pfx type only)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

size

Description ssl certificate file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dnssec-dnskey

Specification	
Type	*object*

action

Description 'create': create; 'import': import; 'export': export; 'copy': copy; 'rename': rename; 'check': check; 'replace': replace; 'delete': delete;

Type: string

Supported Values: create, import, export, copy, rename, check, replace, delete

dst-file

Description destination file name for copy and rename action

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file

Description dnssec dnskey local file name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

file-handle

Description full path of the uploaded file

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

size

Description dnssec dnskey file size in byte

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

data-file

Specification	
Type	*object*

action

Description data file action

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

file-url

Description File URL

Type: string

Format: url

name

Description data file name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

source-ip-address

Description Source IP address

Type: string

Format: ipv4-address

Mutual Exclusion: source-ip-address and use-mgmt-port are mutually exclusive

type

Description data file type

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and source-ip-address are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service

Specification	
Type	*object*

enable

Description Enable Internal File Inspection Service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-disable

Description Disable internal service health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-monitor are mutually exclusive

service-down-action

Description 'reset': Reset Connection; 'allow': Allow File;

Type: string

Supported Values: reset, allow

Default: allow

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global

Specification	
Type	*object*

classification

Description: classification is a **JSON Block**. Please see below for *global_classification*

Type: Object

logging

Description: logging is a **JSON Block**. Please see below for *global_logging*

Type: Object

max-buffer-size

Description Maximum size (bytes) of content that can be buffered - default 0 (disabled) (Maximum size (bytes) content that can be buffered - default 0 (disabled))

Type: number

Range: 0-268435455

Default: 0

max-concurrent-files

Description Max concurrenet inspected files per server - default 10 (Max concurrenet inspected files per server - default 10)

Type: number

Range: 1-100

Default: 10

max-concurrent-files-action

Description 'bypass': Bypass File Inspection (default);

Type: string

Supported Values: bypass

Default: bypass

max-file-size

Description Maximum file size (bytes) - default 157286400

Type: number

Range: 0-1073741824

Default: 157286400

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

global_logging

Specification	
Type	*object*

bypass

Description: bypass is a **JSON Block**. Please see below for *global_logging_bypass*

Type: Object

failed-transactions

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

local-logging-disable

Description Disable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

global_logging_bypass

Specification	
Type	*object*

aflex-disabled-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: aflex-disabled-log and all-bypass-log are mutually exclusive

all-bypass-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: all-bypass-logno-content-disposition-log, old-http-version-log, aflex-disabled-log, service-disabled-log, service-down-log, max-concurrent-files-log, filesize-overlimit-log and internal-buffered-overlimit-log are mutually exclusive

filesize-overlimit-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: filesize-overlimit-log and all-bypass-log are mutually exclusive

internal-buffered-overlimit-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: internal-buffered-overlimit-log and all-bypass-log are mutually exclusive

max-concurrent-files-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: max-concurrent-files-log and all-bypass-log are mutually exclusive

no-content-disposition-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: no-content-disposition-log and all-bypass-log are mutually exclusive

old-http-version-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: old-http-version-log and all-bypass-log are mutually exclusive

service-disabled-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: service-disabled-log and all-bypass-log are mutually exclusive

service-down-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: no-log

Mutual Exclusion: service-down-log and all-bypass-log are mutually exclusive

global_classification

Specification	
Type	*object*

classification-disable

Description Disable Internal File Inspection Classification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-classification-len

Description maximum length to be taken for file classification - default 65536

Type: number

Range: 1-268435455

Default: 65536

min-classification-len

Description minimum length to be taken for file classification - default 4096

Type: number

Range: 1-268435455

Default: 4096

template-list

Specification	
Type	*list*
Block object keys	

bad-downloads-action

Description 'reset': Reset Connection; 'drop': Drop File (default); 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

Default: drop

bad-uploads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

downloads-bad-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

downloads-external-inspect

Description respmod template for external icap inspection

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: downloads-external-inspect and suspect-downloads-action are mutually exclusive

Refernce Object: */axapi/v3/slb/template/respmod-icap*

downloads-external-suspect-log

Description 'log': Log event (default); 'no-log': Do not Log event;

stats data

	Counter	Size	Description
	icap_200	8	Receive icap status 200
	download_suspect_ext_inspect	8	Download suspect extrnal inspect
	upload_bad_blocked	8	Upload malware blocked
	bad_file_size_less_1m	8	Bad Files Less than 1Mb
	suspect_file_size_1_5m	8	Suspect Files Between 1-5Mb
	orig_conn_bytes_bypassed	8	Original connection bytes bypassed
	upload_suspect_allowed	8	Upload suspect allowed
	download_good_blocked	8	Download safe blocked
	bad_file_size_8_32m	8	Bad Files Between 8-32Mb
	total_file_size_less_1m	8	Total Files Less than 1Mb
	upload_bad_ext_inspect	8	Upload malware extrnal inspect
	non_supported_file	8	Non supported file type
	orig_conn_bytes_sent	8	Original connection bytes sent
	total_file_size_1_5m	8	Total Files Between 1-5Mb
	download_suspect_allowed	8	Download suspect allowed
	icap_204	8	Receive icap status 204
	suspect_file_size_5_8m	8	Suspect Files Between 5-8Mb
	suspect_file_size_8_32m	8	Suspect Files Between 8-32Mb
	total_file_size_5_8m	8	Total Files Between 5-8Mb
	icap_connect_fail	8	Icap connect fail
	upload_good_blocked	8	Upload safe blocked
	icap_other_status_code	8	Receive icap other status code
	total_bandwidth	8	Total File Bytes
	total_file_size_over_32m	8	Total Files over 32Mb
	bypass_aflex	8	Bypassed by aflex
	good_file_size_over_32m	8	Good Files over 32Mb
	total_suspect_bandwidth	8	Total Suspected Files Bytes
	orig_conn_bytes_received	8	Original connection bytes received
	upload_good_ext_inspect	8	Upload safe external inspect
	good_file_size_8_32m	8	Good Files Between 8-32Mb

Table 2.11 – continued from previous page

	Counter	Size	Description
	bad_file_size_5_8m	8	Bad Files Between 5-8Mb
	icap_500	8	Receive icap status 500
	icap_bytes_sent	8	Icap bytes sent
	reset_service_down	8	Reset - Internal service down
	total_good_bandwidth	8	Total Good Files Bytes
	good_file_size_1_5m	8	Good Files Between 1-5Mb
	icap_connection_closed	8	Icap connection closed
	download_good_allowed	8	Download safe external inspect
	download_bad_blocked	8	Download malware blocked
	bad_file_size_over_32m	8	Bad Files over 32Mb
	download_bad_ext_inspect	8	Download malware extrnal inspect
	transactions_aborted	8	Total transactions aborted
	bypass_service_disabled	8	Bypassed - Internal service disabled
	bypass_non_inspection	8	Bypassed non inspection data
	suspect_file_size_less_1m	8	Suspect Files Less than 1Mb
	transactions_alloc	8	Total transactions allocated
	download_bad_allowed	8	Download malware allowed
	bypass_buffered_overlimit	8	Total Bytes Buffered Overlimit
	download_good_ext_inspect	8	Download safe allowed
	upload_suspect_blocked	8	Upload suspect blocked
	bypass_max_concurrent_files_reached	8	Bypassed - max concurrent files on server reached
	icap_connection_rst	8	Icap connection rst
	total_file_size_8_32m	8	Total Files Between 8-32Mb
	total_bad_bandwidth	8	Total Bad Files Bytes
	upload_suspect_ext_inspect	8	Upload suspect extrnal inspect
	bypass_service_down	8	Bypassed - Internal service down
	icap_bytes_received	8	Icap bytes received
	icap_connection_established	8	Icap connection established
	good_file_size_less_1m	8	Good Files Less than 1Mb
	good_file_size_5_8m	8	Good Files Between 5-8Mb

continues on next page

Table 2.11 – continued from previous page

	Counter	Size	Description
	transac-tions_failure	8	Total transactions failure
	down-load_suspect_blocked	8	Download suspect blocked
	icap_connection_created	8	Icap connection created
	transac-tions_free	8	Total transactions freed
	by-pass_large_file	8	Bypassed - large file size
	up-load_good_allowed	8	Upload safe allowed
	up-load_bad_allowed	8	Upload malware allowed
	sus-pect_file_size_over_32m	8	Suspect Files over 32Mb
	bad_file_size_1_5m	8	Bad Files Between 1-5Mb

2.36.4 file-inspection service

File Inspection Service related commands

service Specification

Type	*Configuration Resource*
Element Name	service
Element URI	/axapi/v3/file-inspection/service
Element Attributes	service_attributes
Schema	`service schema`

Operations Allowed:

Create Object

POST

/axapi/v3/file-inspection/service

service attributes

Get Object

GET

/axapi/v3/file-inspection/service

service attributes

Modify Object

POST

/axapi/v3/file-inspection/service

service attributes

Replace Object

service attributes

Delete Object

DELETE

/axapi/v3/file-inspection/service

service attributes

service attributes

enable

Description Enable Internal File Inspection Service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check-disable

Description Disable internal service health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-monitor are mutually exclusive

service-down-action

Description 'reset': Reset Connection; 'allow': Allow File;

Type: string

Supported Values: reset, allow

Default: allow

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.36.5 file-inspection template

Manage File Inspection template configuration

template Specification

Type	*Collection*

template attributes

bad-downloads-action

Description 'reset': Reset Connection; 'drop': Drop File (default); 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

Default: drop

bad-uploads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

downloads-bad-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

downloads-external-inspect

Description respmod template for external icap inspection

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: downloads-external-inspect and suspect-downloads-action are mutually exclusive

Refernce Object: */axapi/v3/slb/template/respmod-icap*

downloads-external-suspect-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

downloads-good-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

downloads-suspect-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

good-downloads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File (default);

Type: string

Supported Values: reset, drop, allow

Default: allow

good-uploads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

inspect

Description: inspect is a **JSON Block**. Please see below for *inspect*

Type: Object

name

Description file-inspection template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

suspect-downloads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File (default);

Type: string

Supported Values: reset, drop, allow

Default: allow

Mutual Exclusion: suspect-downloads-action and downloads-external-inspect are mutually exclusive

suspect-uploads-action

Description 'reset': Reset Connection; 'drop': Drop File; 'allow': Allow File;

Type: string

Supported Values: reset, drop, allow

Mutual Exclusion: suspect-uploads-action and uploads-external-inspect are mutually exclusive

uploads-bad-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

Supported Values: log, no-log

Default: log

uploads-external-inspect

Description reqmod template for external icap inspection

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: uploads-external-inspect and suspect-uploads-action are mutually exclusive

Refernce Object: */axapi/v3/slb/template/reqmod-icap*

uploads-external-suspect-log

Description 'log': Log event (default); 'no-log': Do not Log event;

Type: string

counters1

Description 'all': all; 'dummy': Entry for a10countergen;

Type: string

Supported Values: all, dummy

global

Specification	
Type	*object*

alg-processing

Description 'honor-rule-set': Honors firewall rule-sets; 'override-rule-set': Override firewall rule-sets;

Type: string

Supported Values: honor-rule-set, override-rule-set

Default: honor-rule-set

disable-app-list

Type: List

disable-application-metrics

Description Disable exporting application protocol/category statistics to Harmony Controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ip-fw-sessions

Description disable create sessions for non TCP/UDP/ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-matching

Description 'disable': Disable extended matching;

Type: string

Supported Values: disable

listen-on-port-timeout

Description STUN timeout (default: 2 minutes)

Type: number

Range: 0-60

Default: 2

natip-ddos-protection

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

permit-default-action

Description 'forward': Forward; 'next-service-mode': Service to be applied chosen based on configuration;

Type: string

Supported Values: forward, next-service-mode

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

Specification	
Type	*list*
Block object keys	

disable-application-category

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising': Advertising networks and applications.; 'aetls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.;

'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services; 'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

Type: string

Supported Values: aaa, adult-content, advertising, aetls, analytics-and-statistics, anonymizers-and-proxies, audio-chat, basic, blog, cdn, certification-authority, chat, classified-ads, cloud-based-services, crowdfunding, cryptocurrency, database, disposable-email, ebook-reader, education, email, enterprise, file-management, file-transfer, forum, gaming, healthcare, instant-messaging-and-multimedia-conferencing, internet-of-things, map-service, mobile, multimedia-streaming, networking, news-portal, payment-service, peer-

to-peer, remote-access, scada, social-networks, software-update, speedtest, standards-based, transportation, video-chat, voip, vpn-tunnels, web, web-e-commerce, web-search-engines, web-websites, webmails, web-ext-adult, web-ext-auctions, web-ext-blogs, web-ext-business-and-economy, web-ext-cdns, web-ext-collaboration, web-ext-computer-and-internet-info, web-ext-computer-and-internet-security, web-ext-dating, web-ext-educational-institutions, web-ext-entertainment-and-arts, web-ext-fashion-and-beauty, web-ext-file-share, web-ext-financial-services, web-ext-gambling, web-ext-games, web-ext-government, web-ext-health-and-medicine, web-ext-individual-stock-advice-and-tools, web-ext-internet-portals, web-ext-job-search, web-ext-local-information, web-ext-malware, web-ext-motor-vehicles, web-ext-music, web-ext-news, web-ext-p2p, web-ext-parked-sites, web-ext-proxy-avoid-and-anonymizers, web-ext-real-estate, web-ext-reference-and-research, web-ext-search-engines, web-ext-shopping, web-ext-social-network, web-ext-society, web-ext-software, web-ext-sports, web-ext-streaming-media, web-ext-training-and-tools, web-ext-translation, web-ext-travel, web-ext-web-advertisements, web-ext-web-based-email, web-ext-web-hosting, web-ext-web-service

disable-application-protocol

Description Disable specific application protocol

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

tcp-rst-close-immediate

Specification	
Type	*object*

status

Description 'enable': Enable TCP RST close immediate (default); 'disable': Disable TCP RST close immediate;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

mss-clamp

Description: mss-clamp is a **JSON Block**. Please see below for *tcp_mss-clamp*

Type: Object

Refernce Object: */axapi/v3/fw/tcp/mss-clamp*

reset-on-error

Description: reset-on-error is a **JSON Block**. Please see below for *tcp_reset-on-error*

Type: Object

Refernce Object: */axapi/v3/fw/tcp/reset-on-error*

syn-cookie

Description: syn-cookie is a **JSON Block**. Please see below for *tcp_syn-cookie*

Type: Object

Refernce Object: */axapi/v3/fw/tcp/syn-cookie*

tcp_mss-clamp

Specification	
Type	*object*

min

Description Specify the min value allowed for the TCP MSS (Specify the min value allowed for the TCP MSS (default: ((576 - 60 - 60))))

Type: number

Range: 0-1460

Default: 456

mss-clamp-type

Description 'fixed': Specify a fixed max value for the TCP MSS; 'subtract': Specify the value to subtract from the TCP MSS;

Type: string

Supported Values: fixed, subtract

mss-subtract

Description Specify the value to subtract from the TCP MSS (default: not configured)

Type: number

Range: 0-1460

mss-value

Description The max value allowed for the TCP MSS (default: not configured)}

Type: number

Range: 0-1460

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_reset-on-error

Specification	
Type	*object*

enable

Description Enable send TCP reset on error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

outbound

Description 'enable': Enable send TCP reset on error;

Type: string

Supported Values: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_syn-cookie

Specification	
Type	*object*

sampling-enable

Type: List

syn-cookie-enable

Description Enable Firewall Syn-Cookie Protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie-on-threshold

Description on-threshold for Syn-cookie (Decimal number)

Type: number

Range: 1-1000000

syn-cookie-on-timeout

Description on-timeout for Syn-cookie (Timeout in seconds, default is 120 seconds (2 minutes))

Type: number

Range: 1-300000

Default: 120

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_syn-cookie_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'syn_ack_sent': SYN cookie SYN ACK sent; 'verification_passed': SYN cookie verification passed; 'verification_failed': SYN cookie verification failed; 'conn_setup_failed': SYN cookie connection setup failed;

Type: string

Supported Values: all, syn_ack_sent, verification_passed, verification_failed, conn_setup_failed

radius

Specification	
Type	*object*

server

Description: server is a **JSON Block**. Please see below for *radius_server*

Type: Object

Refernce Object: */axapi/v3/fw/radius/server*

radius_server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default);

Type: string

Supported Values: ignore, delete-entry

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

radius_server_remote

Specification	
Type	*object*

ip-list

Type: List

radius_server_remote_ip-list

Specification	
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius_server_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Table Full Dropped; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-created, smp-in-rml, smp-deleted, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop,

radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

radius_server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

clear-session-filter

Specification	
Type	*object*

status

Description 'disable': Disable clear L4 session filter for fw (Default: disabled); 'enable': Enable clear L4 session filter for fw;

Type: string

Supported Values: disable, enable

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

per-instance

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system-status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Vrrp group (VRRP-A vrid)

Type: number

Range: 1-31

limit-entry

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rate-limit

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp

Specification	
Type	*object*

apn-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

apn-prefix

Description: apn-prefix is a **JSON Block**. Please see below for *gtp_apn-prefix*

Type: Object

Refernce Object: */axapi/v3/fw/gtp/apn-prefix*

apn-prefix-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

echo-timeout

Description echo message timeout (minutes) (echo-timeout (default 2))

Type: number

Range: 1-261

Default: 2

gtp-value

Description 'enable': Enable GTP Inspection;

Type: string

Supported Values: enable

insertion-mode

Description 'monitor': Enable inline view-only mode; 'skip-state-checks': Enable skip stateful checks mode;

Type: string

Supported Values: monitor, skip-state-checks

ne-v4-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

ne-v6-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

network-element

Description: network-element is a **JSON Block**. Please see below for *gtp_network-element*

Type: Object

Refernce Object: */axapi/v3/fw/gtp/network-element*

network-element-list-v4

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

network-element-list-v6

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

path-mgmt-logging

Description 'enable-log': Enable Log for Path Management;

Type: string

Supported Values: enable-log

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp_network-element

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp_apn-prefix

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gtp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'out-of-session-memory': Out of Tunnel Memory; 'no-fwd-route': No Forward Route; 'no-rev-route': No Reverse Route; 'gtp-smp-created': GTP SMP Created; 'gtp-smp-marked-deleted': GTP SMP Marked Deleted; 'gtp-smp-deleted': GTP SMP Deleted; 'smp-creation-failed': GTP-U SMP Helper Session Creation Failed; 'gtp-smp-path-created': GTP SMP PATH Created; 'gtp-smp-path-freed': GTP SMP PATH MEM freed; 'gtp-smp-path-allocated': GTP SMP PATH MEM allocated; 'gtp-smp-path-creation-failed': GTP SMP PATH creation Failed; 'gtp-tunnel-rate-limit-entry-create-success': GTP Tunnel Level Rate Limit Entry Create Success; 'gtp-tunnel-rate-limit-entry-create-failure': GTP Tunnel Level Rate Limit Entry Create Failure; 'gtp-tunnel-rate-limit-entry-deleted': GTP Tunnel Level Rate Limit Entry Deleted; 'gtp-rate-limit-smp-created': GTP Rate Limit SMP Created; 'gtp-rate-limit-smp-freed': GTP Rate Limit SMP Freed; 'gtp-rate-limit-smp-create-failure': GTP Rate Limit SMP Create Failure; 'gtp-rate-limit-t3-ctr-create-failure': GTP Rate Limit Dynamic Counters Create Failure; 'gtp-rate-limit-entry-create-failure': GTP Rate Limit Entry Create Failure; 'gtp-echo-conn-created': GTP Echo Request Conn Created; 'gtp-echo-conn-deleted': GTP Echo Request conn Deleted; 'gtp-node-restart-echo': GTP Node Restoration due to Recovery IE in Echo; 'gtp-c-echo-path-failure': GTP-C Path Failure due to Echo; 'drop-vld-gtp-echo-out-of-state-': GTP Echo Out of State Drop; 'drop-vld-gtp-echo-ie-len-exceed-msg-len': GTP Echo IE Length Exceeds Message Length; 'gtp-create-session-request-retransmit': GTP-C Retransmitted Create Session Request; 'gtp-add-bearer-request-retransmit': GTP-C Retransmitted Add Bearer Request; 'gtp-delete-session-request-retransmit': GTP-C Retransmitted Delete Session Request; 'gtp-handover-request-retransmit': GTP Handover Request Retransmit; 'gtp-del-bearer-request-retransmit': GTP-C Retransmitted Delete Bearer Request; 'gtp-add-bearer-response-retransmit': GTP-C Retransmitted Add Bearer Response; 'gtp-create-session-request-retx-drop': GTP-C Retransmitted Create Session Request dropped; 'gtp-u-out-of-state-drop': GTP-U Out of state Drop; 'gtp-c-handover-request-out-of-state-drop': GTP-C Handover Request Out of state Drop; 'gtp-v1-c-nsapi-not-found-in-delete-req': GTPv1-C NSAPI Not Found in GTP Request; 'gtp-v2-c-bearer-not-found-in-delete-req': GTPv2-C Bearer Not Found in GTP Request; 'gtp-v2-c-bearer-not-found-in-delete-resp': GTPv2-C Bearer Not Found in GTP Response; 'gtp-multiple-handover-request': GTP Multiple Handover Request; 'gtp-rr-message-drop': GTP Message Dropped in RR Mode; 'gtp-rr-echo-message-dcmsg': GTP Echo Message Sent to home CPU in RR Mode; 'gtp-rr-c-message-dcmsg': GTP-C Message Sent to home CPU in RR Mode; 'drop-gtp-frag-or-jumbo-pkt': GTP Fragmented or JUMBO packet Drop; 'response-with-reject-cause-forwarded': GTP-C Response with Reject Cause Forwarded; 'gtp-c-message-forwarded-without-conn': GTP-C Message Forwarded without Conn; 'gtp-v0-c-ver-not-supp': GTPv0-C Version not supported indication; 'gtp-v1-c-ver-not-supp': GTPv1-C Version not supported indication; 'gtp-v2-c-ver-not-supp': GTPv2-C Version not supported indication; 'gtp-v1-extn-hdt-notif': GTPV1 Supported Extension header notification; 'gtp-u-error-ind': GTP-U Error Indication; 'gtp-v0-c-uplink-ingress-packets': GTPv0-C Uplink Ingress Packets; 'gtp-v0-c-uplink-egress-packets': GTPv0-C Uplink Egress Packets; 'gtp-v0-c-downlink-ingress-packets': GTPv0-C Downlink Ingress Packets; 'gtp-v0-c-downlink-egress-packets': GTPv0-C Downlink Egress Packets; 'gtp-v0-c-uplink-ingress-bytes': GTPv0-C Uplink Ingress Bytes; 'gtp-v0-c-uplink-egress-bytes': GTPv0-C Uplink Egress Bytes; 'gtp-v0-c-downlink-ingress-bytes': GTPv0-C Downlink Ingress Bytes; 'gtp-v0-c-downlink-egress-bytes': GTPv0-C Downlink Egress Bytes; 'gtp-v1-c-uplink-ingress-

packets': GTPv1-C Uplink Ingress Packets; 'gtp-v1-c-uplink-egress-packets': GTPv1-C Uplink Egress Packets; 'gtp-v1-c-downlink-ingress-packets': GTPv1-C Downlink Ingress Packets; 'gtp-v1-c-downlink-egress-packets': GTPv1-C Downlink Egress Packets; 'gtp-v1-c-uplink-ingress-bytes': GTPv1-C Uplink Ingress Bytes; 'gtp-v1-c-uplink-egress-bytes': GTPv1-C Uplink Egress Bytes; 'gtp-v1-c-downlink-ingress-bytes': GTPv1-C Downlink Ingress Bytes; 'gtp-v1-c-downlink-egress-bytes': GTPv1-C Downlink Egress Bytes; 'gtp-v2-c-uplink-ingress-packets': GTPv2-C Uplink Ingress Packets; 'gtp-v2-c-uplink-egress-packets': GTPv2-C Uplink Egress Packets; 'gtp-v2-c-downlink-ingress-packets': GTPv2-C Downlink Ingress Packets; 'gtp-v2-c-downlink-egress-packets': GTPv2-C Downlink Egress Packets; 'gtp-v2-c-uplink-ingress-bytes': GTPv2-C Uplink Ingress Bytes; 'gtp-v2-c-uplink-egress-bytes': GTPv2-C Uplink Egress Bytes; 'gtp-v2-c-downlink-ingress-bytes': GTPv2-C Downlink Ingress Bytes; 'gtp-v2-c-downlink-egress-bytes': GTPv2-C Downlink Egress Bytes; 'gtp-u-uplink-ingress-packets': GTP-U Uplink Ingress Packets; 'gtp-u-uplink-egress-packets': GTP-U Uplink Egress Packets; 'gtp-u-downlink-ingress-packets': GTP-U Downlink Ingress Packets; 'gtp-u-downlink-egress-packets': GTP-U Downlink Egress Packets; 'gtp-u-uplink-ingress-bytes': GTP-U Uplink Ingress Bytes; 'gtp-u-uplink-egress-bytes': GTP-U Uplink Egress Bytes; 'gtp-u-downlink-ingress-bytes': GTP-U Downlink Ingress Bytes; 'gtp-u-downlink-egress-bytes': GTP-U Downlink Egress Bytes; 'gtp-v0-c-create-synced': GTPv0-C Tunnel Create Synced; 'gtp-v1-c-create-synced': GTPv1-C Tunnel Create Synced; 'gtp-v2-c-create-synced': GTPv2-C Tunnel Create Synced; 'gtp-v0-c-delete-synced': GTPv0-C Tunnel Delete Synced; 'gtp-v1-c-delete-synced': GTPv1-C Tunnel Delete Synced; 'gtp-v2-c-delete-synced': GTPv2-C Tunnel Delete Synced; 'gtp-v0-c-create-sync-rx': GTPv0-C Tunnel Create Sync Received on Standby; 'gtp-v1-c-create-sync-rx': GTPv1-C Tunnel Create Sync Received on Standby; 'gtp-v2-c-create-sync-rx': GTPv2-C Tunnel Create Sync Received on Standby; 'gtp-v0-c-delete-sync-rx': GTPv0-C Tunnel Delete Sync Received on Standby; 'gtp-v1-c-delete-sync-rx': GTPv1-C Tunnel Delete Sync Received on Standby; 'gtp-v2-c-delete-sync-rx': GTPv2-C Tunnel Delete Sync Received on Standby; 'gtp-handover-synced': GTP Handover Synced; 'gtp-handover-sync-rx': GTP Handover Sync Received on Standby; 'gtp-smp-add-bearer-synced': GTP SMP Add Bearer Synced; 'gtp-smp-del-bearer-synced': GTP SMP Del Bearer Synced; 'gtp-smp-additional-bearer-synced': GTP SMP Additional Bearer Synced; 'gtp-smp-add-bearer-sync-rx': GTP SMP Add Bearer Sync Received on Standby; 'gtp-smp-del-bearer-sync-rx': GTP SMP Del Bearer Sync Received on Standby; 'gtp-smp-additional-bearer-sync-rx': GTP SMP Additional Bearer Sync Received on Standby; 'gtp-add-bearer-sync-not-rx-on-standby': GTP Add Bearer Sync Not Received on Standby; 'gtp-add-bearer-sync-with-periodic-update-on-standby': GTP Bearer Added on Standby with Periodic Sync; 'gtp-delete-bearer-sync-with-periodic-update-on-standby': GTP Bearer Deleted on Standy with Periodic Sync; 'gtp-v0-c-echo-create-synced': GTPv0-C Echo Create Synced; 'gtp-v1-c-echo-create-synced': GTPv1-C Echo Create Synced; 'gtp-v2-c-echo-create-synced': GTPv2-C Echo Create Synced; 'gtp-v0-c-echo-create-sync-rx': GTPv0-C-Echo Create Sync Received on Standby; 'gtp-v1-c-echo-create-sync-rx': GTPv1-C-Echo Create Sync Received on Standby; 'gtp-v2-c-echo-create-sync-rx': GTPv2-C-Echo Create Sync Received on Standby; 'gtp-v0-c-echo-del-synced': GTPv0-C Echo Delete Synced; 'gtp-v1-c-echo-del-synced': GTPv1-C Echo Delete Synced; 'gtp-v2-c-echo-del-synced': GTPv2-C Echo Delete Synced; 'gtp-v0-c-echo-del-sync-rx': GTPv0-C-Echo Delete Sync Received on Standby;

Type: string

Supported Values: all, out-of-session-memory, no-fwd-route, no-rev-route, gtp-smp-created, gtp-smp-marked-deleted, gtp-smp-deleted, smp-creation-failed, gtp-smp-path-created, gtp-smp-path-freed, gtp-smp-path-allocated, gtp-smp-path-creation-failed, gtp-tunnel-rate-limit-entry-create-success, gtp-tunnel-rate-limit-entry-create-failure, gtp-tunnel-rate-limit-entry-deleted, gtp-rate-limit-smp-created, gtp-rate-limit-smp-freed, gtp-rate-limit-smp-create-failure, gtp-rate-limit-t3-ctr-create-failure, gtp-rate-limit-entry-create-failure, gtp-echo-conn-created, gtp-echo-conn-deleted, gtp-node-restart-echo, gtp-c-echo-path-failure,

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0': 16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'ascii': A10 Text logging format (ASCII); 'cef': Common Event Format for logging (default);

Type: string

Supported Values: ascii, cef

Default: cef

include-dest-fqdn

Description Include destination FQDN string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *template_logging-list_include-http*

Type: Object

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *template_logging-list_include-radius-attribute*

Type: Object

log

Description: log is a **JSON Block**. Please see below for *template_logging-list_log*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rule

Description: rule is a **JSON Block**. Please see below for *template_logging-list_rule*

Type: Object

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

severity

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: informational

source-address

Description: source-address is a **JSON Block**. Please see below for *template_logging-list_source-address*

Type: Object

Refernce Object: */axapi/v3/fw/template/logging/{name}/source-address*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_logging-list_include-radius-attribute

Specification	
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-radius-attribute_attr-cfg

Specification	
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'sessions': Include in session logs; 'limit-policy': Include in limit policy logs;

Type: string

Supported Values: http-requests, sessions, limit-policy

template_logging-list_rule

Specification	
Type	*object*

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *template_logging-list_rule_rule-http-requests*

Type: Object

template_logging-list_rule_rule-http-requests

Specification	
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 128 char))

Type: number

Range: 100-1000

Default: 128

template_logging-list_rule_rule-http-requests_dest-port

Specification	
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in FW session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-http

Specification	
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template_logging-list_include-http_header-cfg

Specification	
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

template_logging-list_log

Specification	
Type	*object*

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

full-cone-session

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

urpf

Specification	
Type	*object*

status

Description 'loose': Perform loose check; 'strict': Perform strict check; 'disable': Disable check;

Type: string

Supported Values: loose, strict, disable

Default: loose

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tap-monitor

Specification	
Type	*object*

status

Description 'enable': Enable tap monitor mode; 'disable': Disable tap monitor mode (Default:Disable);

Type: string

Supported Values: enable, disable

Default: disable

tap-port-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tap-monitor_tap-port-cfg

Specification	
Type	*list*
Block object keys	

tap-eth

Description Ethernet interface number

Type: number

Format: interface

tap-vlan

Description Vlan number

Type: number

Range: 2-4096

local-log

Specification	
Type	*object*

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rule-set

Specification	
Type	*object*

name

Description Rule set name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/rule-set*

override-nat-aging

Description Override NAT idle-timeout

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-aging

Description Session Aging Template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/fw/session-aging*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging

Specification	
Type	*object*

gtp

Description: gtp is a **JSON Block**. Please see below for *logging_gtp*

Type: Object

Refernce Object: */axapi/v3/fw/logging/gtp*

name

Description Logging Template Name

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/fw-service-group-tmpl*

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Service selection fail drop; 'server_selection_fail_reset': Service selection fail reset; 'service_peak_conn': Service peak connection;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn

service-group-list_member-list

Specification	
Type	*list*
Block object keys	

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/fw/server*

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/fw-service-group-mem-tmpl*

port

Description Port number

Type: number

Range: 1-65534

Refernce Object: */axapi/v3/fw/server/port*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests success; 'peak_conn': Peak connections; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections; 'curr_conn_overflow': Current connection counter overflow count; 'state_flaps': State flaps count;

Type: string

Supported Values: all, curr_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

helper-sessions

Specification	
Type	*object*

idle-timeout

Description helper-sessions idle-timeout time (Idle-timeout in minutes (default: 1 minute))

Type: number

Range: 1-255

Default: 1

limit

Description Limit number of helper-sessions (Limit helper-sessions number)

Type: number

mode

Description 'disable': Disable helper-sessions;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server;

Type: string

Supported Values: enable, disable

Default: enable

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

port-list

Type: List

Refernce Object: */axapi/v3/fw/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/fw-server-port-tmpl*

port-number

Description Port Number

Type: number

Range: 1-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total request success; 'total_fwd_bytes': Forward bytes; 'total_fwd_pkts': Forward packets; 'total_rev_bytes': Reverse bytes; 'total_rev_pkts': Reverse packets; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy request; 'es_resp_count': Total proxy Response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time;

Type: string

Supported Values: all, curr_conn, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time

server-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr-conn': Current connections; 'total-conn': Total connections; 'fwd-pkt': Forward packets; 'rev-pkt': Reverse Packets; 'peak-conn': Peak connections;

Type: string

Supported Values: all, curr-conn, total-conn, fwd-pkt, rev-pkt, peak-conn

session-aging-list

Specification	
Type	*list*
Block object keys	

icmp-idle-timeout

Description Idle Timeout value (default 2 seconds) (idle timeout in second, default 2)

Type: number

Range: 2-15000

Default: 2

ip-idle-timeout

Description Idle Timeout (sec), default is 30 (number)

Type: number

Range: 1-2097151

Default: 30

name

Description session-aging Template (session-aging Template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp

Description: tcp is a **JSON Block**. Please see below for *session-aging-list_tcp*

Type: Object

Refernce Object: */axapi/v3/fw/session-aging/{name}/tcp*

udp

Description: udp is a **JSON Block**. Please see below for *session-aging-list_udp*

Type: Object

Refernce Object: */axapi/v3/fw/session-aging/{name}/udp*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-aging-list_udp

Specification	
Type	*object*

port-cfg

Type: List

udp-idle-timeout

Description Idle Timeout (sec), default is 120 (number)

Type: number

Range: 1-2097151

Default: 120

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-aging-list_udp_port-cfg

Specification	
Type	*list*
Block object keys	

udp-idle-timeout

Description Idle Timeout (sec), default is 120 (number)

Type: number

Range: 1-2097151

Default: 120

udp-port

Description

Type: number

Range: 1-65535

session-aging-list_tcp

Specification	
Type	*object*

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

port-cfg

Type: List

tcp-idle-timeout

Description Idle Timeout (sec), default is 600 (number)

Type: number

Range: 1-2097151

Default: 600

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

session-aging-list_tcp_port-cfg

Specification	
Type	*list*
Block object keys	

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

tcp-idle-timeout

Description Idle Timeout (sec), default is 600 (number)

Type: number

Range: 1-2097151

tcp-port

Description

Type: number

Range: 1-65535

ddos-protection

Specification	
Type	*object*

action

Description: action is a **JSON Block**. Please see below for *ddos-protection_action*

Type: Object

logging

Description: logging is a **JSON Block**. Please see below for *ddos-protection_logging*

Type: Object

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ddos-protection_action

Specification	
Type	*object*

action-type

Description 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: drop, redistribute-route

Default: drop

expiration

Description To specify time in minutes to revert the action (Expiration time, in minutes (default is 5 mins))

Type: number

Range: 2-144000

Default: 5

expiration-route

Description To specify time in minutes to revert the action (Expiration time, in minutes (default is 60 mins))

Type: number

Range: 2-144000

Default: 60

remove-wait-timer

Description Max time to wait before removing IP from blackhole (Max value in seconds (default 300))

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

ddos-protection_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'ddos_entries_too_many': Too many DDOS entries; 'ddos_entry_added': DDOS entry added; 'ddos_entry_removed': DDOS entry removed; 'ddos_entry_added_to_bgp': DDoS Entry added to BGP; 'ddos_entry_removed_from_bgp': DDoS Entry Removed from BGP; 'ddos_entry_add_to_bgp_failure': DDoS Entry BGP add failures; 'ddos_entry_remove_from_bgp_failure': DDOS entry BGP remove failures; 'ddos_packet_dropped': DDOS Packet Drop;

Type: string

Supported Values: all, ddos_entries_too_many, ddos_entry_added, ddos_entry_removed, ddos_entry_added_to_bgp, ddos_entry_removed_from_bgp, ddos_entry_add_to_bgp_failure, ddos_entry_remove_from_bgp_failure, ddos_packet_dropped

ddos-protection_logging

Specification	
Type	*object*

enable-action

Description 'local': Enable local logs only; 'remote': Enable logging to remote server & IPFIX; 'both': Enable both local & remote logs;

Type: string

Supported Values: local, remote, both

Default: local

logging-action

Description 'enable': enable FW DDoS protection logging; 'disable': Disable both local & remote FW DDoS protection logging;

Type: string

Supported Values: enable, disable

Default: enable

top-k-rules

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Type: Object

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action

Specification	
Type	*object*

action-type

Description 'drop': Log, and drop all packets (default); 'redistribute-route': Log, Drop, and Notify upstream router to reroute the packets;

Type: string

Supported Values: drop, redistribute-route

Default: drop

expiration

Description To specify time in minutes to revert the action (Expiration time, in minutes (default is 5 mins))

Type: number

Range: 2-144000

Default: 5

expiration-route

Description To specify time in minutes to revert the action (Expiration time, in minutes (default is 60 mins))

Type: number

Range: 2-144000

Default: 60

remove-wait-timer

Description Max time to wait before removing IP from blackhole (Max value in seconds (default 300))

Type: number

Range: 0-300

Default: 300

route-map

Description Route map name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

timer-multiply-max

Description To specify max value of timer multiplier for attacks lasted long time (Max value of timer multiplier (default is 6))

Type: number

Range: 1-100

Default: 6

sampling-enable

Specification	
Type	*list*
Block object keys

global attributes

alg-processing

Description 'honor-rule-set': Honors firewall rule-sets; 'override-rule-set': Override firewall rule-sets;

Type: string

Supported Values: honor-rule-set, override-rule-set

Default: honor-rule-set

disable-app-list

Type: List

disable-application-metrics

Description Disable exporting application protocol/category statistics to Harmony Controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-ip-fw-sessions

Description disable create sessions for non TCP/UDP/ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-matching

Description 'disable': Disable extended matching;

Type: string

Supported Values: disable

listen-on-port-timeout

Description STUN timeout (default: 2 minutes)

Type: number

Range: 0-60

Default: 2

natip-ddos-protection

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

permit-default-action

Description 'forward': Forward; 'next-service-mode': Service to be applied chosen based on configuration;

Type: string

Supported Values: forward, next-service-mode

respond-to-user-mac

Description Use the user's source MAC for the next hop rather than the routing table (default: off)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-app-list

Specification	
Type	*list*
Block object keys	

disable-application-category

Description 'aaa': Protocol/application used for AAA (Authentification, Authorization and Accounting) purposes.; 'adult-content': Adult content protocol/application.; 'advertising':

Advertising networks and applications.; 'aetls': Application known to enforce HSTS and thus use of TLS.; 'analytics-and-statistics': User analytics and statistics protocol/application.; 'anonymizers-and-proxies': Traffic-anonymization protocol/application.; 'audio-chat': Protocol/application used for Audio Chat.; 'basic': Covers all protocols required for basic classification, including most networking protocols as well as standard protocols like HTTP.; 'blog': Blogging platform protocol/application.; 'cdn': Protocol/application used for Content-Delivery Networks.; 'certification-authority': Certification Authority for SSL/TLS certificate.; 'chat': Protocol/application used for Text Chat.; 'classified-ads': Protocol/application used for Classified Advertisements.; 'cloud-based-services': SaaS and/or PaaS cloud based services.; 'crowdfunding': Service for funding a project or venture by raising small amounts of money from a large number of people, typically via the Internet.; 'cryptocurrency': Services for mining cryptocurrencies, for example a Crypto Web Browser (an application that mines crypto currency in the background while its user browses the web).; 'database': Database-specific protocols.; 'disposable-email': Service offering Disposable Email Accounts (DEA). DEA is a technique to share temporary email address between many users.; 'ebook-reader': Services for e-book readers, i.e. connected devices that display electronic books (typically using e-ink displays to reduce glare and eye strain).; 'education': Protocols offering education services and online courses.; 'email': Native email protocol.; 'enterprise': Protocol/application used in an enterprise network.; 'file-management': Protocol/application designed specifically for file management and exchange. This can include bona fide network protocols (like SMB) as well as web/cloud services (like Dropbox).; 'file-transfer': Protocol that offers file transferring as a secondary feature. This typically includes IM, Web-Mail, and other protocols that allow file transfers in addition to their principal function.; 'forum': Online forum protocol/application.; 'gaming': Protocol/application used by games.; 'healthcare': Protocols offering medical services, i.e protocols used in medical environment.; 'instant-messaging-and-multimedia-conferencing': Protocol/application used for Instant Messaging or Multi-Conferencing.; 'internet-of-things': Internet Of Things protocol/application.; 'map-service': Digital Maps service (web site and their related API).; 'mobile': Mobile-specific protocol/application.; 'multimedia-streaming': Protocol/application used for multimedia streaming.; 'networking': Protocol used for (inter) networking purpose.; 'news-portal': Protocol/application used for News Portals.; 'payment-service': Application offering online services for accepting electronic payments by a variety of payment methods (credit card, bank-based payments such as direct debit, bank transfer, etc).; 'peer-to-peer': Protocol/application used for Peer-to-peer purposes.; 'remote-access': Protocol/application used for remote access.; 'scada': SCADA (Supervisory control and data acquisition) protocols, all generations.; 'social-networks': Social networking application.; 'software-update': Auto-update protocol.; 'speedtest': Speedtest application allowing to access quality of Internet connection (upload, download, latency, etc).; 'standards-based': Protocol issued from standardized bodies such as IETF, ITU, IEEE, ETSI, OIF.; 'transportation': Transportation services, for example smartphone applications that allow users to hail a taxi.; 'video-chat': Protocol/application used for Video Chat.; 'voip': Application used for Voice-Over-IP.; 'vpn-tunnels': Protocol/application used for VPN or tunneling purposes.; 'web': Application based on HTTP/HTTPS.; 'web-e-commerce': Protocol/application used for E-commerce websites.; 'web-search-engines': Protocol/application used for Web search portals.; 'web-websites': Protocol/application used for Company Websites.; 'webmails': Web-based e-mail application.; 'web-ext-adult': Web Extension Adult; 'web-ext-auctions': Web Extension Auctions; 'web-ext-blogs': Web Extension Blogs; 'web-ext-business-and-economy': Web Extension Business and Economy; 'web-ext-cdns': Web Extension CDNs; 'web-ext-collaboration': Web Extension Collaboration; 'web-ext-computer-and-internet-info': Web Extension Computer and Internet Info; 'web-ext-computer-and-internet-security': Web Extension Computer and Internet Security; 'web-ext-dating': Web Extension Dating; 'web-ext-educational-institutions': Web Extension Educational Institutions; 'web-ext-entertainment-and-arts': Web Extension Entertainment and Arts; 'web-ext-fashion-and-beauty': Web Extension Fashion and Beauty; 'web-ext-file-share': Web Extension File Share; 'web-ext-financial-services': Web Extension Financial Services;

'web-ext-gambling': Web Extension Gambling; 'web-ext-games': Web Extension Games; 'web-ext-government': Web Extension Government; 'web-ext-health-and-medicine': Web Extension Health and Medicine; 'web-ext-individual-stock-advice-and-tools': Web Extension Individual Stock Advice and Tools; 'web-ext-internet-portals': Web Extension Internet Portals; 'web-ext-job-search': Web Extension Job Search; 'web-ext-local-information': Web Extension Local Information; 'web-ext-malware': Web Extension Malware; 'web-ext-motor-vehicles': Web Extension Motor Vehicles; 'web-ext-music': Web Extension Music; 'web-ext-news': Web Extension News; 'web-ext-p2p': Web Extension P2P; 'web-ext-parked-sites': Web Extension Parked Sites; 'web-ext-proxy-avoid-and-anonymizers': Web Extension Proxy Avoid and Anonymizers; 'web-ext-real-estate': Web Extension Real Estate; 'web-ext-reference-and-research': Web Extension Reference and Research; 'web-ext-search-engines': Web Extension Search Engines; 'web-ext-shopping': Web Extension Shopping; 'web-ext-social-network': Web Extension Social Network; 'web-ext-society': Web Extension Society; 'web-ext-software': Web Extension Software; 'web-ext-sports': Web Extension Sports; 'web-ext-streaming-media': Web Extension Streaming Media; 'web-ext-training-and-tools': Web Extension Training and Tools; 'web-ext-translation': Web Extension Translation; 'web-ext-travel': Web Extension Travel; 'web-ext-web-advertisements': Web Extension Web Advertisements; 'web-ext-web-based-email': Web Extension Web based Email; 'web-ext-web-hosting': Web Extension Web Hosting; 'web-ext-web-service': Web Extension Web Service;

apn-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

apn-prefix

Description: apn-prefix is a **JSON Block**. Please see below for *apn-prefix*

Type: Object

Refernce Object: */axapi/v3/fw/gtp/apn-prefix*

apn-prefix-list

Description Class List (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

echo-timeout

Description echo message timeout (minutes) (echo-timeout (default 2))

Type: number

Range: 1-261

Default: 2

gtp-value

Description 'enable': Enable GTP Inspection;

Type: string

Supported Values: enable

insertion-mode

Description 'monitor': Enable inline view-only mode; 'skip-state-checks': Enable skip stateful checks mode;

Type: string

Supported Values: monitor, skip-state-checks

ne-v4-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

ne-v6-log-periodicity

Description Periodic Logging Frequency(In Minutes)

Type: number

Range: 1-30

network-element

Description: network-element is a **JSON Block**. Please see below for *network-element*

    }
}
```

helper-sessions attributes

idle-timeout

Description helper-sessions idle-timeout time (Idle-timeout in minutes (default: 1 minute))

Type: number

Range: 1-255

Default: 1

limit

Description Limit number of helper-sessions (Limit helper-sessions number)

Type: number

mode

Description 'disable': Disable helper-sessions;

Type: string

Supported Values: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.37.23 fw limit-entry

Rate Limit Information

limit-entry Specification

Type	*Configuration Resource*

Refernce Object: */axapi/v3/fw/radius/server*

server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default);

Type: string

Supported Values: ignore, delete-entry

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI;

Type: string

Supported Values: msisdn, imei, imsi

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (Port number)

Type: number

Range: 1024-65535

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

server_remote

Specification	
Type	*object*

ip-list

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

server_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Table Full Dropped; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-created': RADIUS SMP Created; 'smp-in-rml': RADIUS SMP in RML; 'smp-deleted': RADIUS SMP Deleted; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate

RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop;

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-created, smp-in-rml, smp-deleted, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

2.37.29 fw radius server

Configure system as a RADIUS server

server Specification

server-list

server-list is **JSON List** of *server attributes*

server-list : [

{ *server attributes* },

{ *server attributes* },

...

]

server attributes

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server;

Type: string

Supported Values: enable, disable

Default: enable

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

host

Description IP Address

Type: string

Format: ipv4-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

port-list

Type: List

Refernce Object: */axapi/v3/fw/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable;

Type: string

Supported Values: enable, disable

Default: enable

health-check

Description Health Check (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/fw-server-port-tmpl*

port-number

Description Port Number

Type: number

Range: 1-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-window-check attributes

sampling-enable

Type: List

status

Description 'enable': Enable TCP window check (default); 'disable': Disable TCP window check;

Type: string

Supported Values: enable, disable

Default: enable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'outside-window': packet dropped for outside of tcp window;

Type: string

Supported Values: all, outside-window

stats data

	Counter	Size	Description
	outside-window	8	packet dropped counter for outside of tcp window

2.37.48 fw template

Define a FW template

template Specification

Type	*Intermediate Resource*

GET

/axapi/v3/fw/template

template_attributes

template attributes

logging-list

Type: List

Refernce Object: */axapi/v3/fw/template/logging/{name}*

logging-list

Specification	
Type	*list*
Block object keys	

facility

Description 'kernel': 0: Kernel; 'user': 1: User-level; 'mail': 2: Mail; 'daemon': 3: System daemons; 'security-authorization': 4: Security/authorization; 'syslog': 5: Syslog internal; 'line-printer': 6: Line printer; 'news': 7: Network news; 'uucp': 8: UUCP subsystem; 'cron': 9: Time-related; 'security-authorization-private': 10: Private security/authorization; 'ftp': 11: FTP; 'ntp': 12: NTP; 'audit': 13: Audit; 'alert': 14: Alert; 'clock': 15: Clock-related; 'local0':

16: Local use 0; 'local1': 17: Local use 1; 'local2': 18: Local use 2; 'local3': 19: Local use 3; 'local4': 20: Local use 4; 'local5': 21: Local use 5; 'local6': 22: Local use 6; 'local7': 23: Local use 7;

Type: string

Supported Values: kernel, user, mail, daemon, security-authorization, syslog, line-printer, news, uucp, cron, security-authorization-private, ftp, ntp, audit, alert, clock, local0, local1, local2, local3, local4, local5, local6, local7

Default: local0

format

Description 'ascii': A10 Text logging format (ASCII); 'cef': Common Event Format for logging (default);

Type: string

Supported Values: ascii, cef

Default: cef

include-dest-fqdn

Description Include destination FQDN string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-http

Description: include-http is a **JSON Block**. Please see below for *logging-list_include-http*

Type: Object

include-radius-attribute

Description: include-radius-attribute is a **JSON Block**. Please see below for *logging-list_include-radius-attribute*

Type: Object

log

Description: log is a **JSON Block**. Please see below for *logging-list_log*

Type: Object

merged-style

Description Merge creation and deletion of session logs to one

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

resolution

Description 'seconds': Logging timestamp resolution in seconds (default); '10-milliseconds': Logging timestamp resolution in 10s of milli-seconds;

Type: string

Supported Values: seconds, 10-milliseconds

Default: seconds

rule

Description: rule is a **JSON Block**. Please see below for *logging-list_rule*

Type: Object

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/fw/service-group*

severity

Description 'emergency': 0: Emergency; 'alert': 1: Alert; 'critical': 2: Critical; 'error': 3: Error; 'warning': 4: Warning; 'notice': 5: Notice; 'informational': 6: Informational; 'debug': 7: Debug;

Type: string

Supported Values: emergency, alert, critical, error, warning, notice, informational, debug

Default: informational

source-address

Description: source-address is a **JSON Block**. Please see below for *logging-list_source-address*

Type: Object

Refernce Object: */axapi/v3/fw/template/logging/{name}/source-address*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_source-address

Specification	
Type	*object*

ip

Description Specify source IP address

Type: string

Format: ipv4-address

ipv6

Description Specify source IPv6 address

Type: string

Format: ipv6-address

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

logging-list_include-radius-attribute

Specification	
Type	*object*

attr-cfg

Type: List

framed-ipv6-prefix

Description Include radius attributes for the prefix

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-if-not-existing

Description Configure what string is to be inserted for custom RADIUS attributes

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-quote

Description No quotation marks for RADIUS attributes in logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

zero-in-custom-attr

Description Insert 0000 for standard and custom attributes in log string

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-radius-attribute_attr-cfg

Specification	
Type	*list*
Block object keys	

attr

Description 'imei': Include IMEI; 'imsi': Include IMSI; 'msisdn': Include MSISDN; 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

attr-event

Description 'http-requests': Include in HTTP request logs; 'sessions': Include in session logs;

Type: string

Supported Values: http-requests, sessions, limit-policy

logging-list_rule

Specification	
Type	*object*

rule-http-requests

Description: rule-http-requests is a **JSON Block**. Please see below for *logging-list_rule_rule-http-requests*

Type: Object

logging-list_rule_rule-http-requests

Specification	
Type	*object*

dest-port

Type: List

disable-sequence-check

Description Disable http packet sequence check and don't drop out of order packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

include-all-headers

Description Include all configured headers despite of absence in HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-every-http-request

Description Log every HTTP request in an HTTP 1.1 session (Default: Log the first HTTP request in a session)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-url-len

Description Max length of URL log (Max URL length (Default: 100 char))

Type: number

Range: 100-1000

Default: 128

logging-list_rule_rule-http-requests_dest-port

Specification	
Type	*list*
Block object keys	

dest-port-number

Description

Type: number

Range: 1-65535

include-byte-count

Description Include the byte count of HTTP Request/Response in FW session deletion logs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-http

Specification	
Type	*object*

file-extension

Description HTTP file extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

header-cfg

Type: List

l4-session-info

Description Log the L4 session information of the HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

method

Description Log the HTTP Request Method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-number

Description HTTP Request Number

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging-list_include-http_header-cfg

Specification	
Type	*list*
Block object keys	

custom-header-name

Description Header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

custom-max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

http-header

Description 'cookie': Log HTTP Cookie Header; 'referer': Log HTTP Referer Header; 'user-agent': Log HTTP User-Agent Header; 'header1': Log HTTP Header 1; 'header2': Log HTTP Header 2; 'header3': Log HTTP Header 3;

Type: string

Supported Values: cookie, referer, user-agent, header1, header2, header3

max-length

Description Max length for a HTTP request log (Max header length (Default: 100 char))

Type: number

Range: 100-1000

Default: 100

logging-list_log

Specification	
Type	*object*

http-requests

Description 'host': Log the HTTP Host Header; 'url': Log the HTTP Request URL;

Type: string

Supported Values: host, url

```

glid-list

glid-list is **JSON List** of *glid attributes*

glid-list : [

{ *glid attributes* },

{ *glid attributes* },

...

]

glid attributes

action-value

Description 'drop': Silently Drop the new connection / new packet when it exceeds limit; 'dns-cache-disable': Disable dns cache when it exceeds limit; 'dns-cache-enable': Enable dns cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: drop, dns-cache-disable, dns-cache-enable, forward, reset

conn-limit

Description Connection Limit for the GLID

Type: number

Range: 1-1048575

conn-rate-limit

Description Connection rate Limit for the GLID

Type: number

Range: 1-2147483647

conn-rate-limit-interval

Description

Type: number

Range: 1-65535

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

dns64

Description: dns64 is a **JSON Block**. Please see below for *dns64*

Type: Object

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

num

Description Global Limit ID

Type: number

Range: 1-1023

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit

Type: number

Range: 1-1048575

request-rate-limit

Description Request rate limit

Type: number

Range: 1-4294967295

request-rate-limit-interval

Description Number of 100ms

Type: number

Range: 1-65535

use-nat-pool

Description Use NAT pool specified to do reverse NAT for class list members bound to the lid

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

dns

Specification	
Type	*object*

action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

2.39 glm

Objects:

2.39.1 glm

Set GLM Connection values

allocate-bandwidth

Description Enter the requested bandwidth in Mbps for Capacity Pool

Type: number

Range: 2-204800

appliance-name

Description Helpful identifier for this appliance

Type: string

Maximum Length: 60 characters

Maximum Length: 1 characters

burst

Description Enable Burst License

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

check-expiration

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

create-license-request

Description: create-license-request is a **JSON Block**. Please see below for *create-license-request*

Type: Object

Refernce Object: */axapi/v3/glm/create-license-request*

enable-requests

Description Enable connection to the GLM

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enterprise

Description Enter the ELM hostname, IP or [IPV6]

Type: string

Format: string-rlx

Maximum Length: 65 characters

Maximum Length: 4 characters

enterprise-request-type

Description 'fqdn': TLS verified with FQDN; 'self-signed': TLS verified with self signed certificate(Default); 'self-signed-pull-cert': Request and use self signed certificate;

Type: string

Supported Values: fqdn, self-signed, self-signed-pull-cert

host

Description Configure GLM host default is glm.a10networks.com

Type: string

Maximum Length: 60 characters

Maximum Length: 4 characters

interval

Description Enter the desired ping interval in hours

Type: number

Range: 1-8760

new-license

Description: new-license is a **JSON Block**. Please see below for *new-license*

Type: Object

Refernce Object: */axapi/v3/glm/new-license*

port

Description License request port (default 443)

Type: number

Range: 1-65535

proxy-server

Description: proxy-server is a **JSON Block**. Please see below for *proxy-server*

Type: Object

Refernce Object: */axapi/v3/glm/proxy-server*

send

Description: send is a **JSON Block**. Please see below for *send*

Type: Object

Refernce Object: */axapi/v3/glm/send*

thunder-capacity-license

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

token

Description License entitlement token

Type: string

Maximum Length: 60 characters

Maximum Length: 8 characters

use-mgmt-port

Description Use management port to connect to GLM

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

create-license-request

Specification	
Type	*object*

create-license-request

Description Create a GLM trial or license request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

new-license

Specification	
Type	*object*

account-name

Description Account Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

country

Description Country

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

existing-org

Description Use existing account with organization ID

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

existing-user

Description Use an existing account with email and password

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

first-name

Description First Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

glm-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

last-name

Description Last Name

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

name

Description License name (Configure license name)

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-email

Description GLM email

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-password

Description GLM password

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

new-user

Description Create a new account

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

org-id

Description GLM organization id

Type: number

Range: 1-899760

phone

Description Phone

Type: string

Format: string-rlx

Maximum Length: 99 characters

Maximum Length: 1 characters

type

Description 'webroot': webroot; 'webroot_trial': webroot_trial; 'webroot_ti': webroot_ti; 'webroot_ti_trial': webroot_ti_trial; 'qosmos': qosmos; 'qosmos_trial': qosmos_trial; 'ipsec_vpn': ipsec_vpn;

Type: string

Supported Values: webroot, webroot_trial, webroot_ti, webroot_ti_trial, qosmos, qosmos_trial, ipsec_vpn

send

Specification	
Type	*object*

license-request

Description Do a single GLM license retrieval

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-server

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Proxy server port

Type: number

Range: 1-65535

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.39.2 glm create-license-request

Create a GLM trial or license request

create-license-request Specification

Type	*Configuration Resource*
Element Name	create-license-request

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

host

Description Proxy server hostname or IP address

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

password

Description Password for proxy authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Proxy server port

Type: number

Range: 1-65535

secret-string

Description password value

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Username for proxy authentication

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40 gslb

Objects:

Type	*object*

auto-detect

Description Automatically detect SLB Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-list

Type: List

Refernce Object: */axapi/v3/gslb/protocol/enable/{type}*

limit

Description: limit is a **JSON Block**. Please see below for *protocol_limit*

Type: Object

Refernce Object: */axapi/v3/gslb/protocol/limit*

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ping-site

Description name of site or ip address to ping

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

secure

Description: secure is a **JSON Block**. Please see below for *protocol_secure*

Type: Object

Refernce Object: */axapi/v3/gslb/protocol/secure*

status-interval

Description Specify GSLB Message Protocol update period (The GSLB Protocol update interval (seconds), default is 30)

Type: number

Range: 1-1800

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and use-mgmt-port-for-all-partitions are mutually exclusive

use-mgmt-port-for-all-partitions

Description Use management port for connections in all L3v Partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port-for-all-partitions and use-mgmt-port are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_secure

Specification	
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure (default); 'enable-fallback': Fall back to non-secure if fail;

Type: string

Supported Values: enable, disable, enable-fallback

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_limit

Specification	
Type	*object*

ardt-query

Description Query Messages of Active RDT, default is 200 (Number)

Type: number

Range: 0-1000000

Default: 200

ardt-response

Description Response Messages of Active RDT, default is 1000 (Number)

Type: number

Range: 0-1000000

Default: 1000

ardt-session

Description Sessions of Active RDT, default is 32768 (Number)

Type: number

Range: 0-1000000

Default: 32768

conn-response

Description Response Messages of Connection Load, default is no limit (Number)

Type: number

Range: 0-1000000

Default: 0

message

Description Amount of Messages, default is 10000 (Number)

Type: number

Range: 0-1000000

Default: 10000

response

Description Amount of Response Messages, default is 3600 (Number)

Type: number

Range: 0-1000000

Default: 3600

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

protocol_enable-list

Specification	
Type	*list*
Block object keys	

type

Description 'controller': Enable/Disable GSLB protocol as GSLB controller; 'device': Enable/Disable GSLB protocol as site device;

Type: string

Supported Values: controller, device

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	
Type	*object*

csv-list

Type: List

Refernce Object: */axapi/v3/gslb/template/csv/{csv-name}*

Specification	
Type	*list*
Block object keys	

auth-key

Description Specify authentication key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

auth-proto

Description 'sha': SHA; 'md5': MD5;

Type: string

Supported Values: sha, md5

Default: md5

community

Description Specify community for version 2c (Community name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-engine-id

Description Specify context engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

context-name

Description Specify context name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

host

Description Specify host (Host name or ip address)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

interface

Description Specify Interface ID

Type: number

Range: 0-2147483647

interval

Description Specify interval, default is 3 (Interval, unit: second, default is 3)

Type: number

Range: 1-999

Default: 3

oid

Description Specify OID

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

port

Description Specify port, default is 161 (Port Number, default is 161)

Type: number

Range: 1-65535

Default: 161

priv-key

Description Specify privacy key (Specify key)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

priv-proto

Description 'aes': AES; 'des': DES;

Type: string

Supported Values: aes, des

Default: des

security-engine-id

Description Specify security engine ID

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

security-level

Description 'no-auth': No authentication; 'auth-no-priv': Authentication, but no privacy; 'auth-priv': Authentication and privacy;

Type: string

Supported Values: no-auth, auth-no-priv, auth-priv

Default: no-auth

snmp-name

Description Specify name of snmp template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

username

Description Specify username (User name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description 'v1': Version 1; 'v2c': Version 2c; 'v3': Version 3;

Type: string

Supported Values: v1, v2c, v3

Default: v3

template_csv-list

Specification	
Type	*list*
Block object keys	

csv-name

Description Specify name of csv template

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

delim-char

Description enter a delimiter character, default ","

Type: string

Format: string-rlx

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: ,

Mutual Exclusion: delim-char and delim-num are mutually exclusive

delim-num

Description enter a delimiter number, default 44 (",")

Type: number

Range: 0-255

Default: 44

Mutual Exclusion: delim-num and delim-char are mutually exclusive

ipv6-enable

Description Support IPv6 IP ranges

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multiple-fields

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template_csv-list_multiple-fields

Specification	
Type	*list*
Block object keys	

csv-type

Description 'ip-from': Beginning address of IP range or subnet; 'ip-to-mask': Ending address of IP range or Mask; 'continent': Continent; 'country': Country; 'state': State or province; 'city': City;

Type: string

Supported Values: ip-from, ip-to-mask, continent, country, state, city

field

Description Field index number (Index of Field)

Type: number

Range: 1-64

ip-list-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list

Specification	
Type	*list*
Block object keys	

dependency-site

Description Dependency on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-site-list

Type: List

member

Type: List

persistent-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

persistent-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

persistent-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

persistent-site

Description Persistent based on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description Specify Service Group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-group-list_disable-site-list

Specification	
Type	*list*
Block object keys	

disable-site

Description Site name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/site*

service-group-list_member

Specification	
Type	*list*
Block object keys	

member-name

Description Service name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

service-port

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	
Type	*object*

age-interval

Description Interval to age runtime statistics. 0: never age, default is 10 (Time, unit: sec, default is 10)

Type: number

Range: 0-120

Default: 10

geo-location-iana

Description Load built-in IANA table

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

gslb-group

Description GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-load-file-list

Type: List

gslb-service-ip

Description GSLB Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-site

Description GSLB Site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hostname

Description System's Network Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-ttl

Description TTL of IP packets, default is 0 (IP TTL value, default is 0)

Type: number

Range: 0-255

Default: 0

module

Description Specify Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-device

Description SLB Device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-server

Description SLB Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-virtual-server

Description SLB Virtual Server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wait

Description Disable GSLB until timeout if system is not ready (Time, unit: sec, default is 0)

Type: number

Range: 0-16384

Default: 0

system_gslb-load-file-list

Specification	
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/template/csv*

secure-attributes

Specification	
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure; 'enable-fallback': Fall back to non-secure if fail; 'use-global-behavior': Follow global configuration under gslb protocol (default);

Type: string

Supported Values: enable, disable, enable-fallback, use-global-behavior

Default: use-global-behavior

gslb-cert

Description Certificate for Secure GSLB (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

gslb-key

Description Private Key for secure gslb signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list

Specification	
Type	*list*
Block object keys	

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_geo-locn-multiple-addresses

Specification	
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

policy-list

Specification	
Type	*list*
Block object keys	

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *policy-list_active-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/active-rdt*

active-servers-enable

Description Enable Select Service-IP with the highest number of active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-servers-fail-break

Description Break when no active server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-enable

Description Enable admin ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: admin-ip-top-only and ordered-ip-top-only are mutually exclusive

admin-preference

Description Select Service-IP for the device having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alias-admin-preference

Description Select alias name having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

amount-first

Description Select record based on the amount of available service-ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-map

Description: auto-map is a **JSON Block**. Please see below for *policy-list_auto-map*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/auto-map*

bw-cost-enable

Description Enable bw cost

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-cost-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity

Description: capacity is a **JSON Block**. Please see below for *policy-list_capacity*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/capacity*

connection-load

Description: connection-load is a **JSON Block**. Please see below for *policy-list_connection-load*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/connection-load*

dns

Description: dns is a **JSON Block**. Please see below for *policy-list_dns*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/dns*

edns

Description: edns is a **JSON Block**. Please see below for *policy-list_edns*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/edns*

geo-location-list

Type: List

Refernce Object: */axapi/v3/gslb/policy/{name}/geo-location/{name}*

geo-location-match

Description: geo-location-match is a **JSON Block**. Please see below for *policy-list_geo-location-match*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/geo-location-match*

geographic

Description Select Service-IP by geographic

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check

Description Select Service-IP by health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check-preference-enable

Description Check health preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-preference-top

Description Only keep top n

Type: number

Range: 1-128

ip-list

Description Specify IP List (IP List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/ip-list*

least-response

Description Least response selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-fail-break

Description Break if no valid Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-force-check

Description Always check Service-IP for all enabled metrics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-order

Description Specify order of metric

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-type

Description

Type: string

Format: enum-list

name

Description Specify policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

num-session-enable

Description Enable Select Service-IP for device having maximum number of available sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

num-session-tolerance

Description The difference between the available sessions, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

ordered-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ordered-ip-top-only and admin-ip-top-only are mutually exclusive

round-robin

Description Round robin selection, enabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weighted-alias

Description Select alias name by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-enable

Description Enable Select Service-IP by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-enable

Description Enable Select Service-IP by weighted site preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

policy-list_auto-map

Specification	
Type	*object*

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_edns

Specification	
Type	*object*

client-subnet-geographic

Description Use client subnet for geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_active-rdt

Specification	
Type	*object*

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_capacity

Specification	
Type	*object*

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_geo-location-match

Specification	
Type	*object*

geo-type-overlap

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

match-first

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

Default: global

overlap

Description Enable overlap mode to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_dns

Specification	
Type	*object*

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32 default /32

Type: string

Format: ipv4-netmask-brief

Default: /32

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_dns_ipv6

Specification	
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

policy-list_dns_block-value

Specification	
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

policy-list_dns_proxy-block-port-range-list

Specification	
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

policy-list_geo-location-list

Specification	
Type	*list*
Block object keys	

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_geo-location-list_ip-multiple-fields

Specification	
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

policy-list_geo-location-list_ipv6-multiple-fields

Specification	
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

policy-list_connection-load

Specification	
Type	*object*

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list

Specification	
Type	*list*
Block object keys	

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *site-list_active-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/active-rdt*

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

bw-cost

Description Specify cost of band-width

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

controller

Description Specify the local controller for the GSLB site (Specify the hostname of the local controller)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

disable

Description Disable all servers in the GSLB site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

easy-rdt

Description: easy-rdt is a **JSON Block**. Please see below for *site-list_easy-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/easy-rdt*

ip-server-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/ip-server/{ip-server-name}*

limit

Description Specify the limit for bandwidth, default is unlimited

Type: number

Range: 0-2147483647

multiple-geo-locations

Type: List

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proto-aging-time

Description Specify GSLB Protocol aging time

Type: number

Range: 0-65535

Default: 0

site-name

Description Specify GSLB site name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

slb-dev-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}*

template

Description Specify template to collect site information (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/template/snmp*

threshold

Description Specify the threshold for limit

Type: number

Range: 0-100

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify a weight for the GSLB site (Weight, default is 1)

Type: number

Range: 1-100

Default: 1

site-list_ip-server-list

Specification	
Type	*list*
Block object keys	

ip-server-name

Description Specify the real server name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list

Specification	
Type	*list*
Block object keys	

admin-preference

Description Specify administrative preference (Specify admin-preference value,default is 100)

Type: number

Range: 0-255

Default: 100

auto-detect

Description 'ip': Service IP only; 'port': Service Port only; 'ip-and-port': Both service IP and service port; 'disabled': disable auto-detect;

Type: string

Supported Values: ip, port, ip-and-port, disabled

Default: ip-and-port

auto-map

Description Enable DNS Auto Mapping

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

client-ip

Description Specify client IP address

Type: string

Format: ipv4-address

device-name

Description Specify SLB device name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

gateway-ip-addr

Description IP address

Type: string

Format: ipv4-address

health-check-action

Description 'health-check': Enable health Check; 'health-check-disable': Disable health check;

Type: string

Supported Values: health-check, health-check-disable

Default: health-check

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description IPv6 address

Type: string

Format: ipv6-address

max-client

Description Specify maximum number of clients, default is 32768

Type: number

Range: 1-2147483647

Default: 32768

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

probe-timer

Description

Type: number

Range: 1-255

proto-aging-fast

Description Fast GSLB Protocol aging

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

proto-aging-time

Description Specify GSLB Protocol aging time, default is 60

Type: number

Range: 1-65535

Default: 60

proto-compatible

Description Run GSLB Protocol in compatible mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rdt-type

Description 'rdt': rdt; 'site-rdt': site-rdt;

Type: string

Supported Values: rdt, site-rdt

rdt-value

Description Specify Round-delay-time

Type: number

Range: 1-65535

session-number

Description

Type: number

Range: 0-16777214

session-utilization

Description

Type: number

Range: 1-100

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-server

Description: vip-server is a **JSON Block**. Please see below for *site-list_slb-dev-list_vip-server*

Type: Object

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server*

site-list_slb-dev-list_vip-server

Specification	
Type	*object*

vip-server-name-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-name/{vip-name}*

vip-server-v4-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-v4/{ipv4}*

vip-server-v6-list

Type: List

Refernce Object: */axapi/v3/gslb/site/{site-name}/slb-dev/{device-name}/vip-server/vip-server-v6/{ipv6}*

site-list_slb-dev-list_vip-server_vip-server-v4-list

Specification	
Type	*list*
Block object keys	

ipv4

Description Specify IP address

Type: string

Format: ipv4-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list_vip-server_vip-server-v4-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits

site-list_slb-dev-list_vip-server_vip-server-v6-list

Specification	
Type	*list*
Block object keys	

ipv6

Description Specify IP address (IPv6 address)

Type: string

Format: ipv6-address

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_slb-dev-list_vip-server_vip-server-v6-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits

site-list_slb-dev-list_vip-server_vip-server-name-list

Specification	
Type	*list*
Block object keys	

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-name

Description Specify a VIP name for the SLB device

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/service-ip*

site-list_slb-dev-list_vip-server_vip-server-name-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'dev_vip_hits': Number of times the service-ip was selected;

Type: string

Supported Values: all, dev_vip_hits

site-list_multiple-geo-locations

Specification	
Type	*list*
Block object keys	

geo-location

Description Specify the geographic location of the GSLB site (Specify geo-location for this site)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

site-list_easy-rdt

Specification	
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

site-list_active-rdt

Specification	
Type	*object*

aging-time

Description Aging Time, Unit: min, default is 10

Type: number

Range: 1-15360

Default: 10

bind-geoloc

Description Bind RDT to geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-count

Description Ignore count if RDT is out of range, default is 5

Type: number

Range: 0-15

Default: 5

ipv6-mask

Description Client IPv6 subnet mask, default is 128

Type: number

Range: 1-128

Default: 128

limit

Description Limit of valid RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

mask

Description Client IP subnet mask, default is 32

Type: string

Format: ipv4-netmask-brief

Default: /32

overlap

Description Enable overlap for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

range-factor

Description Factor of RDT Range, default is 25 (Range Factor of Smooth RDT)

Type: number

Range: 0-1000

Default: 25

smooth-factor

Description Factor of Smooth RDT, default is 10

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list-list

Specification	
Type	*list*
Block object keys	

gslb-ip-list-addr-list

Type: List

gslb-ip-list-filename

Description Load IP List file (IP List filename)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

gslb-ip-list-obj-name

Description Specify IP List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-list-list_gslb-ip-list-addr-list

Specification	
Type	*list*
Block object keys	

id

Description ID Number

Type: number

Range: 0-31

ip

Description Specify IP address

Type: string

Format: ipv4-address

ip-mask

Description IP mask

Type: string

Format: ipv4-netmask

dns

Specification	
Type	*object*

action

Description 'none': No action (default); 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: none, drop, reject, ignore

Default: none

logging

Description 'none': No logging (default); 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

Default: none

sampling-enable

Type: List

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-query': Total number of DNS queries received; 'total-response': Total number of DNS replies sent to clients; 'bad-packet-query': Number of queries with incorrect data length; 'bad-packet-response': Number of replies with incorrect data length; 'bad-header-query': Number of queries with incorrect header; 'bad-header-response': Number of replies with incorrect header; 'bad-format-query': Number of queries with incorrect format; 'bad-format-response': Number of replies with incorrect format; 'bad-service-query': Number of queries with unknown service; 'bad-service-response': Number of replies with unknown service; 'bad-class-query': Number of queries with incorrect class; 'bad-class-response': Number of replies with incorrect class; 'bad-type-query': Number of queries with incorrect type; 'bad-type-response': Number of replies with incorrect type; 'no_answer': Number of replies with unknown server IP;

Type: string

Supported Values: all, total-query, total-response, bad-packet-query, bad-packet-response, bad-header-query, bad-header-response, bad-format-query, bad-format-response, bad-service-query, bad-service-response, bad-class-query, bad-class-response, bad-type-query, bad-type-response, no_answer, metric_health_check, metric_weighted_ip, metric_weighted_site, metric_capacity, metric_active_server, metric_easy_rdt, metric_active_rdt, metric_geographic,

metric_connection_load, metric_number_of_sessions, metric_active_weight, metric_admin_preference, metric_bandwidth_quality, metric_bandwidth_cost, metric_user, metric_least_reponse, metric_admin_ip, metric_round_robin

geolocation-file

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list

Specification	
Type	*list*
Block object keys	

auto-map-learn

Description IP Address learned from other controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-primary

Description Primary Controller's IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-smart

Description Choose Best IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

config-anywhere

Description Every member can do config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-merge

Description Merge old master's config when new one take over

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-save

Description Accept config-save message from master

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

data-interface

Description Data Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

dns-discover

Description Discover member via DNS Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

enable

Description Join GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

learn

Description Learn neighbour information from other controllers

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

mgmt-interface

Description Management Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

name

Description Specify Group domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

primary-ipv6-list

Type: List

primary-list

Type: List

priority

Description Specify Local Priority, default is 100

Type: number

Range: 1-255

Default: 100

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

standalone

Description Run GSLB Group in standalone mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suffix

Description Set DNS Suffix (Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list_primary-ipv6-list

Specification	
Type	*list*
Block object keys	

primary-ipv6

Description Specify Primary controller's IP address

Type: string

Format: ipv6-address

group-list_primary-list

Specification	
Type	*list*
Block object keys	

primary

Description Specify Primary controller's IP address

Type: string

Format: ipv4-address

zone-list

Specification	
Type	*list*
Block object keys	

disable

Description Disable all services in the GSLB zone

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-mx-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/dns-mx-record/{mx-name}*

dns-ns-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/dns-ns-record/{ns-name}*

dns-soa-record

Description: dns-soa-record is a **JSON Block**. Please see below for *zone-list_dns-soa-record*

Type: Object

name

Description Specify the name for the DNS zone

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Specify the policy for this zone (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

sampling-enable

Type: List

service-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}*

template

Description: template is a **JSON Block**. Please see below for *zone-list_template*

Type: Object

ttl

Description Specify the zone ttl value (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-ns-record-list

Specification	
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-ns-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_dns-mx-record-list

Specification	
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_dns-mx-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Total Number of DNS queries received for the zone; 'sent-response': Total Number of DNS replies sent to clients for the zone; 'proxy-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the zone; 'cache-mode-response': Total Number of cached DNS replies sent to clients by the ACOS device for the zone. (This statistic applies only if the DNS cac; 'server-mode-response': Total Number of DNS replies sent to clients by the ACOS device as a DNS server for the zone. (This statistic applies only if th; 'sticky-mode-response': Total Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies on; 'backup-mode-response': Total Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response

zone-list_template

Specification	
Type	*object*

dnssec

Description Specify DNSSEC template (Specify template name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

zone-list_dns-soa-record

Specification	
Type	*object*

ex-expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

ex-mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ex-refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

ex-retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

ex-serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

ex-soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

expire

Description Specify Expire Time Interval, default is 1209600

Type: number

Range: 0-2147483647

Default: 1209600

external

Description Specify External SOA Record (DNS Server Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

mail

Description Mailbox

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

refresh

Description Specify Refresh Time Interval, default is 3600

Type: number

Range: 0-2147483647

Default: 3600

retry

Description Specify Retry Time Interval, default is 900

Type: number

Range: 0-2147483647

Default: 900

serial

Description Specify Serial Number, default is Current Time (Time Interval)

Type: number

Range: 0-2147483647

soa-name

Description DNS Server Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

soa-ttl

Description Specify Negative caching TTL, default is Zone TTL

Type: number

Range: 0-2147483647

zone-list_service-list

Specification	
Type	*list*
Block object keys	

action

Description 'drop': Drop query; 'forward': Forward packet; 'ignore': Send empty response; 'reject': Send refuse response;

Type: string

Supported Values: drop, forward, ignore, reject

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record

Description: dns-a-record is a **JSON Block**. Please see below for *zone-list_service-list_dns-a-record*

Type: Object

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record*

dns-cname-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-cname-record/{alias-name}*

dns-mx-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-mx-record/{mx-name}*

dns-naptr-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-naptr-record/{naptr-target}+{service-proto}+{flag}*

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-ns-record/{ns-name}*

dns-ptr-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-ptr-record/{ptr-name}*

dns-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-record/{type}*

dns-srv-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-srv-record/{srv-name}+{port}*

dns-txt-record-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-txt-record/{record-name}*

forward-type

Description 'both': Forward both query and response; 'query': Forward query; 'response': Forward response;

Type: string

Supported Values: both, query, response

geo-location-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/geo-location/{geo-name}*

health-check-gateway

Description 'enable': Enable Gateway Status Check; 'disable': Disable Gateway Status Check;

Type: string

Supported Values: enable, disable

Default: enable

health-check-port

Type: List

policy

Description Specify policy for this service (Specify policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

service-name

Description Specify the service name for the zone, * for wildcard

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default:

service-port

Description Port number of the service

Type: number

Range: 0-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-a-record

Specification	
Type	*object*

dns-a-record-ipv4-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv4/{dns-a-record-ip}*

dns-a-record-ipv6-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-ipv6/{dns-a-record-ipv6}*

dns-a-record-srv-list

Type: List

Refernce Object: */axapi/v3/gslb/zone/{name}/service/{service-port}+{service-name}/dns-a-record/dns-a-record-srv/{svrname}*

zone-list_service-list_dns-a-record_dns-a-record-ipv6-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ipv6

Description IPV6 address

Type: string

Format: ipv6-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_dns-a-record_dns-a-record-ipv4-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-a-record-ip

Description Specify IP address

Type: string

Format: ipv4-address

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_dns-a-record_dns-a-record-srv-list

Specification	
Type	*list*
Block object keys	

admin-ip

Description Specify admin priority of Service-IP (Specify the priority)

Type: number

Range: 1-255

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

as-replace

Description Return this Service-IP when enable ip-replace

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable this Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-resp

Description Don't use this Service-IP as DNS response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Return this Service-IP in DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svrname

Description Specify name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

ttl

Description Specify TTL for Service-IP

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify weight for Service-IP (Weight value)

Type: number

Range: 1-100

zone-list_service-list_health-check-port

Specification	
Type	*list*
Block object keys	

health-check-port

Description Check Related Port Status (Port Number)

Type: number

Range: 0-65534

zone-list_service-list_dns-txt-record-list

Specification	
Type	*list*
Block object keys	

record-name

Description Specify the Object Name for TXT Data

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

txt-data

Description Specify TXT Data

Type: string

Format: string-rlx

Maximum Length: 1000 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-txt-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-mx-record-list

Specification	
Type	*list*
Block object keys	

mx-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-mx-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-record-list

Specification	
Type	*list*
Block object keys	

data

Description Specify DNS Data

Type: string

Format: string-rlx

Maximum Length: 512 characters

Maximum Length: 1 characters

type

Description Specify DNS Type

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ns-record-list

Specification	
Type	*list*
Block object keys	

ns-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ns-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'received-query': Number of DNS queries received for the service; 'sent-response': Number of DNS replies sent to clients for the service; 'proxy-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS proxy for the service; 'cache-mode-response': Number of cached DNS replies sent to clients by the ACOS device for the service. (This statistic applies only if the DNS cache; 'server-mode-response': Number of DNS replies sent to clients by the ACOS device as a DNS server for the service. (This statistic applies only if the D; 'sticky-mode-response': Number of DNS replies sent to clients by the ACOS device to keep the clients on the same site. (This statistic applies only if; 'backup-mode-response': help Number of DNS replies sent to clients by the ACOS device in backup mode;

Type: string

Supported Values: all, received-query, sent-response, proxy-mode-response, cache-mode-response, server-mode-response, sticky-mode-response, backup-mode-response

zone-list_service-list_dns-srv-record-list

Specification	
Type	*list*
Block object keys	

port

Description Specify Port (Port Number)

Type: number

Range: 0-65534

priority

Description Specify Priority

Type: number

Range: 0-65535

sampling-enable

Type: List

srv-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 10

Type: number

Range: 0-65535

Default: 10

zone-list_service-list_dns-srv-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-ptr-record-list

Specification	
Type	*list*
Block object keys	

ptr-name

Description Specify Domain Name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-ptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the record has been used;

Type: string

Supported Values: all, hits

zone-list_service-list_dns-cname-record-list

Specification	
Type	*list*
Block object keys	

admin-preference

Description Specify Administrative Preference, default is 100

Type: number

Range: 0-255

Default: 100

alias-name

Description Specify the alias name

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

as-backup

Description As backup when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Specify Weight, default is 1

Type: number

Range: 1-100

Default: 1

zone-list_service-list_dns-cname-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cname-hits': Number of times the CNAME has been used;

Type: string

Supported Values: all, cname-hits

zone-list_service-list_geo-location-list

Specification	
Type	*list*
Block object keys	

action

Description Action for this geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: action and policy are mutually exclusive

action-type

Description 'allow': Allow query from this geo-location; 'drop': Drop query from this geo-location; 'forward': Forward packet for this geo-location; 'ignore': Send empty response to this geo-location; 'reject': Send refuse response to this geo-location;

Type: string

Supported Values: allow, drop, forward, ignore, reject

alias

Type: List

forward-type

Description 'both': Forward both query and response; 'query': Forward query from this geo-location; 'response': Forward response to this geo-location;

Type: string

Supported Values: both, query, response

geo-name

Description Specify the geo-location

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

policy

Description Policy for this geo-location (Specify the policy name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: policy and action are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_geo-location-list_alias

Specification	
Type	*list*
Block object keys	

alias

Description Send CNAME response for this geo-location (Specify a CNAME record)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

zone-list_service-list_dns-naptr-record-list

Specification	
Type	*list*
Block object keys	

flag

Description Specify the flag (e.g., a, s). Default is empty flag

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default:

naptr-target

Description Specify the replacement or regular expression

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

order

Description Specify Order

Type: number

Range: 0-65535

preference

Description Specify Preference

Type: number

Range: 0-65535

regexp

Description Return the regular expression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

service-proto

Description Specify Service and Protocol

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ttl

Description Specify TTL

Type: number

Range: 0-2147483647

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone-list_service-list_dns-naptr-record-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'naptr-hits': Number of times the NAPTR has been used;

Type: string

Supported Values: all, naptr-hits

group-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	
Type	*object*

domain

Description Specify Query Domain (Specify Domain Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

icmp

Description Using ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify Query Interval, unit: second, default is 1

Type: number

Range: 1-16383

Default: 1

port

Description Specify local port to send probe packet, default is 0 (no port)

Type: number

Range: 0-65535

Default: 0

retry

Description Specify Retry Count, default is 3

Type: number

Range: 0-16

Default: 3

sleep

Description Specify Sleep Time when query fail, unit: second, default is 3

Type: number

Range: 1-300

Default: 3

timeout

Description Specify Query Timeout, unit: msec, default is 3000

Type: number

Range: 1-16383

Default: 3000

track

Description Specify Tracking Time, unit: second, default is 60

Type: number

Range: 3-16383

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this GSLB server; 'disable': Disable this GSLB server;

Type: string

Supported Values: enable, disable

Default: enable

external-ip

Description External IP address for NAT

Type: string

Format: ipv4-address

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-address

Description IP address

Type: string

Format: ipv4-address

ipv6

Description IPv6 address Mapping

Type: string

Format: ipv6-address

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

node-name

Description Service-IP Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Type: List

Refernce Object: */axapi/v3/gslb/service-ip/{node-name}/port/{port-num}+{port-proto}*

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list_port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': Enable this GSLB server port; 'disable': Disable this GSLB server port;

Type: string

Supported Values: enable, disable

Default: enable

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check Monitor (Monitor Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check health-check-follow-port and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable Health Check Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable health-check and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port health-check and health-check-disable are mutually exclusive

health-check-protocol-disable

Description Disable GSLB Protocol Health Monitor

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-num

Description Port Number

Type: number

Range: 0-65534

port-proto

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

service-ip-list_port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'active': Active Servers; 'current': Current Connections;

Type: string

Supported Values: all, active, current

service-ip-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of times the service IP has been selected; 'recent': Recent hits;

Type: string

Supported Values: all, hits, recent

active-rdt attributes

domain

Description Specify Query Domain (Specify Domain Name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

icmp

Description Using ICMP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Specify Query Interval, unit: second, default is 1

Type: number

Range: 1-16383

Default: 1

port

Description Specify local port to send probe packet, default is 0 (no port)

Type: number

Range: 0-65535

Default: 0

retry

Description Specify Retry Count, default is 3

Type: number

Range: 0-16

Default: 3

sleep

Description Specify Sleep Time when query fail, unit: second, default is 3

Type: number

Range: 1-300

Default: 3

timeout

Description Specify Query Timeout, unit: msec, default is 3000

Type: number

Range: 1-16383

Default: 3000

track

Description Specify Tracking Time, unit: second, default is 60

Type: number

Range: 3-16383

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list is **JSON List** of *geo-location attributes*

geo-location-list : [

{ *geo-location attributes* },

{ *geo-location attributes* },

...

]

geo-location attributes

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-locn-multiple-addresses

Specification	
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

2.40.5 gslb group

GSLB Group

group Specification

Type	*Collection*
Object Key(s)	*name*

```

group-list

group-list is **JSON List** of *group attributes*

group-list : [

{ *group attributes* },

{ *group attributes* },

...

]

group attributes

auto-map-learn

Description IP Address learned from other controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-primary

Description Primary Controller's IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

auto-map-smart

Description Choose Best IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

config-anywhere

Description Every member can do config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-merge

Description Merge old master's config when new one take over

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

config-save

Description Accept config-save message from master

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

data-interface

Description Data Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

dns-discover

Description Discover member via DNS Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

enable

Description Join GSLB Group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

learn

Description Learn neighbour information from other controllers

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

mgmt-interface

Description Management Interface IP Address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

name

Description Specify Group domain name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

primary-ipv6-list

Type: List

primary-list

Type: List

priority

Description Specify Local Priority, default is 100

Type: number

Range: 1-255

Default: 100

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN (Default Query type); 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

standalone

Description Run GSLB Group in standalone mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

suffix

Description Set DNS Suffix (Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

primary-ipv6-list

Specification	
Type	*list*
Block object keys	

primary-ipv6

Description Specify Primary controller's IP address

Type: string

Format: ipv6-address

primary-list

Specification	
Type	*list*
Block object keys	

primary

Description Specify Primary controller's IP address

Type: string

Format: ipv4-address

2.40.6 gslb ip-list

Specify a IP List

policy attributes

active-rdt

Description: active-rdt is a **JSON Block**. Please see below for *active-rdt*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/active-rdt*

active-servers-enable

Description Enable Select Service-IP with the highest number of active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-servers-fail-break

Description Break when no active server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-enable

Description Enable admin ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

admin-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: admin-ip-top-only and ordered-ip-top-only are mutually exclusive

admin-preference

Description Select Service-IP for the device having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alias-admin-preference

Description Select alias name having maximum admin preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

amount-first

Description Select record based on the amount of available service-ip

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-map

Description: auto-map is a **JSON Block**. Please see below for *auto-map*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/auto-map*

bw-cost-enable

Description Enable bw cost

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-cost-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity

Description: capacity is a **JSON Block**. Please see below for *capacity*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/capacity*

connection-load

Description: connection-load is a **JSON Block**. Please see below for *connection-load*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/connection-load*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/dns*

edns

Description: edns is a **JSON Block**. Please see below for *edns*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/edns*

geo-location-list

Type: List

Refernce Object: */axapi/v3/gslb/policy/{name}/geo-location/{name}*

geo-location-match

Description: geo-location-match is a **JSON Block**. Please see below for *geo-location-match*

Type: Object

Refernce Object: */axapi/v3/gslb/policy/{name}/geo-location-match*

geographic

Description Select Service-IP by geographic

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check

Description Select Service-IP by health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

health-check-preference-enable

Description Check health preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-preference-top

Description Only keep top n

Type: number

Range: 1-128

ip-list

Description Specify IP List (IP List Name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/gslb/ip-list*

least-response

Description Least response selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-fail-break

Description Break if no valid Service-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-force-check

Description Always check Service-IP for all enabled metrics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-order

Description Specify order of metric

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

metric-type

Description

Type: string

Format: enum-list

name

Description Specify policy name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: default

num-session-enable

Description Enable Select Service-IP for device having maximum number of available sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

num-session-tolerance

Description The difference between the available sessions, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

ordered-ip-top-only

Description Return highest priority server only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: ordered-ip-top-only and admin-ip-top-only are mutually exclusive

round-robin

Description Round robin selection, enabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weighted-alias

Description Select alias name by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-enable

Description Enable Select Service-IP by weighted preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-ip-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-enable

Description Enable Select Service-IP by weighted site preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

weighted-site-total-hits

Description Weighted by total hits

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auto-map

Specification	
Type	*object*

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

edns

Specification	
Type	*object*

client-subnet-geographic

Description Use client subnet for geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

active-rdt

Specification	
Type	*object*

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

capacity

Specification	
Type	*object*

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-match

Specification	
Type	*object*

geo-type-overlap

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

match-first

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

Default: global

overlap

Description Enable overlap mode to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns

Specification	
Type	*object*

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide A-Records for NS-Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_ipv6

Specification	
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

dns_block-value

Specification	
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

dns_proxy-block-port-range-list

Specification	
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

geo-location-list

Specification	
Type	*list*
Block object keys	

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-list_ip-multiple-fields

Specification	
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

geo-location-list_ipv6-multiple-fields

Specification	
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

connection-load

Specification	
Type	*object*

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	metric-list		metric-list

2.40.8 gslb policy active-rdt

Select SLB device with the shortest round delay time to local DNS

active-rdt Specification

Type	*Configuration Resource*
Element Name	active-rdt
Element URI	/axapi/v3/gslb/policy/{name}/active-rdt
Element Attributes	active-rdt_attributes
Schema	`active-rdt schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
POST /axapi/v3/gslb/policy/a/active-rdt
Payload:
{
    "active-rdt": {
        "enable": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
GET /axapi/v3/gslb/policy/a/active-rdt
Reponse:
{
    "active-rdt": {
        "enable": 1,
        "single-shot": 0,
        "timeout": 3,
        "skip": 3,
```

(continues on next page)

(continued from previous page)

```
        "keep-tracking": 0,
        "samples": 5,
        "tolerance": 10,
        "difference": 0,
        "limit": 16383,
        "fail-break": 0,
        "controller": 0,
        "proto-rdt-enable": 0,
        "uuid": "b3791cc8-6049-11d9-a8dc-001fa00680a0",
        "a10-url": "/axapi/v3/gslb/policy/a/active-rdt"
    }
}
```

Modify Object

POST

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

Replace Object

PUT

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
PUT /axapi/v3/gslb/policy/a/active-rdt
Payload:
{
    "active-rdt": {
        "enable": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/active-rdt

active-rdt attributes

```
DELETE /axapi/v3/gslb/policy/a/active-rdt
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

active-rdt attributes

controller

Description Active round-delay-time by controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

difference

Description The difference between the round-delay-time, default is 0

Type: number

Range: 0-16383

Default: 0

enable

Description Enable the active rdt

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-break

Description Break when no valid RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-id

Description Ignore IP Address specified in IP List by ID

Type: number

Range: 0-31

keep-tracking

Description Keep tracking client even round-delay-time samples are ready

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit

Description Limit of allowed RDT, default is 16383 (Limit, unit: millisecond)

Type: number

Range: 1-16383

Default: 16383

proto-rdt-enable

Description Enable the round-delay-time to the controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

samples

Description Specify samples number for round-delay-time (Number of samples,default is 5)

Type: number

Range: 1-8

Default: 5

single-shot

Description Single Shot RDT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

skip

Description Skip query if round-delay-time samples are not ready (Specify maximum skip count,default is 3)

Type: number

Range: 1-31

Default: 3

timeout

Description Specify timeout if round-delay-time samples are not ready (Specify timeout, unit:sec,default is 3)

Type: number

Range: 1-255

Default: 3

tolerance

Description The difference percentage between the round-delay-time, default is 10 (Tolerance)

Type: number

Range: 0-100

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.9 gslb policy auto-map

Auto Mapping Options

auto-map Specification

Type	*Configuration Resource*
Element Name	auto-map
Element URI	/axapi/v3/gslb/policy/{name}/auto-map
Element Attributes	auto-map_attributes
Schema	`auto-map schema`

Operations Allowed:

Create Object

POST

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```
POST /axapi/v3/gslb/policy/a/auto-map
Payload:
{
    "auto-map": {
        "ttl": 1
    }
}
```

Get Object

GET

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```

auto-map attributes

Replace Object

PUT

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/auto-map

auto-map attributes

```
DELETE /axapi/v3/gslb/policy/a/auto-map
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

auto-map attributes

all

Description All modules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: all and module-type are mutually exclusive

module-disable

Description Specify Disable Auto Map Module

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

module-type

Description

Type: string

Format: enum-list

Mutual Exclusion: module-type and all are mutually exclusive

ttl

Description Specify Auto Map TTL (TTL, default is 300)

Type: number

Range: 1-65535

Default: 300

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.10 gslb policy capacity

Select Service-IP for the device having highest available connection capacity

    }
}
```

capacity attributes

capacity-enable

Description Enable capacity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

capacity-fail-break

Description Break when exceed threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

threshold

Description Specify capacity threshold, default is 90

Type: number

Range: 0-100

Default: 90

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.11 gslb policy connection-load

Select Service-IP with the lowest connection-load

connection-load Specification

Type	*Configuration Resource*

(continued from previous page)

```
    }
}
```

connection-load attributes

connection-load-enable

Description Enable connection-load

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-fail-break

Description Break when exceed limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-load-interval

Description Interval between two samples, Unit: second (Interval value,default is 5)

Type: number

Range: 1-60

Default: 5

connection-load-limit

Description The value of the connection-load limit, default is unlimited

Type: number

Range: 1-999999999

connection-load-samples

Description Specify samples for connection-load (Number of samples used to calculate the connection load, default is 5)

Type: number

Range: 1-8

Default: 5

limit

Description Limit of maxinum connection load, default is unlimited

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

dns attributes

action

Description Apply DNS action for service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-type

Description 'drop': Drop query; 'reject': Send refuse response; 'ignore': Send empty response;

Type: string

Supported Values: drop, reject, ignore

active-only

Description Only keep active servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-only-fail-safe

Description Continue if no candidate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

aging-time

Description Specify aging-time, default is TTL in DNS record, unit: second (Aging time, default 0 means using TTL in DNS record as aging time)

Type: number

Range: 0-1000000000

Default: 0

backup-alias

Description Return alias name when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backup-server

Description Return fallback server when fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-action

Description Specify Action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

block-type

Description

Type: string

Format: enum-list

block-value

Type: List

cache

Description Cache DNS Server response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cname-detect

Description Apply GSLB for DNS Server response when service is Canonical Name (CNAME)

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

delegation

Description Zone Delegation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-auto-map

Description Automatically build DNS Infrastructure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-preference

Description Make dynamically change the preference

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dynamic-weight

Description dynamically change the weight

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description Return DNS response with external IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

external-soa

Description Return DNS response with external SOA Record

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-action

Description Apply DNS action by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-alias

Description Return alias name by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-policy

Description Apply different policy by geo-location

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hint

Description 'none': None; 'answer': Append Hint Records in DNS Answer Section; 'addition': Append Hint Records in DNS Addition Section;

Type: string

Supported Values: none, answer, addition

Default: addition

ip-replace

Description Replace DNS Server Response with GSLB Service-IPs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipv6

Type: List

logging

Description 'none': None; 'query': DNS Query; 'response': DNS Response; 'both': Both DNS Query and Response;

Type: string

Supported Values: none, query, response, both

proxy-block-port-range-list

Type: List

selected-only

Description Only keep selected servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

selected-only-value

Description Answer Number

Type: number

Range: 1-128

server

Description Run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-addition-mx

Description Append MX Records in Addition Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-any

Description Provide All Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any and server-any-with-metric are mutually exclusive

server-any-with-metric

Description Provide All Records with GSLB Metrics applied to A/AAAA Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server-any-with-metric and server-any are mutually exclusive

server-authoritative

Description As authoritative server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ns

Description Provide A-Records for NS-Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-auto-ptr

Description Provide PTR Records automatically

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-cname

Description Provide CNAME Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-custom

Description Provide Custom Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-full-list

Description Append All A Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mode-only

Description Only run GSLB as DNS server mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-mx

Description Provide MX Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-naptr

Description Provide NAPTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns

Description Provide NS Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ns-list

Description Append All NS Records in Authoritative Section

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ptr

Description Provide PTR Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-sec

Description Provide DNSSEC support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-srv

Description Provide SRV Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-txt

Description Provide TXT Records

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky

Description Make DNS Record sticky for certain time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sticky-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

sticky-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

sticky-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

template

Description Logging template (Logging Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

ttl

Description Specify the TTL value contained in DNS record (TTL value, unit: second, default is 10)

Type: number

Range: 0-1000000000

Default: 10

Mutual Exclusion: ttl and use-server-ttl are mutually exclusive

use-server-ttl

Description Use DNS Server Response TTL value in GSLB Proxy mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-server-ttl and ttl are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipv6

Specification	
Type	*list*
Block object keys	

dns-ipv6-mapping-type

Description 'addition': Append Mapped Record in DNS Addition Section; 'answer': Append Mapped Record in DNS Answer Section; 'exclusive': Only return AAAA Record; 'replace': Replace Record with Mapped Record;

Type: string

Supported Values: addition, answer, exclusive, replace

dns-ipv6-option

Description 'mix': Return both AAAA Record and A Record; 'smart': Return AAAA Record by DNS Query Type; 'mapping': Map A Record to AAAA Record;

Type: string

Supported Values: mix, smart, mapping

block-value

Specification	
Type	*list*
Block object keys	

block-value

Description Specify Type Number

Type: number

Range: 1-255

proxy-block-port-range-list

Specification	
Type	*list*
Block object keys	

proxy-block-range-from

Description Specify Type Range (From)

Type: number

proxy-block-range-to

Description To

Type: number

2.40.13 gslb policy edns

Use EDNS extension

edns Specification

Type	*Configuration Resource*
Element Name	edns

{ *geo-location attributes* },

{ *geo-location attributes* },

...

]

geo-location attributes

ip-multiple-fields

Type: List

ipv6-multiple-fields

Type: List

name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-multiple-fields

Specification	
Type	*list*
Block object keys	

ip-addr2-sub

Description Specify IP address range

Type: string

Format: ipv4-address

ip-mask-sub

Description Specify IP/mask format (Specify IP address mask)

Type: string

Format: ipv4-netmask-brief

ip-sub

Description Specify IP information

Type: string

Format: ipv4-address

ipv6-multiple-fields

Specification	
Type	*list*
Block object keys	

ipv6-addr2-sub

Description Specify IPv6 address range

Type: string

Format: ipv6-address

ipv6-mask-sub

Description Specify IPv6/mask format (Specify IP address mask)

Type: number

Range: 0-128

ipv6-sub

Description Specify IPv6 information

Type: string

Format: ipv6-address

2.40.15 gslb policy geo-location-match

Specify match order of geographic

geo-location-match Specification

Type	*Configuration Resource*
Element Name	geo-location-match

Payload:
{
    "geo-location-match": {
        "overlap": 1,
        "geo-type-overlap": "policy"
    }
}
```

Delete Object

DELETE

/axapi/v3/gslb/policy/{name}/geo-location-match

geo-location-match attributes

```
DELETE /axapi/v3/gslb/policy/a/geo-location-match
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

geo-location-match attributes

geo-type-overlap

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

match-first

Description 'global': Global Geo-location; 'policy': Policy Geo-location;

Type: string

Supported Values: global, policy

Default: global

overlap

Description Enable overlap mode to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.40.16 gslb protocol

Specify GSLB Message Protocol parameters

protocol Specification

protocol attributes

auto-detect

Description Automatically detect SLB Config

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-list

Type: List

Refernce Object: */axapi/v3/gslb/protocol/enable/{type}*

limit

Description: limit is a **JSON Block**. Please see below for *limit*

Type: Object

Refernce Object: */axapi/v3/gslb/protocol/limit*

msg-format-acos-2x

Description Run GSLB Protocol in compatible mode with a ACOS 2.x GSLB peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ping-site

Description name of site or ip address to ping

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

secure

Description: secure is a **JSON Block**. Please see below for *secure*

Type: Object

Refernce Object: */axapi/v3/gslb/protocol/secure*

status-interval

Description Specify GSLB Message Protocol update period (The GSLB Protocol update interval (seconds), default is 30)

Type: number

Range: 1-1800

use-mgmt-port

Description Use management port for connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port and use-mgmt-port-for-all-partitions are mutually exclusive

use-mgmt-port-for-all-partitions

Description Use management port for connections in all L3v Partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-mgmt-port-for-all-partitions and use-mgmt-port are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

secure

Specification	
Type	*object*

action

Description 'enable': Enable Secure; 'disable': Disable Secure (default); 'enable-fallback': Fall back to non-secure if fail;

Type: string

Supported Values: enable, disable, enable-fallback

Default: disable

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

limit

Specification	
Type	*object*

ardt-query

Description Query Messages of Active RDT, default is 200 (Number)

Type: number

Range: 0-1000000

Default: 200

ardt-response

Description Response Messages of Active RDT, default is 1000 (Number)

Type: number

Range: 0-1000000

Default: 1000

ardt-session

Description Sessions of Active RDT, default is 32768 (Number)

Type: number

Range: 0-1000000

Default: 32768

conn-response

Description Response Messages of Connection Load, default is no limit (Number)

Type: number

Range: 0-1000000

Default: 0

message

Description Amount of Messages, default is 10000 (Number)

Type: number

Range: 0-1000000

Default: 10000

response

Description Amount of Response Messages, default is 3600 (Number)

Type: number

Range: 0-1000000

Default: 3600

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-list

Specification	
Type	*list*
Block object keys	

type

Description 'controller': Enable/Disable GSLB protocol as GSLB controller; 'device': Enable/Disable GSLB protocol as site device;

Type: string

Supported Values: controller, device

service-group-list

service-group-list is **JSON List** of *service-group attributes*

service-group-list : [

{ *service-group attributes* },

{ *service-group attributes* },

...

]

service-group attributes

dependency-site

Description Dependency on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-site-list

Type: List

member

Type: List

persistent-aging-time

Description Specify aging-time, unit: min, default is 5 (Aging time)

Type: number

Range: 1-65535

Default: 5

persistent-ipv6-mask

Description Specify IPv6 mask length, default is 128

Type: number

Range: 1-128

Default: 128

persistent-mask

Description Specify IP mask, default is /32

Type: string

Format: ipv4-netmask-brief

Default: /32

persistent-site

Description Persistent based on site

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-name

Description Specify Service Group name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters
