Type: string

Supported Values: all, num, curr, total, svrsel_fail, no_route, snat_fail, client_fail, server_fail, no_sess, user_session, acr_out, acr_in, aca_out, aca_in, cea_out, cea_in, cer_out, cer_in, dwr_out, dwr_in, dwa_out, dwa_in, str_out, str_in, sta_out, sta_in, asr_out, asr_in, asa_out, asa_in, other_out, other_in, total_http_req_enter_gen, mismatch_fwd_id, mismatch_rev_id, unkwn_cmd_code, no_session_id, no_fwd_tuple, no_rev_tuple, dcmsg_fwd_in, dcmsg_fwd_out, dcmsg_rev_in, dcmsg_rev_out, dcmsg_error, retry_client_request, retry_client_request_fail, reply_unknown_session_id, ccr_out, ccr_in, cca_out, cca_in, ccr_i, ccr_u, ccr_t, cca_t, terminate_on_cca_t, forward_unknown_session_id, update_latest_server, client_select_fail, close_conn_when_vport_down, invalid_avp, reselect_fwd_tuple, reselect_fwd_tuple_other_cpu, reselect_rev_tuple, conn_closed_by_client, conn_closed_by_server, reply_invalid_avp_value, reply_unable_to_deliver, reply_error_info_fail, dpr_out, dpr_in, dpa_out, dpa_in

stats data

	Counter	Size	Description
	ccr_in	8	Number of CCRs in
	forward_unknown_session_id	8	Forward server side message with unknown session id
	svrsel_fail	8	Number of server selection failed
	curr	8	Current
	conn_closed_by_server	8	Server initiates TCP close/reset
	acr_out	8	Number of ACRs out
	dwr_in	8	Number of DWRs in
	cca_t	8	Number of CCAs terminate
	retry_client_request_fail	8	Diameter retry client request fail
	cca_in	8	Number of CCAs in
	num	8	Number
	no_route	8	Number of no routes
	conn_closed_by_client	8	Client initiates TCP close/reset
	server_fail	8	Number of server failures
	user_session	8	Number of user sessions
	dcmsg_fwd_in	8	Diameter cross cpu fwd in
	aca_out	8	Number of ACAs out
	sta_in	8	Number of STAs in
	total	8	Total
	dwa_in	8	Number of DWAs in
	no_session_id	8	Diameter no session id avp
	dwa_out	8	Number of DWAs out
	client_select_fail	8	Fail to select client
	asa_in	8	Number of ASAs in
	dcmsg_fwd_out	8	Diameter cross cpu fwd out
	reselect_fwd_tuple	8	Original client tuple does not exist so reselect another one
	retry_client_request	8	Diameter retry client request
	reply_unable_to_deliver	8	Reply with unable to deliver error info
	reselect_rev_tuple	8	Original server tuple does not exist so reselect another one
	dcmsg_error	8	Diameter cross cpu error
	asr_out	8	Number of ASRs out
	cca_out	8	Number of CCAs out
	update_latest_server	8	Update to the latest server that used a session id
	total_http_req_enter_gen	8	Total number of HTTP requests enter generic proxy
	aca_in	8	Number of ACAs in
	terminate_on_cca_t	8	Diameter terminate on cca_t
	unkwn_cmd_code	8	Diameter unkown cmd code
	dwr_out	8	Number of DWRs out
	dpa_out	8	Number of DPAs out

continues on next page

Table 2.30 – continued from previous page

	Counter	Size	Description
	invalid_avp	8	AVP value contains illegal chars
	other_out	8	Number of other messages out
	cea_out	8	Number of CEAs out
	dpr_in	8	Number of DPRs in
	asr_in	8	Number of ASRs in
	re-ply_error_info_fail	8	Fail to reply error info to peer
	no_fwd_tuple	8	Diameter no fwd tuple matched
	cer_in	8	Number of CERs in
	str_in	8	Number of STRs in
	sta_out	8	Number of STAs out
	snat_fail	8	Number of snat failures
	client_fail	8	Number of client failures
	cer_out	8	Number of CERs out
	str_out	8	Number of STRs out
	dcmsg_rev_in	8	Diameter cross cpu rev in
	ccr_t	8	Number of CCRs terminate
	ccr_u	8	Number of CCRs update
	cea_in	8	Number of CEAs in
	mis-match_fwd_id	8	Diameter mismatch fwd session id
	close_conn_when_vport_down	8	Close client conn when virtual port is down
	no_rev_tuple	8	Diameter no rev tuple matched
	mis-match_rev_id	8	Diameter mismatch rev session id
	rese-lect_fwd_tuple_other_cpu	8	Original client tuple does not exist so reselect another one on other CPUs
	asa_out	8	Number of ASAs out
	dcmsg_rev_out	8	Diameter cross cpu rev out
	no_sess	8	Number of no sessions
	dpa_in	8	Number of DPAs in
	re-ply_invalid_avp_value	8	Reply with invalid AVP error info
	re-ply_unknown_session_id	8	Reply with unknown session ID error info
	ccr_out	8	Number of CCRs out
	dpr_out	8	Number of DPRs out
	other_in	8	Number of other messages in
	ccr_i	8	Number of CCRs initial
	acr_in	8	Number of ACRs in

abs-max-expiration

Description Absolute max record expiration value (default 10 minutes) (Absolute max record expiration time in minutes, default 10)

Type: number

Range: 1-32767

Default: 10

enable-64bit-player-id

Description Enable 64 bit player id check. Default is 32 bit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforcement-timer

Description Time to playerid enforcement after bootup (default 480 seconds) (Time to playerid enforcement in seconds, default 480)

Type: number

Range: 1-32767

Default: 480

force-passive

Description Forces the device to be in passive mode (Only stats and no packet drops)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

min-expiration

Description Minimum record expiration value (default 1 min) (Min record expiration time in minutes, default 1)

Type: number

Range: 1-32767

Default: 1

pkt-activity-expiration

Description Packet activity record expiration value (default 5 minutes) (Packet activity record expiration time in minutes, default 5)

Type: number

Range: 1-32767

Default: 5

Description 'all': all; 'total_log_times': Total log times; 'total_log_msg': Total log messages; 'local_log_msg': Local log messages; 'remote_log_msg': Remote log messages; 'local_log_rate': Local rate (per sec); 'remote_log_rate': Remote rate (per sec); 'msg_too_big': Log message too big; 'buff_alloc_fail': Buffer alloc fail; 'no_route': No route; 'buff_send_fail': Buffer send fail; 'alloc_conn': Log-session alloc; 'free_conn': Log-session free; 'conn_alloc_fail': Log-session alloc fail; 'no_repeat_msg': No repeat message;

Type: string

Supported Values: all, total_log_times, total_log_msg, local_log_msg, remote_log_msg, local_log_rate, remote_log_rate, msg_too_big, buff_alloc_fail, no_route, buff_send_fail, alloc_conn, free_conn, conn_alloc_fail, no_repeat_msg, local_log_dropped

stats data

	Counter	Size	Description
	msg_too_big	8	Log message too big
	buff_send_fail	8	Buffer send fail
	remote_log_rate	8	Remote rate (per sec)
	alloc_conn	8	Log-session alloc
	no_repeat_msg	8	No repeat message
	free_conn	8	Log-session free
	conn_alloc_fail	8	Log-session alloc fail
	local_log_msg	8	Local log messages
	local_log_dropped	8	Local log dropped due to rate-limit
	total_log_msg	8	Total log messages
	no_route	8	No route
	remote_log_msg	8	Remote log messages
	buff_alloc_fail	8	Buffer alloc fail
	local_log_rate	8	Local rate (per sec)
	total_log_times	8	Total log times

server-list

server-list is **JSON List** of *server attributes*

server-list : [

{ *server attributes* },

{ *server attributes* },

...

]

server attributes

action

Description 'enable': Enable this Real Server; 'disable': Disable this Real Server; 'disable-with-health-check': disable real server, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-server

Type: List

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume (Connection Resume (min active conn before resume taking new conn))

Type: number

Range: 1-1000000

ethernet

Description ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

external-ip

Description External IP address for NAT of GSLB

Type: string

Format: ipv4-address

fqdn-name

Description Server hostname

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fqdn-name server-ipv6-addr and host are mutually exclusive

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check shared-partition-health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-partition-health-check and health-check-shared are mutually exclusive

health-check-shared

Description Health Check Monitor (Health monitor name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

host

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: host server-ipv6-addr and fqdn-name are mutually exclusive

ipv6

Description IPv6 address Mapping of GSLB

Type: string

Format: ipv6-address

name

Description Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list

Type: List

Refernce Object: */axapi/v3/slb/server/{name}/port/{port-number}+{protocol}*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: server-ipv6-addr host and fqdn-name are mutually exclusive

shared-partition-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-health-check health-check and health-check-disable are mutually exclusive

shared-partition-server-template

Description Reference a server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-template and template-server are mutually exclusive

slow-start

Description Slowly ramp up the connection number after server is up (start from 128, then double every 10 sec till 4096)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description This server is a spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

template-link-cost

Description Link-Cost template (Link-Cost template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/link-cost*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-server and shared-partition-server-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/server*

template-server-shared

Description Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server*

trunk

Description trunk interface

Type: number

Range: 1-4096

Refernce Object: */axapi/v3/interface/trunk*

use-aam-server

Description Using aam server. For health check, please configure it in aam server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for this Real Server (Connection Weight)

Type: number

Range: 1-1000

Default: 1

port-list

Specification	
Type	*list*
Block object keys	

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *port-list_auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-checkshared-rport-health-check, health-check-follow-port and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-rport-health-check, rport-health-check-shared and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port health-check and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check health-check and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Forward bytes; 'total_fwd_pkts': Forward packets; 'total_rev_bytes': Reverse bytes; 'total_rev_pkts': Reverse packets; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy request; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

port-list_alternate-port

Specification	
Type	*list*
Block object keys	

alternate

Description Alternate Server Number

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

alternate-server-port

Description Port (Alternate Server Port Value)

Type: number

Range: 1-65535

action

Description 'enable': enable; 'disable': disable; 'disable-with-health-check': disable port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

alternate-port

Type: List

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

conn-resume

Description Connection Resume

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

follow-port-protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-checkshared-rport-health-check, health-check-follow-port and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-rport-health-check, rport-health-check-shared and health-check-follow-port are mutually exclusive

health-check-follow-port

Description Specify which port to follow for health status (Port Number)

Type: number

Range: 1-65534

Mutual Exclusion: health-check-follow-port health-check and health-check-disable are mutually exclusive

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-port-tmpl*

port-number

Description Port Number

Type: number

Range: 0-65534

protocol

Description 'tcp': TCP Port; 'udp': UDP Port;

Type: string

Supported Values: tcp, udp

range

Description Port range (Port range value - used for vip-to-rport-mapping)

Type: number

Range: 0-254

Default: 0

rport-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: rport-health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

sampling-enable

Type: List

shared-partition-port-template

Description Reference a port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-port-template and template-port are mutually exclusive

shared-rport-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-rport-health-check health-check and health-check-disable are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

support-http2

Description Starting HTTP/2 with Prior Knowledge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-port and shared-partition-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/port*

template-port-shared

Description Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

template-server-ssl

Description Server side SSL template (Server side SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Port Weight (Connection Weight)

Type: number

Range: 1-1000

Default: 1

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_req': Current requests; 'total_req': Total Requests; 'total_req_succ': Total requests succ; 'total_fwd_bytes': Forward bytes; 'total_fwd_pkts': Forward packets; 'total_rev_bytes': Reverse bytes; 'total_rev_pkts': Reverse packets; 'total_conn': Total connections; 'last_total_conn': Last total connections; 'peak_conn': Peak connections; 'es_resp_200': Response status 200; 'es_resp_300': Response status 300; 'es_resp_400': Response status 400; 'es_resp_500': Response status 500; 'es_resp_other': Response status other; 'es_req_count': Total proxy request; 'es_resp_count': Total proxy response; 'es_resp_invalid_http': Total non-http response; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_good_status_code': Total reverse packets with good status code inspected; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_req, total_req, total_req_succ, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, last_total_conn, peak_conn, es_resp_200, es_resp_300, es_resp_400, es_resp_500, es_resp_other, es_req_count, es_resp_count, es_resp_invalid_http, total_rev_pkts_inspected, total_rev_pkts_inspected_good_status_code, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, resp-count, resp-1xx, resp-2xx, resp-3xx, resp-4xx, resp-5xx, resp-other, resp-latency, curr_pconn

alternate-port

Specification	
Type	*list*
Block object keys	

alternate

Description Alternate Server Number

Type: number

Range: 1-16

alternate-name

Description Alternate Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

alternate-server-port

Description Port (Alternate Server Port Value)

Type: number

Range: 1-65535

auth-cfg

Specification	
Type	*object*

service-principal-name

Description Service Principal Name (Kerberos principal name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

2.92.55 slb service-group

Service Group

service-group Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*service-group-list*
Collection URI	/axapi/v3/slb/service-group
Element Name	service-group
Element URI	/axapi/v3/slb/service-group/{name}
Element Attributes	service-group_attributes
Statistics Data URI	/axapi/v3/slb/service-group/{name}/stats
Operational Data URI	/axapi/v3/slb/service-group/{name}/oper
Schema	`service-group schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/service-group

service-group attributes

```
POST /axapi/v3/slb/service-group/
Payload:
{
    "service-group": {
        "protocol": "tcp",
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/service-group

service-group attributes

Get Object

GET

/axapi/v3/slb/service-group/{name}

service-group attributes

```
GET /axapi/v3/slb/service-group/a
Reponse:
{
    "service-group": {
        "name": "a",
        "protocol": "tcp",
        "lb-method": "round-robin",
```

(continues on next page)

service-group attributes

```
DELETE /axapi/v3/slb/service-group/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

service-group-list

service-group-list is **JSON List** of *service-group attributes*

service-group-list : [

{ *service-group attributes* },

{ *service-group attributes* },

...

]

service-group attributes

backup-server-event-log

Description Send log info on back up server events

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate

Description Dynamically enable stateless method by conn-rate (Rate to trigger stateless method(conn/sec))

Type: number

Range: 1-1000000

Mutual Exclusion: conn-rate and l4-session-usage are mutually exclusive

conn-rate-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

conn-rate-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

conn-rate-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

conn-revert-rate

Description Rate to revert to statelful method (conn/sec)

Type: number

Range: 1-1000000

extended-stats

Description Enable extended statistics on service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check shared-partition-svcgrp-health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable health check

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disablehealth-check, shared-partition-svcgrp-health-check and svcgrp-health-check-shared are mutually exclusive

l4-session-revert-duration

Description Period that revert condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage

Description Dynamically enable stateless method by session usage (Usage to trigger stateless method)

Type: number

Range: 1-100

Mutual Exclusion: l4-session-usage and conn-rate are mutually exclusive

l4-session-usage-duration

Description Period that trigger condition consistently happens(seconds)

Type: number

Range: 1-600

l4-session-usage-grace-period

Description Define the grace period during transition (Define the grace period during transition(seconds))

Type: number

Range: 1-600

l4-session-usage-log

Description Send log if transition happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4-session-usage-revert-rate

Description Usage to revert to statelful method

Type: number

Range: 1-100

lb-method

Description 'dst-ip-hash': Load-balancing based on only Dst IP and Port hash; 'dst-ip-only-hash': Load-balancing based on only Dst IP hash; 'fastest-response': Fastest response time on service port level; 'least-request': Least request on service port level; 'src-ip-hash': Load-balancing based on only Src IP and Port hash; 'src-ip-only-hash': Load-balancing based on only Src IP hash; 'weighted-rr': Weighted round robin on server level; 'round-robin': Round robin on server level; 'round-robin-strict': Strict mode round robin on server level; 'odd-even-hash': odd/even hash based of client src-ip;

Type: string

Supported Values: dst-ip-hash, dst-ip-only-hash, fastest-response, least-request, src-ip-hash, src-ip-only-hash, weighted-rr, service-weighted-rr, round-robin, round-robin-strict, odd-even-hash

Default: round-robin

Mutual Exclusion: lb-methodlc-method, stateless-lb-method, llb-method and lclb-method are mutually exclusive

lc-method

Description 'least-connection': Least connection on server level; 'service-least-connection': Least connection on service port level; 'weighted-least-connection': Weighted least connection on server level; 'service-weighted-least-connection': Weighted least connection on service port level;

Type: string

Supported Values: least-connection, service-least-connection, weighted-least-connection, service-weighted-least-connection

Mutual Exclusion: lc-methodlb-method, stateless-lb-method, llb-method and lclb-method are mutually exclusive

lclb-method

Description 'link-cost-load-balance': Link cost load balance;

Type: string

Supported Values: link-cost-load-balance

Mutual Exclusion: lclb-methodlb-method, lc-method, stateless-lb-method and llb-method are mutually exclusive

link-probe-template

Description Link Probe template (Link Probe template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/link-probe*

llb-method

Description 'next-hop-link': Server selection w/ link probe template on service port level;

Type: string

Supported Values: next-hop-link

Mutual Exclusion: llb-methodlb-method, lc-method, stateless-lb-method and lclb-method are mutually exclusive

member-list

Type: List

Refernce Object: */axapi/v3/slb/service-group/{name}/member/{name}+{port}*

min-active-member

Description Minimum Active Member Per Priority (Minimum Active Member before Action)

Type: number

Range: 1-1024

min-active-member-action

Description 'dynamic-priority': dynamic change member priority to met the min-active-member requirement; 'skip-pri-set': Skip Current Priority Set If Min not met;

Type: string

Supported Values: dynamic-priority, skip-pri-set

name

Description SLB Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

persist-scoring

Description 'global': Use Global Configuration; 'enable': Enable persist-scoring; 'disable': Disable persist-scoring;

Type: string

Supported Values: global, enable, disable

Default: global

priorities

Type: List

priority-affinity

Description Priority affinity. Persist to the same priority if possible.

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP LB service;

Type: string

Supported Values: tcp, udp

pseudo-round-robin

Description PRR, select the oldest node for sub-select

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

report-delay

Description Reporting frequency (in minutes)

Type: number

Range: 1-7200

reset

Description: reset is a **JSON Block**. Please see below for *reset*

Type: Object

Refernce Object: */axapi/v3/slb/service-group/{name}/reset*

reset-on-server-selection-fail

Description Send reset to client if server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-priority-affinity

Description Reset

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpt-ext-server

Description Report top 10 fastest/slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sample-rsp-time

Description sample server response time

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-svcgrp-health-check

Description Reference a health-check from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-svcgrp-health-check health-check and health-check-disable are mutually exclusive

stateless-auto-switch

Description Enable auto stateless method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stateless-lb-method

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

Mutual Exclusion: stateless-lb-methodlb-method, lc-method, llb-method and lclb-method are mutually exclusive

stateless-lb-method2

Description 'stateless-dst-ip-hash': Stateless load-balancing based on Dst IP and Dst port hash; 'stateless-per-pkt-round-robin': Stateless load-balancing using per-packet round-robin; 'stateless-src-dst-ip-hash': Stateless load-balancing based on IP and port hash for both Src and Dst; 'stateless-src-dst-ip-only-hash': Stateless load-balancing based on only IP hash for both Src and Dst; 'stateless-src-ip-hash': Stateless load-balancing based on Src IP and Src port hash; 'stateless-src-ip-only-hash': Stateless load-balancing based on only Src IP hash;

Type: string

Supported Values: stateless-dst-ip-hash, stateless-per-pkt-round-robin, stateless-src-dst-ip-hash, stateless-src-dst-ip-only-hash, stateless-src-ip-hash, stateless-src-ip-only-hash, stateless-per-pkt-weighted-rr, stateless-per-pkt-service-weighted-rr

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for service group; 'stats-data-disable': Disable statistical data collection for service group;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

strict-select

Description strict selection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

svcgrp-health-check-shared

Description Health Check (Monitor Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: svcgrp-health-check-shared and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-port

Description Port template (Port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

template-server

Description Server template (Server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server*

top-fastest

Description Report top 10 fastest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

top-slowest

Description Report top 10 slowest servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-replication-mirror

Description Mirror Bi-directional Packet

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirrortraffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-da-repl

Description Replace Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-da-repltraffic-replication-mirror, traffic-replication-mirror-ip-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-ip-repl

Description Replaces IP with server-IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-ip-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-sa-da-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-da-repl

Description Replace Source MAC and Destination MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-da-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl and traffic-replication-mirror-sa-repl are mutually exclusive

traffic-replication-mirror-sa-repl

Description Replace Source MAC

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: traffic-replication-mirror-sa-repltraffic-replication-mirror, traffic-replication-mirror-da-repl, traffic-replication-mirror-ip-repl and traffic-replication-mirror-sa-da-repl are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

member-list

Specification	
Type	*list*
Block object keys	

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Refernce Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

member-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': peak_conn; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

reset

Specification	
Type	*object*

auto-switch

Description Reset auto stateless state

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

priorities

Specification	
Type	*list*
Block object keys	

priority

Description Priority option. Define different action for each priority node. (Priority in the Group)

Type: number

Range: 1-16

priority-action

Description 'drop': Drop request when all priority nodes fail; 'drop-if-exceed-limit': Drop request when connection over limit; 'proceed': Proceed to next priority when all priority nodes fail(default); 'reset': Send client reset when all priority nodes fail; 'reset-if-exceed-limit': Send client reset when connection over limit;

Type: string

Supported Values: drop, drop-if-exceed-limit, proceed, reset, reset-if-exceed-limit

Default: proceed

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'server_selection_fail_drop': Service selection fail drop; 'server_selection_fail_reset': Service selection fail reset; 'service_peak_conn': Service peak connection;

Type: string

Supported Values: all, server_selection_fail_drop, server_selection_fail_reset, service_peak_conn, service_healthy_host, service_unhealthy_host, service_req_count, service_resp_count, service_resp_2xx, service_resp_3xx, service_resp_4xx, service_resp_5xx, service_curr_conn_overflow

stats data

	Counter	Size	Description
	service_resp_2xx	8	Service Group response 2xx count
	service_unhealthy_host	8	Service Group unhealthy host count
	service_curr_conn_overflow	8	Current connection counter overflow count
	service_req_count	8	Service Group request count
	service_healthy_host	8	Service Group healthy host count
	service_resp_count	8	Service Group response count
	service_resp_3xx	8	Service Group response 3xx count
	server_selection_fail_drop	8	Drops due to Service selection failure
	service_resp_4xx	8	Service Group response 4xx count
	server_selection_fail_reset	8	Resets sent out for Service selection failure
	service_peak_conn	8	Peak connection count for the Service Group
	service_resp_5xx	8	Service Group response 5xx count

operational data

	Counter	Size	Description
	pri_affinity_priority	number	pri_affinity_priority
	stateless_type	number	stateless_type
	servers_down	number	servers_down
	servers_total	number	servers_total
	servers_disable	number	servers_disable
	stateless_state	number	stateless_state
	filter	enum	Output contains one of the following values: - sgm-sort-config
	stateless_current_rate	number	stateless_current_rate
	state	enum	Output contains one of the following values: - All Up, Functional Up, Down, Disb, Unkn
	sgm-list		sgm-list
	servers_up	number	servers_up
	stateless_current_usage	number	stateless_current_usage
	hm_dsr_enable_all_vip	number	hm_dsr_enable_all_vip

2.92.56 slb service-group member

Service Group Member

member Specification

Type	*Collection*

DELETE

/axapi/v3/slb/service-group/{name}/member/{name}+{port}

member attributes

member-list

member-list is **JSON List** of *member attributes*

member-list : [

{ *member attributes* },

{ *member attributes* },

...

]

member attributes

fqdn-name

Description Server hostname - Not applicable if real server is already defined

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

host

Description IP Address - Not applicable if real server is already defined

Type: string

Format: ipv4-address

member-priority

Description Priority of Port in the Group (Priority of Port in the Group, default is 1)

Type: number

Range: 1-16

Default: 1

member-state

Description 'enable': Enable member service port; 'disable': Disable member service port; 'disable-with-health-check': disable member service port, but health check work;

Type: string

Supported Values: enable, disable, disable-with-health-check

Default: enable

member-stats-data-disable

Description Disable statistical data collection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

member-template

Description Real server port template (Real server port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/port*

name

Description Member name

Type: string

Format: comp-string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server*

port

Description Port number

Type: number

Range: 0-65534

Default: 65534

Refernce Object: */axapi/v3/slb/server/port*

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve FQDN; 'resolve-to-ipv6': Use AAAA Query only to resolve FQDN; 'resolve-to-ipv4-and-ipv6': Use A as well as AAAA Query to resolve FQDN;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6, resolve-to-ipv4-and-ipv6

Default: resolve-to-ipv4

sampling-enable

Type: List

server-ipv6-addr

Description IPV6 Address - Not applicable if real server is already defined

Type: string

Format: ipv6-address

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_conn': Total connections; 'total_rev_pkts_inspected': Total reverse packets inspected; 'total_rev_pkts_inspected_status_code_2xx': Total reverse packets inspected status code 2xx; 'total_rev_pkts_inspected_status_code_non_5xx': Total reverse packets inspected status code non 5xx; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total requests successful; 'peak_conn': peak_conn; 'response_time': Response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_conn, total_rev_pkts_inspected, total_rev_pkts_inspected_status_code_2xx, total_rev_pkts_inspected_status_code_non_5xx, curr_req, total_req, total_req_succ, peak_conn, response_time, fastest_rsp_time, slowest_rsp_time, curr_ssl_conn, total_ssl_conn, curr_conn_overflow, state_flaps

stats data

	Counter	Size	Description
	curr_req	8	Current requests
	total_fwd_bytes	8	Bytes processed in forward direction
	curr_ssl_conn	8	Current SSL connections
	peak_conn	8	Peak connections
	total_req	8	Total requests
	total_conn	8	Total established connections
	total_ssl_conn	8	Total SSL connections
	fastest_rsp_time	8	Fastest response time
	total_fwd_pkts	8	Packets processed in forward direction
	total_rev_pkts_inspected_status_code_non_5xx	8	Total reverse packets inspected status code non 5xx
	total_rev_pkts	8	Packets processed in reverse direction
	total_rev_pkts_inspected_status_code_2xx	8	Total reverse packets inspected status code 2xx
	total_req_succ	8	Total requests successful
	state_flaps	8	State flaps count
	curr_conn	8	Current established connections
	total_rev_pkts_inspected	8	Total reverse packets inspected
	curr_conn_overflow	8	Current connection counter overflow count
	total_rev_bytes	8	Bytes processed in reverse direction
	slowest_rsp_time	8	Slowest response time
	response_time	8	Response time

operational data

	Counter	Size	Description
	alt-list		alt-list
	hm-key	number	hm-key
	state	enum	Output contains one of the following values: - UP, DOWN, MAINTENANCE, DIS-UP, DIS-DOWN, DIS-MAINTENANCE, DIS-DAMP
	drs-list		drs-list
	hm-index	number	hm-index

DELETE

/axapi/v3/slb/ssl-expire-check

ssl-expire-check attributes

ssl-expire-check attributes

before

Description The number of days in advance notice before expiration, default is 5

Type: number

Range: 1-60

Default: 5

exception

Description: exception is a **JSON Block**. Please see below for *exception*

Type: Object

Refernce Object: */axapi/v3/slb/ssl-expire-check/exception*

expire-address1

Description Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

interval-days

Description The interval of days notice after expiration, default is 2

Type: number

Range: 1-5

Default: 2

ssl-expire-email-address

Description Config Email address for certificate expiration check

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

exception

Specification	
Type	*object*

action

Description 'add': Add an exception; 'delete': Delete an exception; 'clean': Delete all exception;

Type: string

Supported Values: add, delete, clean

certificate-name

Description The certificate name

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

2.92.66 slb ssl export-hc-metrics

Export SSL metrics to Harmony Controller

export-hc-metrics Specification

Type	*Configuration Resource*
Element Name	export-hc-metrics
Element URI	/axapi/v3/slb/ssl/export-hc-metrics
Element Attributes	export-hc-metrics_attributes
Schema	`export-hc-metrics schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/ssl/export-hc-metrics

export-hc-metrics attributes

Get Object

GET

/axapi/v3/slb/ssl/export-hc-metrics

export-hc-metrics attributes

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'cert_create': Certificates created; 'cert_expr': Certificates expired; 'cert_hit': Certificate cache hits; 'cert_miss': Certificate cache miss; 'conn_bypass': Connections bypassed; 'conn_inspect': Connections inspected;

Type: string

Supported Values: all, cert_create, cert_expr, cert_hit, cert_miss, conn_bypass, conn_inspect, bypass-failsafe-ssl-sessions, bypass-sni-sessions, bypass-client-auth-sessions, failed-in-ssl-handshakes, failed-in-crypto-operations, failed-in-tcp, failed-in-certificate-verification, failed-in-certificate-signing, invalid-ocsp-stapling-response, revoked-ocsp-response, unsupported-ssl-version, certificates-in-cache, connections-failed, aflex-bypass, bypass-cert-subject-sessions, bypass-cert-issuer-sessions, bypass-cert-san-sessions, bypass-no-sni-sessions, reset-no-sni-sessions, bypass-esni-sessions, drop-esni-sessions, bypass-username-sessions, bypass-ad-group-sessions, tot_conn_in_buff, curr_conn_in_buff, cert_in_cache

stats data

	Counter	Size	Description
	bypass-username-sessions	8	Bypass Username sessions
	drop-esni-sessions	8	Drop ESNI sessions
	invalid-ocsp-stapling-response	8	Invalid OCSP Stapling Response
	failed-in-certificate-verification	8	Failed in Certificate verification
	revoked-ocsp-response	8	Revoked OCSP Response
	bypass-esni-sessions	8	Bypass ESNI sessions
	failed-in-tcp	8	Failed in TCP
	unsupported-ssl-version	8	Unsupported SSL version
	cert_create	8	Certificates created
	failed-in-crypto-operations	8	Failed in crypto operations
	cert_hit	8	Certificate cache hits
	bypass-cert-subject-sessions	8	Bypass Cert Subject sessions
	cert_miss	8	Certificate cache miss
	certificates-in-cache	8	Certificates in cache
	aflex-bypass	8	Bypass triggered by aFleX
	curr_conn_in_buff	8	Current buffered async connections
	conn_inspect	8	Connections inspected
	cert_expr	8	Certificates expired
	tot_conn_in_buff	8	Total buffered async connections
	cert_in_cache	8	Certificates in cache used by HC SSLi App
	bypass-client-auth-sessions	8	Bypass Client Auth sessions
	bypass-sni-sessions	8	Bypass SNI sessions
	connections-failed	8	Connections failed
	failed-in-ssl-handshakes	8	Failed in SSL handshakes
	reset-no-sni-sessions	8	Reset No SNI sessions

continues on next page

Table 2.49 – continued from previous page

	Counter	Size	Description
	bypass-no-sni-sessions	8	Bypass NO SNI sessions
	conn_bypass	8	Connections bypassed
	bypass-cert-san-sessions	8	Bypass Cert SAN sessions
	bypass-ad-group-sessions	8	Bypass AD-group sessions
	failed-in-certificate-signing	8	Failed in Certificate signing
	bypass-cert-issuer-sessions	8	Bypass Cert issuer sessions
	bypass-failsafe-ssl-sessions	8	Bypass Failsafe SSL sessions

	ipv6_ndisc_dad_prefix_mismatch_drop	8	IPv6 DAD on Advertise drop for prefix mismatch
	inactive_nat_pool_arp_drop	8	ARP PKT dropped due to inactive nat pool
	scaleout_hairpin_arp_drop	8	ARP PKT dropped due to scaleout hairpin checks
	urpf_pkt_drop	8	URPF check packet drop
	l4_in_ctrl_cpu	8	L4 In Ctrl CPU
	ipfrag_icmp	8	IP(ICMP) Fragment Rcvd
	redirect_setup_fail	8	Redirect connection setup failed
	ipfrag_timeout	8	IP Fragment Timeout
	vlan_flood	8	VLAN Flood
	scaleout_arp_drop	8	ARP PKT dropped due to scaleout checks
	ttl_exceeded_drop	8	TTL Exceeded Drop

continues on next page

Table 2.50 – continued from previous page

	Counter	Size	Description
	dev_link_down_arp_drop	8	ARP PKT dropped due to interface is down
	ip_defrag	8	IP Defrag
	incorrect_len_drop	8	Incorrect Length Drop
	ip_defrag_invalid_len	8	IP Invalid Length Frag
	ipv6_ndisc_out_of_memory	8	IPv6 DAD Out-of-memory
	sp_non_ctrl_pkt_drop	8	Shared IP mode non ctrl packet to linux drop
	ipfrag_overload	8	IP Frag Overload Drops
	ipv6frag_ipip_dropped	8	IPv6 Frag IPIP Drop
	ipv6_ndisc_mac_changes	8	IPv6 DAD MAC Changed
	rx_kernel	8	Received kernel
	ipv6frag_icmp	8	IPv6 Frag ICMP
	ipv4_noroute_drop	8	IPv4 No Route Drop
	max_arp_drop	8	Max ARP Drop
	ipv6_ndisc_dad_adverts	8	IPv6 DAD on Adverts
	redirect_rev_sent	8	Redirect succeeded in the rev direction
	ipv6frag_esp	8	IPv6 Frag ESP
	ipv6frag_ospf	8	IPv6 Frag OSPF
	acl_deny	8	ACL Denys
	ipv4_novlanfwd_drop	8	IPv4 No L3 VLAN FWD Drop

2.92.72 slb telemetry-log

telemetry logs to be sent out

telemetry-log Specification

Type	*Intermediate Resource*
Element Name	telemetry-log
Element URI	/axapi/v3/slb/telemetry-log
Element Attributes	telemetry-log_attributes
Schema	`telemetry-log schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/telemetry-log

telemetry-log_attributes

telemetry-log attributes

2.92.73 slb template

Define an SLB template

template Specification

Type	*Intermediate Resource*
Element Name	template
Element URI	/axapi/v3/slb/template
Element Attributes	template_attributes
Schema	`template schema`

Operations Allowed:

Get Object

GET

/axapi/v3/slb/template

template_attributes

template attributes

cache-list

Type: List

Refernce Object: */axapi/v3/slb/template/cache/{name}*

cipher-list

Type: List

Refernce Object: */axapi/v3/slb/template/cipher/{name}*

client-ssh-list

Type: List

Refernce Object: */axapi/v3/slb/template/client-ssh/{name}*

virtual-server-list

Type: List

Refernce Object: */axapi/v3/slb/template/virtual-server/{name}*

logging-list

Specification	
Type	*list*
Block object keys	

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specfiy a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool shared-partition-pool and auto are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP proxy template (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cache-list

Specification	
Type	*list*
Block object keys	

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-tmpl-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cache-list_local-uri-policy

Specification	
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cache-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': hits; 'miss': miss; 'bytes_served': bytes_served; 'total_req': total_req; 'caching_req': caching_req; 'nc_req_header': nc_req_header; 'nc_res_header': nc_res_header; 'rv_success': rv_success; 'rv_failure': rv_failure; 'ims_request': ims_request; 'nm_response': nm_response; 'rsp_type_CL': rsp_type_CL; 'rsp_type_CE': rsp_type_CE; 'rsp_type_304': rsp_type_304; 'rsp_type_other': rsp_type_other; 'rsp_no_compress': rsp_no_compress; 'rsp_gzip': rsp_gzip; 'rsp_deflate': rsp_deflate; 'rsp_other': rsp_other; 'nocache_match': nocache_match; 'match': match; 'invalidate_match': invalidate_match; 'content_toobig': content_toobig; 'content_toosmall': content_toosmall; 'entry_create_failures': entry_create_failures; 'mem_size': mem_size; 'entry_num': entry_num; 'replaced_entry': replaced_entry; 'aging_entry': aging_entry; 'cleaned_entry': cleaned_entry;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error

cache-list_uri-policy

Specification	
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list

Specification	
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

connection-reuse-list

Specification	
Type	*list*
Block object keys	

keep-alive-conn

Description Keep a number of server connections open

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-per-server

Description Max Server Connections allowed (Connections per Server Port (default 1000))

Type: number

Range: 0-65535

Default: 1000

name

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

num-conn-per-port

Description Connections per Server Port (default 100)

Type: number

Range: 1-1024

Default: 100

preopen

Description Preopen server connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout in seconds. Multiple of 60 (def 2400)

Type: number

Range: 60-3600

Default: 2400

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-cost-list

Specification	
Type	*list*
Block object keys	

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-cost-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

reqmod-icap-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 1 - 65535, default is 0 (1 - 65536, default is 0)

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reqmod-icap-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

smpp-list

Specification	
Type	*list*
Block object keys	

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp-list

Specification	
Type	*list*
Block object keys	

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *smtp-list_template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp-list_client-domain-switching

Specification	
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

smtp-list_template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

smtp-list_command-disable

Specification	
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

external-service-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

name

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-forward-list

Type: List

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

external-service-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

external-service-list_request-header-forward-list

Specification	
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

tcp-list

Specification	
Type	*list*
Block object keys	

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (default 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

diameter-list

Specification	
Type	*list*
Block object keys	

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *diameter-list_origin-host*

Type: Object

Refernce Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendon Id)

Type: number

Range: 0-2147483647

Default: 0

diameter-list_message-code-list

Specification	
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

diameter-list_avp-list

Specification	
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32 int64 and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64 int32 and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string int32 and int64 are mutually exclusive

diameter-list_origin-host

Specification	
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

udp-list

Specification	
Type	*list*
Block object keys	

age

Description short age

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (default 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-down-on-restart

Specification	
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list

Specification	
Type	*list*
Block object keys	

cookie-name

Description name of cookie to match (Cookie Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-match

Type: List

http-policy-match

Type: List

multi-match-rule-list

Type: List

Refernce Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list_http-policy-match

Specification	
Type	*list*
Block object keys	

match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

http-policy-list_multi-match-rule-list

Specification	
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-typecookie-name-equals-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-typecookie-name-contains-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-ends-with-type are mutually exclusive

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-typecookie-value-equals-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-typecookie-value-contains-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-typeheader-name-equals-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-typeheader-name-equals-type, header-name-contains-type and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-typeheader-name-contains-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-typeheader-name-equals-type, header-name-contains-type and header-name-ends-with-type are mutually exclusive

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-typeheader-value-equals-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-typeheader-value-equals-type, header-value-contains-type and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-typeheader-value-contains-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-typeheader-value-equals-type, header-value-contains-type and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-typehost-equals-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-typehost-equals-type, host-contains-type and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-typehost-contains-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-typehost-equals-type, host-contains-type and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-typequery-param-name-equals-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-typequery-param-name-contains-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-typequery-param-value-equals-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-typequery-param-value-contains-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template-waf

Description Waf Template to be used (Waf Template Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-typeurl-equals-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-typeurl-equals-type, url-contains-type and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-typeurl-contains-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-typeurl-equals-type, url-contains-type and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-list_geo-location-match

Specification	
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

geo-location-template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

geo-location-template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

link-probe-list

Specification	
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *link-probe-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-probe-list_destination

Specification	
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as static-ipv4-addr and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr resolve-as and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr resolve-as and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-ssl-list

Specification	
Type	*list*
Block object keys	

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Refernce Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-san-ends-with-list

Type: List

certificate-san-equals-list

Type: List

certificate-san-starts-with-list

Type: List

certificate-subject-contains-list

Type: List

certificate-subject-ends-with-list

Type: List

certificate-subject-equals-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *client-ssl-list_exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *client-ssl-list_exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-certfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-keyfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificateforward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name shared-partition-pool and fp-cert-fetch-autonat are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days ocspst-sg-hours and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours ocspst-sg-days and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes ocspst-sg-days and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days ocspst-srvr-hours and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours ocspst-srvr-days and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes ocspst-srvr-days and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 0-604800

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lieftime in seconds from stateless session resumption (Lifetime value in seconds)

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template template-cipher and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher shared-partition-cipher-template and cipher-wo-prio are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *client-ssl-list_web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *client-ssl-list_web-reputation*

Type: Object

client-ssl-list_bypass-cert-subject-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-ssl-list_certificate-san-contains-list

Specification	
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_equals-list

Specification	
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_forward-proxy-trusted-ca-lists

Specification	
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ssl-list_ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

client-ssl-list_contains-list

Specification	
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_ends-with-list

Specification	
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance*

client-ssl-list_client-auth-contains-list

Specification	
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-subject-contains-list

Specification	
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_req-ca-lists

Specification	
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

client-ssl-list_certificate-subject-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_web-reputation

Specification	
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-riskbypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-maliciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-riskbypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspiciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-thresholdbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthybypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

client-ssl-list_bypass-cert-issuer-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-ssl-list_client-auth-equals-list

Specification	
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-issuer-equals-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-san-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ssl-list_certificate-list

Specification	
Type	*list*
Block object keys	

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

client-ssl-list_certificate-san-equals-list

Specification	
Type	*list*
Block object keys	

certificate-san-equals

Description Forward proxy bypass if Certificate SAN equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-issuer-contains-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-contains

Description Forward proxy bypass if Certificate issuer contains another string (Certificate issuer)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_client-auth-starts-with-list

Specification	
Type	*list*
Block object keys	

client-auth-starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-subject-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-ends-with

Description Forward proxy bypass if Certificate Subject ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_bypass-cert-san-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-san-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-multi-class-list-name and bypass-cert-san-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

Specification	
Type	*list*
Block object keys	

server-cert

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Description Category Web Hosting Sites

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ssl-list_certificate-issuer-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-starts

Description Forward proxy bypass if Certificate issuer starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_certificate-san-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-starts

Description Forward proxy bypass if Certificate SAN starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_client-auth-ends-with-list

Specification	
Type	*list*
Block object keys	

client-auth-ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_exception-web-reputation

Specification	
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-riskexception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-maliciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-riskexception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspiciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-thresholdexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthyexception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

client-ssl-list_certificate-subject-equals-list

Specification	
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-ssl-list_cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA':

TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio template-cipher and shared-partition-cipher-template are mutually exclusive

client-ssl-list_starts-with-list

Specification	
Type	*list*
Block object keys	

starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

link-block-as-down

Specification	
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dynamic-service-list

Specification	
Type	*list*
Block object keys	

dns-server

Type: List

name

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dynamic-service-list_dns-server

Specification	
Type	*list*
Block object keys	

ipv4-dns-server

Description DNS Server IPv4 Address

Type: string

Format: ipv4-address

ipv6-dns-server

Description DNS Server IPv6 Address

Type: string

Format: ipv6-address

dblb-list

Specification	
Type	*list*
Block object keys	

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *dblb-list_calc-sha1*

Type: Object

Refernce Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dblb-list_calc-sha1

Specification	
Type	*object*

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fix-list

Specification	
Type	*list*
Block object keys	

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fix-list_tag-switching

Specification	
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

persist

Specification	
Type	*object*

cookie-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/cookie/{name}*

destination-ip-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/destination-ip/{name}*

source-ip-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/source-ip/{name}*

ssl-sid-list

Type: List

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid/{name}*

persist_destination-ip-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_source-ip-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_cookie-list

Specification	
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

persist_ssl-sid-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

doh-list

Specification	
Type	*list*
Block object keys	

conn-reuse

Description 'enable': Enable Connection Reuse; 'disable': Disable Connection-Reuse (Default);

Type: string

Supported Values: enable, disable

Default: disable

dns-retry

Description: dns-retry is a **JSON Block**. Please see below for *doh-list_dns-retry*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/dns-retry*

forwarder

Description: forwarder is a **JSON Block**. Please see below for *doh-list_forwarder*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/forwarder*

name

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

doh-list_forwarder

Specification	
Type	*object*

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4forwarding-ipv6, tcp-service-group and udp-service-group are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6forwarding-ipv4, tcp-service-group and udp-service-group are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

doh-list_dns-retry

Specification	
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sip-list_server-request-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sip-list_server-response-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sip-list_client-request-header

Specification	
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

sip-list_client-response-header

Specification	
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

sip-list_exclude-translation

Specification	
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

respmod-icap-list

Specification	
Type	*list*
Block object keys	

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 1 - 65535, default is 0 (1 - 65530, default is 0)

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

respmod-icap-list_bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

virtual-server-list

Specification	
Type	*list*
Block object keys	

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-ssh-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hostkey

Description Specify private-key (Key Name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

name

Description Client SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssli-list

Specification	
Type	*list*
Block object keys	

name

Description SSLi Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'http': HTTP service; 'xmpp': XMPP service; 'smtp': SMTP service; 'pop': POP service;

Type: string

Supported Values: http, xmpp, smtp, pop, ldap, ftp

Default: http

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssh-list

Specification	
Type	*list*
Block object keys	

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssh-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'successful_handshakes': successful_handshakes; 'failed_handshakes': failed_handshakes; 'forwarding_errors': forwarding_errors;

Type: string

Supported Values: all, successful_handshakes, failed_handshakes, forwarding_errors

dns-list

Specification	
Type	*list*
Block object keys	

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

class-list

Description: class-list is a **JSON Block**. Please see below for *dns-list_class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns-logging*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *dns-list_local-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP)

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *dns-list_query-class-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *dns-list_query-type-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *dns-list_recursive-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-edns-csubnet-to-server

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *dns-list_response-rate-limiting*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *dns-list_udp-retransmit*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_response-rate-limiting

Specification	
Type	*object*

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 20 per two seconds)

Type: number

Range: 1-1000

Default: 10

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

dns-list_response-rate-limiting_rrl-class-list-list

Specification	
Type	*list*
Block object keys	

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_response-rate-limiting_rrl-class-list-list_lid-list

Specification	
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_rpz-list

Specification	
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *dns-list_rpz-list_logging*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_rpz-list_logging

Specification	
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_rpz-list_logging_rpz-action

Specification	
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

dns-list_recursive-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/nat/pool*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 30

Type: number

Range: 1-62

Default: 30

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_recursive-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

dns-list_class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *dns-list_class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

dns-list_udp-retransmit

Specification	
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-class-filter

Specification	
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-class-filter_query-class

Specification	
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

dns-list_local-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_local-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

dns-list_local-dns-resolution_local-resolver-cfg

Specification	
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

dns-list_query-type-filter

Specification	
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-list_query-type-filter_query-type

Specification	
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

http-list

Specification	
Type	*list*
Block object keys	

100-cont-wait-for-req-complete

Description When REQ has Expect 100 and response is not 100, then wait for whole request to be sent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-sg

Description Select service group for non-http traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

client-ip-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-port-hdr-replace

Description Replace the existing header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-auto-disable-on-high-cpu

Description Auto-disable software compression on high cpu usage (Disable compression if cpu usage is above threshold. Default is off.)

Type: number

Range: 1-100

compression-content-type

Type: List

compression-enable

Description Enable Compression

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-exclude-content-type

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description compression level, default 1 (compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 100

Type: number

Range: 1-1000

Default: 100

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc rd-secure and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *http-list_redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *http-list_template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-list_request-header-erase-list

Specification	
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_redirect-rewrite

Specification	
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

http-list_redirect-rewrite_match-list

Specification	
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_response-header-insert-list

Specification	
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

http-list_response-header-erase-list

Specification	
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-list_template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

http-list_url-switching

Specification	
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

http-list_response-content-replace-list

Specification	
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

http-list_request-header-insert-list

Specification	
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

http-list_host-switching

Specification	
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

http-list_compression-content-type

Specification	
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-list_compression-exclude-uri

Specification	
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

http-list_compression-exclude-content-type

Specification	
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

dns-logging-list

Specification	
Type	*list*
Block object keys	

disable

Description Disable DNS Logging template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging-protocol

Description 'both': Log DNS over tcp and udp; 'tcp': Log DNS over tcp; 'udp': Log DNS over udp;

Type: string

Supported Values: both, tcp, udp

dns-logging-request-section

Description 'all': Log DNS header and question section; 'header': Log DNS header information; 'question': Log DNS question section;

Type: string

Supported Values: all, header, question

dns-logging-type

Description 'query': DNS Query Logging;

Type: string

Supported Values: query

name

Description DNS Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-list

Specification	
Type	*list*
Block object keys	

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value)

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mqtt-list

Specification	
Type	*list*
Block object keys	

clientid-hash-first

Description Use the begining part of client ID to calculate hash value (client ID string length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-last

Description Use the end part of Client ID to calculate hash value (Client ID length to calculate hash value)

Type: number

Range: 4-128

clientid-hash-offset

Description Skip part of Client ID to calculate hash value (Offset of the Client ID)

Type: number

Range: 0-255

clientid-hash-persist

Description Use Client ID's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description MQTT Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cipher-list

Specification	
Type	*list*
Block object keys	

cipher-cfg

Type: List

cipher13-cfg

Type: List

name

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cipher-list_cipher13-cfg

Specification	
Type	*list*
Block object keys	

cipher13-suite

Description 'TLS_AES_256_GCM_SHA384': TLS_AES_256_GCM_SHA384; 'TLS_CHACHA20_POLY1305_SHA256': TLS_CHACHA20_POLY1305_SHA256; 'TLS_AES_128_GCM_SHA256': TLS_AES_128_GCM_SHA256;

Type: string

Supported Values: TLS_AES_256_GCM_SHA384, TLS_CHACHA20_POLY1305_SHA256, TLS_AES_128_GCM_SHA256

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

cipher-list_cipher-cfg

Specification	
Type	*list*
Block object keys	

cipher-suite

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_SM3, TLS1_ECDHE_SM2_WITH_SMS4_SHA256, TLS1_ECDHE_SM2_WITH_SMS4_GCM_SM3

priority

Description Cipher priority (Cipher priority (default 1))

Type: number

Range: 1-100

Default: 1

policy-list

Specification	
Type	*list*
Block object keys	

bw-list-id

Type: List

bw-list-name

Description Specify a blacklist/whitelist name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list

Description: class-list is a **JSON Block**. Please see below for *policy-list_class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list*

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *policy-list_forward-policy*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy

Specification	
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

filtering

Type: List

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

policy-list_forward-policy_san-filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

policy-list_forward-policy_action-list

Specification	
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url drop-response-code and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_action-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

policy-list_forward-policy_source-list

Specification	
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *policy-list_forward-policy_source-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_forward-policy_source-list_destination

Specification

Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

policy-list_class-list

Specification	
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *policy-list_class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy-list_class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

policy-list_class-list_lid-list_response-code-rate-limit

Specification	
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

policy-list_bw-list-id

Specification	
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

policy-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp_client_hello_not_found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

server-list

Specification	
Type	*list*
Block object keys	

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is "DRS"))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight)

Type: number

Range: 1-1000

Default: 1

monitor-list

Specification	
Type	*list*
Block object keys	

clear-cfg

Type: List

id

Description Monitor template ID Number

Type: number

Range: 1-16

link-disable-cfg

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

monitor-list_clear-cfg

Specification	
Type	*list*
Block object keys	

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

monitor-list_link-enable-cfg

Specification	
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-up-cfg

Specification	
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-down-cfg

Specification	
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

monitor-list_link-disable-cfg

Specification	
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the physical port number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

tcp-proxy-list

Specification	
Type	*list*
Block object keys	

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is 5 (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (sec), default is 600 (number)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (number)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number)

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *tcp-proxy-list_proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-proxy-list_proxy-header

Specification	
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

ftp-list

Specification	
Type	*list*
Block object keys	

active-mode-port

Description Non-Standard FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

active-mode-port-val

Description Non-Standard FTP Active mode port

Type: number

Range: 1-65534

Mutual Exclusion: active-mode-port-val and any are mutually exclusive

any

Description Allow any FTP Active mode port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: any and active-mode-port-val are mutually exclusive

name

Description FTP template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

to

Description End range of FTP Active mode port

Type: number

Range: 1-65534

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

imap-pop3-list

Specification	
Type	*list*
Block object keys	

logindisabled

Description Disable Login before STARTTLS.Works only for imap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description IMAP-POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

starttls

Description 'disabled': Disable STARTTLS; 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before imap transaction;

Type: string

Supported Values: disabled, optional, enforced

Default: disabled

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-list

Specification	
Type	*list*
Block object keys	

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *server-ssl-list_certificate*

Type: Object

Refernce Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template cipher-wo-prio and shared-partition-cipher-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 1-7200

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template cipher-wo-prio and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 30-34

Default: 33

server-ssl-list_crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ssl-list_certificate

Specification	
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-ssl-list_ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

server-ssl-list_server-certificate-error

Specification	
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

server-ssl-list_ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

server-ssl-list_cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio cipher-template and shared-partition-cipher-template are mutually exclusive

2.92.74 slb template cache

RAM caching template

cache Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*cache-list*
Collection URI	/axapi/v3/slb/template/cache
Element Name	cache
Element URI	/axapi/v3/slb/template/cache/{name}
Element Attributes	cache_attributes
Schema	`cache schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/cache

cache attributes

```
POST /axapi/v3/slb/template/cache/
Payload:
{
    "cache": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/cache

cache attributes

Get Object

GET

/axapi/v3/slb/template/cache/{name}

cache attributes

```
GET /axapi/v3/slb/template/cache/a
Reponse:
{
    "cache": {
        "name": "a",
```

(continues on next page)

(continued from previous page)

```

cache-list

Modify Object

POST

/axapi/v3/slb/template/cache/{name}

cache attributes

Replace Object

PUT

/axapi/v3/slb/template/cache/{name}

cache attributes

```
PUT /axapi/v3/slb/template/cache/a
Payload:
{
    "cache": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/template/cache

cache-list

Delete Object

DELETE

/axapi/v3/slb/template/cache/{name}

cache attributes

```
DELETE /axapi/v3/slb/template/cache/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

cache-list

cache-list is **JSON List** of *cache attributes*

cache-list : [

{ *cache attributes* },

{ *cache attributes* },

...

]

cache attributes

accept-reload-req

Description Accept reload requests via cache-control directives in HTTP headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

age

Description Specify duration in seconds cached content valid, default is 3600 seconds (seconds that the cached content is valid (default 3600 seconds))

Type: number

Range: 1-999999

Default: 3600

default-policy-nocache

Description Specify default policy to be to not cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-age

Description Disable insertion of age header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-insert-via

Description Disable insertion of via header in response served from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Type: List

logging

Description Specify logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

max-cache-size

Description Specify maximum cache size in megabytes, default is 80MB (RAM cache size in megabytes (default 80MB))

Type: number

Range: 1-4096

Default: 80

max-content-size

Description Maximum size (bytes) of response that can be cached - default 81920 (80KB)

Type: number

Range: 0-268435455

Default: 81920

min-content-size

Description Minimum size (bytes) of response that can be cached - default 512

Type: number

Range: 0-268435455

Default: 512

name

Description Specify cache template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-tmpl-cache-tmpl*

remove-cookies

Description Remove cookies in response and cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

replacement-policy

Description 'LFU': LFU;

Type: string

Supported Values: LFU

Default: LFU

sampling-enable

Type: List

uri-policy

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-host

Description Verify request using host before sending response from RAM cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

local-uri-policy

Specification	
Type	*list*
Block object keys	

local-uri

Description Specify Local URI for caching (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': hits; 'miss': miss; 'bytes_served': bytes_served; 'total_req': total_req; 'caching_req': caching_req; 'nc_req_header': nc_req_header; 'nc_res_header': nc_res_header; 'rv_success': rv_success; 'rv_failure': rv_failure; 'ims_request': ims_request; 'nm_response': nm_response; 'rsp_type_CL': rsp_type_CL; 'rsp_type_CE': rsp_type_CE; 'rsp_type_304': rsp_type_304; 'rsp_type_other': rsp_type_other; 'rsp_no_compress': rsp_no_compress; 'rsp_gzip': rsp_gzip; 'rsp_deflate': rsp_deflate; 'rsp_other': rsp_other; 'nocache_match': nocache_match; 'match': match; 'invalidate_match': invalidate_match; 'content_toobig': content_toobig; 'content_toosmall': content_toosmall; 'entry_create_failures': entry_create_failures; 'mem_size': mem_size; 'entry_num': entry_num; 'replaced_entry': replaced_entry; 'aging_entry': aging_entry; 'cleaned_entry': cleaned_entry;

Type: string

Supported Values: all, hits, miss, bytes_served, total_req, caching_req, nc_req_header, nc_res_header, rv_success, rv_failure, ims_request, nm_response, rsp_type_CL, rsp_type_CE, rsp_type_304, rsp_type_other, rsp_no_compress, rsp_gzip, rsp_deflate, rsp_other, nocache_match, match, invalidate_match, content_toobig, content_toosmall, entry_create_failures, mem_size, entry_num, replaced_entry, aging_entry, cleaned_entry, rsp_type_stream, header_save_error

uri-policy

Specification	
Type	*list*
Block object keys	

cache-action

Description 'cache': Specify if certain URIs should be cached; 'nocache': Specify if certain URIs should not be cached;

Type: string

Supported Values: cache, nocache

cache-value

Description Specify seconds that content should be cached, default is age specified in cache template

Type: number

Range: 1-999999

invalidate

Description Specify if URI should invalidate cache entries matching pattern (pattern that would match entries to be invalidated (64 chars max))

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uri

Description Specify URI for cache policy (Specify URI pattern that the policy should be applied to, maximum 63 charaters)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description
	nm_response	2	nm_response
	rsp_type_304	2	rsp_type_304
	rsp_other	2	rsp_other
	content_toosmall	2	content_toosmall

continues on next page

Table 2.51 – continued from previous page

	Counter	Size	Description
	entry_create_failures	2	entry_create_failures
	nocache_match	2	nocache_match
	content_toobig	2	content_toobig
	nc_res_header	2	nc_res_header
	miss	2	Cache misses
	nc_req_header	2	nc_req_header
	replaced_entry	8	replaced_entry
	aging_entry	8	aging_entry
	mem_size	8	mem_size
	header_save_error	2	header_save_error
	rsp_deflate	2	rsp_deflate
	invalidate_match	2	invalidate_match
	match	2	match
	cleaned_entry	8	cleaned_entry
	entry_num	8	entry_num
	total_req	2	Total requests received
	bytes_served	2	Bytes served from cache
	rv_success	2	rv_success
	rv_failure	2	rv_failure
	rsp_gzip	2	rsp_gzip
	hits	2	Cache hits
	rsp_type_other	2	rsp_type_other
	rsp_type_CE	2	rsp_type_CE
	rsp_no_compress	2	rsp_no_compress
	rsp_type_CL	2	rsp_type_CL
	caching_req	2	Total requests to cache
	ims_request	2	ims_request
	rsp_type_stream	2	rsp_type_stream

2.92.75 slb template cipher

2.92.77 slb template client-ssl

Client SSL Template

client-ssl Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*client-ssl-list*
Collection URI	/axapi/v3/slb/template/client-ssl
Element Name	client-ssl
Element URI	/axapi/v3/slb/template/client-ssl/{name}
Element Attributes	client-ssl_attributes
Operational Data URI	/axapi/v3/slb/template/client-ssl/{name}/oper
Schema	`client-ssl schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/client-ssl

client-ssl attributes

Create List

POST

/axapi/v3/slb/template/client-ssl

client-ssl attributes

Get Object

GET

/axapi/v3/slb/template/client-ssl/{name}

client-ssl attributes

Get List

GET

/axapi/v3/slb/template/client-ssl

client-ssl-list

Modify Object

POST

/axapi/v3/slb/template/client-ssl/{name}

client-ssl attributes

Replace Object

PUT

/axapi/v3/slb/template/client-ssl/{name}

client-ssl attributes

Replace List

PUT

/axapi/v3/slb/template/client-ssl

client-ssl-list

Delete Object

DELETE

/axapi/v3/slb/template/client-ssl/{name}

client-ssl attributes

client-ssl-list

client-ssl-list is **JSON List** of *client-ssl attributes*

client-ssl-list : [

{ *client-ssl attributes* },

{ *client-ssl attributes* },

...

]

client-ssl attributes

ad-group-list

Description Forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

auth-sg

Description Specify authorization LDAP service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: auth-sg and authen-name are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

auth-sg-dn

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-sg-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

auth-username

Description Specify the Username Field in the Client Certificate(If multi-fields are specificed, prior one has higher priority)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-username-attribute

Description Specify attribute name of username for client SSL authorization

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

authen-name

Description Specify authorization LDAP server name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: authen-name and auth-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ldap*

authorization

Description Specify LDAP server for client SSL authorizaiton

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-cert-issuer-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-class-list-name and bypass-cert-issuer-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-issuer-multi-class-list

Type: List

bypass-cert-san-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-class-list-name and bypass-cert-san-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-san-multi-class-list

Type: List

bypass-cert-subject-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-class-list-name and bypass-cert-subject-multi-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

bypass-cert-subject-multi-class-list

Type: List

ca-certs

Type: List

cache-persistence-list-name

Description Class List Name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

case-insensitive

Description Case insensitive forward proxy bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cert-revoke-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

cert-unknown-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: bypass

certificate-issuer-contains-list

Type: List

certificate-issuer-ends-with-list

Type: List

certificate-issuer-equals-list

Type: List

certificate-issuer-starts-with-list

Type: List

certificate-list

Type: List

Refernce Object: */axapi/v3/slb/template/client-ssl/{name}/certificate/{cert}*

certificate-san-contains-list

Type: List

certificate-san-ends-with-list

Type: List

certificate-san-equals-list

Type: List

certificate-san-starts-with-list

Type: List

certificate-subject-contains-list

Type: List

certificate-subject-ends-with-list

Type: List

certificate-subject-equals-list

Type: List

certificate-subject-starts-with-list

Type: List

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert and chain-cert-shared-str are mutually exclusive

chain-cert-shared-str

Description Chain Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: chain-cert-shared-str and chain-cert are mutually exclusive

cipher-without-prio-list

Type: List

class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: class-list-name and multi-clist-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-auth-case-insensitive

Description Case insensitive forward proxy client auth bypass

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-auth-class-list

Description Forward proxy client auth bypass if SNI string matches class-list (Class List Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-contains-list

Type: List

client-auth-ends-with-list

Type: List

client-auth-equals-list

Type: List

client-auth-starts-with-list

Type: List

client-certificate

Description 'Ignore': Don't request client certificate; 'Require': Require client certificate; 'Request': Request client certificate;

Type: string

Supported Values: Ignore, Require, Request

Default: Ignore

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

contains-list

Type: List

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

direct-client-server-auth

Description Let backend server does SSL client authentication directly

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sslv3

Description Reject Client requests for SSL version 3

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ends-with-list

Type: List

equals-list

Type: List

exception-ad-group-list

Description Exceptions to forward proxy bypass if ad-group matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-issuer-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-san-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-certificate-subject-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-sni-cl-name

Description Exceptions to forward-proxy-bypass

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-user-name-list

Description Exceptions to forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

exception-web-category

Description: exception-web-category is a **JSON Block**. Please see below for *exception-web-category*

Type: Object

exception-web-reputation

Description: exception-web-reputation is a **JSON Block**. Please see below for *exception-web-reputation*

Type: Object

expire-hours

Description Certificate lifetime in hours

Type: number

Range: 1-168

forward-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: forward-encrypted and fp-ca-certificate are mutually exclusive

forward-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-passphrase and fp-ca-certificate are mutually exclusive

forward-proxy-alt-sign

Description Forward proxy alternate signing cert and key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-block-message

Description Message to be included on the block page (Message, enclose in quotes if spaces are present)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

forward-proxy-ca-cert

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-certfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: forward-proxy-ca-keyfp-ca-certificate, fp-ca-key, fp-ca-key-pass-phrase, fp-ca-key-passphrase, fp-ca-key-encrypted, fp-ca-chain-cert and fp-ca-certificate-shared are mutually exclusive

forward-proxy-cert-cache-limit

Description Certificate cache size limit, default is 524288 (set to 0 for unlimited size)

Type: number

Range: 0-2147483647

Default: 524288

forward-proxy-cert-cache-timeout

Description Certificate cache timeout, default is 1 hour (seconds, set to 0 for never timeout)

Type: number

Range: 0-2147483647

Default: 3600

forward-proxy-cert-expiry

Description Adjust certificate expiry relative to the time when it is created on the device

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-cert-not-ready-action

Description 'bypass': bypass the connection; 'reset': reset the connection;

Type: string

Supported Values: bypass, reset, intercept

Default: bypass

forward-proxy-cert-revoke-action

Description Action taken if a certificate is irreversibly revoked, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-cert-unknown-action

Description Action taken if a certificate revocation status is unknown, bypass SSLi processing by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-crl-disable

Description Disable Certificate Revocation List checking for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-decrypted-dscp

Description Apply a DSCP to decrypted and bypassed traffic (DSCP to apply to decrypted traffic)

Type: number

Range: 1-63

forward-proxy-decrypted-dscp-bypass

Description DSCP to apply to bypassed traffic

Type: number

Range: 1-63

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-esni-action

Description Action taken if receiving encrypted server name indication extension in client hello MSG, bypass the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-failsafe-disable

Description Disable Failsafe for SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-hash-persistence-interval

Description Set the time interval to save the hash persistence certs (Interval value, in minutes)

Type: number

Range: 1-720

Default: 30

forward-proxy-log-disable

Description Disable SSL forward proxy logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-no-shared-cipher-action

Description Action taken if handshake fails due to no shared ciper, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

forward-proxy-no-sni-action

Description 'intercept': intercept in no SNI case; 'bypass': bypass in no SNI case; 'reset': reset in no SNI case;

Type: string

Supported Values: intercept, bypass, reset

Default: intercept

forward-proxy-ocsp-disable

Description Disable ocsp-stapling for forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-require-sni-cert-matched

Description 'no-match-action-inspect': Inspected if not matched; 'no-match-action-drop': Dropped if not matched;

Type: string

Supported Values: no-match-action-inspect, no-match-action-drop

forward-proxy-selfsign-redir

Description Redirect connections to pages with self signed certs to a warning page

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-ssl-version

Description TLS/SSL version, default is TLS1.2 (TLS/SSL version: 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 31-34

Default: 33

forward-proxy-trusted-ca-lists

Type: List

forward-proxy-verify-cert-fail-action

Description Action taken if certificate verification fails, close the connection by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

fp-alt-cert

Description CA Certificate for forward proxy alternate signing (Certificate name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

fp-alt-key

Description CA Private Key for forward proxy alternate signing (Key name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

fp-alt-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

fp-alt-shared

Description Alternate CA Certificate and Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-ca-certificate

Description CA Certificate for forward proxy (SSL forward proxy CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-certificateforward-proxy-ca-cert, fp-ca-shared, forward-proxy-ca-key, forward-passphrase, forward-encrypted and fp-ca-key-shared are mutually exclusive

fp-ca-certificate-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-certificate-shared forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-chain-cert forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key

Description CA Private Key for forward proxy (SSL forward proxy CA Key Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

Mutual Exclusion: fp-ca-key-encrypted forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-ca-key-passphrase forward-proxy-ca-cert and forward-proxy-ca-key are mutually exclusive

fp-ca-key-shared

Description CA Private Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-key-shared and fp-ca-certificate are mutually exclusive

fp-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: fp-ca-shared and fp-ca-certificate are mutually exclusive

fp-cert-ext-aia-ca-issuers

Description CA Issuers (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ca-issuers and fp-cert-ext-aia-ocsp are mutually exclusive

fp-cert-ext-aia-ocsp

Description OCSP (Authority Information Access URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-ext-aia-ocsp and fp-cert-ext-aia-ca-issuers are mutually exclusive

fp-cert-ext-crldp

Description CRL Distribution Point (CRL Distribution Point URI)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-cert-fetch-autonat

Description 'auto': Configure auto NAT for server certificate fetching;

Type: string

Supported Values: auto

Mutual Exclusion: fp-cert-fetch-autonat and fp-cert-fetch-natpool-name are mutually exclusive

fp-cert-fetch-autonat-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-cert-fetch-natpool-name

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: fp-cert-fetch-natpool-name shared-partition-pool and fp-cert-fetch-autonat are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-name-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

fp-cert-fetch-natpool-precedence

Description Set this NAT pool as higher precedence than other source NAT like configued under template policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fp-esni-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: bypass

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hsm-type

Description 'thales-embed': Thales embed key; 'thales-hwcrhk': Thales hwcrhk Key;

Type: string

Supported Values: thales-embed, thales-hwcrhk

inspect-certificate-issuer-cl-name

Description Forward proxy Inspect if Certificate issuer matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-san-cl-name

Description Forward proxy Inspect if Certificate Subject Alternative Name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-certificate-subject-cl-name

Description Forward proxy Inspect if Certificate Subject matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

inspect-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

ldap-base-dn-from-cert

Description Use Subject DN as LDAP search base DN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ldap-search-filter

Description Specify LDAP search filter

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

multi-class-list

Type: List

name

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-anti-replay

Description Disable anti-replay protection for TLS 1.3 early data (0-RTT data)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-shared-cipher-action

Description 'bypass': bypass SSLi processing; 'drop': close the connection;

Type: string

Supported Values: bypass, drop

Default: drop

non-ssl-bypass-l4session

Description Handle the non-ssl session as L4 for performance optimization

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-ssl-bypass-service-group

Description Service Group for Bypass non-ssl traffic (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

notafter

Description notAfter date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notafterday

Description Day

Type: number

Range: 1-31

notaftermonth

Description Month

Type: number

Range: 1-12

notafteryear

Description Year

Type: number

Range: 2005-2035

notbefore

Description notBefore date

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

notbeforeday

Description Day

Type: number

Range: 1-31

notbeforemonth

Description Month

Type: number

Range: 1-12

notbeforeyear

Description Year

Type: number

Range: 2005-2035

ocsp-stapling

Description Config OCSP stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-ca-cert

Description CA certificate

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

ocspst-ocsp

Description Specify OCSP Authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ocspst-sg

Description Specify authentication service group

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-sg and ocspst-srvr are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/service-group*

ocspst-sg-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-sg-days ocspst-sg-hours and ocspst-sg-minutes are mutually exclusive

ocspst-sg-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-sg-hours ocspst-sg-days and ocspst-sg-minutes are mutually exclusive

ocspst-sg-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-sg-minutes ocspst-sg-days and ocspst-sg-hours are mutually exclusive

ocspst-sg-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

ocspst-srvr

Description Specify OCSP authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: ocspst-srvr and ocspst-sg are mutually exclusive

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

ocspst-srvr-days

Description Specify update period, in days

Type: number

Range: 1-31

Mutual Exclusion: ocspst-srvr-days ocspst-srvr-hours and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-hours

Description Specify update period, in hours

Type: number

Range: 1-23

Default: 1

Mutual Exclusion: ocspst-srvr-hours ocspst-srvr-days and ocspst-srvr-minutes are mutually exclusive

ocspst-srvr-minutes

Description Specify update period, in minutes

Type: number

Range: 1-59

Mutual Exclusion: ocspst-srvr-minutes ocspst-srvr-days and ocspst-srvr-hours are mutually exclusive

ocspst-srvr-timeout

Description Specify retry timeout (Default is 30 mins)

Type: number

Range: 1-44640

Default: 30

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-ca-lists

Type: List

require-web-category

Description Wait for web category to be resolved before taking bypass decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-auto-map

Description Enable automatic mapping of server name indication in Client hello extension

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-list

Type: List

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 0-604800

Default: 0

session-ticket-disable

Description Disable client side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

session-ticket-lifetime

Description Session ticket lieftime in seconds from stateless session resumption (Lifetime value in seconds)

Type: number

Range: 0-2147483647

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template template-cipher and cipher-wo-prio are mutually exclusive

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and fp-cert-fetch-natpool-name are mutually exclusive

sni-bypass-enable-log

Description Enable logging when bypass event happens, disabled by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-expired-cert

Description Bypass when certificate expired

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-bypass-explicit-list

Description Bypass when matched explicit bypass list (Specify class list name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

sni-bypass-missing-cert

Description Bypass when missing cert/key

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sni-enable-log

Description Enable logging of sni-auto-map failures. Disable by default

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-false-start-disable

Description disable SSL False Start

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

sslv2-bypass-service-group

Description Service Group for Bypass SSLV2 (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

starts-with-list

Type: List

template-cipher

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cipher shared-partition-cipher-template and cipher-wo-prio are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

template-hsm

Description HSM Template (HSM Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/hsm/template*

user-name-list

Description Forward proxy bypass if user-name matches class-list

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

verify-cert-fail-action

Description 'bypass': bypass SSLi processing; 'continue': continue the connection; 'drop': close the connection;

Type: string

Supported Values: bypass, continue, drop, block

Default: drop

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 1-34

web-category

Description: web-category is a **JSON Block**. Please see below for *web-category*

Type: Object

web-reputation

Description: web-reputation is a **JSON Block**. Please see below for *web-reputation*

Type: Object

bypass-cert-subject-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-subject-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-subject-multi-class-list-name and bypass-cert-subject-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

certificate-san-contains-list

Specification	
Type	*list*
Block object keys	

certificate-san-contains

Description Forward proxy bypass if Certificate SAN contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

equals-list

Specification	
Type	*list*
Block object keys	

equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-proxy-trusted-ca-lists

Specification	
Type	*list*
Block object keys	

forward-proxy-trusted-ca

Description Forward proxy trusted CA file (CA file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

fp-trusted-ca-shared

Description Trusted CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

contains-list

Specification	
Type	*list*
Block object keys	

contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ends-with-list

Specification	
Type	*list*
Block object keys	

ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description CA Certificate (CA Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp

Description Specify ocsp authentication server(s) for client certificate verification

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

client-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp/instance*

client-auth-contains-list

Specification	
Type	*list*
Block object keys	

client-auth-contains

Description Forward proxy bypass if SNI string contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-subject-contains-list

Specification	
Type	*list*
Block object keys	

certificate-subject-contains

Description Forward proxy bypass if Certificate Subject contains another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

req-ca-lists

Specification	
Type	*list*
Block object keys	

client-cert-req-ca-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-certificate-Request-CA

Description Send CA lists in certificate request (CA Certificate Name)

Type: string

Maximum Length: 245 characters

Maximum Length: 1 characters

certificate-subject-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-starts

Description Forward proxy bypass if Certificate Subject starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

web-reputation

Specification	
Type	*object*

bypass-low-risk

Description Bypass when reputation score is greater than or equal to 61

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-low-riskbypass-trustworthy, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-malicious

Description Bypass when reputation score is greater than or equal to 1

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-maliciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-threshold are mutually exclusive

bypass-moderate-risk

Description Bypass when reputation score is greater than or equal to 41

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-moderate-riskbypass-trustworthy, bypass-low-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-suspicious

Description Bypass when reputation score is greater than or equal to 21

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-suspiciousbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-malicious and bypass-threshold are mutually exclusive

bypass-threshold

Description Bypass when reputation score is greater than or equal to the customized score (1-100)

Type: number

Range: 1-100

Mutual Exclusion: bypass-thresholdbypass-trustworthy, bypass-low-risk, bypass-moderate-risk, bypass-suspicious and bypass-malicious are mutually exclusive

bypass-trustworthy

Description Bypass when reputation score is greater than or equal to 81

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: bypass-trustworthybypass-low-risk, bypass-moderate-risk, bypass-suspicious, bypass-malicious and bypass-threshold are mutually exclusive

bypass-cert-issuer-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-issuer-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-issuer-multi-class-list-name and bypass-cert-issuer-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

client-auth-equals-list

Specification	
Type	*list*
Block object keys	

client-auth-equals

Description Forward proxy bypass if SNI string equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-issuer-equals-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-equals

Description Forward proxy bypass if Certificate issuer equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-san-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-ends-with

Description Forward proxy bypass if Certificate SAN ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

certificate-list

Specification	
Type	*list*
Block object keys	

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

multi-class-list

Specification	
Type	*list*
Block object keys	

multi-clist-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: multi-clist-name and class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

certificate-issuer-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-ends-with

Description Forward proxy bypass if Certificate issuer ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

web-category

Specification	
Type	*object*

abortion

Description Category Abortion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

adult-and-pornography

Description Category Adult and Pornography

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alcohol-and-tobacco

Description Category Alcohol and Tobacco

Type: boolean

certificate-san-equals-list

Specification	
Type	*list*
Block object keys	

certificate-san-equals

Description Forward proxy bypass if Certificate SAN equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-issuer-contains-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-contains

Description Forward proxy bypass if Certificate issuer contains another string (Certificate issuer)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-starts-with-list

Specification	
Type	*list*
Block object keys	

client-auth-starts-with

Description Forward proxy bypass if SNI string starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-subject-ends-with-list

Specification	
Type	*list*
Block object keys	

certificate-subject-ends-with

Description Forward proxy bypass if Certificate Subject ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

bypass-cert-san-multi-class-list

Specification	
Type	*list*
Block object keys	

bypass-cert-san-multi-class-list-name

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: bypass-cert-san-multi-class-list-name and bypass-cert-san-class-list-name are mutually exclusive

Refernce Object: */axapi/v3/class-list*

server-name-list

Specification	
Type	*list*
Block object keys	

server-cert

Description Server Certificate associated to SNI (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-cert-regex

Description Server Certificate associated to SNI regex (Server Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-chain

Description Server Certificate Chain associated to SNI (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-chain-regex

Description Server Certificate Chain associated to SNI regex (Server Certificate Chain Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

server-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-encrypted-regex

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

server-key

Description Server Private Key associated to SNI (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-key-regex

Description Server Private Key associated to SNI regex (Server Private Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

server-name

Description Server name indication in Client hello extension (Server name String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-name-regex

Description Server name indication in Client hello extension with regular expression (Server name String with regex)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-name-regex-alternate

Description Specific the second certifcate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-passphrase

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-passphrase-regex

Description help Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

server-shared

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-shared-regex

Description Server Name Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-web-category

Specification	
Type	*object*

exception-abortion

Description Category Abortion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-adult-and-pornography

Description Category Adult and Pornography

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-alcohol-and-tobacco

Description Category Alcohol and Tobacco

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-auctions

Description Category Auctions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-bot-nets

Description Category Bot Nets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-business-and-economy

Description Category Business and Economy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-cdns

Description Category CDNs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-cheating

Description Category Cheating

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-computer-and-internet-info

Description Category Computer and Internet Info

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-computer-and-internet-security

Description Category Computer and Internet Security

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-confirmed-spam-sources

Description Category Confirmed SPAM Sources

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-cult-and-occult

Description Category Cult and Occult

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-dating

Description Category Dating

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-dead-sites

Description Category Dead Sites (db Ops only)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-drugs

Description Category Abused Drugs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-dynamic-comment

Description Category Dynamic Comment

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-educational-institutions

Description Category Educational Institutions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-entertainment-and-arts

Description Category Entertainment and Arts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-fashion-and-beauty

Description Category Fashion and Beauty

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-financial-services

Description Category Financial Services

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-food-and-dining

Description Category Food and Dining

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-gambling

Description Category Gambling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-games

Description Category Games

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-government

Description Category Government

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-gross

Description Category Gross

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-hacking

Description Category Hacking

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-hate-and-racism

Description Category Hate and Racism

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-health-and-medicine

Description Category Health and Medicine

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-home-and-garden

Description Category Home and Garden

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-hunting-and-fishing

Description Category Hunting and Fishing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-illegal

Description Category Illegal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-illegal-pornography

Description Category Illegal join Adult and Pornography

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-image-and-video-search

Description Category Image and Video Search

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-internet-communications

Description Category Internet Communications

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-internet-portals

Description Category Internet Portals

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-job-search

Description Category Job Search

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-keyloggers-and-monitoring

Description Category Keyloggers and Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-kids

Description Category Kids

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-legal

Description Category Legal

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-local-information

Description Category Local Information

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-malware-sites

Description Category Malware Sites

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-marijuana

Description Category Marijuana

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-military

Description Category Military

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-motor-vehicles

Description Category Motor Vehicles

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-music

Description Category Music

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-news-and-media

Description Category News and Media

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-nudity

Description Category Nudity

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-nudity-artistic

Description Category Nudity join Entertainment and Arts

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-online-greeting-cards

Description Category Online Greeting cards

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-open-http-proxies

Description Category Open HTTP Proxies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-parked-domains

Description Category Parked Domains

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-pay-to-surf

Description Category Pay to Surf

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-peer-to-peer

Description Category Peer to Peer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-personal-sites-and-blogs

Description Category Personal sites and Blogs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-personal-storage

Description Category Personal Storage

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-philosophy-and-politics

Description Category Philosophy and Political Advocacy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-phishing-and-other-fraud

Description Category Phishing and Other Frauds

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-private-ip-addresses

Description Category Private IP Addresses

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-proxy-avoid-and-anonymizers

Description Category Proxy Avoid and Anonymizers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-questionable

Description Category Questionable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-real-estate

Description Category Real Estate

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-recreation-and-hobbies

Description Category Recreation and Hobbies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-reference-and-research

Description Category Reference and Research

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-religion

Description Category Religion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-search-engines

Description Category Search Engines

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-sex-education

Description Category Sex Education

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-shareware-and-freeware

Description Category Shareware and Freeware

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-shopping

Description Category Shopping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-social-network

Description Category Social Network

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-society

Description Category Society

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-spam-urls

Description Category SPAM URLs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-sports

Description Category Sports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-spyware-and-adware

Description Category Spyware and Adware

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-stock-advice-and-tools

Description Category Stock Advice and Tools

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-streaming-media

Description Category Streaming Media

Type: boolean

Supported Values: true, false, 1, 0

exception-swimsuits-and-intimate-apparel

Description Category Swimsuits and Intimate Apparel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-training-and-tools

Description Category Training and Tools

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-translation

Description Category Translation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-travel

Description Category Travel

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-uncategorized

Description Uncategorized URLs

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-unconfirmed-spam-sources

Description Category Unconfirmed SPAM Sources

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-violence

Description Category Violence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-weapons

Description Category Weapons

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-web-advertisements

Description Category Web Advertisements

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-web-based-email

Description Category Web based email

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exception-web-hosting-sites

Description Category Web Hosting Sites

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

certificate-issuer-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-issuer-starts

Description Forward proxy bypass if Certificate issuer starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

certificate-san-starts-with-list

Specification	
Type	*list*
Block object keys	

certificate-san-starts

Description Forward proxy bypass if Certificate SAN starts with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-auth-ends-with-list

Specification	
Type	*list*
Block object keys	

client-auth-ends-with

Description Forward proxy bypass if SNI string ends with another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

exception-web-reputation

Specification	
Type	*object*

exception-low-risk

Description Intercept when reputation score is less than or equal to 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-low-riskexception-trustworthy, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-malicious

Description Intercept when reputation score is less than or equal to 20

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-maliciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-threshold are mutually exclusive

exception-moderate-risk

Description Intercept when reputation score is less than or equal to 60

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-moderate-riskexception-trustworthy, exception-low-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

exception-suspicious

Description Intercept when reputation score is less than or equal to 40

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-suspiciousexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-malicious and exception-threshold are mutually exclusive

exception-threshold

Description Intercept when reputation score is less than or equal to a customized value (1-100)

Type: number

Range: 1-100

Mutual Exclusion: exception-thresholdexception-trustworthy, exception-low-risk, exception-moderate-risk, exception-suspicious and exception-malicious are mutually exclusive

exception-trustworthy

Description Intercept when reputation score is less than or equal to 100

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: exception-trustworthyexception-low-risk, exception-moderate-risk, exception-suspicious, exception-malicious and exception-threshold are mutually exclusive

certificate-subject-equals-list

Specification	
Type	*list*
Block object keys	

certificate-subject-equals

Description Forward proxy bypass if Certificate Subject equals another string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA':

Maximum Length: 1 characters

chain-cert

Description Chain Certificate (Chain Certificate Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key

Description Server Private Key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

key-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Server Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.79 slb template connection-reuse

Connection Reuse

connection-reuse Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*connection-reuse-list*
Collection URI	/axapi/v3/slb/template/connection-reuse
Element Name	connection-reuse
Element URI	/axapi/v3/slb/template/connection-reuse/{name}
Element Attributes	connection-reuse_attributes
Schema	`connection-reuse schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/connection-reuse

connection-reuse attributes

```
POST /axapi/v3/slb/template/connection-reuse/
Payload:
{
    "connection-reuse": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/connection-reuse

connection-reuse attributes

Get Object

GET

/axapi/v3/slb/template/connection-reuse/{name}

connection-reuse attributes

```
GET /axapi/v3/slb/template/connection-reuse/a
Reponse:
{
    "connection-reuse": {

/axapi/v3/slb/template/connection-reuse

connection-reuse-list

Delete Object

DELETE

/axapi/v3/slb/template/connection-reuse/{name}

connection-reuse attributes

```
DELETE /axapi/v3/slb/template/connection-reuse/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

connection-reuse-list

connection-reuse-list is **JSON List** of *connection-reuse attributes*

connection-reuse-list : [

{ *connection-reuse attributes* },

{ *connection-reuse attributes* },

...

]

connection-reuse attributes

keep-alive-conn

Description Keep a number of server connections open

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

limit-per-server

Description Max Server Connections allowed (Connections per Server Port (default 1000))

Type: number

Range: 0-65535

Default: 1000

name

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

num-conn-per-port

Description Connections per Server Port (default 100)

Type: number

Range: 1-1024

Default: 100

preopen

Description Preopen server connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Timeout in seconds. Multiple of 60 (def 2400)

Type: number

Range: 60-3600

Default: 2400

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.80 slb template dblb

DBLB template

dblb Specification

dblb-list

dblb-list is **JSON List** of *dblb attributes*

dblb-list : [

{ *dblb attributes* },

{ *dblb attributes* },

...

]

dblb attributes

calc-sha1

Description: calc-sha1 is a **JSON Block**. Please see below for *calc-sha1*

Type: Object

Refernce Object: */axapi/v3/slb/template/dblb/{name}/calc-sha1*

class-list

Description Specify user/password string class list (Class list name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

name

Description DBLB template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-version

Description 'MSSQL2008': MSSQL server 2008 or 2008 R2; 'MSSQL2012': MSSQL server 2012; 'MySQL': MySQL server (any version);

Type: string

Supported Values: MSSQL2008, MSSQL2012, MySQL

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

calc-sha1

Specification	
Type	*object*

sha1-value

Description Cleartext password

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

}
```

diameter-list

diameter-list is **JSON List** of *diameter attributes*

diameter-list : [

{ *diameter attributes* },

{ *diameter attributes* },

...

]

diameter attributes

avp-code

Description avp code

Type: number

Range: 1-2147483647

avp-list

Type: List

avp-string

Description pattern to be matched in the avp string name, max length 127 bytes

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

customize-cea

Description customizing cea response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dwr-time

Description dwr health-check timer interval (in 100 milli second unit, default is 100, 0 means unset this option)

Type: number

Range: 0-2147483647

Default: 100

dwr-up-retry

Description number of successful dwr health-check before declaring target up

Type: number

Range: 1-7

Default: 3

forward-to-latest-server

Description Forward client message to the latest server that sends message with the same session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-unknown-session-id

Description Forward server message even it has unknown session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description user sesison idle timeout (in minutes, default is 5)

Type: number

Range: 1-65535

Default: 5

load-balance-on-session-id

Description Load balance based on the session id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-code-list

Type: List

multiple-origin-host

Description allowing multiple origin-host to a single server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description diameter template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

origin-host

Description: origin-host is a **JSON Block**. Please see below for *origin-host*

Type: Object

Refernce Object: */axapi/v3/slb/template/diameter/{name}/origin-host*

origin-realm

Description origin-realm name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

product-name

Description product name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group-name

Description service group name, this is the service group that the message needs to be copied to

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

session-age

Description user session age allowed (default 10), this is not idle-time (in minutes)

Type: number

Range: 1-65535

Default: 10

terminate-on-cca-t

Description remove diameter session when receiving CCA-T message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vendor-id

Description vendor-id avp (Vendon Id)

Type: number

Range: 0-2147483647

Default: 0

message-code-list

Specification	
Type	*list*
Block object keys	

message-code

Description

Type: number

Range: 1-2147483647

avp-list

Specification	
Type	*list*
Block object keys	

avp

Description customize avps for cer to the server (avp number)

Type: number

Range: 0-2147483647

int32

Description 32 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int32 int64 and string are mutually exclusive

int64

Description 64 bits integer

Type: number

Range: 0-2147483647

Mutual Exclusion: int64 int32 and string are mutually exclusive

mandatory

Description mandatory avp

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

string

Description String (string name, max length 127 bytes)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: string int32 and int64 are mutually exclusive

origin-host

Specification	
Type	*object*

origin-host-name

Description origin-host name avp

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.82 slb template diameter origin-host

```

dns-list

dns-list is **JSON List** of *dns attributes*

dns-list : [

{ *dns attributes* },

{ *dns attributes* },

...

]

dns attributes

add-padding-to-client

Description 'block-length': Block-Length Padding; 'random-block-length': Random-Block-Length Padding;

Type: string

Supported Values: block-length, random-block-length

cache-record-serving-policy

Description 'global': Follow global cofiguration (Default); 'no-change': No change in record order; 'round-robin': Round-robin;

Type: string

Supported Values: global, no-change, round-robin

class-list

Description: class-list is a **JSON Block**. Please see below for *class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list*

default-policy

Description 'nocache': Cache disable; 'cache': Cache enable;

Type: string

Supported Values: nocache, cache

Default: nocache

disable-dns-template

Description Disable DNS template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-rpz-attach-soa

Description Disable attaching SOA due to RPZ

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-logging

Description dns logging template (DNS Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns-logging*

dnssec-service-group

Description Use different service group if DNSSEC DO bit set (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

drop

Description Drop the malformed query

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop and forward are mutually exclusive

enable-cache-sharing

Description Enable DNS cache sharing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward

Description Forward to service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: forward and drop are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

local-dns-resolution

Description: local-dns-resolution is a **JSON Block**. Please see below for *local-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/local-dns-resolution*

max-cache-entry-size

Description Define maximum cache entry size (Maximum cache entry size per VIP)

Type: number

Range: 1-4096

Default: 1024

max-cache-size

Description Define maximum cache size (Maximum cache entry per VIP)

Type: number

max-query-length

Description Define Maximum DNS Query Length, default is unlimited (Specify Maximum Length)

Type: number

Range: 1-4095

name

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

period

Description Period in minutes

Type: number

Range: 1-10000

query-class-filter

Description: query-class-filter is a **JSON Block**. Please see below for *query-class-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-class-filter*

query-id-switch

Description Use DNS query ID to create sesion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

query-type-filter

Description: query-type-filter is a **JSON Block**. Please see below for *query-type-filter*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/query-type-filter*

recursive-dns-resolution

Description: recursive-dns-resolution is a **JSON Block**. Please see below for *recursive-dns-resolution*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/recursive-dns-resolution*

redirect-to-tcp-port

Description Direct the client to retry with TCP for DNS UDP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-aa-flag

Description Make answers created from cache non-authoritative

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-edns-csubnet-to-server

Description Remove EDNS(0) client subnet from client queries

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

remove-padding-to-server

Description Remove EDNS(0) padding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

response-rate-limiting

Description: response-rate-limiting is a **JSON Block**. Please see below for *response-rate-limiting*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting*

rpz-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}*

udp-retransmit

Description: udp-retransmit is a **JSON Block**. Please see below for *udp-retransmit*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/udp-retransmit*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

response-rate-limiting

Specification	
Type	*object*

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 10 per seconds)

Type: number

Range: 1-1000

Default: 10

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

response-rate-limiting_rrl-class-list-list

Specification	
Type	*list*
Block object keys	

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}/lid/{lidnum}*

name

Description Class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

response-rate-limiting_rrl-class-list-list_lid-list

Specification	
Type	*list*
Block object keys	

lid-action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

lid-enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lid-response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

lid-slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

lid-window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list

Specification	
Type	*list*
Block object keys	

logging

Description: logging is a **JSON Block**. Please see below for *rpz-list_logging*

Type: Object

Refernce Object: */axapi/v3/slb/template/dns/{name}/rpz/{seq-id}/logging*

name

Description Specify a Response Policy Zone name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

seq-id

Description sequential id of RPZ

Type: number

Range: 1-8

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list_logging

Specification	
Type	*object*

enable

Description Log RPZ triggered action

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rpz-action

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

rpz-list_logging_rpz-action

Specification	
Type	*list*
Block object keys	

str-rpz-action

Description 'drop': Log RPZ due to drop action; 'pass-thru': Log RPZ due to pass-thru action; 'nxdomain': Log RPZ due to nxdomain action; 'nodata': Log RPZ due to nodata action; 'tcp-only': Log RPZ due to tcp-only action; 'local-data': Log RPZ due to local-data action;

Type: string

Supported Values: drop, pass-thru, nxdomain, nodata, tcp-only, local-data

recursive-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

ipv4-nat-pool

Description IPv4 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

ipv6-nat-pool

Description IPv6 Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/nat/pool*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 30

Type: number

Range: 1-62

Default: 30

retries-per-level

Description Number of DNS query retries at each server level before closing client connection, default 6

Type: number

Range: 1-6

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

recursive-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

class-list

Specification	
Type	*object*

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/class-list/lid/{lidnum}*

name

Description Specify a class list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *class-list_lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

udp-retransmit

Specification	
Type	*object*

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-class-filter

Specification	
Type	*object*

query-class

Type: List

query-class-action

Description 'allow': Allow only certain DNS query classes; 'deny': Deny only certain DNS query classes;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-class-filter_query-class

Specification	
Type	*list*
Block object keys	

num-query-class

Description Other query class value

Type: number

Range: 1-65535

str-query-class

Description 'INTERNET': INTERNET query class; 'CHAOS': CHAOS query class; 'HESIOD': HESIOD query class; 'NONE': NONE query class; 'ANY': ANY query class;

Type: string

Supported Values: INTERNET, CHAOS, HESIOD, NONE, ANY

local-dns-resolution

Specification	
Type	*object*

host-list-cfg

Type: List

local-resolver-cfg

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

local-dns-resolution_host-list-cfg

Specification	
Type	*list*
Block object keys	

hostnames

Description Hostnames class-list name (ac type)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/class-list*

local-dns-resolution_local-resolver-cfg

Specification	
Type	*list*
Block object keys	

local-resolver

Description Local dns servers (address)

Type: string

Format: ipv4-address

query-type-filter

Specification	
Type	*object*

query-type

Type: List

query-type-action

Description 'allow': Allow only certain DNS query types; 'deny': Deny only certain DNS query types;

Type: string

Supported Values: allow, deny

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

query-type-filter_query-type

Specification	
Type	*list*
Block object keys	

num-query-type

Description Other record type value

Type: number

Range: 1-65535

str-query-type

Description 'A': Address record; 'AAAA': IPv6 Address record; 'CNAME': Canonical name record; 'MX': Mail exchange record; 'NS': Name server record; 'SRV': Service locator; 'PTR': PTR resource record; 'SOA': Start of authority record; 'TXT': Text record; 'ANY': All cached record;

Type: string

Supported Values: A, AAAA, CNAME, MX, NS, SRV, PTR, SOA, TXT, ANY

2.92.84 slb template dns class-list

Classification list

class-list Specification

Type	*Configuration Resource*
Element Name	class-list
Element URI	/axapi/v3/slb/template/dns/{name}/class-list
Element Attributes	class-list_attributes

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'dns-cache-disable': Disable DNS cache when it exceeds limit; 'dns-cache-enable': Enable DNS cache when it exceeds limit; 'forward': Forward the traffic even it exceeds limit;

Type: string

Supported Values: dns-cache-disable, dns-cache-enable, forward

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-2147483647

dns

Description: dns is a **JSON Block**. Please see below for *lid-list_dns*

Type: Object

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-interval

Description Log interval (minute, by default system will log every over limit instance)

Type: number

Range: 1-255

over-limit-action

Description Action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

per

Description Per (Number of 100ms)

Type: number

Range: 1-65535

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns

Specification	
Type	*object*

cache-action

Description 'cache-disable': Disable dns cache; 'cache-enable': Enable dns cache;

Type: string

Supported Values: cache-disable, cache-enable

Default: cache-disable

honor-server-response-ttl

Description Honor the server reponse TTL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description TTL for cache entry (TTL in seconds)

Type: number

Range: 1-65535

weight

Description Weight for cache entry

Type: number

Range: 1-7

action

Description 'log-only': Only log rate-limiting, do not actually rate limit. Requires enable-log configuration; 'rate-limit': Rate-Limit based on configuration (Default); 'whitelist': Whitelist, disable rate-limiting;

Type: string

Supported Values: log-only, rate-limit, whitelist

Default: rate-limit

enable-log

Description Enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

filter-response-rate

Description Maximum allowed request rate for the filter. This should match average traffic. (default 20 per two seconds)

Type: number

Range: 1-1000

Default: 10

response-rate

Description Responses exceeding this rate within the window will be dropped (default 5 per second)

Type: number

Range: 1-1000

Default: 5

rrl-class-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/dns/{name}/response-rate-limiting/rrl-class-list/{name}*

slip-rate

Description Every n'th response that would be rate-limited will be let through instead

Type: number

Range: 2-10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description Rate-Limiting Interval in Seconds (default is one)

Type: number

Range: 1-60

Default: 1

doh attributes

doh-list

doh-list is **JSON List** of *doh attributes*

doh-list : [

{ *doh attributes* },

{ *doh attributes* },

...

]

doh attributes

conn-reuse

Description 'enable': Enable Connection Reuse; 'disable': Disable Connection-Reuse (Default);

Type: string

Supported Values: enable, disable

Default: disable

dns-retry

Description: dns-retry is a **JSON Block**. Please see below for *dns-retry*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/dns-retry*

forwarder

Description: forwarder is a **JSON Block**. Please see below for *forwarder*

Type: Object

Refernce Object: */axapi/v3/slb/template/doh/{name}/forwarder*

name

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-dns-request

Description 'allow': Forward Non-DoH request to http server bound to vport; 'reject': Reject Non-DoH requests with HTTP 400 Bad Request (Default);

Type: string

Supported Values: allow, reject

Default: reject

reject-status-code

Description '400': Status Code 400 BAD Request (Default); '500': Status Code 500 Internal Server Error; '501': Status Code 501 Not Implemented;

Type: string

Supported Values: 400, 500, 501

Default: 400

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

snat-pool

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

source-nat

Description 'auto': Perform Source NAT Auto for service-group(Default) (Not supported with forwarding-ip); 'disable': Don't perform source-nat for server side DNS queries; 'pool': Perform Source NAT with specific pool;

Type: string

Supported Values: auto, disable, pool

Default: auto

tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forwarder

Specification	
Type	*object*

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4forwarding-ipv6, tcp-service-group and udp-service-group are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6forwarding-ipv4, tcp-service-group and udp-service-group are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

dns-retry

Specification	
Type	*object*

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.98 slb template doh dns-retry

DNS over HTTP(s) template retry policy

dns-retry Specification

Type	*Configuration Resource*

dns-retry attributes

after-timeout

Description 'close': Close client side connection; 'retry-with-tcp': Retry DNS query to server using TCP (If UDP was tried initially. Close after.);

Type: string

Supported Values: close, retry-with-tcp

Default: close

max-trials

Description Total number of times to try DNS query to server before closing client connection, default 3

Type: number

Range: 1-5

Default: 3

retry-interval

Description DNS Retry Interval value 1 - 400 in units of 100ms, default is 10 (default is 1000ms) (1 - 400 in units of 100ms, default is 10 (1000ms/1sec))

Type: number

Range: 1-400

Default: 10

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.99 slb template doh forwarder

DNS over HTTP(s) template forwarding policy

forwarder Specification

Type	*Configuration Resource*
Element Name	forwarder
Element URI	/axapi/v3/slb/template/doh/{name}/forwarder
Element Attributes	forwarder_attributes
Schema	`forwarder schema`

Operations Allowed:

Create Object

forwarder attributes

forwarder attributes

forwarding-ipv4

Description SLB VIP IPv4 address to forward DOH query (IP address)

Type: string

Format: ipv4-address

Mutual Exclusion: forwarding-ipv4forwarding-ipv6, tcp-service-group and udp-service-group are mutually exclusive

forwarding-ipv6

Description SLB VIP IPv6 address to forward DOH query (IP address)

Type: string

Format: ipv6-address

Mutual Exclusion: forwarding-ipv6forwarding-ipv4, tcp-service-group and udp-service-group are mutually exclusive

tcp-service-group

Description Bind a TCP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

udp-service-group

Description Bind a UDP Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: udp-service-group forwarding-ipv4 and forwarding-ipv6 are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v4-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v4-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v4-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

v6-internal

Description Try to find this IP as a VIP in this L3v Partition and forward it internally to the VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

v6-l4-proto

Description 'tcp': Use TCP only when forwarding DNS traffic; 'udp': Use UDP only when forwarding DNS traffic; 'both': Use UDP 1st and if unreachable, retry with TCP when forwarding DNS traffic;

Type: string

Supported Values: tcp, udp, both

Default: both

v6-port

Description Forwarding port number, Default is 53

Type: number

Range: 1-65534

Default: 53

external-service-list

external-service-list is **JSON List** of *external-service attributes*

external-service-list : [

{ *external-service attributes* },

{ *external-service attributes* },

...

]

external-service attributes

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

bypass-ip-cfg

Type: List

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

name

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-forward-list

Type: List

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

type

Description 'skyfire-icap': Skyfire ICAP service; 'url-filter': URL filtering service;

Type: string

Supported Values: skyfire-icap, url-filter

Default: url-filter

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass external service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

request-header-forward-list

Specification	
Type	*list*
Block object keys	

request-header-forward

Description Request header to be forwarded to external service (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

2.92.102 slb template fix

FIX template

fix attributes

insert-client-ip

Description Insert client ip to tag 11447

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

tag-switching

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tag-switching

Specification	
Type	*list*
Block object keys	

equals

Description Equals (Tag String)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'sender-comp-id': Select service group based on SenderCompID; 'target-comp-id': Select service group based on TargetCompID;

Type: string

Supported Values: sender-comp-id, target-comp-id

Type: List

compression-exclude-uri

Type: List

compression-keep-accept-encoding

Description Keep accept encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-keep-accept-encoding-enable

Description Enable Server Accept Encoding

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

compression-level

Description compression level, default 1 (compression level value, default is 1)

Type: number

Range: 1-9

Default: 1

compression-minimum-content-length

Description Minimum Content Length (Minimum content length for compression in bytes. Default is 120.)

Type: number

Range: 1-2147483647

Default: 120

cookie-format

Description 'rfc6265': Follow rfc6265;

Type: string

Supported Values: rfc6265

cookie-samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

default-charset

Description 'iso-8859-1': Use ISO-8859-1 as the default charset; 'utf-8': Use UTF-8 as the default charset; 'us-ascii': Use US-ASCII as the default charset;

Type: string

Supported Values: iso-8859-1, utf-8, us-ascii

Default: utf-8

failover-url

Description Failover to this URL (Failover URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

frame-limit

Description Limit the number of CONTINUATION, PING, PRIORITY, RESET, SETTINGS and empty frames in one HTTP2 connection, default 10000

Type: number

Range: 0-65535

Default: 10000

host-switching

Type: List

insert-client-ip

Description Insert Client IP address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-ip-header-name

Description HTTP Header Name for inserting Client IP

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

insert-client-port

Description Insert Client Port address into HTTP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-client-port-header-name

Description HTTP Header Name for inserting Client Port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

keep-client-alive

Description Keep client alive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-retry

Description log when HTTP request retry

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-concurrent-streams

Description (http2 only) Max concurrent streams, default 100

Type: number

Range: 1-1000

Default: 100

name

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

non-http-bypass

Description Bypass non-http traffic instead of dropping

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

persist-on-401

Description Persist to the same server if the response code is 401

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute; 'check': check server prefix and enforce prefix format;

Type: string

Supported Values: host, secure, check

rd-port

Description Port (Port Number)

Type: number

Range: 1-65535

Mutual Exclusion: rd-port and rd-simple-loc are mutually exclusive

rd-resp-code

Description '301': Moved Permanently; '302': Found; '303': See Other; '307': Temporary Redirect;

Type: string

Supported Values: 301, 302, 303, 307

rd-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: rd-secure and rd-simple-loc are mutually exclusive

rd-simple-loc

Description Redirect location tag absolute URI string

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

Mutual Exclusion: rd-simple-loc rd-secure and rd-port are mutually exclusive

redirect

Description Automatically send a redirect response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-rewrite

Description: redirect-rewrite is a **JSON Block**. Please see below for *redirect-rewrite*

Type: Object

req-hdr-wait-time

Description HTTP request header wait time before abort connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-hdr-wait-time-val

Description Number of seconds wait for client request header (default is 7)

Type: number

Range: 1-31

Default: 7

request-header-erase-list

Type: List

request-header-insert-list

Type: List

request-line-case-insensitive

Description Parse http request line as case insensitive

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-timeout

Description Request timeout if response not received (timeout in seconds)

Type: number

Range: 1-120

response-content-replace-list

Type: List

response-header-erase-list

Type: List

response-header-insert-list

Type: List

retry-on-5xx

Description Retry http request on HTTP 5xx code

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx and retry-on-5xx-per-req are mutually exclusive

retry-on-5xx-per-req

Description Retry http request on HTTP 5xx code for each request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: retry-on-5xx-per-req and retry-on-5xx are mutually exclusive

retry-on-5xx-per-req-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

retry-on-5xx-val

Description Number of times to retry (default is 3)

Type: number

Range: 1-3

Default: 3

strict-transaction-switch

Description Force server selection on every HTTP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

term-11client-hdr-conn-close

Description Terminate HTTP 1.1 client when req has Connection: close

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-hash-first

Description Use the begining part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-first and url-hash-last are mutually exclusive

url-hash-last

Description Use the end part of URL to calculate hash value (URL string length to calculate hash value)

Type: number

Range: 4-128

Mutual Exclusion: url-hash-last and url-hash-first are mutually exclusive

url-hash-offset

Description Skip part of URL to calculate hash value (Offset of the URL string)

Type: number

Range: 0-255

url-hash-persist

Description Use URL's hash value to select server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

url-switching

Type: List

use-server-status

Description Use Server-Status header to do URL hashing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

request-header-erase-list

Specification	
Type	*list*
Block object keys	

request-header-erase

Description Erase a header from HTTP request (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

redirect-rewrite

Specification	
Type	*object*

match-list

Type: List

redirect-secure

Description Use HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

redirect-secure-port

Description Port (Port Number)

Type: number

Range: 1-65535

Default: 443

redirect-rewrite_match-list

Specification	
Type	*list*
Block object keys	

redirect-match

Description URL Matching (Pattern URL String)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

rewrite-to

Description Rewrite to Destination URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

response-header-insert-list

Specification	
Type	*list*
Block object keys	

response-header-insert

Description Insert a header into HTTP response (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

response-header-erase-list

Specification	
Type	*list*
Block object keys	

response-header-erase

Description Erase a header from HTTP response (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

url-switching

Specification	
Type	*list*
Block object keys	

url-match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

url-switching-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string; 'url-case-insensitive': Case insensitive URL switching; 'url-hits-enable': Enables URL Hits;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, url-case-insensitive, url-hits-enable

response-content-replace-list

Specification	
Type	*list*
Block object keys	

response-content-replace

Description replace the data from HTTP response content (String in the http content need to be replaced)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

response-new-string

Description String will be in the http content

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-list

Specification	
Type	*list*
Block object keys	

request-header-insert

Description Insert a header into HTTP request (Header Content (Format: "[name]: [value]"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

request-header-insert-type

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

host-switching

Specification	
Type	*list*
Block object keys	

host-match-string

Description Hostname String

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-service-group

Description Create a Service Group comprising Servers (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

host-switching-type

Description 'contains': Select service group if hostname contains another string; 'ends-with': Select service group if hostname ends with another string; 'equals': Select service group if hostname equals another string; 'starts-with': Select service group if hostname starts with another string; 'host-hits-enable': Enables Host Hits counters;

Type: string

Supported Values: contains, ends-with, equals, starts-with, regex-match, host-hits-enable

compression-content-type

Specification	
Type	*list*
Block object keys	

content-type

Description Compression content-type

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

compression-exclude-uri

Specification	
Type	*list*
Block object keys	

exclude-uri

Description Compression exclude uri

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

compression-exclude-content-type

Specification	
Type	*list*
Block object keys	

exclude-content-type

Description Compression exclude content-type (Compression exclude content type)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

2.92.105 slb template http-policy

http-policy template

http-policy Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*http-policy-list*
Collection URI	/axapi/v3/slb/template/http-policy
Element Name	http-policy
Element URI	/axapi/v3/slb/template/http-policy/{name}
Element Attributes	http-policy_attributes
Schema	`http-policy schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/http-policy

http-policy attributes

```
POST /axapi/v3/slb/template/http-policy/
Payload:
{
    "http-policy": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/http-policy

http-policy attributes

Get Object

GET

/axapi/v3/slb/template/http-policy/{name}

http-policy attributes

```
GET /axapi/v3/slb/template/http-policy/a
Reponse:
{
    "http-policy": {
        "name": "a",
        "uuid": "529bb55c-6123-11d9-93cf-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/slb/template/http-policy/a"
    }
}
```

Get List

GET

/axapi/v3/slb/template/http-policy

http-policy-list

Modify Object

POST

/axapi/v3/slb/template/http-policy/{name}

http-policy attributes

Replace Object

PUT

/axapi/v3/slb/template/http-policy/{name}

http-policy attributes

```
PUT /axapi/v3/slb/template/http-policy/a
Payload:
{
    "http-policy": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/template/http-policy

http-policy-list

Delete Object

DELETE

/axapi/v3/slb/template/http-policy/{name}

http-policy attributes

```
DELETE /axapi/v3/slb/template/http-policy/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

http-policy-list

http-policy-list is **JSON List** of *http-policy attributes*

http-policy-list : [

{ *http-policy attributes* },

{ *http-policy attributes* },

...

]

http-policy attributes

cookie-name

Description name of cookie to match (Cookie Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

geo-location-match

Type: List

http-policy-match

Type: List

multi-match-rule-list

Type: List

Refernce Object: */axapi/v3/slb/template/http-policy/{name}/multi-match-rule/{multi-match}*

name

Description http-policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

http-policy-match

Specification	
Type	*list*
Block object keys	

match-string

Description URL String

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

match-type

Description 'contains': Select service group if URL string contains another string; 'ends-with': Select service group if URL string ends with another string; 'equals': Select service group if URL string equals another string; 'starts-with': Select service group if URL string starts with another string;

Type: string

Supported Values: contains, ends-with, equals, starts-with

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

type

Description 'cookie': cookie value match; 'host': hostname match; 'url': URL match;

Type: string

Supported Values: cookie, host, url, header-name, header-value, query-param-name, query-param-value

multi-match-rule-list

Specification	
Type	*list*
Block object keys	

cookie-name-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-contains-type

Description 'contains': Cookie name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-name-contains-typecookie-name-equals-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-ends-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-ends-with-type

Description 'ends-with': Cookie name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-name-ends-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-starts-with-type are mutually exclusive

cookie-name-equals-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-equals-type

Description 'equals': Cookie name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-name-equals-typecookie-name-contains-type, cookie-name-starts-with-type and cookie-name-ends-with-type are mutually exclusive

cookie-name-starts-with-string

Description Cookie name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-name-starts-with-type

Description 'starts-with': Cookie name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-name-starts-with-typecookie-name-equals-type, cookie-name-contains-type and cookie-name-ends-with-type are mutually exclusive

cookie-value-contains-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-contains-type

Description 'contains': Cookie value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: cookie-value-contains-typecookie-value-equals-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-ends-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-ends-with-type

Description 'ends-with': Cookie value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: cookie-value-ends-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-starts-with-type are mutually exclusive

cookie-value-equals-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-equals-type

Description 'equals': Cookie value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: cookie-value-equals-typecookie-value-contains-type, cookie-value-starts-with-type and cookie-value-ends-with-type are mutually exclusive

cookie-value-starts-with-string

Description Cookie value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

cookie-value-starts-with-type

Description 'starts-with': Cookie value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: cookie-value-starts-with-typecookie-value-equals-type, cookie-value-contains-type and cookie-value-ends-with-type are mutually exclusive

header-name-contains-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-contains-type

Description 'contains': Header name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-name-contains-typeheader-name-equals-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-ends-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-ends-with-type

Description 'ends-with': Header name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-name-ends-with-typeheader-name-equals-type, header-name-contains-type and header-name-starts-with-type are mutually exclusive

header-name-equals-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-typeheader-name-contains-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-typeheader-name-equals-type, header-name-contains-type and header-name-ends-with-type are mutually exclusive

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-typeheader-value-equals-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-typeheader-value-equals-type, header-value-contains-type and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-typeheader-value-contains-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-typeheader-value-equals-type, header-value-contains-type and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-typehost-equals-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-typehost-equals-type, host-contains-type and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-typehost-contains-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-typehost-equals-type, host-contains-type and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-typequery-param-name-equals-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string, use "[no-name]" for empty query-param-name match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-typequery-param-name-contains-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-typequery-param-value-equals-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string, use "[no-value]" for empty query-param-value match

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-typequery-param-value-contains-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template-waf

Description Waf Template to be used (Waf Template Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-typeurl-equals-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-typeurl-equals-type, url-contains-type and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-typeurl-contains-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-typeurl-equals-type, url-contains-type and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location-match

Specification	
Type	*list*
Block object keys	

geo-location

Description Geolocation name

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

geo-location-service-group

Description Service Group to be used (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

geo-location-template

Description 'waf': waf; (WAF template to be used)

Type: string

Supported Values: waf

geo-location-template-name

Description WAF template to be used (Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-equals-type

Description 'equals': Header name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-name-equals-typeheader-name-contains-type, header-name-starts-with-type and header-name-ends-with-type are mutually exclusive

header-name-starts-with-string

Description Header name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-name-starts-with-type

Description 'starts-with': Header name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-name-starts-with-typeheader-name-equals-type, header-name-contains-type and header-name-ends-with-type are mutually exclusive

header-value-contains-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-contains-type

Description 'contains': Header value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: header-value-contains-typeheader-value-equals-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-ends-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-ends-with-type

Description 'ends-with': Header value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: header-value-ends-with-typeheader-value-equals-type, header-value-contains-type and header-value-starts-with-type are mutually exclusive

header-value-equals-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-equals-type

Description 'equals': Header value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: header-value-equals-typeheader-value-contains-type, header-value-starts-with-type and header-value-ends-with-type are mutually exclusive

header-value-starts-with-string

Description Header value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

header-value-starts-with-type

Description 'starts-with': Header value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: header-value-starts-with-typeheader-value-equals-type, header-value-contains-type and header-value-ends-with-type are mutually exclusive

host-contains-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-contains-type

Description 'contains': Host contains string;

Type: string

Supported Values: contains

Mutual Exclusion: host-contains-typehost-equals-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-ends-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-ends-with-type

Description 'ends-with': Host ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: host-ends-with-typehost-equals-type, host-contains-type and host-starts-with-type are mutually exclusive

host-equals-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-equals-type

Description 'equals': Host equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: host-equals-typehost-contains-type, host-starts-with-type and host-ends-with-type are mutually exclusive

host-starts-with-string

Description Host string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

host-starts-with-type

Description 'starts-with': Host starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: host-starts-with-typehost-equals-type, host-contains-type and host-ends-with-type are mutually exclusive

multi-match

Description Specify a multi-match-rule name

Type: string

Format: string-rlx

Maximum Length: 64 characters

Maximum Length: 1 characters

query-param-name-contains-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-contains-type

Description 'contains': query parameter name contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-name-contains-typequery-param-name-equals-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-ends-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-ends-with-type

Description 'ends-with': query parameter name ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-name-ends-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-starts-with-type are mutually exclusive

query-param-name-equals-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-equals-type

Description 'equals': query parameter name equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-name-equals-typequery-param-name-contains-type, query-param-name-starts-with-type and query-param-name-ends-with-type are mutually exclusive

query-param-name-starts-with-string

Description query parameter name string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-name-starts-with-type

Description 'starts-with': query parameter name starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-name-starts-with-typequery-param-name-equals-type, query-param-name-contains-type and query-param-name-ends-with-type are mutually exclusive

query-param-value-contains-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-contains-type

Description 'contains': query parameter value contains string;

Type: string

Supported Values: contains

Mutual Exclusion: query-param-value-contains-typequery-param-value-equals-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-ends-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-ends-with-type

Description 'ends-with': query parameter value ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: query-param-value-ends-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-starts-with-type are mutually exclusive

query-param-value-equals-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-equals-type

Description 'equals': query parameter value equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: query-param-value-equals-typequery-param-value-contains-type, query-param-value-starts-with-type and query-param-value-ends-with-type are mutually exclusive

query-param-value-starts-with-string

Description query parameter value string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

query-param-value-starts-with-type

Description 'starts-with': query parameter value starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: query-param-value-starts-with-typequery-param-value-equals-type, query-param-value-contains-type and query-param-value-ends-with-type are mutually exclusive

seq-num

Description Specify a sequence number

Type: number

Range: 1-8192

service-group

Description Service Group to be used (Service Group Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

template-waf

Description Waf Template to be used (Waf Template Name)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

url-contains-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-contains-type

Description 'contains': URL contains string;

Type: string

Supported Values: contains

Mutual Exclusion: url-contains-typeurl-equals-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-ends-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-ends-with-type

Description 'ends-with': URL ends-with string;

Type: string

Supported Values: ends-with

Mutual Exclusion: url-ends-with-typeurl-equals-type, url-contains-type and url-starts-with-type are mutually exclusive

url-equals-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-equals-type

Description 'equals': URL equals to string;

Type: string

Supported Values: equals

Mutual Exclusion: url-equals-typeurl-contains-type, url-starts-with-type and url-ends-with-type are mutually exclusive

url-starts-with-string

Description URL string

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

url-starts-with-type

Description 'starts-with': URL starts-with string;

Type: string

Supported Values: starts-with

Mutual Exclusion: url-starts-with-typeurl-equals-type, url-contains-type and url-ends-with-type are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-cost attributes

bandwidth-interval

Description Interval duration in seconds

Type: number

Range: 1-60

Default: 5

name

Description Server Link-Cost Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

overage-bandwidth-cost

Description Configure overage bandwidth cost on real server (Overage bandwidth cost per Mbpi)

Type: number

Range: 0-4294967295

Default: 0

prepaid-bandwidth

Description Configure prepaid bandwidth on real server (Prepaid Bandwidth in Mbpi)

Type: number

Range: 0-4294967295

Default: 0

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'link_total_fwd_bytes': Total bytes fwd for link; 'interval_fwd_bytes': Link Cost bytes processed in forward direction per interval; 'link_total_conn': Link Cost total connection; 'interval_avg_throughput': Link Cost average throughput per interval; 'interval_max_throughput': Link Cost max throughput per interval;

Type: string

Supported Values: all, link_total_fwd_bytes, interval_fwd_bytes, link_total_conn, interval_avg_throughput, interval_max_throughput

stats data

	Counter	Size	Description
	link_total_fwd_bytes	8	Total bytes fwd for link
	interval_fwd_bytes	8	Link Cost bytes processed in forward direction per interval
	interval_avg_throughput	8	Link Cost average throughput per interval
	interval_max_throughput	8	Link Cost max throughput per interval
	link_total_conn	8	Link Cost total connection

2.92.110 slb template link-down-on-restart

All Link event will be treated as Link-down template

link-down-on-restart Specification

link-probe attributes

destination

Description: destination is a **JSON Block**. Please see below for *destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/link-probe/{name}/destination*

disable

Description Disable Probe template

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

expected-status-code

Description Specify response code range (e.g. 200,400-430), default is 200 (Format is xx,xx-xx (xx between [100, 899]), default is 200)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: 200

name

Description probe template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

probe-interval

Description Time between each probe that needs to be sent out (in seconds, default is 5)

Type: number

Range: 1-7200

Default: 5

probes-per-test

Description Total number of probes to be sent out for each test

Type: number

Range: 1-10

Default: 5

rtt-method

Description 'http-rtt': Calculate Round Trip Time between HTTP request and response; 'tcp-srtt': Use TCP Smoothed round trip time in the HTTP connection;

Type: string

Supported Values: http-rtt, tcp-srtt

Default: http-rtt

selection-rule

Description 'threshold': Use all links below a threshold before selecting the fastest link; 'fastest-link-always': Always use the link with the lowest average latency;

Type: string

Supported Values: threshold, fastest-link-always

Default: fastest-link-always

test-interval

Description time interval between subsequent tests (in seconds, default is 60)

Type: number

Range: 1-7200

Default: 60

threshold-value

Description Use all links below a threshold before selecting the fastest link (RTT in milliseconds)

Type: number

Range: 0-65534

Default: 0

url

Description Specify URL to which probes should be sent out. Default is /

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Default: /

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

destination

Specification	
Type	*object*

hostname

Description Target Hostname

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

resolve-as

Description 'resolve-to-ipv4': Use A Query only to resolve the configured hostname; 'resolve-to-ipv6': Use AAAA Query only to resolve the configured hostname;

Type: string

Supported Values: resolve-to-ipv4, resolve-to-ipv6

Mutual Exclusion: resolve-as static-ipv4-addr and static-ipv6-addr are mutually exclusive

static-ipv4-addr

Description Target IPv4 Address

Type: string

Format: ipv4-address

Mutual Exclusion: static-ipv4-addr resolve-as and static-ipv6-addr are mutually exclusive

static-ipv6-addr

Description Target IPv6 Address

Type: string

Format: ipv6-address

Mutual Exclusion: static-ipv6-addr resolve-as and static-ipv4-addr are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

    }
}
```

logging-list

logging-list is **JSON List** of *logging attributes*

logging-list : [

{ *logging attributes* },

{ *logging attributes* },

...

]

logging attributes

auto

Description 'auto': Configure auto NAT for logging, default is auto enabled;

Type: string

Supported Values: auto

Default: auto

Mutual Exclusion: auto and pool are mutually exclusive

format

Description Specfiy a format string for web logging (format string(less than 250 characters) for web logging)

Type: string

Format: string-rlx

Maximum Length: 250 characters

Maximum Length: 1 characters

keep-end

Description Number of unmasked characters at the end (default: 0)

Type: number

Range: 0-65535

Default: 0

keep-start

Description Number of unmasked characters at the beginning (default: 0)

Type: number

Range: 0-65535

Default: 0

local-logging

Description 1 to enable local logging (1 to enable local logging, default 0)

Type: number

Range: 0-1

Default: 0

mask

Description Character to mask the matched pattern (default: X)

Type: string

Maximum Length: 1 characters

Maximum Length: 1 characters

Default: X

name

Description Logging Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pcre-mask

Description Mask matched PCRE pattern in the log

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: pool shared-partition-pool and auto are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

service-group

Description Bind a Service Group to the logging template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-pool

Description Reference a NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

tcp-proxy

Description TCP proxy template (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.114 slb template monitor

Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of destination IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Destination IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enforce-higher-priority

Description Enforce to use high priority node if available

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

hash-persist

Description Use hash value of source IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-dst-ip

Description Include destination IP on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

incl-sport

Description Include source port on the persist

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persistence type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Source IP persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

Default: 255.255.255.255

netmask6

Description IPV6 subnet mask

Type: number

Range: 1-128

Default: 128

primary-port

Description Primary port to create the persist session

Type: number

Range: 1-65534

scan-all-members

Description Persist with SCAN of all members

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cookie-list

Specification	
Type	*list*
Block object keys	

cookie-name

Description Set cookie name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-sid-list

Specification	
Type	*list*
Block object keys	

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SSL session ID persistence template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

timeout

Description Persistence timeout (in minutes)

Type: number

Range: 1-2000

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.117 slb template persist cookie

Cookie persistence

cookie Specification

Type	*Collection*

    }
}
```

cookie-list

cookie-list is **JSON List** of *cookie attributes*

cookie-list : [

{ *cookie attributes* },

{ *cookie attributes* },

...

]

cookie attributes

cookie-name

Description Set cookie name (Cookie name, default "sto-id")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: sto-id

domain

Description Set cookie domain

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

dont-honor-conn-rules

Description Do not observe connection rate rules

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypt-level

Description Encryption level for cookie name / value

Type: number

Range: 0-1

Default: 1

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

expire

Description Set cookie expiration time (Expiration in seconds)

Type: number

Range: 0-31536000

Default: 31536000

httponly

Description Enable HttpOnly attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

insert-always

Description Insert persist cookie to every reponse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

match-type

Description Persist for server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pass-phrase

Description Set passphrase for encryption

Type: string

Format: password

Maximum Length: 8 characters

Maximum Length: 8 characters

Default: ACOS4KEY

pass-thru

Description Pass thru mode - Server sends the persist cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

path

Description Set cookie path (Cookie path, default is "/")

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

Default: /

prefix

Description 'host': the cookie will have been set with a Secure attribute, a Path attribute with a value of /, and no Domain attribute; 'secure': the cookie will have been set with a Secure attribute;

Type: string

Supported Values: host, secure

samesite

Description 'none': none; 'lax': lax; 'strict': strict;

Type: string

Supported Values: none, lax, strict

scan-all-members

Description Persist within the same server SCAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secure

Description Enable secure attribute

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Persist to the same server, default is port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: server and service-group are mutually exclusive

server-service-group

Description Persist to the same server and within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Persist within the same service group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: service-group and server are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

policy Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*policy-list*
Collection URI	/axapi/v3/slb/template/policy
Element Name	policy
Element URI	/axapi/v3/slb/template/policy/{name}
Element Attributes	policy_attributes
Schema	`policy schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/policy

policy attributes

```
POST /axapi/v3/slb/template/policy/
Payload:
{
```

(continues on next page)

(continued from previous page)

```
    "policy": {
        "name": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/slb/template/policy

policy attributes

Get Object

GET

/axapi/v3/slb/template/policy/{name}

policy attributes

```
GET /axapi/v3/slb/template/policy/a
Reponse:
{
    "policy": {
        "name": "a",
        "timeout": 5,
        "use-destination-ip": 0,
        "over-limit": 0,
        "overlap": 0,
        "share": 0,
        "full-domain-tree": 0,
        "uuid": "d968f26e-6125-11d9-a3e6-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/slb/template/policy/a"
    }
}
```

Get List

GET

/axapi/v3/slb/template/policy

policy-list

Modify Object

POST

/axapi/v3/slb/template/policy/{name}

policy attributes

Replace Object

PUT

/axapi/v3/slb/template/policy/{name}

policy attributes

```
PUT /axapi/v3/slb/template/policy/a
Payload:
{
    "policy": {
        "name": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/slb/template/policy

policy-list

Delete Object

DELETE

/axapi/v3/slb/template/policy/{name}

policy attributes

```
DELETE /axapi/v3/slb/template/policy/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

policy-list

policy-list is **JSON List** of *policy attributes*

policy-list : [

{ *policy attributes* },

{ *policy attributes* },

...

]

policy attributes

bw-list-id

Type: List

bw-list-name

Description Specify a blacklist/whitelist name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

class-list

Description: class-list is a **JSON Block**. Please see below for *class-list*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list*

forward-policy

Description: forward-policy is a **JSON Block**. Please see below for *forward-policy*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy*

full-domain-tree

Description Share counters between geo-location and sub regions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description Log interval (minute)

Type: number

Range: 1-255

name

Description Policy template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

over-limit

Description Specify operation in case over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-lockup

Description Don't accept any new connection for certain time (Lockup duration (minute))

Type: number

Range: 1-127

over-limit-logging

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-reset

Description Reset the connection when it exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

overlap

Description Use overlap mode for geo-location to do longest match

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

share

Description Share counters between virtual ports and virtual servers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Define timeout value of PBSLB dynamic entry (Timeout value (minute, default is 5))

Type: number

Range: 1-127

Default: 5

use-destination-ip

Description Use destination IP to match the policy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy

Specification	
Type	*object*

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

filtering

Type: List

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

forward-policy_san-filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

forward-policy_action-list

Specification	
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url drop-response-code and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_action-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

forward-policy_source-list

Specification	
Type	*list*
Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *forward-policy_source-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination

Specification	
Type	*object*

any

Description: any is a **JSON Block**. Please see below for *forward-policy_source-list_destination_any*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/any*

class-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/class-list/{dest-class-list}*

web-category-list-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-category-list/{web-category-list}*

web-reputation-scope-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination/web-reputation-scope/{web-reputation-scope}*

forward-policy_source-list_destination_class-list-list

Specification	
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

dest-class-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

sampling-enable

Type: List

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url, ip

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

forward-policy_source-list_destination_class-list-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Supported Values: all, hits

forward-policy_source-list_destination_web-category-list-list

Specification	
Type	*list*
Block object keys	

action

Description Action to be performed

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority value of the action(higher the number higher the priority)

Type: number

Range: 1-1024

sampling-enable

Type: List

type

Description 'host': Match hostname; 'url': match URL;

Type: string

Supported Values: host, url

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

web-category-list

Description Destination Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/web-category/category-list*

Supported Values: all, hits

forward-policy_source-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this source rule; 'destination-match-not-found': Number of requests without matching destination rule; 'no-host-info': Failed to parse ip or host information from request;

Type: string

Supported Values: all, hits, destination-match-not-found, no-host-info

class-list

Specification	
Type	*object*

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *class-list_lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

class-list_lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

class-list_lid-list_response-code-rate-limit

Specification	
Type	*list*
Block object keys	

code-range-end

Description server response code range end

Type: number

Range: 100-600

code-range-start

Description server response code range start

Type: number

Range: 100-600

period

Description seconds

Type: number

Range: 1-127

threshold

Description the times of getting the response code

Type: number

Range: 1-15

bw-list-id

Specification	
Type	*list*
Block object keys	

action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

bw-list-action

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: bw-list-action and service-group are mutually exclusive

fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

id

Description Specify id that maps to service group (The id number)

Type: number

Range: 0-1023

logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pbslb-interval

Description Specify logging interval in minutes

Type: number

Range: 0-60

Default: 3

pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: service-group and bw-list-action are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'fwd-policy-dns-unresolved': Forward-policy unresolved DNS queries; 'fwd-policy-dns-outstanding': Forward-policy current DNS outstanding requests; 'fwd-policy-snat-fail': Forward-policy source-nat translation failure; 'fwd-policy-hits': Number of forward-policy requests for this policy template; 'fwd-policy-forward-to-internet': Number of forward-policy requests forwarded to internet; 'fwd-policy-forward-to-service-group': Number of forward-policy requests forwarded to service group; 'fwd-policy-policy-drop': Number of forward-policy requests dropped; 'fwd-policy-source-match-not-found': Forward-policy requests without matching source rule; 'exp_client_hello_not_found': Expected Client HELLO requests not found;

Type: string

Supported Values: all, fwd-policy-dns-unresolved, fwd-policy-dns-outstanding, fwd-policy-snat-fail, fwd-policy-hits, fwd-policy-forward-to-internet, fwd-policy-forward-to-service-group, fwd-policy-forward-to-proxy, fwd-policy-policy-drop, fwd-policy-source-match-not-found, exp-client-hello-not-found

stats data

	Counter	Size	Description
	fwd-policy-dns-unresolved	8	Forward-policy unresolved DNS queries
	fwd-policy-hits	8	Number of forward-policy requests for this policy template
	fwd-policy-policy-drop	8	Number of forward-policy requests dropped
	fwd-policy-forward-to-service-group	8	Number of forward-policy requests forwarded to service group
	fwd-policy-forward-to-internet	8	Number of forward-policy requests forwarded to internet
	fwd-policy-dns-outstanding	8	Forward-policy current DNS outstanding requests
	fwd-policy-source-match-not-found	8	Forward-policy requests without matching source rule
	fwd-policy-snat-fail	8	Forward-policy source-nat translation failure
	exp-client-hello-not-found	8	Expected Client HELLO requests not found
	fwd-policy-forward-to-proxy	8	Number of forward-policy requests forwarded to proxy

class-list attributes

client-ip-l3-dest

Description Use destination IP as client IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l3-dest and client-ip-l7-header are mutually exclusive

client-ip-l7-header

Description Use extract client IP address from L7 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: client-ip-l7-header and client-ip-l3-dest are mutually exclusive

header-name

Description Specify L7 header name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

lid-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/class-list/lid/{lidnum}*

name

Description Class list name or geo-location-class-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list

Specification	
Type	*list*
Block object keys	

action-value

Description 'forward': Forward the traffic even it exceeds limit; 'reset': Reset the connection when it exceeds limit;

Type: string

Supported Values: forward, reset

bw-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

bw-rate-limit

Description Specify bandwidth rate limit (Bandwidth rate limit in bytes)

Type: number

Range: 1-2147483647

conn-limit

Description Connection limit

Type: number

Range: 0-1048575

conn-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

conn-rate-limit

Description Specify connection rate limit

Type: number

Range: 1-2147483647

direct-action

Description Set action when match the lid

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-action-interval

Description Specify logging interval in minute (default is 3)

Type: number

Range: 0-60

Default: 3

direct-action-value

Description 'drop': drop the packet; 'reset': Send reset back;

Type: string

Supported Values: drop, reset

Mutual Exclusion: direct-action-value and direct-service-group are mutually exclusive

direct-fail

Description Only log unsuccessful connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-logging-drp-rst

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-pbslb-interval

Description Specify logging interval in minutes(default is 3)

Type: number

Range: 0-60

Default: 3

direct-pbslb-logging

Description Configure PBSLB logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

direct-service-group

Description Specify a service group (Specify the service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: direct-service-group and direct-action-value are mutually exclusive

Refernce Object: */axapi/v3/slb/service-group*

dns64

Description: dns64 is a **JSON Block**. Please see below for *lid-list_dns64*

Type: Object

interval

Description Specify log interval in minutes, by default system will log every over limit instance

Type: number

Range: 1-255

lidnum

Description Specify a limit ID

Type: number

Range: 1-1023

lockout

Description Don't accept any new connection for certain time (Lockout duration in minutes)

Type: number

Range: 1-1023

log

Description Log a message

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

over-limit-action

Description Set action when exceeds limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

request-limit

Description Request limit (Specify request limit)

Type: number

Range: 1-1048575

request-per

Description Per (Specify interval in number of 100ms)

Type: number

Range: 1-65535

request-rate-limit

Description Request rate limit (Specify request rate limit)

Type: number

Range: 1-4294967295

response-code-rate-limit

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

lid-list_dns64

Specification	
Type	*object*

disable

Description Disable

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

exclusive-answer

Description Exclusive Answer in DNS Response

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

prefix

Description IPv6 prefix

Type: string

Format: ipv6-address-plen

lid-list_response-code-rate-limit

```

forward-policy attributes

acos-event-log

Description Enable acos event logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

action-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/action/{name}*

filtering

Type: List

local-logging

Description Enable local logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-client-conn-reuse

Description Inspects only first request of a connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

require-web-category

Description Wait for web category to be resolved before taking proxy decision

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

san-filtering

Type: List

source-list

Type: List

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering

Description 'bypassed-sni-disable': Disable SNI filtering for bypassed URL's(enabled by default); 'intercepted-sni-enable': Enable SNI filtering for intercepted URL's(disabled by default); 'intercepted-http-disable': Disable HTTP(host/URL) filtering for intercepted URL's(enabled by default); 'no-sni-allow': Allow connection if SNI filtering is enabled and SNI header is not present(Drop by default);

Type: string

Supported Values: bypassed-sni-disable, intercepted-sni-enable, intercepted-http-disable, no-sni-allow

san-filtering

Specification	
Type	*list*
Block object keys	

ssli-url-filtering-san

Description 'enable-san': Enable SAN filtering(disabled by default); 'bypassed-san-disable': Disable SAN filtering for bypassed URL's(enabled by default); 'intercepted-san-enable': Enable SAN filtering for intercepted URL's(disabled by default); 'no-san-allow': Allow connection if SAN filtering is enabled and SAN field is not present(Drop by default);

Type: string

Supported Values: enable-san, bypassed-san-disable, intercepted-san-enable, no-san-allow

action-list

Specification	
Type	*list*
Block object keys	

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url drop-response-code and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_sampling-enable

Specification	
Type	*list*

Block object keys	

destination

Description: destination is a **JSON Block**. Please see below for *source-list_destination*

Type: Object

Refernce Object: */axapi/v3/slb/template/policy/{name}/forward-policy/source/{name}/destination*

match-any

Description Match any source

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: match-any and match-class-list are mutually exclusive

match-authorize-policy

Description Authorize-policy for user and group based policy

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authorization/policy*

match-class-list

Description Class List Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: match-class-list and match-any are mutually exclusive

name

Description source destination match rule name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

priority

Description Priority of the source(higher the number higher the priority, default 0)

Type: number

Range: 1-2000

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

action attributes

action1

Description 'forward-to-internet': Forward request to Internet; 'forward-to-service-group': Forward request to service group; 'forward-to-proxy': Forward request to HTTP proxy server; 'drop': Drop request;

Type: string

Supported Values: forward-to-internet, forward-to-service-group, forward-to-proxy, drop

drop-message

Description drop-message sent to the client as webpage(html tags are included and quotation marks are required for white spaces)

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-message and drop-redirect-url are mutually exclusive

drop-redirect-url

Description Specify URL to which client request is redirected upon being dropped

Type: string

Format: string-rlx

Maximum Length: 1023 characters

Maximum Length: 1 characters

Mutual Exclusion: drop-redirect-url drop-response-code and drop-message are mutually exclusive

drop-response-code

Description Specify response code for drop action

Type: number

Range: 100-599

Mutual Exclusion: drop-response-code and drop-redirect-url are mutually exclusive

fake-sg

Description service group to forward the packets to Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back

Description Fallback service group for Internet

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

fall-back-snat

Description Source NAT pool or pool group for fallback server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

forward-snat

Description Source NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

http-status-code

Description '301': Moved permanently; '302': Found;

Type: string

Supported Values: 301, 302

Default: 302

log

Description enable logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Action policy name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

proxy-chaining

Description Enable proxy chaining feature

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

proxy-chaining-bypass

Description Forward all https packets to upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

real-sg

Description service group to forward the packets

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

support-cert-fetch

Description Fetch server certificate by upstream proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hits': Number of requests matching this destination rule;

Type: string

Supported Values: all, hits

stats data

	Counter	Size	Description
	hits	8	Number of requests matching this destination rule

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

...

]

port attributes

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server port (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dampening-flaps

Description service dampening flaps count (max-flaps allowed in flap period)

Type: number

Range: 1-255

decrement

Description Decrease after every round of DNS query (default is 0)

Type: number

Range: 0-7

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-nat

Description Destination NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down-grace-period

Description Port down grace period

Type: number

Range: 1-86400

down-timer

Description The timer to bring the marked down server/port to up (default is 0, never bring up) (The timer to bring up server (in second, default is 0))

Type: number

Range: 0-255

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

dynamic-member-priority

Description Set dynamic member's priority (Initial priority (default is 16))

Type: number

Range: 1-16

Default: 16

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

flap-period

Description take service out of rotation if max-flaps exceeded within time in seconds

Type: number

Range: 1-255

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

inband-health-check

Description Use inband traffic to detect port's health status

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

name

Description Port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

no-ssl

Description No SSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reassign

Description Maximum reassign times before declear the server/port down (default is 25) (The maximum reassign number)

Type: number

Range: 0-255

Default: 25

request-rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

request-rate-limit

Description Request rate limit

Type: number

Range: 1-1048575

request-rate-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resel-on-reset

Description When receiving reset from server, do the server/port reselection (default is 0, don't do reselection)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restore-svc-time

Description put the service back to the rotation after time in seconds

Type: number

Range: 1-4095

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

retry

Description Maximum retry times before reassign this connection to another server/port (default is 2) (The maximum retry number)

Type: number

Range: 0-7

Default: 2

shared-partition-pool

Description Reference a NAT pool or pool-group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and source-nat are mutually exclusive

slow-start

Description Slowly ramp up the connection number after port is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

source-nat

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: source-nat and shared-partition-pool are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server port; 'stats-data-disable': Disable statistical data collection for real server port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

sub-group

Description Divide service group members into different sub groups (Sub group ID (default is 0))

Type: number

Range: 0-15

Default: 0

template-port-pool-shared

Description Source NAT (IP NAT Pool or pool group name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight (port weight)

Type: number

Range: 1-1000

Default: 1

2.92.133 slb template reqmod-icap

action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

allowed-http-methods

Description List of allowed HTTP methods. Default is "Allow All". (List of HTTP methods allowed (default "Allow All"))

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

bypass-ip-cfg

Type: List

disable-http-server-reset

Description Don't reset http server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fail-close

Description When template sg is down mark vport down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failure-action

Description 'continue': Continue; 'drop': Drop; 'reset': Reset;

Type: string

Supported Values: continue, drop, reset

Default: continue

include-protocol-in-uri

Description Include protocol and port in HTTP URI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-only-allowed-method

Description Only log allowed HTTP method

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description logging template (Logging template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

min-payload-size

Description min-payload-size value 1 - 65536, default is 4096

Type: number

Range: 0-65535

Default: 0

name

Description Reqmod ICAP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

preview

Description Preview value 1 - 32768, default is 32768

Type: number

Range: 1-32768

Default: 32768

server-ssl

Description Server SSL template (Server SSL template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

service-group

Description Bind a Service Group to the template (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

service-url

Description URL to send to ICAP server (Service URL Name)

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and source-ip are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and tcp-proxy are mutually exclusive

source-ip

Description Source IP persistence template (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

tcp-proxy

Description TCP proxy template (TCP proxy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

timeout

Description Timeout value 1 - 200 in units of 200ms, default is 5 (default is 1000ms) (1 - 200 in units of 200ms, default is 5 (1000ms))

Type: number

Range: 1-200

Default: 5

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

x-auth-url

Description Use URL format for authentication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bypass-ip-cfg

Specification	
Type	*list*
Block object keys	

bypass-ip

Description ip address to bypass reqmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

bypass-ip

Description ip address to bypass respmod-icap service

Type: string

Format: ipv4-address

mask

Description IP prefix mask

Type: string

Format: ipv4-netmask

2.92.135 slb template server

Server template

server Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*server-list*
Collection URI	/axapi/v3/slb/template/server
Element Name	server
Element URI	/axapi/v3/slb/template/server/{name}
Element Attributes	server_attributes
Schema	`server schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/template/server

server attributes

```
POST /axapi/v3/slb/template/server/
Payload:
{
    "server": {
        "name": "a",
        "user-tag": "a"
    }
}
```

server-list

server-list is **JSON List** of *server attributes*

server-list : [

{ *server attributes* },

{ *server attributes* },

...

]

server attributes

add

Description Slow start connection limit add by a number every interval (Add by this number every interval)

Type: number

Range: 1-4095

Mutual Exclusion: add and times are mutually exclusive

bw-rate-limit

Description Configure bandwidth rate limit on real server (Bandwidth rate limit in Kbps)

Type: number

Range: 1-16777216

bw-rate-limit-acct

Description 'to-server-only': Only account for traffic sent to server; 'from-server-only': Only account for traffic received from server; 'all': Account for all traffic sent to and received from server;

Type: string

Supported Values: to-server-only, from-server-only, all

Default: all

bw-rate-limit-duration

Description Duration in seconds the observed rate needs to honor

Type: number

Range: 1-250

bw-rate-limit-no-logging

Description Do not log bandwidth rate limit related state transitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Resume server selection after bandwidth drops below this threshold (in Kbps) (Bandwidth rate limit resume threshold (in Kbps))

Type: number

Range: 1-16777216

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dns-fail-interval

Description The interval to retry when DNS failed to query (DNS failure interval (in second, default is 30))

Type: number

Range: 0-1800

Default: 30

dns-query-interval

Description The interval to query DNS server for the hostname (DNS query interval (in minute, default is 10))

Type: number

Range: 1-1440

Default: 10

dynamic-server-prefix

Description Prefix of dynamic server (Prefix of dynamic server (default is "DRS"))

Type: string

Maximum Length: 3 characters

Maximum Length: 1 characters

Default: DRS

every

Description Slow start connection limit increment interval (default 10)

Type: number

Range: 1-60

Default: 10

extended-stats

Description Enable extended statistics on real server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

health-check

Description Health Check Monitor (Health monitor name)

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: health-check and health-check-disable are mutually exclusive

Refernce Object: */axapi/v3/health/monitor*

health-check-disable

Description Disable configured health check configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: health-check-disable and health-check are mutually exclusive

initial-slow-start

Description Initial slow start connection limit (default 128)

Type: number

Range: 1-4095

Default: 128

log-selection-failure

Description Enable real-time logging for server selection failure event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-dynamic-server

Description Maximum dynamic server number (Maximum dynamic server number (default is 255))

Type: number

Range: 1-1023

Default: 255

min-ttl-ratio

Description Minimum TTL to DNS query interval ratio (Minimum TTL ratio (default is 2))

Type: number

Range: 1-15

Default: 2

name

Description Server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

resume

Description Resume accepting new connection after connection number drops below threshold (Connection resume threshold)

Type: number

Range: 1-1048575

slow-start

Description Slowly ramp up the connection number after server is up

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spoofing-cache

Description Servers under the template are spoofing cache

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for real server; 'stats-data-disable': Disable statistical data collection for real server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

till

Description Slow start ends when slow start connection limit reaches a number (default 4096) (Slow start ends when connection limit reaches this number)

Type: number

Range: 1-65535

Default: 4096

times

Description Slow start connection limit multiply by a number every interval (default 2) (Multiply by this number every interval)

Type: number

Range: 2-10

Default: 2

Mutual Exclusion: times and add are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

weight

Description Weight for the Real Servers (Connection Weight)

Type: number

Range: 1-1000

Default: 1

2.92.136 slb template server-ssh

Server Side SSH Template

server-ssh Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*server-ssh-list*

server-ssh attributes

forward-proxy-enable

Description Enable SSH forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSH Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Type: List

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'successful_handshakes': successful_handshakes; 'failed_handshakes': failed_handshakes; 'forwarding_errors': forwarding_errors;

Type: string

Supported Values: all, successful_handshakes, failed_handshakes, forwarding_errors

stats data

	Counter	Size	Description
	forward-ing_errors	8	forwarding_errors
	success-ful_handshakes	8	successful_handshakes
	failed_handshakes	8	failed_handshakes

2.92.137 slb template server-ssl

Server Side SSL Template

server-ssl Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*server-ssl-list*
Collection URI	/axapi/v3/slb/template/server-ssl

server-ssl-list

server-ssl-list is **JSON List** of *server-ssl attributes*

server-ssl-list : [

{ *server-ssl attributes* },

{ *server-ssl attributes* },

...

]

server-ssl attributes

alert-type

Description 'fatal': Log fatal alerts;

Type: string

Supported Values: fatal

ca-certs

Type: List

certificate

Description: certificate is a **JSON Block**. Please see below for *certificate*

Type: Object

Refernce Object: */axapi/v3/slb/template/server-ssl/{name}/certificate*

cipher-template

Description Cipher Template (Cipher Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: cipher-template cipher-wo-prio and shared-partition-cipher-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cipher*

cipher-without-prio-list

Type: List

close-notify

Description Send close notification when terminate connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

crl-certs

Type: List

dgversion

Description Lower TLS/SSL version can be downgraded

Type: number

Range: 30-34

Default: 31

dh-type

Description '1024': 1024; '1024-dsa': 1024-dsa; '2048': 2048;

Type: string

Supported Values: 1024, 1024-dsa, 2048

early-data

Description Enable TLS 1.3 early data (0-RTT)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ec-list

Type: List

enable-ssli-ftp-alg

Description Enable SSLi FTP over TLS support at which port

Type: number

Range: 1-65535

enable-tls-alert-logging

Description Enable TLS alert logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

forward-proxy-enable

Description Enable SSL forward proxy

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

handshake-logging-enable

Description Enable SSL handshake logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

ocsp-stapling

Description Enable ocsp-stapling support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

renegotiation-disable

Description Disable SSL renegotiation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-certificate-error

Type: List

server-name

Description Specify Server Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

session-cache-size

Description Session Cache Size (Specify 0 to disable Session ID reuse.)

Type: number

Range: 0-128

Default: 0

session-cache-timeout

Description Session Cache Timeout (Timeout value, in seconds)

Type: number

Range: 1-7200

session-ticket-enable

Description Enable server side session ticket support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-cipher-template

Description Reference a cipher template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cipher-template cipher-wo-prio and cipher-template are mutually exclusive

ssli-logging

Description SSLi logging level, default is error logging only

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sslilogging

Description 'disable': Disable all logging; 'all': enable all logging(error, info);

Type: string

Supported Values: disable, all

template-cipher-shared

Description Cipher Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cipher*

use-client-sni

Description use client SNI

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

version

Description TLS/SSL version, default is the highest number supported (TLS/SSL version: 30-SSLv3.0, 31-TLSv1.0, 32-TLSv1.1 and 33-TLSv1.2)

Type: number

Range: 30-34

Default: 33

crl-certs

Specification	
Type	*list*
Block object keys	

crl

Description Certificate Revocation Lists (Certificate Revocation Lists file name)

Type: string

Maximum Length: 255 characters

Maximum Length: 1 characters

crl-partition-shared

Description Certificate Revocation Lists Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

certificate

Specification	
Type	*object*

cert

Description Certificate Name

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

key

Description Client private-key (Key Name)

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

passphrase

Description Password Phrase

Type: string

Format: password

Maximum Length: 63 characters

Maximum Length: 1 characters

shared

Description Client Certificate and Key Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ec-list

Specification	
Type	*list*
Block object keys	

ec

Description 'secp256r1': X9_62_prime256v1; 'secp384r1': secp384r1;

Type: string

Supported Values: secp256r1, secp384r1

server-certificate-error

Specification	
Type	*list*
Block object keys	

error-type

Description 'email': Notify the error via email; 'ignore': Ignore the error, which mean the connection can continue; 'logging': Log the error; 'trap': Notify the error by SNMP trap;

Type: string

Supported Values: email, ignore, logging, trap

ca-certs

Specification	
Type	*list*
Block object keys	

ca-cert

Description Specify CA certificate

Type: string

Format: string-rlx

Maximum Length: 245 characters

Maximum Length: 1 characters

ca-cert-partition-shared

Description CA Certificate Partition Shared

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-ocsp-sg

Description Specify service-group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/service-group*

server-ocsp-srvr

Description Specify authentication server

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/authentication/server/ocsp*

cipher-without-prio-list

Specification	
Type	*list*
Block object keys	

cipher-wo-prio

Description 'SSL3_RSA_DES_192_CBC3_SHA': SSL3_RSA_DES_192_CBC3_SHA; 'SSL3_RSA_RC4_128_MD5': SSL3_RSA_RC4_128_MD5; 'SSL3_RSA_RC4_128_SHA': SSL3_RSA_RC4_128_SHA; 'TLS1_RSA_AES_128_SHA': TLS1_RSA_AES_128_SHA; 'TLS1_RSA_AES_256_SHA': TLS1_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_SHA256': TLS1_RSA_AES_128_SHA256; 'TLS1_RSA_AES_256_SHA256': TLS1_RSA_AES_256_SHA256; 'TLS1_DHE_RSA_AES_128_GCM_SHA256': TLS1_DHE_RSA_AES_128_GCM_SHA256; 'TLS1_DHE_RSA_AES_128_SHA': TLS1_DHE_RSA_AES_128_SHA; 'TLS1_DHE_RSA_AES_128_SHA256': TLS1_DHE_RSA_AES_128_SHA256; 'TLS1_DHE_RSA_AES_256_GCM_SHA384': TLS1_DHE_RSA_AES_256_GCM_SHA384; 'TLS1_DHE_RSA_AES_256_SHA': TLS1_DHE_RSA_AES_256_SHA; 'TLS1_DHE_RSA_AES_256_SHA256': TLS1_DHE_RSA_AES_256_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256': TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_ECDSA_AES_128_SHA': TLS1_ECDHE_ECDSA_AES_128_SHA; 'TLS1_ECDHE_ECDSA_AES_128_SHA256': TLS1_ECDHE_ECDSA_AES_128_SHA256; 'TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384': TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_ECDSA_AES_256_SHA': TLS1_ECDHE_ECDSA_AES_256_SHA; 'TLS1_ECDHE_RSA_AES_128_GCM_SHA256': TLS1_ECDHE_RSA_AES_128_GCM_SHA256; 'TLS1_ECDHE_RSA_AES_128_SHA': TLS1_ECDHE_RSA_AES_128_SHA; 'TLS1_ECDHE_RSA_AES_128_SHA256': TLS1_ECDHE_RSA_AES_128_SHA256; 'TLS1_ECDHE_RSA_AES_256_GCM_SHA384': TLS1_ECDHE_RSA_AES_256_GCM_SHA384; 'TLS1_ECDHE_RSA_AES_256_SHA': TLS1_ECDHE_RSA_AES_256_SHA; 'TLS1_RSA_AES_128_GCM_SHA256': TLS1_RSA_AES_128_GCM_SHA256; 'TLS1_RSA_AES_256_GCM_SHA384': TLS1_RSA_AES_256_GCM_SHA384;

Type: string

Supported Values: SSL3_RSA_DES_192_CBC3_SHA, SSL3_RSA_RC4_128_MD5, SSL3_RSA_RC4_128_SHA, TLS1_RSA_AES_128_SHA, TLS1_RSA_AES_256_SHA, TLS1_RSA_AES_128_SHA256, TLS1_RSA_AES_256_SHA256, TLS1_DHE_RSA_AES_128_GCM_SHA256, TLS1_DHE_RSA_AES_128_SHA, TLS1_DHE_RSA_AES_128_SHA256, TLS1_DHE_RSA_AES_256_GCM_SHA384, TLS1_DHE_RSA_AES_256_SHA, TLS1_DHE_RSA_AES_256_SHA256, TLS1_ECDHE_ECDSA_AES_128_GCM_SHA256, TLS1_ECDHE_ECDSA_AES_128_SHA, TLS1_ECDHE_ECDSA_AES_128_SHA256, TLS1_ECDHE_ECDSA_AES_256_GCM_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA, TLS1_ECDHE_RSA_AES_128_GCM_SHA256, TLS1_ECDHE_RSA_AES_128_SHA, TLS1_ECDHE_RSA_AES_128_SHA256, TLS1_ECDHE_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA, TLS1_RSA_AES_128_GCM_SHA256, TLS1_RSA_AES_256_GCM_SHA384, TLS1_ECDHE_RSA_AES_256_SHA384, TLS1_ECDHE_ECDSA_AES_256_SHA384, TLS1_ECDHE_RSA_CHACHA20_POLY1305_SHA256, TLS1_ECDHE_ECDSA_CHACHA20_POLY1305_SHA256, TLS1_DHE_RSA_CHACHA20_POLY1305_SHA256

Mutual Exclusion: cipher-wo-prio cipher-template and shared-partition-cipher-template are mutually exclusive

2.92.138 slb template server-ssl certificate

Server Certificate

sip-list

sip-list is **JSON List** of *sip attributes*

sip-list : [

{ *sip attributes* },

{ *sip attributes* },

...

]

sip attributes

acl-id

Description ACL id

Type: number

Range: 100-199

Mutual Exclusion: acl-id and acl-name-value are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-name-value

Description IPv4 Access List Name

Type: string

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-value and acl-id are mutually exclusive

Refernce Object: */axapi/v3/ip/access-list*

alg-dest-nat

Description Translate VIP to real server IP in SIP message when destination NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

alg-source-nat

Description Translate source IP to NAT IP in SIP message when source NAT is used

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

call-id-persist-disable

Description Disable call-ID persistence

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-keep-alive

Description Respond client keep-alive packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header

Type: List

client-response-header

Type: List

dialog-aware

Description Permit system processes dialog session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-when-client-fail

Description Drop current SIP message when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-client-fail and failed-client-selection-message are mutually exclusive

drop-when-server-fail

Description Drop current SIP message when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: drop-when-server-fail and failed-server-selection-message are mutually exclusive

exclude-translation

Type: List

failed-client-selection

Description Define action when select client fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-client-selection-message

Description Send SIP message (includs status code) to server when select client fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-client-selection-message and drop-when-client-fail are mutually exclusive

failed-server-selection

Description Define action when select server fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

failed-server-selection-message

Description Send SIP message (includs status code) to client when select server fail(Format: 3 digits(1XX~6XX) space reason)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: failed-server-selection-message and drop-when-server-fail are mutually exclusive

insert-client-ip

Description Insert Client IP address into SIP header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

interval

Description The interval of keep-alive packet for each persist connection (second)

Type: number

Range: 5-300

Default: 30

keep-server-ip-if-match-acl

Description Use Real Server IP for addresses matching the ACL for a Call-Id

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SIP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

pstn-gw

Description configure pstn gw host name for tel: uri translate to sip: uri (Hostname String, default is "pstn")

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Default: pstn

server-keep-alive

Description Send server keep-alive packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header

Type: List

server-response-header

Type: List

server-selection-per-request

Description Force server selection on every SIP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group

Description service group name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

smp-call-id-rtp-session

Description Create the across cpu call-id rtp session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

timeout

Description Time in minutes

Type: number

Range: 1-250

Default: 30

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

server-request-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-response-header

Specification	
Type	*list*
Block object keys	

insert-condition-server-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

server-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

client-request-header

Specification	
Type	*list*
Block object keys	

client-request-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-request-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-request-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-request

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

client-response-header

Specification	
Type	*list*
Block object keys	

client-response-erase-all

Description Erase all headers

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-response-header-erase

Description Erase a SIP header (Header Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

client-response-header-insert

Description Insert a SIP header (Header Content (Format: "name: value"))

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

insert-condition-client-response

Description 'insert-if-not-exist': Only insert the header when it does not exist; 'insert-always': Always insert the header even when there is a header with the same name;

Type: string

Supported Values: insert-if-not-exist, insert-always

exclude-translation

Specification	
Type	*list*
Block object keys	

header-string

Description SIP header name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

translation-value

Description 'start-line': SIP request line or status line; 'header': SIP message headers; 'body': SIP message body;

Type: string

Supported Values: start-line, header, body

2.92.140 slb template smpp

SMPP template

client-enquire-link

Description Respond client ENQUIRE_LINK packet directly instead of forwarding to server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

password

Description Configure the password used to bind

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

server-enquire-link

Description Send server ENQUIRE_LINK packet for every persist connection when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-enquire-link-val

Description Set interval of keep-alive packet for each persistent connection (second, default is 30)

Type: number

Range: 5-300

Default: 30

server-selection-per-request

Description Force server selection on every SMPP request when enable conn-reuse

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user

Description Configure the user to bind (The name used to bind)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

smtp attributes

LF-to-CRLF

Description Change the LF to CRLF for smtp end of line

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

client-domain-switching

Type: List

client-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue START-TLS command before mail transaction;

Type: string

Supported Values: optional, enforced

command-disable

Type: List

error-code-to-client

Description Would transfer error code(554) to client, when getting it from connection establishing with real-server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

server-domain

Description Config the domain of the email servers (Server's domain, default is "mail-server-domain")

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Default: mail-server-domain

server-starttls-type

Description 'optional': STARTTLS is optional requirement; 'enforced': Must issue STARTTLS command before mail transaction;

Type: string

Supported Values: optional, enforced

service-ready-msg

Description Set SMTP service ready message (SMTP service ready message, default is "ESMTP mail service ready")

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: ESMTP mail service ready

template

Description: template is a **JSON Block**. Please see below for *template*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

client-domain-switching

Specification	
Type	*list*
Block object keys	

match-string

Description Domain name string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

service-group

Description Select service group (Service group name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

switching-type

Description 'contains': Specify domain name string if domain contains another string; 'ends-with': Specify domain name string if domain ends with another string; 'starts-with': Specify domain string if domain starts with another string;

Type: string

Supported Values: contains, ends-with, starts-with

template

Specification	
Type	*object*

logging

Description Logging template (Logging Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/logging*

command-disable

Specification	
Type	*list*
Block object keys	

disable-type

Description 'expn': Disable SMTP EXPN commands; 'turn': Disable SMTP TURN commands; 'vrfy': Disable SMTP VRFY commands;

Type: string

Supported Values: expn, turn, vrfy

```

tcp-list

tcp-list is **JSON List** of *tcp attributes*

tcp-list : [

{ *tcp attributes* },

{ *tcp attributes* },

...

]

tcp attributes

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

force-delete-timeout

Description The maximum time that a session can stay in the system before being delete (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being delete (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default off (half close idle timeout in second, default off)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default off (half open idle timeout in second, default off)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

initial-window-size

Description Set the initial window size (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lan-fast-ack

Description Enable fast TCP ack on LAN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

logging

Description 'init': init only log; 'term': termination only log; 'both': both initial and termination log;

Type: string

Supported Values: init, term, both

name

Description Fast TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-follow-fin

Description send reset to client or server upon receiving first fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

```

tcp-proxy-list

tcp-proxy-list is **JSON List** of *tcp-proxy attributes*

tcp-proxy-list : [

{ *tcp-proxy attributes* },

{ *tcp-proxy attributes* },

...

]

tcp-proxy attributes

ack-aggressiveness

Description 'low': Delayed ACK; 'medium': Delayed ACK, with ACK on each packet with PUSH flag; 'high': ACK on each packet;

Type: string

Supported Values: low, medium, high

Default: low

alive-if-active

Description keep connection alive if active traffic

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

backend-wscale

Description The TCP window scale used for the server side, default is off (number)

Type: number

Range: 1-14

del-session-on-server-down

Description Delete session if the server/port goes down (either disabled/hm down)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description send reset to client when server is disabled

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable and down are mutually exclusive

disable-abc

Description Appropriate Byte Counting RFC 3465 Disabled, default is enabled (Appropriate Byte Counting (ABC) is enabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-sack

Description disable Selective Ack Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-tcp-timestamps

Description disable TCP Timestamps Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-window-scale

Description disable TCP Window-Scale Option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

down

Description send reset to client when server is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: down and disable are mutually exclusive

dynamic-buffer-allocation

Description Optimally adjust the transmit and receive buffer sizes of TCP proxy while keeping their sum constant

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

early-retransmit

Description Configure the Early-Retransmit Algorithm (RFC 5827) (Early-Retransmit is disabled by default)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin-timeout

Description FIN timeout (sec), default is 5 (number)

Type: number

Range: 1-60

force-delete-timeout

Description The maximum time that a session can stay in the system before being deleted, default is off (number (second))

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout and force-delete-timeout-100ms are mutually exclusive

force-delete-timeout-100ms

Description The maximum time that a session can stay in the system before being deleted, default is off (number in 100ms)

Type: number

Range: 1-31

Mutual Exclusion: force-delete-timeout-100ms and force-delete-timeout are mutually exclusive

half-close-idle-timeout

Description TCP Half Close Idle Timeout (sec), default is off (number)

Type: number

Range: 60-120

half-open-idle-timeout

Description TCP Half Open Idle Timeout (sec), default is off (number)

Type: number

Range: 1-60

idle-timeout

Description Idle Timeout (Interval of 60 seconds), default is 600 (idle timeout in second, default 600)

Type: number

Range: 1-2097151

Default: 600

init-cwnd

Description The initial congestion control window size (packets), default is 10 (number)

Type: number

Range: 1-15

Default: 10

initial-window-size

Description Set the initial window size, default is off (number)

Type: number

Range: 1-65535

insert-client-ip

Description Insert client ip into TCP option

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

invalid-rate-limit

Description Invalid Packet Response Rate Limit (ms), default is 500 (number default 500 challenges)

Type: number

Range: 0-60000000

Default: 500

keepalive-interval

Description Interval between keepalive probes (sec), default is off (number)

Type: number

Range: 60-12000

keepalive-probes

Description Number of keepalive probes sent, default is off

Type: number

Range: 2-10

limited-slowstart

Description RFC 3742 Limited Slow-Start for TCP with Large Congestion Windows (number)

Type: number

Range: 0-2147483647

Default: 0

maxburst

Description The max packet count sent per transmission event (number)

Type: number

Range: 1-100

Default: 25

min-rto

Description The minmum retransmission timeout, default is 200ms (number)

Type: number

Range: 100-1000

Default: 200

mss

Description Responding MSS to use if client MSS is large, default is off (number)

Type: number

Range: 128-9000

Default: 1460

nagle

Description Enable Nagle Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

proxy-header

Description: proxy-header is a **JSON Block**. Please see below for *proxy-header*

Type: Object

psh-flag-optimization

Description Enable Optimized PSH Flag Use

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

qos

Description QOS level (number)

Type: number

Range: 1-63

reassembly-limit

Description The reassembly queuing limit, default is 25 segments (number)

Type: number

Range: 1-500

Default: 25

reassembly-timeout

Description The reassembly timeout, default is 30sec (number)

Type: number

Range: 1-300

Default: 30

receive-buffer

Description TCP Receive Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

reno

Description Enable Reno Congestion Control Algorithm

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-fwd

Description send reset to server if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-rev

Description send reset to client if error happens

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

retransmit-retries

Description Number of Retries for Retransmit, default is 5

Type: number

Range: 1-20

Default: 5

server-down-action

Description 'FIN': FIN Connection; 'RST': Reset Connection;

Type: string

Supported Values: FIN, RST

syn-retries

Description SYN Retry Numbers, default is 5

Type: number

Range: 1-20

Default: 5

timewait

Description Timewait Threshold (sec), default 5 (number)

Type: number

Range: 1-60

Default: 5

transmit-buffer

Description TCP Transmit Buffer (default 200k) (number)

Type: number

Range: 1-2147483647

Default: 200000

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

proxy-header

Specification	
Type	*object*

proxy-header-action

Description 'insert': Insert proxy header;

Type: string

Supported Values: insert

version

Description 'v1': version 1; 'v2': version 2;

Type: string

Supported Values: v1, v2

udp-list

udp-list is **JSON List** of *udp attributes*

udp-list : [

{ *udp attributes* },

{ *udp attributes* },

...

]

udp attributes

age

Description short age (in sec), default is 31

Type: number

Range: 1-31

avp

Description '4': NAS-IP-address; '8': Framed-IP-Address;

Type: string

Supported Values: 4, 8

disable-clear-session

Description Disable immediate clearing of session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

idle-timeout

Description Idle Timeout value (Interval of 60 seconds), default 120 seconds (idle timeout in second, default 120)

Type: number

Range: 1-2097151

Default: 120

immediate

Description Immediate Removal after Transaction

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: immediate and short are mutually exclusive

name

Description Fast UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

qos

Description QOS level (number)

Type: number

Range: 1-63

radius-lb-method-hash-type

Description 'ip': IP-Hash;

Type: string

Supported Values: ip

re-select-if-server-down

Description re-select another server if service port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

short

Description Short lived session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: short and immediate are mutually exclusive

stateless-conn-timeout

Description Stateless Current Connection Timeout value (5 - 120 seconds) (idle timeout in second, default 120)

Type: number

Range: 5-120

Default: 120

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

]

virtual-port attributes

aflow

Description Use aFlow to eliminate the traffic surge

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-syn-otherflags

Description Allow initial SYN packet with other flags

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

allow-vip-to-rport-mapping

Description Allow mapping of VIP to real port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

drop-unknown-conn

Description Drop conection if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dscp

Description Differentiated Services Code Point (DSCP to Real Server IP Mapping Value)

Type: number

Range: 1-63

ignore-tcp-msl

Description reclaim TCP resource immediately without MSL

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

log-options

Description 'no-logging': Do not log over limit event; 'no-repeat-logging': log once for over limit event. Default is log once per minute;

Type: string

Supported Values: no-logging, no-repeat-logging

name

Description Virtual port template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

non-syn-initiation

Description Allow initial TCP packet to be non-SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pkt-rate-interval

Description '100ms': Source IP and port rate limit per 100ms; 'second': Source IP and port rate limit per second (default);

Type: string

Supported Values: 100ms, second

Default: second

pkt-rate-limit-reset

Description send client-side reset (reset after packet limit)

Type: number

Range: 0-1048575

Default: 0

pkt-rate-type

Description 'src-ip-port': Source IP and port rate limit; 'src-port': Source port rate limit;

Type: string

Supported Values: src-ip-port, src-port

rate

Description Source IP and port rate limit (Packet rate limit)

Type: number

Range: 1-1048575

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

reset-l7-on-failover

Description Send reset to L7 client and server connection upon a failover

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-unknown-conn

Description Send reset back if receives TCP packet without SYN or RST flag and it does not belong to any existing connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-msl

Description Source NAT MSL (Source NAT MSL value)

Type: number

Range: 1-1800

snat-port-preserve

Description Source NAT Port Preservation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

when-rr-enable

Description Only do rate limit if CPU RR triggered

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.92.147 slb template virtual-server

Virtual server template

virtual-server Specification

Type	*Collection*
Object Key(s)	*name*
Collection Name	*virtual-server-list*

        "status": "OK"
    }
}
```

virtual-server-list

virtual-server-list is **JSON List** of *virtual-server attributes*

virtual-server-list : [

{ *virtual-server attributes* },

{ *virtual-server attributes* },

...

]

virtual-server attributes

conn-limit

Description Connection limit

Type: number

Range: 1-64000000

Default: 64000000

conn-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit-reset

Description Send client reset when connection over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit

Description Connection rate limit

Type: number

Range: 1-1048575

conn-rate-limit-no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-rate-limit-reset

Description Send client reset when connection rate over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable-when-all-ports-down

Description Disable Virtual Server when all member ports are down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-all-ports-down and disable-when-any-port-down are mutually exclusive

disable-when-any-port-down

Description Disable Virtual Server when any member port is down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: disable-when-any-port-down and disable-when-all-ports-down are mutually exclusive

icmp-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmp-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmp-rate-limit

Description ICMP rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

icmpv6-lockup

Description Enter lockup state when ICMP rate exceeds lockup rate limit (Maximum rate limit. If exceeds this limit, drop all ICMP packet for a time period)

Type: number

Range: 1-65535

icmpv6-lockup-period

Description Lockup period (second)

Type: number

Range: 1-16383

icmpv6-rate-limit

Description ICMPv6 rate limit (Normal rate limit. If exceeds this limit, drop the ICMP packet that goes over the limit)

Type: number

Range: 1-65535

name

Description Virtual server template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

rate-interval

Description '100ms': Use 100 ms as sampling interval; 'second': Use 1 second as sampling interval;

Type: string

Supported Values: 100ms, second

Default: second

subnet-gratuitous-arp

Description Send gratuitous ARP for every IP in the subnet virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tcp-stack-tfo-active-conn-limit

Description The allowed active layer 7 tcp fast-open connection limit, default is zero (number)

Type: number

Range: 0-10000

Default: 0

tcp-stack-tfo-backoff-time

Description The time tcp stack will wait before allowing new fast-open requests after security condition, default 600 seconds (number)

Type: number

Range: 1-14400

Default: 600

tcp-stack-tfo-cookie-time-limit

Description The time limit (in seconds) that a layer 7 tcp fast-open cookie is valid, default is 60 seconds (number)

Type: number

Range: 1-14400

Default: 60

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.92.148 slb transparent-acl-template

Refernce Object: */axapi/v3/ip/access-list*

arp-disable

Description Disable Respond to Virtual Server ARP request

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

description

Description Create a description for VIP

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

disable-vip-adv

Description Disable virtual server GARP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-disable-action

Description 'enable': Enable Virtual Server (default); 'disable': Disable Virtual Server; 'disable-when-all-ports-down': Disable Virtual Server when all member ports are down; 'disable-when-any-port-down': Disable Virtual Server when any member port is down;

Type: string

Supported Values: enable, disable, disable-when-all-ports-down, disable-when-any-port-down

Default: enable

ethernet

Description Ethernet interface

Type: number

Format: interface

extended-stats

Description Enable extended statistics on virtual server

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-dynamic

Description Dynamic failover based on vip status

Type: number

Range: 1-255

ip-address

Description IP Address

Type: string

Format: ipv4-address

Mutual Exclusion: ip-address ipv6-address and use-if-ip are mutually exclusive

ipv6-acl

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Mutual Exclusion: ipv6-acl p-ipv6-acl and shared-partition-ipv6-acl are mutually exclusive

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6-acl-shared

Description ipv6 acl name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ipv6/access-list*

ipv6-address

Description IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-address ip-address and use-if-ip are mutually exclusive

migrate-vip

Description: migrate-vip is a **JSON Block**. Please see below for *migrate-vip*

Type: Object

Refernce Object: */axapi/v3/slb/virtual-server/{name}/migrate-vip*

name

Description SLB Virtual Server Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask-brief

port-list

Type: List

Refernce Object: */axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}*

redistribute-route-map

Description Route map reference (Name of route-map)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

redistribution-flagged

Description Flag VIP for special redistribution handling

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-vs-template

Description Reference a virtual-server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-vs-template and template-virtual-server are mutually exclusive

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual server; 'stats-data-disable': Disable statistical data collection for virtual server;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

suppress-internal-loopback

Description Suppress VIP internal loopback programming

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-logging

Description NAT Logging template (NAT Logging template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/template/logging*

template-policy

Description Policy template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-virtual-server

Description Virtual server template (Virtual server template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-virtual-server and shared-partition-vs-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/virtual-server*

template-virtual-server-shared

Description Virtual-Server Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/virtual-server*

use-if-ip

Description Use Interface IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-if-ip ipv6-address and ip-address are mutually exclusive

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vport-disable-action

Description 'drop-packet': Drop packet for disabled virtual-port;

Type: string

Supported Values: drop-packet

vrid

Description Join a vrrp group (Specify ha VRRP-A vrid)

Type: number

Range: 1-31

port-list

Specification	
Type	*list*
Block object keys	

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable fast sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable fast sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *port-list_auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'ssh': SSH Port; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-bucket-count

Description Number of traffic buckets

Type: number

Range: 1-256

Default: 32

scaleout-device-group

Description Device group id

Type: number

Range: 1-16

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template (Client SSL Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template (HTTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL session ID persistence (Source IP Persistence Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template (Server SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Refernce Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ssli*

template-tcp

Description L4 TCP Template (TCP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template (UDP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

waf-template

Description WAF template (WAF Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'total_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Permit number; 'loc_deny': Deny number; 'loc_conn': Connection number; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, total_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time, loc_permit, loc_deny, loc_conn, curr_ssl_conn, total_ssl_conn, backend-time-to-first-byte, backend-time-to-last-byte, in-latency, out-latency, total_fwd_bytes_out, total_fwd_pkts_out, total_rev_bytes_out, total_rev_pkts_out, curr_req_rate, curr_resp, total_resp, total_resp_succ, curr_resp_rate, dnsrrl_total_allowed, dnsrrl_total_dropped, dnsrrl_total_slipped, dnsrrl_bad_fqdn, throughput-bits-per-sec, dynamic-memory-alloc, dynamic-memory-free, dynamic-memory, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts, total_dns_filter_type_drop, total_dns_filter_class_drop, dns_filter_type_a_drop, dns_filter_type_aaaa_drop, dns_filter_type_cname_drop, dns_filter_type_mx_drop, dns_filter_type_ns_drop, dns_filter_type_srv_drop, dns_filter_type_ptr_drop, dns_filter_type_soa_drop, dns_filter_type_txt_drop, dns_filter_type_any_drop, dns_filter_type_others_drop, dns_filter_class_internet_drop, dns_filter_class_chaos_drop, dns_filter_class_hesiod_drop, dns_filter_class_none_drop, dns_filter_class_any_drop, dns_filter_class_others_drop, dns_rpz_action_drop, dns_rpz_action_pass_thru, dns_rpz_action_tcp_only, dns_rpz_action_nxdomain, dns_rpz_action_nodata, dns_rpz_action_local_data, dns_rpz_trigger_client_ip, dns_rpz_trigger_resp_ip, dns_rpz_trigger_ns_ip, dns_rpz_trigger_qname, dns_rpz_trigger_ns_name

port-list_acl-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id p-acl and shared-partition-acl are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool shared-partition-pool-name and v-shared-partition-pool-name are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

port-list_aflex-scripts

Specification	
Type	*list*
Block object keys	

aflex

Description Bind aFleX Script to the Virtual Port (aFleX Script Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-shared

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

port-list_auth-cfg

Specification	
Type	*object*

aaa-policy

Description Specify AAA policy name to bind to the virtual port

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/aaa-policy*

migrate-vip

Specification	
Type	*object*

cancel-migration

Description Cancel migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: cancel-migration and finish-migration are mutually exclusive

finish-migration

Description Complete the migration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: finish-migration and cancel-migration are mutually exclusive

target-data-cpu

Description Number of CPUs on the target platform

Type: number

Range: 1-75

target-floating-ipv4

Description Specify IP address

Type: string

Format: ipv4-address

Mutual Exclusion: target-floating-ipv4 and target-floating-ipv6 are mutually exclusive

target-floating-ipv6

Description Specify IPv6 address

Type: string

Format: ipv6-address

Mutual Exclusion: target-floating-ipv6 and target-floating-ipv4 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

operational data

	Counter	Size	Description
	peak-conn	number	peak-conn
	conn-rate-unit	enum	Output contains one of the following values: - 100ms, second
	curr-conn-overflow	number	curr-conn-overflow
	ip-address	ipv4-address	ip-address
	icmpv6-rate-over-limit-drop	number	icmpv6-rate-over-limit-drop
	curr-conn-rate	number	curr-conn-rate
	state	enum	Output contains one of the following values: - All Up, Functional Up, Partial Up, Down, Disb, Unkn
	ip_only_lb_fwd_bytes	number	ip_only_lb_fwd_bytes
	curr-icmp-rate	number	curr-icmp-rate
	icmpv6-lockup-time-left	number	icmpv6-lockup-time-left
	mac	string	mac
	ip_only_lb_rev_bytes	number	ip_only_lb_rev_bytes
	curr-icmpv6-rate	number	curr-icmpv6-rate
	icmp-rate-over-limit-drop	number	icmp-rate-over-limit-drop
	ip_only_lb_fwd_pkts	number	ip_only_lb_fwd_pkts
	icmp-lockup-time-left	number	icmp-lockup-time-left
	ip_only_lb_rev_pkts	number	ip_only_lb_rev_pkts
	migration-status	string	migration-status

2.92.151 slb virtual-server port

Virtual Port

port Specification

Type	*Collection*
Object Key(s)	*port-number, protocol*
Collection Name	*port-list*
Collection URI	/axapi/v3/slb/virtual-server/{name}/port
Element Name	port
Element URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}
Element Attributes	port_attributes
Statistics Data URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/stats
Operational Data URI	/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}/oper
Schema	`port schema`

Operations Allowed:

Create Object

POST

/axapi/v3/slb/virtual-server/{name}/port

port attributes

Create List

POST

/axapi/v3/slb/virtual-server/{name}/port

port attributes

Get Object

GET

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Get List

GET

/axapi/v3/slb/virtual-server/{name}/port

port-list

Modify Object

POST

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Replace Object

PUT

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

Replace List

PUT

/axapi/v3/slb/virtual-server/{name}/port

port-list

Delete Object

DELETE

/axapi/v3/slb/virtual-server/{name}/port/{port-number}+{protocol}

port attributes

port-list

port-list is **JSON List** of *port attributes*

port-list : [

{ *port attributes* },

{ *port attributes* },

...

]

port attributes

acl-list

Type: List

action

Description 'enable': Enable; 'disable': Disable;

Type: string

Supported Values: enable, disable

Default: enable

aflex-scripts

Type: List

aflex-table-entry-syn-disable

Description Disable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-disable and aflex-table-entry-syn-enable are mutually exclusive

aflex-table-entry-syn-enable

Description Enable aFlex entry sync for this port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: aflex-table-entry-syn-enable and aflex-table-entry-syn-disable are mutually exclusive

alt-protocol1

Description 'http': HTTP Port;

Type: string

Supported Values: http

alt-protocol2

Description 'tcp': TCP LB service;

Type: string

Supported Values: tcp

alternate-port

Description Alternate Virtual Port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: alternate-port and range are mutually exclusive

alternate-port-number

Description Virtual Port

Type: number

Range: 0-65534

attack-detection

Description Enable analytics

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

auth-cfg

Description: auth-cfg is a **JSON Block**. Please see below for *auth-cfg*

Type: Object

auto

Description Configure auto NAT for the vport

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

clientip-sticky-nat

Description Prefer to use same source NAT address for a client

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

conn-limit

Description Connection Limit

Type: number

Range: 1-64000000

Default: 64000000

cpu-compute

Description enable cpu compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

def-selection-if-pref-failed

Description 'def-selection-if-pref-failed': Use default server selection method if prefer method failed; 'def-selection-if-pref-failed-disable': Stop using default server selection method if prefer method failed;

Type: string

Supported Values: def-selection-if-pref-failed, def-selection-if-pref-failed-disable

Default: def-selection-if-pref-failed

enable-playerid-check

Description Enable playerid checks on UDP packets once the AX is in active mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable-scaleout

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

eth-fwd

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-fwd and trunk-fwd are mutually exclusive

eth-rev

Description Ethernet interface number

Type: number

Format: interface

Mutual Exclusion: eth-rev and trunk-rev are mutually exclusive

expand

Description expand syn-cookie with timestamp and wscale

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

extended-stats

Description Enable extended statistics on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

force-routing-mode

Description Force routing mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb-enable

Description Enable Global Server Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gtp-session-lb

Description Enable GTP Session Load Balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ha-conn-mirror

Description Enable for HA Conn sync

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-global

Description Ignore global substitute-source-mac

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-map-list

Description Enter name of IP Map List to be bound (IP Map List Name)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ip-only-lb

Description Enable IP-Only LB mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-smart-rr

Description Use IP address round-robin behavior

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipinip

Description Enable IP in IP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-hardware-assist

Description FPGA assist L7 packet parsing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l7-service-chain

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

memory-compute

Description enable dynamic memory compute on virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

message-switching

Description Message switching

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

name

Description SLB Virtual Service Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

no-auto-up-on-aflex

Description Don't automatically mark vport up when aFleX is bound

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-dest-nat

Description Disable destination NAT, this option only supports in wildcard VIP or when a connection is operated in SSLi + EP mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

no-logging

Description Do not log connection over limit event

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

on-syn

Description Enable for HA Conn sync for l4 tcp sessions on SYN

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

one-server-conn

Description Support server that allow only one connection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

optimization-level

Description '0': No optimization; '1': Optimization level 1 (Experimental);

Type: string

Supported Values: 0, 1

Default: 0

p-template-sip-shared

Description SIP Template Name

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: p-template-sip-shared and template-sip are mutually exclusive

packet-capture-template

Description Name of the packet capture template to be bind with this object

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/visibility/packet-capture/object-templates/slb-vport-tmpl*

persist-type

Description 'src-dst-ip-swap-persist': Create persist session after source IP and destination IP swap; 'use-src-ip-for-dst-persist': Use the source IP to create a destination persist session; 'use-dst-ip-for-src-persist': Use the destination IP to create source IP persist session;

Type: string

Supported Values: src-dst-ip-swap-persist, use-src-ip-for-dst-persist, use-dst-ip-for-src-persist

pool

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: pool and shared-partition-pool are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

pool-shared

Description Specify NAT pool or pool group

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

port-number

Description Port

Type: number

Range: 0-65534

port-translation

Description Enable port translation under no-dest-nat

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

precedence

Description Set auto NAT pool as higher precedence for source NAT

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

protocol

Description 'tcp': TCP LB service; 'udp': UDP Port; 'others': for no tcp/udp protocol, do IP load balancing; 'diameter': diameter port; 'dns-tcp': DNS service over TCP; 'dns-udp': DNS service over UDP; 'fast-http': Fast HTTP Port; 'fix': FIX Port; 'ftp': File Transfer Protocol Port; 'ftp-proxy': ftp proxy port; 'http': HTTP Port; 'https': HTTPS port; 'imap': imap proxy port; 'mlb': Message based load balancing; 'mms': Microsoft Multimedia Service Port; 'mysql': mssql port; 'mssql': mssql; 'pop3': pop3 proxy port; 'radius': RADIUS Port; 'rtsp': Real Time Streaming Protocol Port; 'sip': Session initiation protocol over UDP; 'sip-tcp': Session initiation protocol over TCP; 'sips': Session initiation protocol over TLS; 'smpp-tcp': SMPP service over TCP; 'spdy': spdy port; 'spdys': spdys port; 'smtp': SMTP Port; 'ssl-proxy': Generic SSL proxy; 'ssli': SSL insight; 'tcp-proxy': Generic TCP proxy; 'tftp': TFTP Port;

Type: string

Supported Values: tcp, udp, others, diameter, dns-tcp, dns-udp, fast-http, fix, ftp, ftp-proxy, http, https, imap, mlb, mms, mysql, mssql, pop3, radius, rtsp, sip, sip-tcp, sips, smpp-tcp, spdy, spdys, smtp, mqtt, mqtts, ssl-proxy, ssli, ssh, tcp-proxy, tftp, fast-fix

proxy-layer

Description 'v1': Force using old proxy; 'v2': Force using new proxy;

Type: string

Supported Values: v1, v2

range

Description Virtual Port range (Virtual Port range value)

Type: number

Range: 0-254

Default: 0

Mutual Exclusion: range and alternate-port are mutually exclusive

rate

Description Specify the log message rate

Type: number

Range: 0-2147483647

redirect-to-https

Description Redirect HTTP to HTTPS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reply-acme-challenge

Description Reply ACME http-01 challenge. This option only takes effect in HTTP port 80

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

req-fail

Description Use alternate virtual port when L7 request fail

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reselection

Description 'disable': disable;

Type: string

Supported Values: disable

reset

Description Send client reset when connection number over limit

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reset-on-server-selection-fail

Description Send client reset when server selection fails

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resolve-web-cat-list

Description Web Category List name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/web-category/category-list*

rtp-sip-call-id-match

Description rtp traffic try to match the real server of sip smp call-id session

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Type: List

scaleout-bucket-count

Description Number of traffic buckets

Type: number

Range: 1-256

Default: 32

scaleout-device-group

Description Device group id

Type: number

Range: 1-16

secs

Description Specify the interval in seconds

Type: number

Range: 1-100

serv-sel-fail

Description Use alternate virtual port when server selection failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-group

Description Bind a use-rcv-hop-for-resp Server Group to this Virtual Server (Server Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/server-group*

service-group

Description Bind a Service Group to this Virtual Server (Service Group Name)

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/service-group*

shared-partition-cache-template

Description Reference a Cache template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-cache-template and template-cache are mutually exclusive

shared-partition-client-ssl-template

Description Reference a Client SSL template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-client-ssl-template and template-client-ssl are mutually exclusive

shared-partition-connection-reuse-template

Description Reference a connection reuse template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-connection-reuse-template and template-connection-reuse are mutually exclusive

shared-partition-dblb-template

Description Reference a dblb template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dblb-template and template-dblb are mutually exclusive

shared-partition-diameter-template

Description Reference a Diameter template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-diameter-template and template-diameter are mutually exclusive

shared-partition-dns-template

Description Reference a dns template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dns-template and template-dns are mutually exclusive

shared-partition-doh-template

Description Reference a DNS over HTTP(s) template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-doh-template and template-doh are mutually exclusive

shared-partition-dynamic-service-template

Description Reference a dynamic service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-dynamic-service-template and template-dynamic-service are mutually exclusive

shared-partition-external-service-template

Description Reference a external service template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-external-service-template and template-external-service are mutually exclusive

shared-partition-fix-template

Description Reference a FIX template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-fix-template and template-fix are mutually exclusive

shared-partition-http-policy-template

Description Reference a http policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-policy-template and template-http-policy are mutually exclusive

shared-partition-http-template

Description Reference a HTTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-http-template and template-http are mutually exclusive

shared-partition-imap-pop3-template

Description Reference a IMAP/POP3 template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-imap-pop3-template and template-imap-pop3 are mutually exclusive

shared-partition-persist-cookie-template

Description Reference a persist cookie template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-cookie-template and template-persist-cookie are mutually exclusive

shared-partition-persist-destination-ip-template

Description Reference a persist destination ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-destination-ip-template and template-persist-destination-ip are mutually exclusive

shared-partition-persist-source-ip-template

Description Reference a persist source ip template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-source-ip-template and template-persist-source-ip are mutually exclusive

shared-partition-persist-ssl-sid-template

Description Reference a persist SSL SID template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-persist-ssl-sid-template and template-persist-ssl-sid are mutually exclusive

shared-partition-policy-template

Description Reference a policy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-policy-template and template-policy are mutually exclusive

shared-partition-pool

Description Specify NAT pool or pool group from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool and pool are mutually exclusive

shared-partition-server-ssl-template

Description Reference a SSL Server template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-server-ssl-template and template-server-ssl are mutually exclusive

shared-partition-smpp-template

Description Reference a smpp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smpp-template and template-smpp are mutually exclusive

shared-partition-smtp-template

Description Reference a SMTP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-smtp-template and template-smtp are mutually exclusive

shared-partition-tcp

Description Reference a tcp template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp and template-tcp are mutually exclusive

shared-partition-tcp-proxy-template

Description Reference a TCP Proxy template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-tcp-proxy-template and template-tcp-proxy are mutually exclusive

shared-partition-udp

Description Reference a UDP template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-udp and template-udp are mutually exclusive

shared-partition-virtual-port-template

Description Reference a Virtual Port template from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-virtual-port-template and template-virtual-port are mutually exclusive

skip-rev-hash

Description Skip rev tuple hash insertion

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snat-on-vip

Description Enable source NAT traffic against VIP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

stats-data-action

Description 'stats-data-enable': Enable statistical data collection for virtual port; 'stats-data-disable': Disable statistical data collection for virtual port;

Type: string

Supported Values: stats-data-enable, stats-data-disable

Default: stats-data-enable

substitute-source-mac

Description Substitute Source MAC Address to that of the outgoing interface

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

support-http2

Description Support HTTP2

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn-cookie

Description Enable syn-cookie

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-cache and shared-partition-cache-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/cache*

template-cache-shared

Description Cache Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-client-ssh

Description Client SSH Template (Client SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssh*

template-client-ssl

Description Client SSL Template (Client SSL Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-client-ssl and shared-partition-client-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-client-ssl-shared

Description Client SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/client-ssl*

template-connection-reuse

Description Connection Reuse Template (Connection Reuse Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-connection-reuse and shared-partition-connection-reuse-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-connection-reuse-shared

Description Connection Reuse Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/connection-reuse*

template-dblb

Description DBLB Template (DBLB template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dblb and shared-partition-dblb-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dblb*

template-dblb-shared

Description DBLB Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dblb*

template-diameter

Description Diameter Template (diameter template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-diameter and shared-partition-diameter-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/diameter*

template-diameter-shared

Description Diameter Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/diameter*

template-dns

Description DNS template (DNS template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dns and shared-partition-dns-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dns*

template-dns-shared

Description DNS Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dns*

template-doh

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-doh and shared-partition-doh-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/doh*

template-doh-shared

Description DNS over HTTP(s) Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/doh*

template-dynamic-service

Description Dynamic Service Template (dynamic-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-dynamic-service and shared-partition-dynamic-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-dynamic-service-shared

Description Dynamic Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/dynamic-service*

template-external-service

Description External service template (external-service template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-external-service and shared-partition-external-service-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/external-service*

template-external-service-shared

Description External Service Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/external-service*

template-fix

Description FIX template (FIX Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-fix and shared-partition-fix-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/fix*

template-fix-shared

Description FIX Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/fix*

template-ftp

Description FTP port template (Ftp template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ftp*

template-http

Description HTTP Template (HTTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http and shared-partition-http-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http*

template-http-policy

Description http-policy template (http-policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-http-policy and shared-partition-http-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-policy-shared

Description Http Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http-policy*

template-http-shared

Description HTTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/http*

template-imap-pop3

Description IMAP/POP3 Template (IMAP/POP3 Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-imap-pop3 and shared-partition-imap-pop3-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-imap-pop3-shared

Description IMAP/POP3 Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/imap-pop3*

template-mqtt

Description MQTT Template (MQTT Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/mqtt*

template-persist-cookie

Description Cookie persistence (Cookie persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-cookie and shared-partition-persist-cookie-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-cookie-shared

Description Cookie Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/cookie*

template-persist-destination-ip

Description Destination IP persistence (Destination IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-destination-ip and shared-partition-persist-destination-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-destination-ip-shared

Description Destination IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/destination-ip*

template-persist-source-ip

Description Source IP persistence (Source IP persistence template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-source-ip and shared-partition-persist-source-ip-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-source-ip-shared

Description Source IP Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/source-ip*

template-persist-ssl-sid

Description SSL session ID persistence (Source IP Persistence Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-persist-ssl-sid and shared-partition-persist-ssl-sid-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-persist-ssl-sid-shared

Description SSL SID Persistence Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/persist/ssl-sid*

template-policy

Description Policy Template (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-policy and shared-partition-policy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/policy*

template-policy-shared

Description Policy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

template-ram-cache

Description RAM caching template (Cache Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/cache*

template-reqmod-icap

Description ICAP reqmod template (reqmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/reqmod-icap*

template-respmod-icap

Description ICAP respmod service template (respmod-icap template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/respmod-icap*

template-scaleout

Description Scaleout template (Scaleout template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

template-server-ssh

Description Server SSH Template (Server SSH Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssh*

template-server-ssl

Description Server Side SSL Template (Server SSL Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-server-ssl and shared-partition-server-ssl-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-server-ssl-shared

Description Server SSL Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/server-ssl*

template-sip

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-sip and p-template-sip-shared are mutually exclusive

Refernce Object: */axapi/v3/slb/template/sip*

template-sip-shared

Description SIP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/sip*

template-smpp

Description SMPP template

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smpp and shared-partition-smpp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smpp*

template-smpp-shared

Description SMPP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smpp*

template-smtp

Description SMTP Template (SMTP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-smtp and shared-partition-smtp-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/smtp*

template-smtp-shared

Description SMTP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/smtp*

template-ssli

Description SSLi template (SSLi Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/ssli*

template-tcp

Description L4 TCP Template (TCP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-tcp and shared-partition-tcp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp*

template-tcp-proxy

Description TCP Proxy Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Mutual Exclusion: template-tcp-proxy and shared-partition-tcp-proxy-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-client

Description TCP Proxy Config Client (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-server

Description TCP Proxy Config Server (TCP Proxy Config name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-proxy-shared

Description TCP Proxy Template name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/tcp-proxy*

template-tcp-shared

Description TCP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/tcp*

template-udp

Description L4 UDP Template (UDP Config Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-udp and shared-partition-udp are mutually exclusive

Refernce Object: */axapi/v3/slb/template/udp*

template-udp-shared

Description UDP Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Refernce Object: */axapi/v3/slb/template/udp*

template-virtual-port

Description Virtual port template (Virtual port template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Default: default

Mutual Exclusion: template-virtual-port and shared-partition-virtual-port-template are mutually exclusive

Refernce Object: */axapi/v3/slb/template/virtual-port*

template-virtual-port-shared

Description Virtual Port Template Name

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/virtual-port*

trunk-fwd

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-fwd and eth-fwd are mutually exclusive

trunk-rev

Description Trunk interface number

Type: number

Format: interface

Mutual Exclusion: trunk-rev and eth-rev are mutually exclusive

use-alternate-port

Description Use alternate virtual port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-cgnv6

Description Follow CGNv6 source NAT configuration

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-default-if-no-server

Description Use default forwarding if server selection failed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-for-resp

Description Use receive hop for response to client(For packets on default-vlan, also config "vlan-global enable-def-vlan-l2-forwarding".)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

use-rcv-hop-group

Description Set use-rcv-hop group

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view

Description Specify a GSLB View (ID)

Type: number

Range: 1-31

waf-template

Description WAF template (WAF Template Name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/waf/template*

when-down

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

when-down-protocol2

Description Use alternate virtual port when down

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'curr_conn': Current connections; 'total_l4_conn': Total L4 connections; 'total_l7_conn': Total L7 connections; 'total_tcp_conn': Total TCP connections; 'total_conn': Total connections; 'total_fwd_bytes': Total forward bytes; 'total_fwd_pkts': Total forward packets; 'total_rev_bytes': Total reverse bytes; 'total_rev_pkts': Total reverse packets; 'total_dns_pkts': Total DNS packets; 'total_mf_dns_pkts': Total MF DNS packets; 'es_total_failure_actions': Total failure actions; 'compression_bytes_before': Data into compression engine; 'compression_bytes_after': Data out of compression engine; 'compression_hit': Number of requests compressed; 'compression_miss': Number of requests NOT compressed; 'compression_miss_no_client': Compression miss no client; 'compression_miss_template_exclusion': Compression miss template exclusion; 'curr_req': Current requests; 'total_req': Total requests; 'total_req_succ': Total successful requests; 'peak_conn': Peak connections; 'curr_conn_rate': Current connection rate; 'last_rsp_time': Last response time; 'fastest_rsp_time': Fastest response time; 'slowest_rsp_time': Slowest response time; 'loc_permit': Permit number; 'loc_deny': Deny number; 'loc_conn': Connection number; 'curr_ssl_conn': Current SSL connections; 'total_ssl_conn': Total SSL connections;

Type: string

Supported Values: all, curr_conn, total_l4_conn, total_l7_conn, total_tcp_conn, total_conn, total_fwd_bytes, total_fwd_pkts, total_rev_bytes, total_rev_pkts, total_dns_pkts, total_mf_dns_pkts, es_total_failure_actions, compression_bytes_before, compression_bytes_after, compression_hit, compression_miss, compression_miss_no_client, compression_miss_template_exclusion, curr_req, total_req, total_req_succ, peak_conn, curr_conn_rate, last_rsp_time, fastest_rsp_time, slowest_rsp_time, loc_permit, loc_deny,

loc_conn, curr_ssl_conn, total_ssl_conn, backend-time-to-first-byte, backend-time-to-last-byte, in-latency, out-latency, total_fwd_bytes_out, total_fwd_pkts_out, total_rev_bytes_out, total_rev_pkts_out, curr_req_rate, curr_resp, total_resp, total_resp_succ, curr_resp_rate, dnsrrl_total_allowed, dnsrrl_total_dropped, dnsrrl_total_slipped, dnsrrl_bad_fqdn, throughput-bits-per-sec, dynamic-memory-alloc, dynamic-memory-free, dynamic-memory, ip_only_lb_fwd_bytes, ip_only_lb_rev_bytes, ip_only_lb_fwd_pkts, ip_only_lb_rev_pkts, total_dns_filter_type_drop, total_dns_filter_class_drop, dns_filter_type_a_drop, dns_filter_type_aaaa_drop, dns_filter_type_cname_drop, dns_filter_type_mx_drop, dns_filter_type_ns_drop, dns_filter_type_srv_drop, dns_filter_type_ptr_drop, dns_filter_type_soa_drop, dns_filter_type_txt_drop, dns_filter_type_any_drop, dns_filter_type_others_drop, dns_filter_class_internet_drop, dns_filter_class_chaos_drop, dns_filter_class_hesiod_drop, dns_filter_class_none_drop, dns_filter_class_any_drop, dns_filter_class_others_drop, dns_rpz_action_drop, dns_rpz_action_pass_thru, dns_rpz_action_tcp_only, dns_rpz_action_nxdomain, dns_rpz_action_nodata, dns_rpz_action_local_data, dns_rpz_trigger_client_ip, dns_rpz_trigger_resp_ip, dns_rpz_trigger_ns_ip, dns_rpz_trigger_qname, dns_rpz_trigger_ns_name

acl-list

Specification	
Type	*list*
Block object keys	

acl-id

Description ACL id VPORT

Type: number

Range: 1-199

Mutual Exclusion: acl-id p-acl and shared-partition-acl are mutually exclusive

Refernce Object: */axapi/v3/access-list/standard*

acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-id-shared

Description acl id

Type: number

Range: 1-199

Refernce Object: */axapi/v3/access-list/standard*

acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-id-src-nat-pool and shared-partition-pool-id are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

acl-name

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

acl-name-shared

Description Apply an access list name (Named Access List)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/access-list*

acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: acl-name-src-nat-pool shared-partition-pool-name and v-shared-partition-pool-name are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-id and acl-id-src-nat-pool are mutually exclusive

shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

v-acl-id-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-id-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Mutual Exclusion: v-acl-id-src-nat-pool and v-shared-partition-pool-id are mutually exclusive

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-id-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-name-seq-num

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-seq-num-shared

Description Specify ACL precedence (sequence-number)

Type: number

Range: 1-32

v-acl-name-src-nat-pool

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-acl-name-src-nat-pool-shared

Description Policy based Source NAT (NAT Pool or Pool Group)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/ip/nat/pool*

v-shared-partition-pool-id

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-id and v-acl-id-src-nat-pool are mutually exclusive

v-shared-partition-pool-name

Description Policy based Source NAT from shared partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: v-shared-partition-pool-name and acl-name-src-nat-pool are mutually exclusive

aflex-scripts

Specification	
Type	*list*
Block object keys	

aflex

Description Bind aFleX Script to the Virtual Port (aFleX Script Name)

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

aflex-shared

Description aFleX Script Name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

auth-cfg

Specification	
Type	*object*

aaa-policy

Description Specify AAA policy name to bind to the virtual port

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/aam/aaa-policy*

Objects:

2.93.1 smtp

Configure SMTP Server

smtp Specification

Type	*Configuration Resource*
Element Name	smtp
Element URI	/axapi/v3/smtp
Element Attributes	smtp_attributes
Schema	`smtp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/smtp

smtp attributes

```
POST /axapi/v3/smtp
Payload:
{
    "smtp": {
        "smtp-server": "a"
    }
}
```

Get Object

GET

/axapi/v3/smtp

smtp attributes

```
GET /axapi/v3/smtp
Reponse:
{
    "smtp": {
        "smtp-server": "a",
        "needauthentication": 0,
        "uuid": "43d3c482-5bf7-11d9-abbe-001fa00680a0",
        "a10-url": "/axapi/v3/smtp"
    }
}
```

Modify Object

POST

/axapi/v3/smtp

smtp attributes

Replace Object

PUT

/axapi/v3/smtp

smtp attributes

```
PUT /axapi/v3/smtp
Payload:
{
    "smtp": {
        "smtp-server": "abcd"
    }
}

smtp attributes

mailfrom

Description Configure email source address

Type: string

Format: email-addr

Maximum Length: 63 characters

Maximum Length: 1 characters

needauthentication

Description Configure SMTP server need authtication

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

port

Description Configure SMTP Port (Configure SMTP port, default is 25)

Type: number

Range: 1-65535

smtp-server

Description Configure SMTP Server (length:1-254)

Type: string

Format: host

Maximum Length: 254 characters

Maximum Length: 1 characters

Mutual Exclusion: smtp-server and smtp-server-v6 are mutually exclusive

smtp-server-v6

Description Configure SMTP Server IPV6 address

Type: string

Format: ipv6-address

Mutual Exclusion: smtp-server-v6 and smtp-server are mutually exclusive

use-mgmt-port

Description Use management port as source port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

username-cfg

Description: username-cfg is a **JSON Block**. Please see below for *username-cfg*

Type: Object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

username-cfg

Specification	
Type	*object*

password

Description: password is a **JSON Block**. Please see below for *username-cfg_password*

Type: Object

username

Description Configure SMTP login username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

username-cfg_password

Specification	
Type	*object*

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED password string)

smtp-password

Description Configure SMTP login password

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

2.94 snmp-server

Objects:

2.94.1 snmp-server

Configure SNMP engine parameters

snmp-server Specification

Type	*Intermediate Resource*
Element Name	snmp-server
Element URI	/axapi/v3/snmp-server
Element Attributes	snmp-server_attributes
Schema	`snmp-server schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server

snmp-server_attributes

snmp-server attributes

SNMPv1-v2c

Description: SNMPv1-v2c is a **JSON Block**. Please see below for *SNMPv1-v2c*

Type: Object

Refernce Object: */axapi/v3/snmp-server/SNMPv1-v2c*

SNMPv3

Description: SNMPv3 is a **JSON Block**. Please see below for *SNMPv3*

Type: Object

Refernce Object: */axapi/v3/snmp-server/SNMPv3*

community

Description: community is a **JSON Block**. Please see below for *community*

Type: Object

Refernce Object: */axapi/v3/snmp-server/community*

contact

Description: contact is a **JSON Block**. Please see below for *contact*

Type: Object

Refernce Object: */axapi/v3/snmp-server/contact*

disable

Description: disable is a **JSON Block**. Please see below for *disable*

Type: Object

Refernce Object: */axapi/v3/snmp-server/disable*

enable

Description: enable is a **JSON Block**. Please see below for *enable*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable*

engineID

Description: engineID is a **JSON Block**. Please see below for *engineID*

Type: Object

Refernce Object: */axapi/v3/snmp-server/engineID*

group-list

Type: List

Refernce Object: */axapi/v3/snmp-server/group/{groupname}*

host

Description: host is a **JSON Block**. Please see below for *host*

Type: Object

Refernce Object: */axapi/v3/snmp-server/host*

location

Description: location is a **JSON Block**. Please see below for *location*

Type: Object

Refernce Object: */axapi/v3/snmp-server/location*

management-index

Description: management-index is a **JSON Block**. Please see below for *management-index*

Type: Object

Refernce Object: */axapi/v3/snmp-server/management-index*

slb-data-cache-timeout

Description: slb-data-cache-timeout is a **JSON Block**. Please see below for *slb-data-cache-timeout*

Type: Object

Refernce Object: */axapi/v3/snmp-server/slb-data-cache-timeout*

table-timeout-list

Type: List

Refernce Object: */axapi/v3/snmp-server/table-timeout/{table}*

user-list

Type: List

Refernce Object: */axapi/v3/snmp-server/user/{username}*

view-list

Type: List

Refernce Object: */axapi/v3/snmp-server/view/{viewname}+{oid}*

table-timeout-list

Specification	
Type	*list*
Block object keys	

table

Description SNMP table name or table oid

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

timeout

Description timeout value

Type: number

Range: 1-60

Default: 60

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable

Specification	
Type	*object*

service

Description Enable SNMP service

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps

Description: traps is a **JSON Block**. Please see below for *enable_traps*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps

Specification	
Type	*object*

all

Description Enable all SNMP traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description: gslb is a **JSON Block**. Please see below for *enable_traps_gslb*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/gslb*

lldp

Description Enable lldp traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn

Description: lsn is a **JSON Block**. Please see below for *enable_traps_lsn*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/lsn*

network

Description: network is a **JSON Block**. Please see below for *enable_traps_network*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/network*

routing

Description: routing is a **JSON Block**. Please see below for *enable_traps_routing*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing*

slb

Description: slb is a **JSON Block**. Please see below for *enable_traps_slb*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/slb*

slb-change

Description: slb-change is a **JSON Block**. Please see below for *enable_traps_slb-change*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/slb-change*

snmp

Description: snmp is a **JSON Block**. Please see below for *enable_traps_snmp*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/snmp*

ssl

Description: ssl is a **JSON Block**. Please see below for *enable_traps_ssl*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/ssl*

system

Description: system is a **JSON Block**. Please see below for *enable_traps_system*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/system*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Description: vcs is a **JSON Block**. Please see below for *enable_traps_vcs*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/vcs*

vrrp-a

Description: vrrp-a is a **JSON Block**. Please see below for *enable_traps_vrrp-a*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/vrrp-a*

enable_traps_slb-change

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_lsn

Specification	
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_vrrp-a

Specification	
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_snmp

Specification	
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_system

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_ssl

Specification	
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_vcs

Specification	
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing

Specification	
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *enable_traps_routing_bgp*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/bgp*

isis

Description: isis is a **JSON Block**. Please see below for *enable_traps_routing_isis*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *enable_traps_routing_ospf*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/ospf*

enable_traps_routing_bgp

Specification	
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing_ospf

Specification	
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_routing_isis

Specification	
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable_traps_gslb

Specification	
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_slb

Specification	
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable_traps_network

Specification	
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb-data-cache-timeout

Specification	
Type	*object*

slblimit

Description Cache time-out in seconds, default as 60 seconds

Type: number

Range: 5-120

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

view-list

Specification	
Type	*list*
Block object keys	

mask

Description Hex octets, separated by '.', mask of oid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: mask and type are mutually exclusive

oid

Description MIB view family name or oid

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'included': MIB family is included in the view; 'excluded': MIB family is excluded from the view;

Type: string

Supported Values: included, excluded

Mutual Exclusion: type and mask are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

viewname

Description Name of the view

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

community

Specification	
Type	*object*

read-list

Type: List

Refernce Object: */axapi/v3/snmp-server/community/read/{user}*

community_read-list

Specification	
Type	*list*
Block object keys	

oid-list

Type: List

Refernce Object: */axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}*

remote

Description: remote is a **JSON Block**. Please see below for *community_read-list_remote*

Type: Object

user

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

community_read-list_oid-list

Specification	
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *community_read-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

community_read-list_oid-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

community_read-list_oid-list_remote_host-list

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_oid-list_remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_oid-list_remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

community_read-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

community_read-list_remote_host-list

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

community_read-list_remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

contact

Specification	
Type	*object*

contact-name

Description Identification of the contact person for this managed node

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

host

Specification	
Type	*object*

host-name-list

Type: List

Refernce Object: */axapi/v3/snmp-server/host/host-name/{hostname}+{version}*

ipv4-host-list

Type: List

Refernce Object: */axapi/v3/snmp-server/host/ipv4-host/{ipv4-addr}+{version}*

ipv6-host-list

Type: List

Refernce Object: */axapi/v3/snmp-server/host/ipv6-host/{ipv6-addr}+{version}*

host_ipv6-host-list

Specification	
Type	*list*
Block object keys	

ipv6-addr

Description help IPV6 address of SNMP trap host

Type: string

Format: ipv6-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

host_host-name-list

Specification	
Type	*list*
Block object keys	

hostname

Description Hostname of SNMP trap host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

host_ipv4-host-list

Specification	
Type	*list*
Block object keys	

ipv4-addr

Description help IPV4 address of SNMP trap host

Type: string

Format: ipv4-address

udp-port

Description The trap host's UDP port number(default: 162)

Type: number

Range: 1-65535

Default: 162

user

Description SNMPv3 user to send traps (User Name)

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v1-v2c-comm

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

version

Description 'v1': Use SNMPv1; 'v2c': Use SNMPv2c; 'v3': User SNMPv3;

Type: string

Supported Values: v1, v2c, v3

Default: v2c

management-index

Specification	
Type	*object*

mgmt-index

Description index number

Type: number

Range: 0-2147483647

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable

Specification	
Type	*object*

a10cmsubagent

Description Disable a10cmsubagent

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps

Description: traps is a **JSON Block**. Please see below for *disable_traps*

Type: Object

Refernce Object: */axapi/v3/snmp-server/disable/traps*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

disable_traps

Specification	
Type	*object*

all

Description Disable all traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description Disable all gslb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Disable all slb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-change

Description Disable all slb-change traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp

Description Disable all snmp traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Description Disable all vrrp-a on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

location

Specification	
Type	*object*

loc

Description The physical location of this node

Type: string

Format: string-rlx

Maximum Length: 255 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

group-list

Specification	
Type	*list*
Block object keys	

groupname

Description Name of the group

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

read

Description specify a read view for the group (read view name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': group using the authNoPriv Security Level; 'noauth': group using the noAuthNoPriv Security Level; 'priv': group using SNMPv3 authPriv security level;

Type: string

Supported Values: auth, noauth, priv

SNMPv3

Specification	
Type	*object*

user-list

Type: List

Refernce Object: */axapi/v3/snmp-server/SNMPv3/user/{username}*

SNMPv3_user-list

Specification	
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

user-list

Specification	
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

engineID

Specification	
Type	*object*

engId

Description Define local engineID HEX WORD

Type: string

Maximum Length: 24 characters

Maximum Length: 10 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

SNMPv1-v2c

Specification	
Type	*object*

user-list

Type: List

Refernce Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}*

SNMPv1-v2c_user-list

Specification	
Type	*list*
Block object keys	

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED community string)

oid-list

Type: List

Refernce Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}*

passwd

Description define value of community string

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *SNMPv1-v2c_user-list_remote*

Type: Object

user

Description SNMPv1/v2c community configuration key

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

SNMPv1-v2c_user-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

2.94.3 snmp-server SNMPv1-v2c user

Define configuration for SNMPv1/v2c user

user Specification

Type	*Collection*
Object Key(s)	*user*
Collection Name	*user-list*
Collection URI	/axapi/v3/snmp-server/SNMPv1-v2c/user
Element Name	user
Element URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}
Element Attributes	user_attributes
Schema	`user schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user

user attributes

```
POST /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/
Payload:
{
    "oid": {
        "oid-val": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user

user attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
GET /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Reponse:
{
    "oid": {
        "oid-val": "a",
        "uuid": "76aeb0dc-6139-11d9-bcb8-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user

user-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
PUT /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Payload:
{
    "oid": {
        "oid-val": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user

user-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}

user attributes

```
DELETE /axapi/v3/snmp-server/SNMPv1-v2c/user/a/oid/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED community string)

oid-list

Type: List

Refernce Object: */axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}*

passwd

Description define value of community string

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

oid-list

Specification	
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

oid-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

oid-list_remote_host-list

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

oid-list_remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

oid-list_remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.94.4 snmp-server SNMPv1-v2c user oid

Define a remote entity to which user belongs

oid Specification

Type	*Collection*
Object Key(s)	*oid-val*
Collection Name	*oid-list*
Collection URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid
Element Name	oid
Element URI	/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}
Element Attributes	oid_attributes
Schema	`oid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid attributes

Create List

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Get List

GET

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

Replace List

PUT

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid

oid-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv1-v2c/user/{user}/oid/{oid-val}

oid attributes

oid-list

oid-list is **JSON List** of *oid attributes*

oid-list : [

{ *oid attributes* },

{ *oid attributes* },

...

]

oid attributes

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

remote_host-list

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.94.5 snmp-server SNMPv3

Define a SNMPv3 user

SNMPv3 Specification

Type	*Intermediate Resource*
Element Name	SNMPv3
Element URI	/axapi/v3/snmp-server/SNMPv3
Element Attributes	SNMPv3_attributes
Schema	`SNMPv3 schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/SNMPv3

SNMPv3_attributes

SNMPv3 attributes

user-list

Type: List

Refernce Object: */axapi/v3/snmp-server/SNMPv3/user/{username}*

user-list

Specification	
Type	*list*
Block object keys	

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.94.6 snmp-server SNMPv3 user

Define a user who can access the SNMP engine

user Specification

Type	*Collection*
Object Key(s)	*username*
Collection Name	*user-list*
Collection URI	/axapi/v3/snmp-server/SNMPv3/user
Element Name	user
Element URI	/axapi/v3/snmp-server/SNMPv3/user/{username}
Element Attributes	user_attributes
Schema	`user schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/SNMPv3/user

user attributes

```
POST /axapi/v3/snmp-server/SNMPv3/user/
Payload:
{
    "user": {
        "username": "a",
        "auth-val": "md5",
        "v3": "auth",
        "group": "a",
        "passwd": "abcdefgh",
        "priv": "des",
        "encpasswd": "abcdefgh"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/SNMPv3/user

user attributes

Get Object

GET

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
GET /axapi/v3/snmp-server/SNMPv3/user/a
Reponse:
{
    "user": {
        "username": "a",
        "group": "a",
        "v3": "auth",
        "auth-val": "md5",
        "pw-encrypted": "XXXXX",
        "priv": "des",
        "priv-pw-encrypted": "XXXXX",
        "uuid": "979b7cee-6139-11d9-bcb8-001fa00680a0",
        "a10-url": "/axapi/v3/snmp-server/SNMPv3/user/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/SNMPv3/user

user-list

Modify Object

POST

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

Replace Object

PUT

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
PUT /axapi/v3/snmp-server/SNMPv3/user/a
Payload:
{
    "user": {
        "username": "a",
        "v3": "noauth",
        "group": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/SNMPv3/user

user-list

Delete Object

DELETE

/axapi/v3/snmp-server/SNMPv3/user/{username}

user attributes

```
DELETE /axapi/v3/snmp-server/SNMPv3/user/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.94.7 snmp-server community

Deprecated SNMP community command

community Specification

Type	*Intermediate Resource*
Element Name	community
Element URI	/axapi/v3/snmp-server/community
Element Attributes	community_attributes
Schema	`community schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/community

community_attributes

community attributes

read-list

Type: List

Refernce Object: */axapi/v3/snmp-server/community/read/{user}*

read-list

Specification	
Type	*list*
Block object keys	

oid-list

Type: List

Refernce Object: */axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}*

remote

Description: remote is a **JSON Block**. Please see below for *read-list_remote*

Type: Object

user

Description SNMPv1/v2c community string

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

read-list_oid-list

Specification	
Type	*list*
Block object keys	

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *read-list_oid-list_remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

read-list_oid-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

read-list_oid-list_remote_host-list

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_oid-list_remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_oid-list_remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

read-list_remote

Specification	
Type	*object*

host-list

Type: List

ipv4-list

Type: List

ipv6-list

Type: List

Specification	
Type	*list*
Block object keys	

dns-host

Description DNS remote host

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_remote_ipv4-list

Specification	
Type	*list*
Block object keys	

ipv4-host

Description IPV4 remote host

Type: string

Format: ipv4-address

ipv4-mask

Description IPV4 mask

Type: string

Format: ipv4-netmask

read-list_remote_ipv6-list

Specification	
Type	*list*
Block object keys	

ipv6-host

Description IPV6 remote host

Type: string

Format: ipv6-address

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.94.8 snmp-server community read

Define a read only community string

read Specification

Type	*Collection*
Object Key(s)	*user*
Collection Name	*read-list*
Collection URI	/axapi/v3/snmp-server/community/read
Element Name	read
Element URI	/axapi/v3/snmp-server/community/read/{user}
Element Attributes	read_attributes
Schema	`read schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/community/read

read attributes

```
POST /axapi/v3/snmp-server/community/read/
Payload:
{
    "read": {
        "user": "a",
        "user-tag": "a"
    }
}
```

Create List

POST

/axapi/v3/snmp-server/community/read

read attributes

Get Object

GET

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
GET /axapi/v3/snmp-server/community/read/a
Reponse:
{
    "read": {
        "user": "a",
        "uuid": "b81ac77c-6139-11d9-bcb8-001fa00680a0",
        "user-tag": "a",
        "a10-url": "/axapi/v3/snmp-server/community/read/a"
    }
}
```

Get List

GET

/axapi/v3/snmp-server/community/read

read-list

Modify Object

POST

/axapi/v3/snmp-server/community/read/{user}

read attributes

Replace Object

PUT

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
PUT /axapi/v3/snmp-server/community/read/a
Payload:
{
    "read": {
        "user": "a",
        "user-tag": "abcd"
    }
}
```

Replace List

PUT

/axapi/v3/snmp-server/community/read

read-list

Delete Object

DELETE

/axapi/v3/snmp-server/community/read/{user}

read attributes

```
DELETE /axapi/v3/snmp-server/community/read/a
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

read-list

read-list is **JSON List** of *read attributes*

read-list : [

{ *read attributes* },

{ *read attributes* },

...

ipv6-mask

Description IPV6 mask

Type: number

Range: 1-128

2.94.9 snmp-server community read oid

Define a remote entity to which user belongs

oid Specification

Type	*Collection*
Object Key(s)	*oid-val*
Collection Name	*oid-list*
Collection URI	/axapi/v3/snmp-server/community/read/{user}/oid
Element Name	oid
Element URI	/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}
Element Attributes	oid_attributes
Schema	`oid schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/community/read/{user}/oid

oid attributes

Create List

POST

/axapi/v3/snmp-server/community/read/{user}/oid

oid attributes

Get Object

GET

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Get List

GET

/axapi/v3/snmp-server/community/read/{user}/oid

oid-list

Modify Object

POST

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Replace Object

PUT

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

Replace List

PUT

/axapi/v3/snmp-server/community/read/{user}/oid

oid-list

Delete Object

DELETE

/axapi/v3/snmp-server/community/read/{user}/oid/{oid-val}

oid attributes

oid-list

oid-list is **JSON List** of *oid attributes*

oid-list : [

{ *oid attributes* },

{ *oid attributes* },

...

]

oid attributes

oid-val

Description specific the oid (The oid value, object-key)

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

remote

Description: remote is a **JSON Block**. Please see below for *remote*

Type: Object

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

remote

Specification	
Type	*object*

Maximum Length: 1 characters

traps

Specification	
Type	*object*

all

Description Disable all traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description Disable all gslb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Description Disable all slb traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb-change

Description Disable all slb-change traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

snmp

Description Disable all snmp traps on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Description Disable all vrrp-a on this partition

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.94.12 snmp-server disable traps

Disable l3v partition SNMP traps

traps Specification

traps_slb-change

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_lsn

Specification	
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_vrrp-a

Specification	
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_snmp

Specification	
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_system

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_ssl

Specification	
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_vcs

Specification	
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing

Specification	
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *traps_routing_bgp*

traps_routing_bgp

Specification	
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing_ospf

Specification	
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_routing_isis

Specification	
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

traps_gslb

Specification	
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_slb

Specification	
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traps_network

Specification	
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.94.14 snmp-server enable traps

Enable SNMP traps

traps Specification

Type	*Configuration Resource*
Element Name	traps
Element URI	/axapi/v3/snmp-server/enable/traps
Element Attributes	traps_attributes
Schema	`traps schema`

Operations Allowed:

Create Object

POST

/axapi/v3/snmp-server/enable/traps

traps attributes

```
POST /axapi/v3/snmp-server/enable/traps
Payload:
{
    "traps": {
        "all": 1
    }
}
```

Get Object

GET

/axapi/v3/snmp-server/enable/traps

traps attributes

```
GET /axapi/v3/snmp-server/enable/traps
Reponse:
{
    "traps": {
        "all": 1,
        "lldp": 0,
        "uuid": "0e088a52-613a-11d9-bcb8-001fa00680a0",
        "gslb": {
            "all": 0,
            "zone": 0,
            "site": 0,
            "group": 0,
            "service-ip": 0,
            "uuid": "",
            "a10-url": "/axapi/v3/snmp-server/enable/traps/gslb"
        },
```

(continues on next page)

(continued from previous page)

```
        "a10-url": "/axapi/v3/snmp-server/enable/traps"
    }
}
```

Modify Object

POST

/axapi/v3/snmp-server/enable/traps

traps attributes

Replace Object

PUT

/axapi/v3/snmp-server/enable/traps

traps attributes

```
PUT /axapi/v3/snmp-server/enable/traps
Payload:
{
    "traps": {
        "all": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/snmp-server/enable/traps

traps attributes

```
DELETE /axapi/v3/snmp-server/enable/traps
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

traps attributes

all

Description Enable all SNMP traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gslb

Description: gslb is a **JSON Block**. Please see below for *gslb*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/gslb*

lldp

Description Enable lldp traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn

Description: lsn is a **JSON Block**. Please see below for *lsn*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/lsn*

network

Description: network is a **JSON Block**. Please see below for *network*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/network*

routing

Description: routing is a **JSON Block**. Please see below for *routing*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing*

slb

Description: slb is a **JSON Block**. Please see below for *slb*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/slb*

slb-change

Description: slb-change is a **JSON Block**. Please see below for *slb-change*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/slb-change*

snmp

Description: snmp is a **JSON Block**. Please see below for *snmp*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/snmp*

ssl

Description: ssl is a **JSON Block**. Please see below for *ssl*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/ssl*

system

Description: system is a **JSON Block**. Please see below for *system*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/system*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Description: vcs is a **JSON Block**. Please see below for *vcs*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/vcs*

vrrp-a

Description: vrrp-a is a **JSON Block**. Please see below for *vrrp-a*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/vrrp-a*

slb-change

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lsn

Specification	
Type	*object*

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrrp-a

Specification	
Type	*object*

active

Description Enable VRRP-A active trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

all

Description Enable all VRRP-A group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

standby

Description Enable VRRP-A standby trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

snmp

Specification	
Type	*object*

all

Description Enable all SNMP group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkdown

Description Enable SNMP link-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

linkup

Description Enable SNMP link-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system

Specification	
Type	*object*

all

Description Enable all system group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

control-cpu-high

Description Enable control CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl

Specification	
Type	*object*

server-certificate-error

Description Enable SSL server certificate error trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vcs

Specification	
Type	*object*

state-change

Description Enable VCS state change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing

Specification	
Type	*object*

bgp

Description: bgp is a **JSON Block**. Please see below for *routing_bgp*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/bgp*

isis

Description: isis is a **JSON Block**. Please see below for *routing_isis*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/isis*

ospf

Description: ospf is a **JSON Block**. Please see below for *routing_ospf*

Type: Object

Refernce Object: */axapi/v3/snmp-server/enable/traps/routing/ospf*

routing_bgp

Specification	
Type	*object*

bgpBackwardTransNotification

Description Enable bgpBackwardTransNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bgpEstablishedNotification

Description Enable bgpEstablishedNotification traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing_ospf

Specification	
Type	*object*

ospfIfAuthFailure

Description Enable ospfIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfConfigError

Description Enable ospfIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfRxBadPacket

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

routing_isis

Specification	
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

gslb

Specification	
Type	*object*

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

slb

Specification	
Type	*object*

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

network

Specification	
Type	*object*

trunk-port-threshold

Description Enable network trunk-port-threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.94.15 snmp-server enable traps gslb

Enable GSLB group traps

gslb Specification

Type	*Configuration Resource*

    }
}
```

gslb attributes

all

Description Enable all GSLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

group

Description Enable GSLB group related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-ip

Description Enable GSLB service-ip related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

site

Description Enable GSLB site related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

zone

Description Enable GSLB zone related traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.94.16 snmp-server enable traps lsn

Enable LSN group traps

    }
}
```

lsn attributes

all

Description Enable all LSN group traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fixed-nat-port-mapping-file-change

Description Enable LSN trap when fixed nat port mapping file change

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

max-ipport-threshold

Description Maximum threshold

Type: number

Range: 10000-64512

Default: 64512

max-port-threshold

Description Maximum threshold

Type: number

Range: 10000-655355000

Default: 655350000

per-ip-port-usage-threshold

Description Enable LSN trap when IP total port usage reaches the threshold (default 64512)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

total-port-usage-threshold

Description Enable LSN trap when NAT total port usage reaches the threshold (default 655350000)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

traffic-exceeded

Description Enable LSN trap when NAT pool reaches the threshold

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

Description Enable ospfIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfIfStateChange

Description Enable ospfIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbApproachingOverflow

Description Enable ospfLsdbApproachingOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfLsdbOverflow

Description Enable ospfLsdbOverflow traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfMaxAgeLsa

Description Enable ospfMaxAgeLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfNbrStateChange

Description Enable ospfNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfOriginateLsa

Description Enable ospfOriginateLsa traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfTxRetransmit

Description Enable ospfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfAuthFailure

Description Enable ospfVirtIfAuthFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfConfigError

Description Enable ospfVirtIfConfigError traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfRxBadPacket

Description Enable ospfVirtIfRxBadPacket traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfStateChange

Description Enable ospfVirtIfStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtIfTxRetransmit

Description Enable ospfVirtIfTxRetransmit traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ospfVirtNbrStateChange

Description Enable ospfVirtNbrStateChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

isis

Specification	
Type	*object*

isisAdjacencyChange

Description Enable isisAdjacencyChange traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAreaMismatch

Description Enable isisAreaMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAttemptToExceedMaxSequence

Description Enable isisAttemptToExceedMaxSequence traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationFailure

Description Enable isisAuthenticationFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisAuthenticationTypeFailure

Description Enable isisAuthenticationTypeFailure traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisCorruptedLSPDetected

Description Enable isisCorruptedLSPDetected traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisDatabaseOverload

Description Enable isisDatabaseOverload traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisIDLenMismatch

Description Enable isisIDLenMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisLSPTooLargeToPropagate

Description Enable isisLSPTooLargeToPropagate traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisManualAddressDrops

Description Enable isisManualAddressDrops traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisMaxAreaAddressesMismatch

Description Enable isisMaxAreaAddressesMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOriginatingLSPBufferSizeMismatch

Description Enable isisOriginatingLSPBufferSizeMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisOwnLSPPurge

Description Enable isisOwnLSPPurge traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisProtocolsSupportedMismatch

Description Enable isisProtocolsSupportedMismatch traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisRejectedAdjacency

Description Enable isisRejectedAdjacency traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisSequenceNumberSkip

Description Enable isisSequenceNumberSkip traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

isisVersionSkew

Description Enable isisVersionSkew traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

slb attributes

all

Description Enable all SLB traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

application-buffer-limit

Description Enable application buffer reach limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-exceed

Description Enable SLB server/port bandwidth rate limit exceed trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-rate-limit-resume

Description Enable SLB server/port bandwidth rate limit resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-down

Description Enable SLB server gateway down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

gateway-up

Description Enable SLB server gateway up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-limit

Description Enable SLB server connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-conn-resume

Description Enable SLB server connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-disabled

Description Enable SLB server-disabled trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-down

Description Enable SLB server-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-selection-failure

Description Enable SLB server selection failure trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-up

Description Enable slb server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-limit

Description Enable SLB service connection limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-conn-resume

Description Enable SLB service connection resume trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-down

Description Enable SLB service-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-down

Description Enable SLB service-group-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-down

Description Enable SLB service-group-member-down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-member-up

Description Enable SLB service-group-member-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-group-up

Description Enable SLB service-group-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

service-up

Description Enable SLB service-up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip-connlimit

Description Enable the virtual server reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-connratelimit

Description Enable the virtual server reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-down

Description Enable SLB virtual server down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connlimit

Description Enable the virtual port reach conn-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-connratelimit

Description Enable the virtual port reach conn-rate-limit trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-down

Description Enable SLB virtual port down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port-up

Description Enable SLB virtual port up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-up

Description Enable SLB virtual server up trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.94.23 snmp-server enable traps slb-change

Enable SLB change traps

connection-resource-event

Description Enable system connection resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-usage-warning

Description Enable partition resource usage warning trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server

Description Enable slb server create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

server-port

Description Enable slb server port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-change

Description Enable SSL certificate change trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-cert-expire

Description Enable SSL certificate expiring trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-threshold

Description Enable slb system threshold trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vip

Description Enable slb vip create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

vip-port

Description Enable slb vip-port create/delete trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

2.94.24 snmp-server enable traps snmp

Default: 0

data-cpu-high

Description Enable data CPU usage high trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fan

Description Enable system fan trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

file-sys-read-only

Description Enable file system read-only trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-disk-use

Description Enable system high disk usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-memory-use

Description Enable system high memory usage trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

high-temp

Description Enable system high temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

license-management

Description Enable system license management traps

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

low-temp

Description Enable system low temperature trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packet-drop

Description Enable system packet dropped trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

power

Description Enable system power supply trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

pri-disk

Description Enable system primary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

restart

Description Enable system restart trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sec-disk

Description Enable system secondary hard disk trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shutdown

Description Enable system shutdown trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

smp-resource-event

Description Enable system smp resource event trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

start

Description Enable system start trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syslog-severity-one

Description Enable system syslog severity one messages trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tacacs-server-up-down

Description Enable system TACACS monitor server up/down trap

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.94.27 snmp-server enable traps vcs

group-list

group-list is **JSON List** of *group attributes*

group-list : [

{ *group attributes* },

{ *group attributes* },

...

]

group attributes

groupname

Description Name of the group

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

read

Description specify a read view for the group (read view name)

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': group using the authNoPriv Security Level; 'noauth': group using the noAuthNoPriv Security Level; 'priv': group using SNMPv3 authPriv security level;

Type: string

Supported Values: auth, noauth, priv

2.94.31 snmp-server host

Specify hosts to receive SNMP traps

host Specification

Type	*Intermediate Resource*
Element Name	host
Element URI	/axapi/v3/snmp-server/host
Element Attributes	host_attributes
Schema	`host schema`

Operations Allowed:

Get Object

GET

/axapi/v3/snmp-server/host

host_attributes

host attributes

host-name-list

Type: List

Refernce Object: */axapi/v3/snmp-server/host/host-name/{hostname}+{version}*

```

user-list

user-list is **JSON List** of *user attributes*

user-list : [

{ *user attributes* },

{ *user attributes* },

...

]

user attributes

auth-val

Description 'md5': Use HMAC MD5 algorithm for authentication; 'sha': Use HMAC SHA algorithm for authentication;

Type: string

Supported Values: md5, sha

encpasswd

Description Passphrase for encryption

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

group

Description Group to which the user belongs

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

passwd

Description Password of this user

Type: string

Format: password

Maximum Length: 31 characters

Maximum Length: 8 characters

priv

Description 'des': DES encryption alogrithm; 'aes': AES encryption alogrithm; (Encryption type)

Type: string

Supported Values: des, aes

priv-pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

pw-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED passphrase string)

username

Description Name of the user

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

v3

Description 'auth': Using the authNoPriv Security Level; 'noauth': Using the noAuthNoPriv Security Level;

Type: string

Supported Values: auth, noauth

2.94.40 snmp-server view

Defines named "view" - a subset of the overall OID tree

view Specification

Type	*Collection*

}
```

view-list

view-list is **JSON List** of *view attributes*

view-list : [

{ *view attributes* },

{ *view attributes* },

...

]

view attributes

mask

Description Hex octets, separated by '.', mask of oid

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Mutual Exclusion: mask and type are mutually exclusive

oid

Description MIB view family name or oid

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

type

Description 'included': MIB family is included in the view; 'excluded': MIB family is excluded from the view;

Type: string

Supported Values: included, excluded

Mutual Exclusion: type and mask are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

viewname

Description Name of the view

Type: string

Maximum Length: 31 characters

Maximum Length: 1 characters

2.95 so-counters

Objects:

2.95.1 so-counters

Show scaleout statistics

so-counters Specification

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'so_pkts_conn_in': Total packets processed for an established connection; 'so_pkts_conn_redirect': Total packets redirected for an established connection; 'so_pkts_dropped': Total packets dropped; 'so_pkts_errors': Total packet errors; 'so_pkts_in': Total packets in-coming; 'so_pkts_new_conn_in': Total packets processed for a new connection; 'so_pkts_new_conn_redirect': Total packets redirected for a new connection; 'so_pkts_out': Total packets sent out; 'so_pkts_redirect': Total packets redirected; 'so_pkts_conn_sync_fail': Total connection sync failures; 'so_pkts_nat_reserve_fail': Total NAT reserve failures; 'so_pkts_nat_release_fail': Total NAT release failures; 'so_pkts_conn_l7_sync': Total L7 connection syncs; 'so_pkts_conn_l4_sync': Total L4 connection syncs; 'so_pkts_redirect_conn_aged_out': Total redirect conns aged out;

Type: string

Supported Values: all, so_pkts_rcvd, so_redirect_pkts_sent, so_pkts_dropped, so_redirected_pkts_rcvd, so_fw_shadow_session_created, so_pkts_traffic_map_not_found_drop, so_slb_pkts_redirect_conn_aged_out, so_pkts_scaleout_not_active_drop, so_pkts_slb_nat_reserve_fail, so_pkts_slb_nat_release_fail, so_pkts_dest_mac_mistmatch_drop, so_pkts_l2redirect_dest_mac_zero_drop, so_pkts_l2redirect_interface_not_up, so_pkts_l2redirect_invalid_redirect_info_error, so_pkts_l3_redirect_encap_error_drop, so_pkts_l3_redirect_inner_mac_zero_drop, so_pkts_l3_redirect_decap_vlan_sanity_drop, so_pkts_l3_redirect_decap_non_ipv4_vxlan_drop, so_pkts_l3_redirect_decap_rx_encap_params_drop, so_pkts_l3_redirect_table_error, so_pkts_l3_redirect_rcvd_in_l2_mode_drop, so_pkts_l3_redirect_fragmentation_error, so_pkts_l3_redirect_table_no_entry_found, so_pkts_l3_redirect_invalid_dev_dir, so_pkts_l3_redirect_chassis_dest_mac_error, so_pkts_l3_redirect_encap_ipv4_jumbo_frag_drop, so_pkts_l3_redirect_encap_ipv6_jumbo_frag_drop, so_pkts_l3_redirect_too_large_pkts_in_drop, so_sync_fw_shadow_session_create, so_sync_fw_shadow_session_delete, so_sync_fw_shadow_ext, so_sync_shadow_stats_to_active, so_fw_internal_rule_count, so_hc_registration_done, so_hc_deregistration_done

stats data

	Counter	Size	Description
	so_pkts_traffic_map_not_found_drop	8	Traffic MAP Not Found Drop
	so_pkts_l3_redirect_encap_error_drop	8	L3 Redirect encap error drop during transmission
	so_fw_shadow_session_created	8	FW Shadow Session created
	so_pkts_l3_redirect_inner_mac_zero_drop	8	L3 Redirect inner mac zero drop during transmission
	so_pkts_l3_redirect_too_large_pkts_in_drop	8	Received L3 Redirected fragmented packets too large
	so_pkts_l3_redirect_invalid_dev_dir	8	L3 Redirect Invalid Device direction during transmission
	so_pkts_l3_redirect_decap_rx_encap_params_drop	8	L3 Redirect decap Rx encap params error Drop
	so_pkts_l3_redirect_decap_non_ipv4_vxlan_drop	8	L3 Redirect received non ipv4 VXLAN packet
	so_pkts_dropped	8	Total packets dropped
	so_redirect_pkts_sent	8	Total packets redirected out of node
	so_pkts_l3_redirect_decap_vlan_sanity_drop	8	L3 Redirect Decap VLAN Sanity Drop during receipt
	so_pkts_dest_mac_mistmatch_drop	8	Destination MAC Mistmatch Drop
	so_pkts_l2redirect_interface_not_up	8	L2redirect Intf is not UP
	so_pkts_slb_nat_release_fail	8	Total SLB NAT release failures
	so_pkts_scaleout_not_active_drop	8	Scaleout Not Active Drop
	so_redirected_pkts_rcvd	8	Total redirected packets received on node
	so_pkts_slb_nat_reserve_fail	8	Total SLB NAT reserve failures
	so_pkts_l3_redirect_fragmentation_error	8	L3 redirect encap Fragmentation error
	so_pkts_l2redirect_invalid_redirect_info_error	8	Redirect Table Error due to invalid redirect info
	so_pkts_l3_redirect_table_error	8	L3 Redirect Table error Drop
	so_pkts_l3_redirect_encap_ipv6_jumbo_frag_drop	8	L3 Redirect tx ipv6 packet after encap more than max jumbo size
	so_slb_pkts_redirect_conn_aged_out	8	Total SLB redirect conns aged out
	so_pkts_l3_redirect_table_no_entry_found	8	L3 redirect Table no redirect entry found error
	so_pkts_rcvd	8	Total data packets received
	so_pkts_l3_redirect_rcvd_in_l2_mode_drop	8	Recevied l3 redirect packets in L2 mode Drop
	so_pkts_l3_redirect_encap_ipv4_jumbo_frag_drop	8	L3 Redirect ipv4 packet after encap more than max jumbo size
	so_pkts_l3_redirect_chassis_dest_mac_error	8	L3 Redirect RX multi-slot Destination MAC Error
	so_pkts_l2redirect_dest_mac_zero_drop	8	Destination MAC Address zero Drop

2.96 ssh-login-grace-time

Objects:

2.96.1 ssh-login-grace-time

The grace time during which a connection can exist without successful authentication.

state-list_next-state-list_case-list_action-list_tcp_options

Specification	
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

state-list_next-state-list_case-list_action-list_l2

Specification	
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

state-list_next-state-list_case-list_action-list_l2_mac-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

state-list_next-state-list_case-list_action-list_l3

Specification	
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

ip-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

state-list_next-state-list_case-list_action-list_l3_ip-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

state-list_next-state-list_case-list_action-list_l1

Specification	
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

state-list_next-state-list_case-list_action-list_l1_eth-list

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Type: number

Format: interface

ethernet-start

Description Ethernet port (Interface number)

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

state-list_next-state-list_case-list_action-list_l1_trunk_list

Specification	
Type	*list*
Block object keys	

trunk-end

Description Trunk Group

Type: number

trunk-start

Description Trunk groups

Type: number

run-test

Specification	
Type	*object*

mode

Description 'basic': Run Basic mode; 'fault-injection': Run FI mode. This will also run Basic mode to gather data; 'cpu-rr': Run CPU RR mode; 'frag': Run IP frag mode;

Type: string

Supported Values: basic, fault-injection, cpu-rr, frag

2.98.2 sys-ut common

Common

common Specification

Type	*Configuration Resource*
Element Name	common
Element URI	/axapi/v3/sys-ut/common
Element Attributes	common_attributes
Schema	`common schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/common

common attributes

Get Object

GET

/axapi/v3/sys-ut/common

common attributes

Modify Object

POST

/axapi/v3/sys-ut/common

common attributes

Replace Object

PUT

/axapi/v3/sys-ut/common

common attributes

Delete Object

DELETE

/axapi/v3/sys-ut/common

common attributes

common attributes

delay

Description wait time in seconds after each run

Type: number

Range: 1-3600

proceed-on-error

Description Run test even in case of event failure

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.98.3 sys-ut event

Specify event parameters

event Specification

Type	*Collection*
Object Key(s)	*event-number*
Collection Name	*event-list*
Collection URI	/axapi/v3/sys-ut/event
Element Name	event
Element URI	/axapi/v3/sys-ut/event/{event-number}
Element Attributes	event_attributes
Schema	`event schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/event

event attributes

Create List

POST

/axapi/v3/sys-ut/event

event attributes

Get Object

GET

/axapi/v3/sys-ut/event/{event-number}

event attributes

Get List

GET

/axapi/v3/sys-ut/event

event-list

Modify Object

POST

/axapi/v3/sys-ut/event/{event-number}

event attributes

Replace Object

PUT

/axapi/v3/sys-ut/event/{event-number}

event attributes

Replace List

PUT

/axapi/v3/sys-ut/event

event-list

Delete Object

DELETE

/axapi/v3/sys-ut/event/{event-number}

event attributes

event-list

event-list is **JSON List** of *event attributes*

event-list : [

{ *event attributes* },

{ *event attributes* },

...

]

event attributes

action-list

Type: List

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}*

event-number

Description Event number

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list

Specification	
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ignore-validation

Description: ignore-validation is a **JSON Block**. Please see below for *action-list_ignore-validation*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/ignore-validation*

l1

Description: l1 is a **JSON Block**. Please see below for *action-list_l1*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *action-list_l2*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *action-list_l3*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *action-list_tcp*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *action-list_udp*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_ignore-validation

Specification	
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_udp

Specification	
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_tcp

Specification	
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *action-list_tcp_flags*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *action-list_tcp_options*

Type: Object

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

action-list_tcp_flags

Specification	
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list_tcp_options

Specification	
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

action-list_l2

Specification	
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

action-list_l2_mac-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

tcp_flags

Specification	
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_options

Specification	
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

l2

Specification	
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Refernce Object: */axapi/v3/sys-ut/event/{event-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

l2_mac-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

l1

Specification	
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

l1_eth-list

Specification	
Type	*list*
Block object keys	

ethernet-end

Description Ethernet port

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.98.13 sys-ut event action tcp options

Tcp Flags

options Specification

Type	*Configuration Resource*
Element Name	options
Element URI	/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options
Element Attributes	options_attributes
Schema	`options schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options

options attributes

Get Object

GET

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options

options attributes

Modify Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options

options attributes

Replace Object

PUT

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options

options attributes

Delete Object

DELETE

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/tcp/options

options attributes

options attributes

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

2.98.14 sys-ut event action udp

UDP header

udp Specification

Type	*Configuration Resource*
Element Name	udp
Element URI	/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp
Element Attributes	udp_attributes
Schema	`udp schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp

udp attributes

Get Object

GET

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp

udp attributes

Modify Object

POST

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp

udp attributes

Replace Object

PUT

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp

udp attributes

Delete Object

DELETE

/axapi/v3/sys-ut/event/{event-number}/action/{direction}/udp

udp attributes

udp attributes

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.98.15 sys-ut run-suite

Generate test cases and run them

run-suite Specification

Type	*Configuration Resource*
Element Name	run-suite
Element URI	/axapi/v3/sys-ut/run-suite
Element Attributes	run-suite_attributes
Schema	`run-suite schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/run-suite

run-suite attributes

Get Object

GET

/axapi/v3/sys-ut/run-suite

run-suite attributes

Modify Object

POST

/axapi/v3/sys-ut/run-suite

run-suite attributes

run-suite attributes

2.98.16 sys-ut state

State machine node

state Specification

Type	*Collection*
Object Key(s)	*name*

Collection URI	/axapi/v3/sys-ut/state
Element Name	state
Element URI	/axapi/v3/sys-ut/state/{name}
Element Attributes	state_attributes
Schema	`state schema`

Operations Allowed:

Create Object

POST

/axapi/v3/sys-ut/state

state attributes

Create List

POST

/axapi/v3/sys-ut/state

state attributes

Get Object

GET

/axapi/v3/sys-ut/state/{name}

state attributes

Get List

GET

/axapi/v3/sys-ut/state

state-list

Modify Object

POST

/axapi/v3/sys-ut/state/{name}

state attributes

Replace Object

PUT

/axapi/v3/sys-ut/state/{name}

state attributes

Replace List

PUT

/axapi/v3/sys-ut/state

state-list

Delete Object

DELETE

/axapi/v3/sys-ut/state/{name}

state attributes

state-list

state-list is **JSON List** of *state attributes*

state-list : [

{ *state attributes* },

{ *state attributes* },

...

]

state attributes

name

Description Node name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list

Specification	
Type	*list*
Block object keys	

case-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}*

name

Description Node name

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list

Specification	
Type	*list*
Block object keys	

action-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}*

case-number

Description

Type: number

Range: 1-32

repeat

Description number of times case should be repeated before state transition

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list

Specification	
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description: l1 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l1*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l1*

l2

Description: l2 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l2*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2*

l3

Description: l3 is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_l3*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3*

tcp

Description: tcp is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp*

template

Description Packet template

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/sys-ut/template*

udp

Description: udp is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_udp*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/udp*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_udp

Specification	
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_tcp

Specification	
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

flags

Description: flags is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp_flags*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/flags*

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

options

Description: options is a **JSON Block**. Please see below for *next-state-list_case-list_action-list_tcp_options*

Type: Object

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/tcp/options*

seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

src-port

Description Source port value

Type: number

Range: 1-65535

urgent

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

window

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

next-state-list_case-list_action-list_tcp_flags

Specification	
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

next-state-list_case-list_action-list_tcp_options

Specification	
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

next-state-list_case-list_action-list_l2

Specification	
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

next-state-list_case-list_action-list_l2_mac-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

case attributes

case-list

case-list is **JSON List** of *case attributes*

```
case-list : [
        { case attributes },
        { case attributes },
        ...
    ]
```

case attributes

action-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}*

case-number

Description

Type: number

Range: 1-32

repeat

Description number of times case should be repeated before state transition

Type: number

Range: 1-32

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

action-list

Specification	
Type	*list*
Block object keys	

delay

Description Delay in seconds

Type: number

Range: 1-3600

direction

Description 'send': Test event; 'expect': Expected result; 'wait': Introduce a delay;

Type: string

Supported Values: send, expect, wait

drop

Description Packet drop. Only allowed for output spec

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description: l1 is a **JSON Block**. Please see below for *action-list_l1*

Type: Object

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

l2

Specification	
Type	*object*

ethertype

Description L2 frame type

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mac-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l2/mac/{src-dst}*

protocol

Description 'arp': arp; 'ipv4': ipv4; 'ipv6': ipv6;

Type: string

Supported Values: arp, ipv4, ipv6

Default: ipv4

Mutual Exclusion: protocol and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description ethertype number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and protocol are mutually exclusive

vlan

Description Vlan ID on the packet. 0 is untagged

Type: number

Range: 0-4095

Default: 0

l2_mac-list

Specification	
Type	*list*
Block object keys	

address-type

Description 'broadcast': broadcast; 'multicast': multicast;

Type: string

Supported Values: broadcast, multicast

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Mac Address

Type: string

Format: mac-address

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

l3

Specification	
Type	*object*

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

ip-list

Type: List

Refernce Object: */axapi/v3/sys-ut/state/{name}/next-state/{name}/case/{case-number}/action/{direction}/l3/ip/{src-dst}*

protocol

Description L4 Protocol

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ttl

Description

Type: number

Range: 1-64

type

Description 'tcp': tcp; 'udp': udp; 'icmp': icmp;

Type: string

Supported Values: tcp, udp, icmp

Mutual Exclusion: type and value are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description protocol number

Type: number

Range: 0-2147483647

Mutual Exclusion: value and type are mutually exclusive

l3_ip-list

Specification	
Type	*list*
Block object keys	

ethernet

Description Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ethernet*

Description IP address

Type: string

Format: ipv4-address

ipv6-address

Description Ipv6 address

Type: string

Format: ipv6-address

nat-pool

Description Nat pool

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-dst

Description 'dest': dest; 'src': src;

Type: string

Supported Values: dest, src

trunk

Description Trunk number

Type: number

Format: interface

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve

Description Virtual Ethernet interface

Type: number

Format: interface

Refernce Object: */axapi/v3/interface/ve*

virtual-server

Description vip

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/virtual-server*

l1

Specification	
Type	*object*

auto

Description Auto calculate pkt len

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: auto and value are mutually exclusive

eth-list

Type: List

length

Description packet length

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk_list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

value

Description Total packet length starting at L2 header

Type: number

Range: 64-9000

Mutual Exclusion: value and auto are mutually exclusive

checksum

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Default: valid

dest-port

Description Dest port

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

dest-port-value

Description Dest port value

Type: number

Range: 1-65535

length

Description Total packet length starting at UDP header

Type: number

Range: 64-9000

nat-pool

Description Nat pool port

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

src-port

Description Source port value

Type: number

Range: 1-65535

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.98.29 sys-ut stop-test

Clear all dynamic test parameters and stop the test

stop-test Specification

ignore-validation

Specification	
Type	*object*

all

Description Skip validation

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l1

Description Dont validate TX descriptor. This includes Tx port, Len & vlan

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l2

Description Dont validate L2 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l3

Description Dont validate L3 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

l4

Description Dont validate L4 header

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp

Specification	
Type	*object*

ack-seq-number

Description 'valid': valid; 'invalid': invalid;

Type: string

Supported Values: valid, invalid

Specification	
Type	*object*

ack

Description Ack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cwr

Description Cwr

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ece

Description Ece

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

fin

Description Fin

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psh

Description Psh

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

rst

Description Rst

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

syn

Description Syn

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

urg

Description Urg

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp_options

Specification	
Type	*object*

mss

Description TCP MSS

Type: number

Range: 536-1460

nop

Description No Op

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

sack-type

Description 'permitted': permitted; 'block': block;

Type: string

Supported Values: permitted, block

time-stamp-enable

Description adds Time Stamp to options

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

wscale

Description

Type: number

Range: 1-8

system attributes

add-cpu-core

Description: add-cpu-core is a **JSON Block**. Please see below for *add-cpu-core*

Type: Object

Refernce Object: */axapi/v3/system/add-cpu-core*

add-port

Description: add-port is a **JSON Block**. Please see below for *add-port*

Type: Object

Refernce Object: */axapi/v3/system/add-port*

all-vlan-limit

Description: all-vlan-limit is a **JSON Block**. Please see below for *all-vlan-limit*

Type: Object

Refernce Object: */axapi/v3/system/all-vlan-limit*

anomaly-log

Description log system anomalies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

app-performance

Description: app-performance is a **JSON Block**. Please see below for *app-performance*

Type: Object

Refernce Object: */axapi/v3/system/app-performance*

apps-global

Description: apps-global is a **JSON Block**. Please see below for *apps-global*

Type: Object

Refernce Object: */axapi/v3/system/apps-global*

attack-log

Description log attack anomalies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bandwidth

Description: bandwidth is a **JSON Block**. Please see below for *bandwidth*

Type: Object

Refernce Object: */axapi/v3/system/bandwidth*

bfd

Description: bfd is a **JSON Block**. Please see below for *bfd*

Type: Object

Refernce Object: */axapi/v3/system/bfd*

class-list-hitcount-enable

Description Enable class list hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

cm-update-file-name-ref

Description: cm-update-file-name-ref is a **JSON Block**. Please see below for *cm-update-file-name-ref*

Type: Object

Refernce Object: */axapi/v3/system/cm-update-file-name-ref*

control-cpu

Description: control-cpu is a **JSON Block**. Please see below for *control-cpu*

Type: Object

Refernce Object: */axapi/v3/system/control-cpu*

core

Description: core is a **JSON Block**. Please see below for *core*

Type: Object

Refernce Object: */axapi/v3/system/core*

cosq-show

Description: cosq-show is a **JSON Block**. Please see below for *cosq-show*

Type: Object

Refernce Object: */axapi/v3/system/cosq-show*

cosq-stats

Description: cosq-stats is a **JSON Block**. Please see below for *cosq-stats*

Type: Object

Refernce Object: /axapi/v3/system/cosq-stats

counter-lib-accounting

Description: counter-lib-accounting is a **JSON Block**. Please see below for *counter-lib-accounting*

Type: Object

Refernce Object: */axapi/v3/system/counter-lib-accounting*

cpu-hyper-thread

Description: cpu-hyper-thread is a **JSON Block**. Please see below for *cpu-hyper-thread*

Type: Object

Refernce Object: */axapi/v3/system/cpu-hyper-thread*

cpu-list

Description: cpu-list is a **JSON Block**. Please see below for *cpu-list*

Type: Object

Refernce Object: */axapi/v3/system/cpu-list*

cpu-load-sharing

Description: cpu-load-sharing is a **JSON Block**. Please see below for *cpu-load-sharing*

Type: Object

Refernce Object: */axapi/v3/system/cpu-load-sharing*

cpu-map

Description: cpu-map is a **JSON Block**. Please see below for *cpu-map*

Type: Object

Refernce Object: */axapi/v3/system/cpu-map*

data-cpu

Description: data-cpu is a **JSON Block**. Please see below for *data-cpu*

Type: Object

Refernce Object: */axapi/v3/system/data-cpu*

ddos-attack

Description System DDoS Attack

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ddos-log

Description log DDoS attack anomalies

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

deep-hrxq

Description: deep-hrxq is a **JSON Block**. Please see below for *deep-hrxq*

Type: Object

Refernce Object: */axapi/v3/system/deep-hrxq*

del-port

Description: del-port is a **JSON Block**. Please see below for *del-port*

Type: Object

Refernce Object: */axapi/v3/system/del-port*

delete-cpu-core

Description: delete-cpu-core is a **JSON Block**. Please see below for *delete-cpu-core*

Type: Object

Refernce Object: */axapi/v3/system/delete-cpu-core*

dns

Description: dns is a **JSON Block**. Please see below for *dns*

Type: Object

Refernce Object: */axapi/v3/system/dns*

dns-cache

Description: dns-cache is a **JSON Block**. Please see below for *dns-cache*

Type: Object

Refernce Object: */axapi/v3/system/dns-cache*

domain-list-hitcount-enable

Description Enable class list hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

domain-list-info

Description: domain-list-info is a **JSON Block**. Please see below for *domain-list-info*

Type: Object

Refernce Object: */axapi/v3/system/domain-list-info*

dpdk-stats

Description: dpdk-stats is a **JSON Block**. Please see below for *dpdk-stats*

Type: Object

Refernce Object: /axapi/v3/system/dpdk-stats

dynamic-service-dns-socket-pool

Description Enable socket pool for dynamic-service DNS

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

environment

Description: environment is a **JSON Block**. Please see below for *environment*

Type: Object

Refernce Object: */axapi/v3/system/environment*

fpga-core-crc

Description: fpga-core-crc is a **JSON Block**. Please see below for *fpga-core-crc*

Type: Object

Refernce Object: */axapi/v3/system/fpga-core-crc*

fpga-drop

Description: fpga-drop is a **JSON Block**. Please see below for *fpga-drop*

Type: Object

Refernce Object: */axapi/v3/system/fpga-drop*

fw

Description: fw is a **JSON Block**. Please see below for *fw*

Type: Object

Refernce Object: */axapi/v3/system/fw*

geo-db-hitcount-enable

Description Enable Geolocation database hit count

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location

Description: geo-location is a **JSON Block**. Please see below for *geo-location*

Type: Object

Refernce Object: */axapi/v3/system/geo-location*

geoloc

Description: geoloc is a **JSON Block**. Please see below for *geoloc*

Type: Object

Refernce Object: */axapi/v3/system/geoloc*

geoloc-list-list

Type: List

Refernce Object: */axapi/v3/system/geoloc-list/{name}*

geoloc-name-helper

Description: geoloc-name-helper is a **JSON Block**. Please see below for *geoloc-name-helper*

Type: Object

Refernce Object: */axapi/v3/system/geoloc-name-helper*

geolocation-file

Description: geolocation-file is a **JSON Block**. Please see below for *geolocation-file*

Type: Object

Refernce Object: */axapi/v3/system/geolocation-file*

glid

Description Apply limits to the whole system

Type: number

Range: 1-1023

Refernce Object: */axapi/v3/glid*

guest-file

Description: guest-file is a **JSON Block**. Please see below for *guest-file*

Type: Object

Refernce Object: */axapi/v3/system/guest-file*

gui-image-list

Description: gui-image-list is a **JSON Block**. Please see below for *gui-image-list*

Type: Object

Refernce Object: */axapi/v3/system/gui-image-list*

hardware

Description: hardware is a **JSON Block**. Please see below for *hardware*

Type: Object

Refernce Object: */axapi/v3/system/hardware*

hardware-forward

Description: hardware-forward is a **JSON Block**. Please see below for *hardware-forward*

Type: Object

Refernce Object: */axapi/v3/system/hardware-forward*

high-memory-l4-session

Description: high-memory-l4-session is a **JSON Block**. Please see below for *high-memory-l4-session*

Type: Object

Refernce Object: */axapi/v3/system/high-memory-l4-session*

hrxq-status

Description: hrxq-status is a **JSON Block**. Please see below for *hrxq-status*

Type: Object

Refernce Object: */axapi/v3/system/hrxq-status*

icmp

Description: icmp is a **JSON Block**. Please see below for *icmp*

Type: Object

Refernce Object: */axapi/v3/system/icmp*

icmp-rate

Description: icmp-rate is a **JSON Block**. Please see below for *icmp-rate*

Type: Object

Refernce Object: */axapi/v3/system/icmp-rate*

icmp6

Description: icmp6 is a **JSON Block**. Please see below for *icmp6*

Type: Object

Refernce Object: */axapi/v3/system/icmp6*

inuse-cpu-list

Description: inuse-cpu-list is a **JSON Block**. Please see below for *inuse-cpu-list*

Type: Object

Refernce Object: */axapi/v3/system/inuse-cpu-list*

inuse-port-list

Description: inuse-port-list is a **JSON Block**. Please see below for *inuse-port-list*

Type: Object

Refernce Object: */axapi/v3/system/inuse-port-list*

io-cpu

Description: io-cpu is a **JSON Block**. Please see below for *io-cpu*

Type: Object

Refernce Object: */axapi/v3/system/io-cpu*

ip-dns-cache

Description: ip-dns-cache is a **JSON Block**. Please see below for *ip-dns-cache*

Type: Object

Refernce Object: */axapi/v3/system/ip-dns-cache*

ip-stats

Description: ip-stats is a **JSON Block**. Please see below for *ip-stats*

Type: Object

Refernce Object: /axapi/v3/system/ip-stats

ip-threat-list

Description: ip-threat-list is a **JSON Block**. Please see below for *ip-threat-list*

Type: Object

Refernce Object: */axapi/v3/system/ip-threat-list*

ip6-stats

Description: ip6-stats is a **JSON Block**. Please see below for *ip6-stats*

Type: Object

Refernce Object: /axapi/v3/system/ip6-stats

ipmi

Description: ipmi is a **JSON Block**. Please see below for *ipmi*

Type: Object

Refernce Object: */axapi/v3/system/ipmi*

ipmi-service

Description: ipmi-service is a **JSON Block**. Please see below for *ipmi-service*

Type: Object

Refernce Object: */axapi/v3/system/ipmi-service*

ipsec

Description: ipsec is a **JSON Block**. Please see below for *ipsec*

Type: Object

Refernce Object: */axapi/v3/system/ipsec*

link-capability

Description: link-capability is a **JSON Block**. Please see below for *link-capability*

Type: Object

Refernce Object: */axapi/v3/system/link-capability*

link-monitor

Description: link-monitor is a **JSON Block**. Please see below for *link-monitor*

Type: Object

Refernce Object: */axapi/v3/system/link-monitor*

lro

Description: lro is a **JSON Block**. Please see below for *lro*

Type: Object

Refernce Object: */axapi/v3/system/lro*

management-interface-mode

Description: management-interface-mode is a **JSON Block**. Please see below for *management-interface-mode*

Type: Object

Refernce Object: */axapi/v3/system/management-interface-mode*

memory

Description: memory is a **JSON Block**. Please see below for *memory*

Type: Object

Refernce Object: */axapi/v3/system/memory*

mfa-auth

Description: mfa-auth is a **JSON Block**. Please see below for *mfa-auth*

Type: Object

Refernce Object: */axapi/v3/system/mfa-auth*

mfa-cert-store

Description: mfa-cert-store is a **JSON Block**. Please see below for *mfa-cert-store*

Type: Object

Refernce Object: */axapi/v3/system/mfa-cert-store*

mfa-management

Description: mfa-management is a **JSON Block**. Please see below for *mfa-management*

Type: Object

Refernce Object: */axapi/v3/system/mfa-management*

mfa-validation-type

Description: mfa-validation-type is a **JSON Block**. Please see below for *mfa-validation-type*

Type: Object

Refernce Object: */axapi/v3/system/mfa-validation-type*

mgmt-port

Description: mgmt-port is a **JSON Block**. Please see below for *mgmt-port*

Type: Object

Refernce Object: */axapi/v3/system/mgmt-port*

modify-port

Description: modify-port is a **JSON Block**. Please see below for *modify-port*

Type: Object

Refernce Object: */axapi/v3/system/modify-port*

module-ctrl-cpu

Description 'high': high cpu usage; 'low': low cpu usage; 'medium': medium cpu usage;

Type: string

Supported Values: high, low, medium

mon-template

Description: mon-template is a **JSON Block**. Please see below for *mon-template*

Type: Object

Refernce Object: */axapi/v3/system/mon-template*

multi-queue-support

Description: multi-queue-support is a **JSON Block**. Please see below for *multi-queue-support*

Type: Object

Refernce Object: */axapi/v3/system/multi-queue-support*

ndisc-ra

Description: ndisc-ra is a **JSON Block**. Please see below for *ndisc-ra*

Type: Object

Refernce Object: */axapi/v3/system/ndisc-ra*

password-policy

Description: password-policy is a **JSON Block**. Please see below for *password-policy*

Type: Object

Refernce Object: */axapi/v3/system/password-policy*

per-vlan-limit

Description: per-vlan-limit is a **JSON Block**. Please see below for *per-vlan-limit*

Type: Object

Refernce Object: */axapi/v3/system/per-vlan-limit*

platformtype

Description: platformtype is a **JSON Block**. Please see below for *platformtype*

Type: Object

Refernce Object: */axapi/v3/system/platformtype*

port-info

Description: port-info is a **JSON Block**. Please see below for *port-info*

Type: Object

Refernce Object: */axapi/v3/system/port-info*

port-list

Description: port-list is a **JSON Block**. Please see below for *port-list*

Type: Object

Refernce Object: */axapi/v3/system/port-list*

ports

Description: ports is a **JSON Block**. Please see below for *ports*

Type: Object

Refernce Object: */axapi/v3/system/ports*

probe-network-devices

Type: Object

Refernce Object: */axapi/v3/system/probe-network-devices*

promiscuous-mode

Description Run in promiscous mode settings

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

psu-info

Description: psu-info is a **JSON Block**. Please see below for *psu-info*

Type: Object

Refernce Object: */axapi/v3/system/psu-info*

q-in-q

Description: q-in-q is a **JSON Block**. Please see below for *q-in-q*

Type: Object

Refernce Object: */axapi/v3/system/q-in-q*

queuing-buffer

Description: queuing-buffer is a **JSON Block**. Please see below for *queuing-buffer*

Type: Object

Refernce Object: */axapi/v3/system/queuing-buffer*

radius

Description: radius is a **JSON Block**. Please see below for *radius*

Type: Object

Refernce Object: */axapi/v3/system/radius*

reboot

Description: reboot is a **JSON Block**. Please see below for *reboot*

Type: Object

Refernce Object: */axapi/v3/system/reboot*

resource-accounting

Description: resource-accounting is a **JSON Block**. Please see below for *resource-accounting*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting*

resource-usage

Description: resource-usage is a **JSON Block**. Please see below for *resource-usage*

Type: Object

Refernce Object: */axapi/v3/system/resource-usage*

session

Description: session is a **JSON Block**. Please see below for *session*

Type: Object

Refernce Object: */axapi/v3/system/session*

session-reclaim-limit

Description: session-reclaim-limit is a **JSON Block**. Please see below for *session-reclaim-limit*

Type: Object

Refernce Object: */axapi/v3/system/session-reclaim-limit*

set-rxtx-desc-size

Description: set-rxtx-desc-size is a **JSON Block**. Please see below for *set-rxtx-desc-size*

Type: Object

Refernce Object: */axapi/v3/system/set-rxtx-desc-size*

set-rxtx-queue

Description: set-rxtx-queue is a **JSON Block**. Please see below for *set-rxtx-queue*

Type: Object

Refernce Object: */axapi/v3/system/set-rxtx-queue*

set-tcp-syn-per-sec

Description: set-tcp-syn-per-sec is a **JSON Block**. Please see below for *set-tcp-syn-per-sec*

Type: Object

Refernce Object: */axapi/v3/system/set-tcp-syn-per-sec*

shared-poll-mode

Description: shared-poll-mode is a **JSON Block**. Please see below for *shared-poll-mode*

Type: Object

Refernce Object: */axapi/v3/system/shared-poll-mode*

shell-privileges

Description: shell-privileges is a **JSON Block**. Please see below for *shell-privileges*

Type: Object

Refernce Object: */axapi/v3/system/shell-privileges*

shm-logging

Description: shm-logging is a **JSON Block**. Please see below for *shm-logging*

Type: Object

Refernce Object: */axapi/v3/system/shm-logging*

shutdown

Description: shutdown is a **JSON Block**. Please see below for *shutdown*

Type: Object

Refernce Object: */axapi/v3/system/shutdown*

sockstress-disable

Description Disable sockstress protection

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

spe-profile

Description: spe-profile is a **JSON Block**. Please see below for *spe-profile*

Type: Object

Refernce Object: */axapi/v3/system/spe-profile*

spe-status

Description: spe-status is a **JSON Block**. Please see below for *spe-status*

Type: Object

Refernce Object: */axapi/v3/system/spe-status*

src-ip-hash-enable

Description Enable source ip hash

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-req-q

Description: ssl-req-q is a **JSON Block**. Please see below for *ssl-req-q*

Type: Object

Refernce Object: */axapi/v3/system/ssl-req-q*

ssl-scv

Description: ssl-scv is a **JSON Block**. Please see below for *ssl-scv*

Type: Object

Refernce Object: */axapi/v3/system/ssl-scv*

ssl-scv-verify-crl-sign

Description: ssl-scv-verify-crl-sign is a **JSON Block**. Please see below for *ssl-scv-verify-crl-sign*

Type: Object

Refernce Object: */axapi/v3/system/ssl-scv-verify-crl-sign*

ssl-scv-verify-host

Description: ssl-scv-verify-host is a **JSON Block**. Please see below for *ssl-scv-verify-host*

Type: Object

Refernce Object: */axapi/v3/system/ssl-scv-verify-host*

ssl-set-compatible-cipher

Description: ssl-set-compatible-cipher is a **JSON Block**. Please see below for *ssl-set-compatible-cipher*

Type: Object

Refernce Object: */axapi/v3/system/ssl-set-compatible-cipher*

ssl-status

Description: ssl-status is a **JSON Block**. Please see below for *ssl-status*

Type: Object

Refernce Object: */axapi/v3/system/ssl-status*

syslog-time-msec

Specification	
Type	*object*

entry-list

Type: List

Refernce Object: */axapi/v3/system/geo-location/entry/{geo-locn-obj-name}*

geo-location-geolite2-city

Description Load built-in Maxmind GeoLite2-City database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-geolite2-country

Description Load built-in Maxmind GeoLite2-Country database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-iana

Description Load built-in IANA Database

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

geolite2-city-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geolite2-country-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-load-file-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location_entry-list

Specification	
Type	*list*
Block object keys	

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geo-location_entry-list_geo-locn-multiple-addresses

Specification	
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

geo-location_geoloc-load-file-list

Specification	
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/csv*

mgmt-port

Specification	
Type	*object*

mac-address

Description mac-address to be configured as mgmt port

Type: string

Format: mac-address

Maximum Length: 14 characters

Maximum Length: 14 characters

pci-address

Description pci-address to be configured as mgmt port

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

geolocation-file

Specification	
Type	*object*

error-info

Description: error-info is a **JSON Block**. Please see below for *geolocation-file_error-info*

Type: Object

Refernce Object: */axapi/v3/system/geolocation-file/error-info*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geolocation-file_error-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ndisc-ra

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ndisc-ra_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'good_recv': Good Router Solicitations (R.S.) Received; 'periodic_sent': Periodic Router Advertisements (R.A.) Sent; 'rate_limit': R.S. Rate Limited; 'bad_hop_limit': R.S. Bad Hop Limit; 'truncated': R.S. Truncated; 'bad_icmpv6_csum': R.S. Bad ICMPv6 Checksum; 'bad_icmpv6_code': R.S. Unknown ICMPv6 Code; 'bad_icmpv6_option': R.S. Bad ICMPv6 Option; 'l2_addr_and_unspec': R.S. Src Link-Layer Option and Unspecified Address; 'no_free_buffers': No Free Buffers to send R.A.;

Type: string

Supported Values: all, good_recv, periodic_sent, rate_limit, bad_hop_limit, truncated, bad_icmpv6_csum, bad_icmpv6_code, bad_icmpv6_option, l2_addr_and_unspec, no_free_buffers

tcp

Specification	
Type	*object*

rate-limit-reset-unknown-conn

Description: rate-limit-reset-unknown-conn is a **JSON Block**. Please see below for *tcp_rate-limit-reset-unknown-conn*

Type: Object

Refernce Object: */axapi/v3/system/tcp/rate-limit-reset-unknown-conn*

sampling-enable

Type: List

uuid

Description uuid of the object

Description 'all': all; 'ip_checksum_error': IP packet checksum errors; 'udp_checksum_error': UDP packet checksum errors; 'session_not_found': Session not found; 'multihop_mismatch': Multihop session or packet mismatch; 'version_mismatch': BFD version mismatch; 'length_too_small': Packets too small; 'data_is_short': Packet data length too short; 'invalid_detect_mult': Invalid detect multiplier; 'invalid_multipoint': Invalid multipoint setting; 'invalid_my_disc': Invalid my descriptor; 'invalid_ttl': Invalid TTL; 'auth_length_invalid': Invalid authentication length; 'auth_mismatch': Authentication mismatch; 'auth_type_mismatch': Authentication type mismatch; 'auth_key_id_mismatch': Authentication key-id mismatch; 'auth_key_mismatch': Authentication key mismatch; 'auth_seqnum_invalid': Invalid authentication sequence number; 'auth_failed': Authentication failures; 'local_state_admin_down': Local admin down session state; 'dest_unreachable': Destination unreachable; 'other_error': Other errors;

Type: string

Supported Values: all, ip_checksum_error, udp_checksum_error, session_not_found, multihop_mismatch, version_mismatch, length_too_small, data_is_short, invalid_detect_mult, invalid_multipoint, invalid_my_disc, invalid_ttl, auth_length_invalid, auth_mismatch, auth_type_mismatch, auth_key_id_mismatch, auth_key_mismatch, auth_seqnum_invalid, auth_failed, local_state_admin_down, dest_unreachable, no_ipv6_enable, other_error

trunk-xaui-hw-hash

Specification	
Type	*object*

mode

Description Set HW hash mode, default is 6 (1:dst-mac 2:src-mac 3:src-dst-mac 4:src-ip 5:dst-ip 6:rtag6 7:rtag7)

Type: number

Range: 1-7

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

environment

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-info

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

trunk-hw-hash

Specification	
Type	*object*

mode

Description Set HW hash mode, default is 6 (1:dst-mac 2:src-mac 3:src-dst-mac 4:src-ip 5:dst-ip 6:rtag6 7:rtag7)

Type: number

Range: 1-7

Default: 6

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template

Specification	
Type	*object*

template-policy

Description Apply policy template to the whole system (Policy template name)

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/slb/template/policy*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-bind

Specification	
Type	*object*

monitor-list

Type: List

Refernce Object: */axapi/v3/system/template-bind/monitor/{template-monitor}*

template-bind_monitor-list

Specification	
Type	*list*
Block object keys	

template-monitor

Description Monitor template ID Number

Type: number

Range: 1-16

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipmi

Specification	
Type	*object*

ip

Description: ip is a **JSON Block**. Please see below for *ipmi_ip*

Type: Object

Refernce Object: */axapi/v3/system/ipmi/ip*

ipsrc

Description: ipsrc is a **JSON Block**. Please see below for *ipmi_ipsrc*

Type: Object

Refernce Object: */axapi/v3/system/ipmi/ipsrc*

reset

Description Reset IPMI Controller

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

tool

Description: tool is a **JSON Block**. Please see below for *ipmi_tool*

Type: Object

Refernce Object: */axapi/v3/system/ipmi/tool*

user

Description: user is a **JSON Block**. Please see below for *ipmi_user*

Type: Object

Refernce Object: */axapi/v3/system/ipmi/user*

ipmi_ip

Specification	
Type	*object*

default-gateway

Description Default gateway address

Type: string

Format: ipv4-address

ipv4-address

Description IP address

Type: string

Format: ipv4-address

ipv4-netmask

Description IP subnet mask

Type: string

Format: ipv4-netmask

ipmi_ipsrc

Specification	
Type	*object*

dhcp

Description IP addr obtained by BMC running DHCP

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

static

Description Manually configured static IP address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipmi_tool

Specification	
Type	*object*

cmd

Description Command to execute in double quotes

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

ipmi_user

Specification	
Type	*object*

add

Description Add a new IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

administrator

Description Full control

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

callback

Description Lowest privilege level

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

disable

Description Disable an existing IPMI user (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newname

Description New IPMI User Name

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

newpass

Description New Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

operator

Description Most BMC commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

password

Description Password

Type: string

Format: password

Maximum Length: 17 characters

Maximum Length: 1 characters

privilege

Description Change an existing IPMI user privilege (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setname

Description Change User Name (Current IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

setpass

Description Change Password (IPMI User Name)

Type: string

Format: string-rlx

Maximum Length: 16 characters

Maximum Length: 1 characters

user

Description Only 'benign' commands are allowed

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

lro

Specification	
Type	*object*

disable

Description Disable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Large Receive Offload

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

q-in-q

Specification	
Type	*object*

enable-all-ports

Description Enable 802.1QinQ on all physical ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inner-tpid

Description TPID for inner VLAN (Inner TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

outer-tpid

Description TPID for outer VLAN (Outer TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-req-q

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-req-q_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num-ssl-queues': num-ssl-queues; 'ssl-req-q-depth-tot': ssl-req-q-depth-tot; 'ssl-req-q-inuse-tot': ssl-req-q-inuse-tot; 'ssl-hw-q-depth-tot': ssl-hw-q-depth-tot; 'ssl-hw-q-inuse-tot': ssl-hw-q-inuse-tot;

Type: string

Supported Values: all, num-ssl-queues, ssl-req-q-depth-tot, ssl-req-q-inuse-tot, ssl-hw-q-depth-tot, ssl-hw-q-inuse-tot

telemetry-log

Specification	
Type	*object*

device-status

Description: device-status is a **JSON Block**. Please see below for *telemetry-log_device-status*

Type: Object

Refernce Object: */axapi/v3/system/telemetry-log/device-status*

environment

Description: environment is a **JSON Block**. Please see below for *telemetry-log_environment*

Type: Object

Refernce Object: */axapi/v3/system/telemetry-log/environment*

partition-metrics

Description: partition-metrics is a **JSON Block**. Please see below for *telemetry-log_partition-metrics*

Type: Object

Refernce Object: */axapi/v3/system/telemetry-log/partition-metrics*

top-k-app-svc-list

Description: top-k-app-svc-list is a **JSON Block**. Please see below for *telemetry-log_top-k-app-svc-list*

Type: Object

Refernce Object: */axapi/v3/system/telemetry-log/top-k-app-svc-list*

top-k-source-list

Description: top-k-source-list is a **JSON Block**. Please see below for *telemetry-log_top-k-source-list*

Type: Object

Refernce Object: */axapi/v3/system/telemetry-log/top-k-source-list*

telemetry-log_device-status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_environment

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_partition-metrics

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_top-k-app-svc-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

telemetry-log_top-k-source-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec

Specification	
Type	*object*

crypto-core

Description Crypto cores assigned for IPsec processing

Type: number

Range: 0-64

Default: 0

crypto-mem

Description Crypto memory percentage assigned for IPsec processing (rounded to increments of 10)

Type: number

Range: 0-100

Default: 0

fpga-decrypt

Description: fpga-decrypt is a **JSON Block**. Please see below for *ipsec_fpga-decrypt*

Type: Object

Refernce Object: */axapi/v3/system/ipsec/fpga-decrypt*

packet-round-robin

Description Enable packet round robin for IPsec packets

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ipsec_fpga-decrypt

Specification	
Type	*object*

action

Description 'enable': Enable FPGA decryption offload; 'disable': Disable FPGA decryption offload;

Type: string

Supported Values: enable, disable

Default: disable

hrxq-status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cosq-stats

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

queuing-buffer

Specification	
Type	*object*

enable

Description Enable/Disable micro-burst traffic support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-map

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ports

Specification	
Type	*object*

link-detection-interval

Description Link detection interval in msecs

Type: number

Range: 50-60000

Default: 1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mfa-validation-type

Specification	
Type	*object*

ca-cert

Description Configure CA Certificate

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

core

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-performance

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-performance_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total-throughput-bits-per-sec': Total Throughput in bits/sec; 'l4-conns-per-sec': L4 Connections/sec; 'l7-conns-per-sec': L7 Connections/sec; 'l7-trans-per-sec': L7 Transactions/sec; 'ssl-conns-per-sec': SSL Connections/sec; 'ip-nat-conns-per-sec': IP NAT Connections/sec; 'total-new-conns-per-sec': Total New Connections Established/sec; 'total-curr-conns': Total Current Established Connections; 'l4-bandwidth': L4 Bandwidth in bits/sec; 'l7-bandwidth': L7 Bandwidth in bits/sec; 'serv-ssl-conns-per-sec': Server SSL Connections/sec; 'fw-conns-per-sec': FW Connections/sec; 'gifw-conns-per-sec': GiFW Connections/sec;

Type: string

Supported Values: all, total-throughput-bits-per-sec, l4-conns-per-sec, l7-conns-per-sec, l7-trans-per-sec, ssl-conns-per-sec, ip-nat-conns-per-sec, total-new-conns-per-sec, total-curr-conns, l4-bandwidth, l7-bandwidth, serv-ssl-conns-per-sec, fw-conns-per-sec, gifw-conns-per-sec

counter-lib-accounting

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

inuse-port-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

control-cpu

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

password-policy

Specification	
Type	*object*

aging

Description 'Strict': Strict: Max Age-60 Days; 'Medium': Medium: Max Age- 90 Days; 'Simple': Simple: Max Age-120 Days;

Type: string

Supported Values: Strict, Medium, Simple

complexity

Description 'Strict': Strict: Min length:8, Min Lower Case:2, Min Upper Case:2, Min Numbers:2, Min Special Character:1; 'Medium': Medium: Min length:6, Min Lower Case:2, Min Upper Case:2, Min Numbers:1, Min Special Character:1; 'Simple': Simple: Min length:4, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:0;

Type: string

Supported Values: Strict, Medium, Simple

history

Description 'Strict': Strict: Does not allow upto 5 old passwords; 'Medium': Medium: Does not allow upto 4 old passwords; 'Simple': Simple: Does not allow upto 3 old passwords;

Type: string

Supported Values: Strict, Medium, Simple

min-pswd-len

Description Configure custom password length

Type: number

Range: 8-63

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tcp-syn-per-sec

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

radius

Specification	
Type	*object*

server

Description: server is a **JSON Block**. Please see below for *radius_server*

Type: Object

Refernce Object: */axapi/v3/system/radius/server*

radius_server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated(CGN only);

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI; 'custom1': Clear using CUSTOM1 attribute configured; 'custom2': Clear using CUSTOM2 attribute configured; 'custom3': Clear using CUSTOM3 attribute configured; 'custom4': Clear using CUSTOM4 attribute configured; 'custom5': Clear using CUSTOM5 attribute configured; 'custom6': Clear using CUSTOM6 attribute configured;

Type: string

Supported Values: msisdn, imei, imsi, custom1, custom2, custom3, custom4, custom5, custom6

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (default 1813) (Port number)

Type: number

Range: 1024-65535

Default: 1813

remote

Description: remote is a **JSON Block**. Please see below for *radius_server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

radius_server_remote

Specification	
Type	*object*

ip-list

Type: List

radius_server_remote_ip-list

Specification	
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

radius_server_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full);

'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop; 'radius-packets-redirected': RADIUS packets redirected (SO); 'radius-packets-redirect-fail-dropped': RADIUS packets dropped due to redirect failure (SO); 'radius-packets-process-local': RADIUS packets processed locally without redirection (SO); 'radius-packets-dropped-not-lo': RADIUS packets dropped dest not loopback (SO); 'radius-inter-card-dup-redir': RADIUS packet dropped as redirected by other blade (SO);

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

radius_server_attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3; 'custom4': Customized attribute 4; 'custom5': Customized attribute 5; 'custom6': Customized attribute 6;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

modify-port

Specification	
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

port-number

Description port number to be configured (Specify port number)

Type: number

Range: 1-32

del-port

Specification	
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

management-interface-mode

Specification	
Type	*object*

dedicated

Description Set management interface in dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

non-dedicated

Description Set management interface in non-dedicated mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

shared-poll-mode

Specification	
Type	*object*

disable

Description Disable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable shared poll mode

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

mfa-cert-store

Specification	
Type	*object*

cert-host

Description Configure certificate store host

Type: string

Format: host

cert-store-path

Description Configure certificate store path

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

passwd-string

Description Certificate store host password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

protocol

Description 'tftp': Use tftp for connection; 'ftp': Use ftp for connection; 'scp': Use scp for connection; 'http': Use http for connection; 'https': Use https for connection; 'sftp': Use sftp for connection;

Type: string

Supported Values: tftp, ftp, scp, http, https, sftp

username

Description Certificate store host username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

reboot

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

domain-list-info

Specification	
Type	*object*

uuid

Description uuid of the object

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ve-mac-scheme-val

Description 'hash-based': Hash-based using the VE number; 'round-robin': Round Robin scheme; 'system-mac': Use system MAC address;

Type: string

Supported Values: hash-based, round-robin, system-mac

Default: hash-based

link-monitor

Specification	
Type	*object*

disable

Description Disable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable Link Monitoring

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

apps-global

Specification	
Type	*object*

log-session-on-established

Description Send TCP session creation log on completion of 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-40 seconds, default is 2 seconds)

Type: number

Range: 1-40

Default: 2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

multi-queue-support

Specification	
Type	*object*

enable

Description Enable Multi-Queue-Support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

trunk

Specification	
Type	*object*

load-balance

Description: load-balance is a **JSON Block**. Please see below for *trunk_load-balance*

Type: Object

Refernce Object: */axapi/v3/system/trunk/load-balance*

trunk_load-balance

Specification	
Type	*object*

use-l3

Description Layer-3 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l3 and use-l4 are mutually exclusive

use-l4

Description Layer-3/4 Header based load balancing

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

Mutual Exclusion: use-l4 and use-l3 are mutually exclusive

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-usage

Specification	
Type	*object*

aflex-table-entry-count

Description Total aFleX table entry in the system (Total aFlex entry in the system)

Type: number

auth-portal-html-file-size

Description Specify maximum html file size for each html page in auth portal (in KB)

Type: number

Range: 4-120

Default: 20

auth-portal-image-file-size

Description Specify maximum image file size for default portal (in KB)

Type: number

Range: 1-80

Default: 6

auth-session-count

Description Total auth sessions in the system

Type: number

authz-policy-number

Description Specify the maximum number of authorization policies

Type: number

class-list-ac-entry-count

Description Total entries for AC class-list

Type: number

class-list-entry-count

Description Total entries for class-list

Type: number

class-list-ipv6-addr-count

Description Total IPv6 addresses for class-list

Type: number

ipsec-sa-number

Description Specify the maximum number of IPsec SA

Type: number

l4-session-count

Description Total Sessions in the System

Type: number

max-aflex-authz-collection-number

Description Specify the maximum number of collections supported by aFleX authorization

Type: number

Range: 256-4096

Default: 512

max-aflex-file-size

Description Set maximum aFleX file size (Maximum file size in KBytes, default is 32K)

Type: number

Range: 16-256

Default: 32

nat-pool-addr-count

Description Total configurable NAT Pool addresses in the System

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

ram-cache-memory-limit

Description Specify the maximum memory used by ram cache

Type: number

ssl-context-memory

Description Total SSL context memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 256-16384

Default: 2048

ssl-dma-memory

Description Total SSL DMA memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 32-2048

Default: 256

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

visibility

Description: visibility is a **JSON Block**. Please see below for *resource-usage_visibility*

Type: Object

Refernce Object: */axapi/v3/system/resource-usage/visibility*

waf-template-count

Description Total configurable WAF Templates in the System

Type: number

resource-usage_visibility

Specification	
Type	*object*

monitored-entity-count

Description Total number of monitored entities for visibility

Type: number

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-scv-verify-crl-sign

Specification	
Type	*object*

enable

Description Enable verify CRL signature during SCV

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

throughput

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

throughput_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'global-system-throughput-bits-per-sec': Global System throughput in bits/sec; 'per-part-throughput-bits-per-sec': Partition throughput in bits/sec;

Type: string

Supported Values: all, global-system-throughput-bits-per-sec, per-part-throughput-bits-per-sec

cm-update-file-name-ref

Specification	
Type	*object*

dest_name

Description bind dest name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

id

Description Specify unique Partition id

Type: number

source_name

Description bind source name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

spe-status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mfa-auth

Specification	
Type	*object*

second-factor

Description Input second factor paramter

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

username

Description Username for MFA validation

Type: string

Maximum Length: 128 characters

Maximum Length: 1 characters

ssl-status

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-core-crc

Specification	
Type	*object*

monitor-disable

Description Disable FPGA Core CRC error monitoring and act on it

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

reboot-enable

Description Enable system reboot if system encounters FPGA Core CRC error

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

tls-1-3-mgmt

Specification	
Type	*object*

enable

Description Enable TLS 1.3 support on ACOS management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-load-sharing

Specification	
Type	*object*

cpu-usage

Description: cpu-usage is a **JSON Block**. Please see below for *cpu-load-sharing_cpu-usage*

Type: Object

disable

Description Disable CPU load sharing in overload situations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *cpu-load-sharing_packets-per-second*

Type: Object

tcp

Description Disallow redistribution of new TCP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description Disallow redistribution of new UDP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-load-sharing_cpu-usage

Specification	
Type	*object*

high

Description CPU usage threshold (percentage) that will trigger the redistribution (default: 75)

Type: number

Range: 0-100

Default: 75

low

Description CPU usage threshold (percentage) that will restore the normal packet distribution (default: 60)

Type: number

Range: 0-100

Default: 60

cpu-load-sharing_packets-per-second

Specification	
Type	*object*

min

Description Minimum packets-per-second threshold (per CPU) before redistribution will take effect (Minimum packets-per-second threshold (per CPU) before redistribution will take effect (default: 100000))

Type: number

Range: 0-30000000

Default: 100000

geoloc-list-list

Specification	
Type	*list*
Block object keys	

exclude-geoloc-name-list

Type: List

include-geoloc-name-list

Type: List

name

Description Specify name of Geolocation list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

shared

Description Enable sharing with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc-list-list_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': hit-count; 'total-geoloc': total-geoloc; 'total-active': total-active;

Type: string

Supported Values: all, hit-count, total-geoloc, total-active

geoloc-list-list_include-geoloc-name-list

Specification	
Type	*list*
Block object keys	

include-geoloc-name-val

Description Geolocation name to add

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

geoloc-list-list_exclude-geoloc-name-list

Specification	
Type	*list*
Block object keys	

exclude-geoloc-name-val

Description Geolocation name to exclude

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

shutdown

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-stats

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-stats_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inreceives': Incoming packets received; 'inhdrerrors': Incoming packet header errors; 'intoobigerrors': Incoming packet too big errors; 'innoroutes': Incoming no route packet drops; 'inaddrerrors': Incoming packet address errors; 'inunknownprotos': Incoming unkown protocol packet drops; 'intruncatedpkts': Incoming truncated packets; 'indiscards': Incoming packets discarded; 'indelivers': Incoming packets delivered; 'outforwdatagrams': Outgoing forwarded datagrams; 'outrequests': Outgoing packets; 'outdiscards': Outgoing packets discarded; 'outnoroutes': Outgoing no route packet drops; 'reasmtimeout': Reassembly timed out packet drops; 'reasmreqds': Incoming reassembly requests; 'reasmoks': Incoming reassembled packets; 'reasmfails': Incoming reassembly requests failed; 'fragoks': Outgoing packets fragmented; 'fragfails': Outgoing packets fragmentation failed; 'fragcreates': Outgoing fragmented packets; 'inmcastpkts': Incoming multicast packets; 'outmcastpkts': Outgoing multicast packets;

Type: string

Supported Values: all, inreceives, inhdrerrors, intoobigerrors, innoroutes, inaddrerrors, inunknownprotos, intruncatedpkts, indiscards, indelivers, outforwdatagrams, outrequests, outdiscards, outnoroutes, reasmtimeout, reasmreqds, reasmoks, reasmfails, fragoks, fragfails, fragcreates, inmcastpkts, outmcastpkts

ip6-stats

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip6-stats_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'inreceives': Incoming packets received; 'inhdrerrors': Incoming packet header errors; 'intoobigerrors': Incoming packet too big errors; 'innoroutes': Incoming no route packet drops; 'inaddrerrors': Incoming packet address errors; 'inunknownprotos': Incoming unkown protocol packet drops; 'intruncatedpkts': Incoming truncated packets; 'indiscards': Incoming packets discarded; 'indelivers': Incoming packets delivered; 'outforwdatagrams': Outgoing forwarded datagrams; 'outrequests': Outgoing packets; 'outdiscards': Outgoing packets discarded; 'outnoroutes': Outgoing no route packet drops; 'reasmtimeout': Reassembly timed out packet drops; 'reasmreqds': Incoming reassembly requests; 'reasmoks': Incoming reassembled packets; 'reasmfails': Incoming reassembly requests failed; 'fragoks': Outgoing packets fragmented; 'fragfails': Outgoing packets fragmentation failed; 'fragcreates': Outgoing fragmented packets; 'inmcastpkts': Incoming multicast packets; 'outmcastpkts': Outgoing multicast packets;

Type: string

Supported Values: all, inreceives, inhdrerrors, intoobigerrors, innoroutes, inaddrerrors, inunknownprotos, intruncatedpkts, indiscards, indelivers, outforwdatagrams, outrequests, outdiscards, outnoroutes, reasmtimeout, reasmreqds, reasmoks, reasmfails, fragoks, fragfails, fragcreates, inmcastpkts, outmcastpkts

io-cpu

Specification	
Type	*object*

max-cores

Description max number of IO cores (Specify number of cores)

Type: number

Range: 0-128

dns

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'slb_req': No. of requests; 'slb_resp': No. of responses; 'slb_no_resp': No. of requests with no response; 'slb_req_rexmit': No. of requests retransmit; 'slb_resp_no_match': No. of requests and responses with no match; 'slb_no_resource': No. of resource failures; 'nat_req': (NAT) No. of requests; 'nat_resp': (NAT) No. of responses; 'nat_no_resp': (NAT) No. of resource failures; 'nat_req_rexmit': (NAT) No. of request retransmits; 'nat_resp_no_match': (NAT) No. of requests with no response; 'nat_no_resource': (NAT) No. of resource failures; 'nat_xid_reused': (NAT) No. of requests reusing a transaction id; 'filter_type_drop': Total Query Type Drop; 'filter_class_drop': Total Query Class Drop; 'filter_type_any_drop': Total Query ANY Type Drop; 'slb_dns_client_ssl_succ': No. of client ssl success; 'slb_dns_server_ssl_succ': No. of server ssl success; 'slb_dns_udp_conn': No. of backend udp connections; 'slb_dns_udp_conn_succ': No. of backend udp conn established; 'slb_dns_padding_to_server_removed': slb_dns_padding_to_server_removed; 'slb_dns_padding_to_client_added': slb_dns_padding_to_client_added;

'slb_dns_edns_subnet_to_server_removed': slb_dns_edns_subnet_to_server_removed; 'slb_dns_udp_retransmit': slb_dns_udp_retransmit; 'slb_dns_udp_retransmit_fail': slb_dns_udp_retransmit_fail; 'rpz_action_drop': RPZ Action Drop; 'rpz_action_pass_thru': RPZ Action Pass Through; 'rpz_action_tcp_only': RPZ Action TCP Only; 'rpz_action_nxdomain': RPZ Action NXDOMAIN; 'rpz_action_nodata': RPZ Action NODATA; 'rpz_action_local_data': RPZ Action Local Data; 'slb_drop': DNS requests drop; 'nat_slb_drop': (NAT)DNS requests drop; 'invalid_q_len_to_udp': invalid query length to conver to UDP;

Type: string

Supported Values: all, slb_req, slb_resp, slb_no_resp, slb_req_rexmit, slb_resp_no_match, slb_no_resource, nat_req, nat_resp, nat_no_resp, nat_req_rexmit, nat_resp_no_match, nat_no_resource, nat_xid_reused, filter_type_drop, filter_class_drop, filter_type_any_drop, slb_dns_client_ssl_succ, slb_dns_server_ssl_succ, slb_dns_udp_conn, slb_dns_udp_conn_succ, slb_dns_padding_to_server_removed, slb_dns_padding_to_client_added, slb_dns_edns_subnet_to_server_removed, slb_dns_udp_retransmit, slb_dns_udp_retransmit_fail, rpz_action_drop, rpz_action_pass_thru, rpz_action_tcp_only, rpz_action_nxdomain, rpz_action_nodata, rpz_action_local_data, slb_drop, nat_slb_drop, invalid_q_len_to_udp

memory

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

memory_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'usage-percentage': Memory Usage percentage;

Type: string

Supported Values: all, usage-percentage

cpu-hyper-thread

Specification	
Type	*object*

disable

Description Disable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

enable

Description Enable CPU Hyperthreading

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ssl-scv

Specification	
Type	*object*

enable

Description Enable server certificate validation for all SSL connections

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ssl-set-compatible-cipher

Specification	
Type	*object*

disable

Description Disable setting common cipher suite in management plane

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

spe-profile

Specification	
Type	*object*

action

Description 'ipv4-only': Enable IPv4 HW forward entries only; 'ipv6-only': Enable IPv6 HW forward entries only; 'ipv4-ipv6': Enable Both IPv4/IPv6 HW forward entries (shared);

Type: string

Supported Values: ipv4-only, ipv6-only, ipv4-ipv6

Default: ipv4-ipv6

add-cpu-core

Specification	
Type	*object*

core-index

Description core index to be added (Specify core index)

Type: number

Range: 0-128

cpu-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

icmp_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'num': Total number; 'inmsgs': In Messages; 'inerrors': In Errors; 'indestunreachs': In Destination Unreachable; 'intimeexcds': In TTL Exceeds; 'inparmprobs': In Parameter Problem; 'insrcquenchs': In Source Quench Error; 'inredirects': In Redirects; 'inechos': In Echo requests; 'inechoreps': In Echo replies; 'intimestamps': In Timestamp; 'intimestampreps': In Timestamp Rep; 'inaddrmasks': In Address Masks; 'inaddrmaskreps': In Address Mask Rep; 'outmsgs': Out Message; 'outerrors': Out Errors; 'outdestunreachs': Out Destination Unreachable; 'outtimeexcds': Out TTL Exceeds; 'outparmprobs': Out Parameter Problem; 'outsrcquenchs': Out Source Quench Error; 'outredirects': Out Redirects; 'outechos': Out Echo Requests; 'outechoreps': Out Echo Replies; 'outtimestamps': Out Time Stamp; 'outtimestampreps': Out Time Stamp Rep; 'outaddrmasks': Out Address Mask; 'outaddrmaskreps': Out Address Mask Rep;

Type: string

Supported Values: all, num, inmsgs, inerrors, indestunreachs, intimeexcds, inparmprobs, insrcquenchs, inredirects, inechos, inechoreps, intimestamps, intimestampreps, inaddrmasks, inaddrmaskreps, outmsgs, outerrors, outdestunreachs, outtimeexcds, outparmprobs, outsrcquenchs, outredirects, outechos, outechoreps, outtimestamps, outtimestampreps, outaddrmasks, outaddrmaskreps

gui-image-list

Specification

Description 'all': all; 'connattempt': Connect initiated; 'connects': Connect established; 'drops': Connect dropped; 'conndrops': Embryonic connect dropped; 'closed': Connect closed; 'segstimed': Segs to get RTT; 'rttupdated': Update RTT; 'delack': Delayed acks sent; 'timeoutdrop': Conn dropped in rxmt timeout; 'rexmttimeo': Retransmit timeout; 'persisttimeo': Persist timeout; 'keeptimeo': Keepalive timeout; 'keepprobe': Keepalive probe sent; 'keepdrops': Connect dropped in keepalive; 'sndtotal': Total packet sent; 'sndpack': Data packet sent; 'sndbyte': Data bytes sent; 'sndrexmitpack': Data packet retransmit; 'sndrexmitbyte': Data byte retransmit; 'sndrexmitbad': Unnecessary packet retransmit; 'sndacks': Ack packet sent; 'sndprobe': Window probe sent; 'sndurg': URG packet sent; 'sndwinup': Window update packet sent; 'sndctrl': SYN|FIN|RST packet sent; 'sndrst': RST packet sent; 'sndfin': FIN packet sent; 'sndsyn': SYN packet sent; 'rcvtotal': Total packet received; 'rcvpack': Packet received; 'rcvbyte': Bytes received; 'rcvbadoff': Packet received with bad offset; 'rcvmemdrop': Packet dropped for lack of memory; 'rcvshort': Packet received too short; 'rcvduppack': Duplicate packet received; 'rcvdupbyte': Duplicate bytes received; 'rcvpartduppack': Packet with some duplicate data; 'rcvpartdupbyte': Dup. bytes in part-dup. packets; 'rcvoopack': Out-of-order packet received; 'rcvoobyte': Out-of-order bytes received; 'rcvpackafterwin': Packets with data after window; 'rcvbyteafterwin': Bytes rcvd after window; 'rcvwinprobe': Rcvd window probe packet; 'rcvdupack': Rcvd duplicate acks; 'rcvacktoomuch': Rcvd acks for unsent data; 'rcvackpack': Rcvd ack packets; 'rcvackbyte': Bytes acked by rcvd acks; 'rcvwinupd': Rcvd window update packets; 'pawsdrop': Segments dropped due to PAWS; 'predack': Hdr predict for acks; 'preddat': Hdr predict for data pkts; 'persistdrop': Timeout in persist state; 'mturesent': Resends due to MTU discovery; 'badrst': Ignored RST; 'finwait2_drops': Drop FIN_WAIT_2 connection after time limit; 'sack_recovery_episode': SACK recovery episodes; 'sack_rexmits': SACK rexmit segments; 'sack_rexmit_bytes': SACK rexmit bytes; 'sack_rcv_blocks': SACK received; 'sack_send_blocks': SACK sent; 'ecn_shs': ECN successful handshakes; 'ecn_rcwnd': ECN reduced the cwnd; 'sndcack': Challenge ACK sent; 'cacklim': Challenge ACK limited;

Type: string

Supported Values: all, connattempt, connects, drops, conndrops, closed, segstimed, rttupdated, delack, timeoutdrop, rexmttimeo, persisttimeo, keeptimeo, keepprobe, keepdrops, sndtotal, sndpack, sndbyte, sndrexmitpack, sndrexmitbyte, sndrexmitbad, sndacks, sndprobe, sndurg, sndwinup, sndctrl, sndrst, sndfin, sndsyn, rcvtotal, rcvpack, rcvbyte, rcvbadoff, rcvmemdrop, rcvduppack, rcvdupbyte, rcvpartduppack, rcvpartdupbyte, rcvoopack, rcvoobyte, rcvpackafterwin, rcvbyteafterwin, rcvwinprobe, rcvdupack, rcvacktoomuch, rcvackpack, rcvackbyte, rcvwinupd, pawsdrop, predack, preddat, persistdrop, badrst, finwait2_drops, sack_recovery_episode, sack_rexmits, sack_rexmit_bytes, sack_rcv_blocks, sack_send_blocks, sndcack, cacklim, reassmemdrop, reasstimeout, cc_idle, cc_reduce, rcvdsack, a2brcvwnd, a2bsackpresent, a2bdupack, a2brxdata, a2btcpoptions, a2boodata, a2bpartialack, a2bfsmtransition, a2btransitionnum, b2atransitionnum, bad_iochan, atcpforward, atcpsent, atcprexmitsadrop, atcpsendbackack, atcprexmit, atcpbuffallocfail, a2bappbuffering, atcpsendfail, earlyrexmit, mburstlim, a2bsndwnd, proxyheaderv1, proxyheaderv2

delete-cpu-core

Specification	
Type	*object*

core-index

Description core index to be deleted (Specify core index)

Type: number

Range: 0-128

geoloc-name-helper

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

geoloc-name-helper_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'place-holder': place-holder;

Type: string

Supported Values: all, place-holder

shell-privileges

Specification	
Type	*object*

enable-shell-privileges

Description enable the shell privileges for a given customer

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

link-capability

Specification	
Type	*object*

enable

Description Enable/Disable link capabilities

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

timeout-value

Specification	
Type	*object*

ftp

Description set timeout to stop ftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 120

http

Description set timeout to stop http transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

https

Description set timeout to stop https transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

scp

Description set timeout to stop scp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 300

sftp

Description set timeout to stop sftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

tftp

Description set timeout to stop tftp transfer in seconds, 0 is no limit

Type: number

Range: 0-9999

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

shm-logging

Specification	
Type	*object*

enable

Description Enable shared memory based logging

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

port-list

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting

Specification	
Type	*object*

template-list

Type: List

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list

Specification	
Type	*list*
Block object keys	

app-resources

Description: app-resources is a **JSON Block**. Please see below for *resource-accounting_template-list_app-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/app-resources*

name

Description Enter template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

network-resources

Description: network-resources is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/network-resources*

system-resources

Description: system-resources is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/system-resources*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list_app-resources

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_app-resources_virtual-server-cfg*

Type: Object

resource-accounting_template-list_app-resources_http-template-cfg

Specification	
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_server-ssl-template-cfg

Specification	
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-template-cfg

Specification	
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_virtual-server-cfg

Specification	
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-service-port-cfg

Specification	
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-site-cfg

Specification	
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_proxy-template-cfg

Specification	
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_real-server-cfg

Specification	
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_link-cost-template-cfg

Specification	
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_client-ssl-template-cfg

Specification	
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_health-monitor-cfg

Specification	
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

resource-accounting_template-list_app-resources_gslb-zone-cfg

Specification	
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_conn-reuse-template-cfg

Specification	
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-policy-cfg

Specification	
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-service-cfg

Specification	
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-geo-location-cfg

Specification	
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_cache-template-cfg

Specification	
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_persist-cookie-template-cfg

Specification	
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fix-template-cfg

Specification	
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fast-tcp-template-cfg

Specification	
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_fast-udp-template-cfg

Specification	
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-service-ip-cfg

Specification	
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-svc-group-cfg

Specification	
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_virtual-port-cfg

Specification	
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_service-group-cfg

Specification	
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-device-cfg

Specification	
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_persist-srcip-template-cfg

Specification	
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_stream-template-cfg

Specification	
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_real-port-cfg

Specification	
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_app-resources_gslb-ip-list-cfg

Specification	
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_system-resources

Description: ssl-throughput-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_ssl-throughput-limit-cfg*

Type: Object

sslcps-limit-cfg

Description: sslcps-limit-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_system-resources_sslcps-limit-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list_system-resources_l4-session-limit-cfg

Specification	
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

resource-accounting_template-list_system-resources_l7cps-limit-cfg

Specification	
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

resource-accounting_template-list_system-resources_l4cps-limit-cfg

Specification	
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_natcps-limit-cfg

Specification	
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_sslcps-limit-cfg

Specification	
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

resource-accounting_template-list_system-resources_fwcps-limit-cfg

Specification	
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

resource-accounting_template-list_system-resources_ssl-throughput-limit-cfg

Specification	
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-accounting_template-list_system-resources_bw-limit-cfg

Specification	
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

resource-accounting_template-list_system-resources_concurrent-session-limit-cfg

Specification	
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

resource-accounting_template-list_network-resources

Specification	
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *resource-accounting_template-list_network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

resource-accounting_template-list_network-resources_static-ipv6-route-cfg

Specification	
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_network-resources_object-group-clause-cfg

Specification	
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

resource-accounting_template-list_network-resources_static-ipv4-route-cfg

Specification	
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

resource-accounting_template-list_network-resources_static-arp-cfg

Specification	
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

resource-accounting_template-list_network-resources_ipv4-acl-line-cfg

Specification	
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

resource-accounting_template-list_network-resources_static-mac-cfg

Specification	
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

resource-accounting_template-list_network-resources_ipv6-acl-line-cfg

Specification	
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

resource-accounting_template-list_network-resources_static-neighbor-cfg

Specification	
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

resource-accounting_template-list_network-resources_object-group-cfg

Specification	
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

ssl-scv-verify-host

Specification	
Type	*object*

disable

Description Disable verify host during SCV

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

hardware

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-drop

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fpga-drop_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'mrx-drop': Total MRX Drop; 'hrx-drop': Total HRX Drop; 'siz-drop': Total Size Drop; 'fcs-drop': Total FCS Drop; 'land-drop': Total LAND Attack Drop; 'empty-frag-drop': Total Empty frag Drop; 'mic-frag-drop': Total Micro frag Drop; 'ipv4-opt-drop': Total IPv4 opt Drop; 'ipv4-frag': Total IP frag Drop; 'bad-ip-hdr-len': Total Bad IP hdr len Drop; 'bad-ip-flags-drop': Total Bad IP Flags Drop; 'bad-ip-ttl-drop': Total Bad IP TTL Drop; 'no-ip-payload-drop': Total No IP Payload Drop; 'oversize-ip-payload': Total Oversize IP PL Drop; 'bad-ip-payload-len': Total Bad IP PL len Drop; 'bad-ip-frag-offset': Total Bad IP frag off Drop; 'bad-ip-chksum-drop': Total Bad IP csum Drop; 'icmp-pod-drop': Total ICMP POD Drop; 'tcp-bad-urg-offet': Total TCP bad urg off Drop; 'tcp-short-hdr': Total TCP short hdr Drop; 'tcp-bad-ip-len': Total TCP Bad IP Len Drop; 'tcp-null-flags': Total TCP null flags Drop; 'tcp-null-scan': Total TCP null scan Drop; 'tcp-fin-sin': Total TCP SYN&FIN Drop; 'tcp-xmas-flags': Total TCP XMAS FLAGS Drop; 'tcp-xmas-scan': Total TCP XMAS scan Drop; 'tcp-syn-frag': Total TCP SYN frag Drop; 'tcp-frag-hdr': Total TCP frag header Drop; 'tcp-bad-chksum': Total TCP bad csum Drop; 'udp-short-hdr': Total UDP short hdr Drop; 'udp-bad-ip-len': Total UDP bad leng Drop; 'udp-kb-frags': Total UDP KB frag Drop; 'udp-port-lb': Total UDP port LB Drop; 'udp-bad-chksum': Total UDP bad csum Drop; 'runt-ip-hdr': Total Runt IP hdr Drop; 'runt-tcpudp-hdr': Total Runt TCPUDP hdr Drop; 'tun-mismatch': Total Tun mismatch Drop; 'qdr-drop': Total QDR Drop;

Type: string

Supported Values: all, mrx-drop, hrx-drop, siz-drop, fcs-drop, land-drop, empty-frag-drop, mic-frag-drop, ipv4-opt-drop, ipv4-frag, bad-ip-hdr-len, bad-ip-flags-drop, bad-ip-ttl-drop, no-ip-payload-drop, oversize-ip-payload, bad-ip-payload-len, bad-ip-frag-offset, bad-ip-chksum-drop, icmp-pod-drop, tcp-bad-urg-offet, tcp-short-hdr, tcp-bad-ip-len, tcp-null-flags, tcp-null-scan, tcp-fin-sin, tcp-xmas-flags, tcp-xmas-scan, tcp-syn-frag, tcp-frag-hdr, tcp-bad-chksum, udp-short-hdr, udp-bad-ip-len, udp-kb-frags, udp-port-lb, udp-bad-chksum, runt-ip-hdr, runt-tcpudp-hdr, tun-mismatch, qdr-drop

all-vlan-limit

Specification	
Type	*object*

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

guest-file

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

high-memory-l4-session

Specification	
Type	*object*

enable

Description Enable/Disable high memory l4 session support

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

per-vlan-limit

Specification	
Type	*object*

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

deep-hrxq

Specification	
Type	*object*

enable

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

cosq-show

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

set-rxtx-queue

Specification	
Type	*object*

port-index

Description port index to be configured (Specify port index)

Type: number

Range: 0-32

rxq-size

Description Set number of new rx queues

Type: number

Range: 0-1024

txq-size

Description Set number of new tx queues

Type: number

Range: 0-1024

syslog-time-msec

Specification	
Type	*object*

enable-flag

Description

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ipmi-service

Specification	
Type	*object*

disable

Description Disable IPMI on platform

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

data-cpu

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-cache

Specification	
Type	*object*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

dns-cache_sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'total_q': Total query; 'total_r': Total server response; 'hit': Total cache hit; 'bad_q': Query not passed; 'encode_q': Query encoded; 'multiple_q': Query with multiple questions; 'oversize_q': Query exceed cache size; 'bad_r': Response not passed; 'oversize_r': Response exceed cache size; 'encode_r': Response encoded; 'multiple_r': Response with multiple questions; 'answer_r': Response with multiple answers; 'ttl_r': Response with short TTL; 'ageout': Total aged out; 'bad_answer': Bad Answer; 'ageout_weight': Total aged for lower weight; 'total_log': Total stats log sent; 'total_alloc': Total allocated; 'total_freed': Total freed; 'current_allocate': Current allocate; 'current_data_allocate': Current data allocate; 'resolver_queue_full': Resolver task queue full;

Type: string

Supported Values: all, total_q, total_r, hit, bad_q, encode_q, multiple_q, oversize_q, bad_r, oversize_r, encode_r, multiple_r, answer_r, ttl_r, ageout, bad_answer, ageout_weight, total_log, total_alloc, total_freed, current_allocate, current_data_allocate, resolver_queue_full

set-tcp-syn-per-sec

Specification	
Type	*object*

tcp-syn-value

Description Configure Tcp SYN's per sec, default 70

Type: number

Range: 25-128

Default: 70

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

fw

Specification	
Type	*object*

application-flow

Description Number of flows

Type: number

application-mempool

Description Enable application memory pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-dpi-enable

Description Enable basic dpi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

ip-dns-cache

Specification	
Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mon-template

Specification

Type: List

link-down-cfg

Type: List

link-enable-cfg

Type: List

link-up-cfg

Type: List

monitor-relation

Description 'monitor-and': Configures the monitors in current template to work with AND logic; 'monitor-or': Configures the monitors in current template to work with OR logic;

Type: string

Supported Values: monitor-and, monitor-or

Default: monitor-and

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

mon-template_monitor-list_clear-cfg

Specification	
Type	*list*
Block object keys	

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

mon-template_monitor-list_link-enable-cfg

Specification	
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_monitor-list_link-up-cfg

Specification	
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the sequece number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

mon-template_monitor-list_link-down-cfg

Specification

Type	*object*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

table-integrity

Specification	
Type	*object*

audit-action

Description 'enable': Enable table integrity audit; 'disable': Disable table integrity audit;

Type: string

Supported Values: enable, disable

Default: enable

auto-sync-action

Description 'enable': Enable auto-sync; 'disable': Disable auto-sync;

Type: string

Supported Values: enable, disable

Default: enable

sampling-enable

Type: List

table

Description 'all': All tables;

Type: string

Supported Values: all

Default: all

    "response": {
        "status": "OK"
    }
}
```

all-vlan-limit attributes

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 5000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.3 system app-performance

Application perfomance stats

app-performance Specification

Type	*Configuration Resource*
Element Name	app-performance
Element URI	/axapi/v3/system/app-performance

apps-global attributes

log-session-on-established

Description Send TCP session creation log on completion of 3-way handshake

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

msl-time

Description Configure maximum session life, default is 2 seconds (1-40 seconds, default is 2 seconds)

Type: number

Range: 1-40

Default: 2

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.5 system bandwidth

System bandwidth information

bandwidth Specification

Type	*Configuration Resource*
Element Name	bandwidth
Element URI	/axapi/v3/system/bandwidth

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'ip_checksum_error': IP packet checksum errors; 'udp_checksum_error': UDP packet checksum errors; 'session_not_found': Session not found; 'multihop_mismatch': Multihop session or packet mismatch; 'version_mismatch': BFD version mismatch; 'length_too_small': Packets too small; 'data_is_short': Packet data length too short; 'invalid_detect_mult': Invalid detect multiplier; 'invalid_multipoint': Invalid multipoint setting; 'invalid_my_disc': Invalid my descriptor; 'invalid_ttl': Invalid TTL; 'auth_length_invalid': Invalid authentication length; 'auth_mismatch': Authentication mismatch; 'auth_type_mismatch': Authentication type mismatch; 'auth_key_id_mismatch': Authentication key-id mismatch; 'auth_key_mismatch': Authentication key mismatch; 'auth_seqnum_invalid': Invalid authentication sequence number; 'auth_failed': Authentication failures; 'local_state_admin_down': Local admin down session state; 'dest_unreachable': Destination unreachable; 'other_error': Other errors;

Type: string

Supported Values: all, ip_checksum_error, udp_checksum_error, session_not_found, multihop_mismatch, version_mismatch, length_too_small, data_is_short, invalid_detect_mult, invalid_multipoint, invalid_my_disc, invalid_ttl, auth_length_invalid, auth_mismatch, auth_type_mismatch, auth_key_id_mismatch, auth_key_mismatch, auth_seqnum_invalid, auth_failed, local_state_admin_down, dest_unreachable, no_ipv6_enable, other_error

stats data

	Counter	Size	Description
	no_ipv6_enable	2	No IPv6 enable
	auth_length_invalid	2	Invalid authentication length
	auth_key_mismatch	2	Authentication key mismatch
	length_too_small	2	Packets too small
	auth_mismatch	2	Authentication mismatch
	invalid_ttl	2	Invalid TTL
	auth_key_id_mismatch	2	Authentication key-id mismatch
	dest_unreachable	2	Destination unreachable
	udp_checksum_error	2	UDP packet checksum errors
	other_error	2	Other errors
	invalid_my_disc	2	Invalid my descriptor
	auth_failed	2	Authentication failures
	invalid_detect_mult	2	Invalid detect multiplier
	invalid_multipoint	2	Invalid multipoint setting
	session_not_found	2	Session not found
	local_state_admin_down	2	Local admin down session state
	ip_checksum_error	2	IP packet checksum errors
	version_mismatch	2	BFD version mismatch
	multihop_mismatch	2	Multihop session or packet mismatch
	auth_type_mismatch	2	Authentication type mismatch
	data_is_short	2	Packet data length too short
	auth_seqnum_invalid	2	Invalid authentication sequence number

	total-ctr-in-system	8	Total counters currently allocated in system
	total-ctr-freed	8	Total counters actually freed

2.99.9 system cpu-load-sharing

Redistribute packets uniformly to all CPUs during overload situations

cpu-load-sharing Specification

Type	*Configuration Resource*
Element Name	cpu-load-sharing
Element URI	/axapi/v3/system/cpu-load-sharing
Element Attributes	cpu-load-sharing_attributes
Schema	`cpu-load-sharing schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/cpu-load-sharing

cpu-load-sharing attributes

```
POST /axapi/v3/system/cpu-load-sharing
Payload:
{
    "cpu-load-sharing": {
        "disable": 1
    }
}
```

Get Object

GET

/axapi/v3/system/cpu-load-sharing

cpu-load-sharing attributes

```
GET /axapi/v3/system/cpu-load-sharing
Reponse:
{
    "cpu-load-sharing": {
        "disable": 1,
        "packets-per-second": {
            "min": 100000
        },
        "cpu-usage": {
            "low": 60,
            "high": 75
        },
        "uuid": "dc64f062-bfa6-11e5-a413-df8bf195119b",
        "a10-url": "/axapi/v3/system/cpu-load-sharing"
    }
}
```

Modify Object

POST

/axapi/v3/system/cpu-load-sharing

cpu-load-sharing attributes

Replace Object

PUT

/axapi/v3/system/cpu-load-sharing

cpu-load-sharing attributes

```
PUT /axapi/v3/system/cpu-load-sharing
Payload:
{
    "cpu-load-sharing": {
        "disable": 0
    }
}
```

Delete Object

DELETE

/axapi/v3/system/cpu-load-sharing

cpu-load-sharing attributes

```
DELETE /axapi/v3/system/cpu-load-sharing
Reponse:
{
    "response": {
        "status": "OK"
    }
}
```

cpu-load-sharing attributes

cpu-usage

Description: cpu-usage is a **JSON Block**. Please see below for *cpu-usage*

Type: Object

disable

Description Disable CPU load sharing in overload situations

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

packets-per-second

Description: packets-per-second is a **JSON Block**. Please see below for *packets-per-second*

Type: Object

tcp

Description Disallow redistribution of new TCP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

udp

Description Disallow redistribution of new UDP sessions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

cpu-usage

Specification	
Type	*object*

high

Description CPU usage threshold (percentage) that will trigger the redistribution (default: 75)

Type: number

Range: 0-100

Default: 75

low

Description CPU usage threshold (percentage) that will restore the normal packet distribution (default: 60)

Type: number

Range: 0-100

Default: 60

packets-per-second

Specification	
Type	*object*

min

Description Minimum packets-per-second threshold (per CPU) before redistribution will take effect (Minimum packets-per-second threshold (per CPU) before redistribution will take effect (default: 100000))

Type: number

Range: 0-30000000

Default: 100000

Delete Object

DELETE

/axapi/v3/system/fw

fw attributes

fw attributes

application-flow

Description Number of flows

Type: number

application-mempool

Description Enable application memory pool

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

basic-dpi-enable

Description Enable basic dpi

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.17 system geo-location

Configure system global geo-location

geo-location Specification

Type	*Configuration Resource*
Element Name	geo-location
Element URI	/axapi/v3/system/geo-location
Element Attributes	geo-location_attributes
Schema	`geo-location schema`

entry-list

Type: List

Refernce Object: */axapi/v3/system/geo-location/entry/{geo-locn-obj-name}*

geo-location-geolite2-city

Description Load built-in Maxmind GeoLite2-City database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-geolite2-country

Description Load built-in Maxmind GeoLite2-Country database. Database available from http://www.maxmind.com

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geo-location-iana

Description Load built-in IANA Database

Type: boolean

Supported Values: true, false, 1, 0

Default: 1

geolite2-city-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geolite2-country-include-ipv6

Description Include IPv6 address

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

geoloc-load-file-list

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

entry-list

Specification	
Type	*list*
Block object keys	

geo-locn-multiple-addresses

Type: List

geo-locn-obj-name

Description Specify geo-location name, section range is (1-15)

Type: string

Maximum Length: 127 characters

Maximum Length: 1 characters

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

entry-list_geo-locn-multiple-addresses

Specification	
Type	*list*
Block object keys	

first-ip-address

Description Specify IP information (Specify IP address)

Type: string

Format: ipv4-address

first-ipv6-address

Description Specify IPv6 address

Type: string

Format: ipv6-address

geol-ipv4-mask

Description Specify IPv4 mask

Type: string

Format: ipv4-netmask

Mutual Exclusion: geol-ipv4-mask and ip-addr2 are mutually exclusive

geol-ipv6-mask

Description Specify IPv6 mask

Type: number

Range: 0-128

Mutual Exclusion: geol-ipv6-mask and ipv6-addr2 are mutually exclusive

ip-addr2

Description Specify IP address range

Type: string

Format: ipv4-address

Mutual Exclusion: ip-addr2 and geol-ipv4-mask are mutually exclusive

ipv6-addr2

Description Specify IPv6 address range

Type: string

Format: ipv6-address

Mutual Exclusion: ipv6-addr2 and geol-ipv6-mask are mutually exclusive

geoloc-load-file-list

Specification	
Type	*list*
Block object keys	

geo-location-load-filename

Description Specify file to be loaded

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

template-name

Description CSV template to load this file

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

Refernce Object: */axapi/v3/template/csv*

2.99.18 system geo-location entry

Manually configure geo-location entry

entry Specification

Type	*Collection*
Object Key(s)	*geo-locn-obj-name*
Collection Name	*entry-list*
Collection URI	/axapi/v3/system/geo-location/entry

geoloc-list-list

geoloc-list-list is **JSON List** of *geoloc-list attributes*

geoloc-list-list : [

{ *geoloc-list attributes* },

{ *geoloc-list attributes* },

...

]

geoloc-list attributes

exclude-geoloc-name-list

Type: List

include-geoloc-name-list

Type: List

name

Description Specify name of Geolocation list

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

sampling-enable

Type: List

shared

Description Enable sharing with other partitions

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'hit-count': hit-count; 'total-geoloc': total-geoloc; 'total-active': total-active;

Type: string

Supported Values: all, hit-count, total-geoloc, total-active

include-geoloc-name-list

Specification	
Type	*list*
Block object keys	

include-geoloc-name-val

Description Geolocation name to add

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

exclude-geoloc-name-list

Specification	
Type	*list*
Block object keys	

exclude-geoloc-name-val

Description Geolocation name to exclude

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

stats data

	Counter	Size	Description

mfa-cert-store attributes

cert-host

Description Configure certificate store host

Type: string

Format: host

cert-store-path

Description Configure certificate store path

Type: string

Format: string-rlx

Maximum Length: 128 characters

Maximum Length: 1 characters

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

passwd-string

Description Certificate store host password

Type: string

Format: password

Maximum Length: 128 characters

Maximum Length: 1 characters

protocol

Description 'tftp': Use tftp for connection; 'ftp': Use ftp for connection; 'scp': Use scp for connection; 'http': Use http for connection; 'https': Use https for connection; 'sftp': Use sftp for connection;

Type: string

Supported Values: tftp, ftp, scp, http, https, sftp

username

Description Certificate store host username

Type: string

Format: string-rlx

Maximum Length: 31 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.39 system mfa-management

Enable 2FA for management plane

mfa-management Specification

Type	*Configuration Resource*

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

clear-cfg

Specification	
Type	*list*
Block object keys	

clear-all-sequence

Description Sequence number (Specify the port physical port number)

Type: number

Range: 1-16

clear-sequence

Description Specify the port physical port number

Type: number

Range: 1-16

sessions

Description 'all': Clear all sessions; 'sequence': Sequence number;

Type: string

Supported Values: all, sequence

link-enable-cfg

Specification	
Type	*list*
Block object keys	

ena-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

enaeth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

link-up-cfg

Specification	
Type	*list*
Block object keys	

link-up-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence2

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-up-sequence3

Description Sequence number (Specify the sequece number)

Type: number

Range: 1-16

linkup-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkup-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

link-down-cfg

Specification	
Type	*list*
Block object keys	

link-down-sequence1

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

link-down-sequence2

Description Sequence number (Specify the seqeuence number)

Type: number

Range: 1-16

link-down-sequence3

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

linkdown-ethernet1

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet2

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

linkdown-ethernet3

Description Specify the port physical port number (Ethernet interface number)

Type: number

Format: interface

link-disable-cfg

Specification	
Type	*list*
Block object keys	

dis-sequence

Description Sequence number (Specify the sequence number)

Type: number

Range: 1-16

diseth

Description Specify the physical port number (Ethernet interface number)

Type: number

Format: interface

2.99.45 system ndisc-ra

Neighbor discovery and RA counters

ndisc-ra Specification

Type	*Configuration Resource*

sampling-enable

Type: List

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'good_recv': Good Router Solicitations (R.S.) Received; 'periodic_sent': Periodic Router Advertisements (R.A.) Sent; 'rate_limit': R.S. Rate Limited; 'bad_hop_limit': R.S. Bad Hop Limit; 'truncated': R.S. Truncated; 'bad_icmpv6_csum': R.S. Bad ICMPv6 Checksum; 'bad_icmpv6_code': R.S. Unknown ICMPv6 Code; 'bad_icmpv6_option': R.S. Bad ICMPv6 Option; 'l2_addr_and_unspec': R.S. Src Link-Layer Option and Unspecified Address; 'no_free_buffers': No Free Buffers to send R.A.;

Type: string

Supported Values: all, good_recv, periodic_sent, rate_limit, bad_hop_limit, truncated, bad_icmpv6_csum, bad_icmpv6_code, bad_icmpv6_option, l2_addr_and_unspec, no_free_buffers

stats data

	Counter	Size	Description
	bad_hop_limit	2	R.S. Bad Hop Limit
	bad_icmpv6_code	2	R.S. Unknown ICMPv6 Code
	bad_icmpv6_csum	2	R.S. Bad ICMPv6 Checksum
	truncated	2	R.S. Truncated
	no_free_buffers	2	No Free Buffers to send R.A.
	rate_limit	2	R.S. Rate Limited
	l2_addr_and_unspec	2	R.S. Src Link-Layer Option and Unspecified Address
	bad_icmpv6_option	2	R.S. Bad ICMPv6 Option
	periodic_sent	2	Periodic Router Advertisements (R.A.) Sent
	good_recv	2	Good Router Solicitations (R.S.) Received

2.99.46 system password-policy

Configure Password Complexity, Passsword Aging, Password history under password policy

password-policy Specification

Type	*Configuration Resource*
Element Name	password-policy

aging

Description 'Strict': Strict: Max Age-60 Days; 'Medium': Medium: Max Age- 90 Days; 'Simple': Simple: Max Age-120 Days;

Type: string

Supported Values: Strict, Medium, Simple

complexity

Description 'Strict': Strict: Min length:8, Min Lower Case:2, Min Upper Case:2, Min Numbers:2, Min Special Character:1; 'Medium': Medium: Min length:6, Min Lower Case:2, Min Upper Case:2, Min Numbers:1, Min Special Character:1; 'Simple': Simple: Min length:4, Min Lower Case:1, Min Upper Case:1, Min Numbers:1, Min Special Character:0;

Type: string

Supported Values: Strict, Medium, Simple

history

Description 'Strict': Strict: Does not allow upto 5 old passwords; 'Medium': Medium: Does not allow upto 4 old passwords; 'Simple': Simple: Does not allow upto 3 old passwords;

Type: string

Supported Values: Strict, Medium, Simple

min-pswd-len

Description Configure custom password length

Type: number

Range: 8-63

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.47 system per-vlan-limit

Per vlan flooding packet limit

per-vlan-limit Specification

Type	*Configuration Resource*

    }
}
```

per-vlan-limit attributes

bcast

Description broadcast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

ipmcast

Description IP multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

mcast

Description multicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

unknown-ucast

Description unknown unicast packets (per second limit)

Type: number

Range: 1-65535

Default: 1000

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

enable-all-ports

Description Enable 802.1QinQ on all physical ports

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

inner-tpid

Description TPID for inner VLAN (Inner TPID, 16 bit hex value, default is 8100)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

outer-tpid

Description TPID for outer VLAN (Outer TPID, 16 bit hex value, default is 8a88)

Type: string

Format: time-hh:mm

Maximum Length: 4 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

2.99.51 system queuing-buffer

Enable/Disable micro-burst traffic support

queuing-buffer Specification

Type	*Configuration Resource*
Element Name	queuing-buffer
Element URI	/axapi/v3/system/queuing-buffer
Element Attributes	queuing-buffer_attributes
Schema	`queuing-buffer schema`

Operations Allowed:

server

Description: server is a **JSON Block**. Please see below for *server*

Type: Object

Refernce Object: */axapi/v3/system/radius/server*

server

Specification	
Type	*object*

accounting-interim-update

Description 'ignore': Ignore (default); 'append-entry': Append the AVPs to existing entry; 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: ignore

accounting-on

Description 'ignore': Ignore (default); 'delete-entries-using-attribute': Delete entries matching attribute in RADIUS Table;

Type: string

Supported Values: ignore, delete-entries-using-attribute

Default: ignore

accounting-start

Description 'ignore': Ignore; 'append-entry': Append the AVPs to existing entry (default); 'replace-entry': Replace the AVPs of existing entry;

Type: string

Supported Values: ignore, append-entry, replace-entry

Default: append-entry

accounting-stop

Description 'ignore': Ignore; 'delete-entry': Delete the entry (default); 'delete-entry-and-sessions': Delete the entry and data sessions associated(CGN only);

Type: string

Supported Values: ignore, delete-entry, delete-entry-and-sessions

Default: delete-entry

attribute

Type: List

attribute-name

Description 'msisdn': Clear using MSISDN; 'imei': Clear using IMEI; 'imsi': Clear using IMSI; 'custom1': Clear using CUSTOM1 attribute configured; 'custom2': Clear using CUSTOM2 attribute configured; 'custom3': Clear using CUSTOM3 attribute configured;

Type: string

Supported Values: msisdn, imei, imsi, custom1, custom2, custom3, custom4, custom5, custom6

Mutual Exclusion: attribute-name and custom-attribute-name are mutually exclusive

custom-attribute-name

Description Clear using customized attribute

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

Mutual Exclusion: custom-attribute-name and attribute-name are mutually exclusive

disable-reply

Description Toggle option for RADIUS reply packet(Default: Accounting response will be sent)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

listen-port

Description Configure the listen port of RADIUS server (default 1813) (Port number)

Type: number

Range: 1024-65535

Default: 1813

remote

Description: remote is a **JSON Block**. Please see below for *server_remote*

Type: Object

sampling-enable

Type: List

secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

vrid

Description Join a VRRP-A failover group

Type: number

Range: 1-31

remote

Specification	
Type	*object*

ip-list

Type: List

remote_ip-list

Specification	
Type	*list*
Block object keys	

ip-list-encrypted

Description Do NOT use this option manually. (This is an A10 reserved keyword.) (The ENCRYPTED secret string)

ip-list-name

Description IP-list name

Type: string

Format: string-rlx

Maximum Length: 63 characters

Maximum Length: 1 characters

ip-list-secret

Description Configure shared secret

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

ip-list-secret-string

Description The RADIUS secret

Type: string

Format: password

Maximum Length: 127 characters

Maximum Length: 1 characters

sampling-enable

Specification	
Type	*list*
Block object keys	

counters1

Description 'all': all; 'msisdn-received': MSISDN Received; 'imei-received': IMEI Received; 'imsi-received': IMSI Received; 'custom-received': Custom attribute Received; 'radius-request-received': RADIUS Request Received; 'radius-request-dropped': RADIUS Request Dropped (Malformed Packet); 'request-bad-secret-dropped': RADIUS Request Bad Secret Dropped; 'request-no-key-vap-dropped': RADIUS Request No Key Attribute Dropped; 'request-malformed-dropped': RADIUS Request Malformed Dropped; 'request-ignored': RADIUS Request Ignored; 'radius-table-full': RADIUS Request Dropped (Table Full); 'secret-not-configured-dropped': RADIUS Secret Not Configured Dropped; 'ha-standby-dropped': HA Standby Dropped; 'ipv6-prefix-length-mismatch': Framed IPV6 Prefix Length Mismatch; 'invalid-key': Radius Request has Invalid Key Field; 'smp-created': RADIUS SMP Created; 'smp-deleted': RADIUS SMP Deleted; 'smp-mem-allocated': RADIUS SMP Memory Allocated; 'smp-mem-alloc-failed': RADIUS SMP Memory Allocation Failed; 'smp-mem-freed': RADIUS SMP Memory Freed; 'smp-in-rml': RADIUS SMP in RML; 'mem-allocated': RADIUS Memory Allocated; 'mem-alloc-failed': RADIUS Memory Allocation Failed; 'mem-freed': RADIUS Memory Freed; 'ha-sync-create-sent': HA Record Sync Create Sent; 'ha-sync-delete-sent': HA Record Sync Delete Sent; 'ha-sync-create-recv': HA Record Sync Create Received; 'ha-sync-delete-recv': HA Record Sync Delete Received; 'acct-on-filters-full': RADIUS Acct On Request Ignored(Filters Full); 'acct-on-dup-request': Duplicate

RADIUS Acct On Request; 'ip-mismatch-delete': Radius Entry IP Mismatch Delete; 'ip-add-race-drop': Radius Entry IP Add Race Drop; 'ha-sync-no-key-vap-dropped': HA Record Sync No key dropped; 'inter-card-msg-fail-drop': Inter-Card Message Fail Drop;

Type: string

Supported Values: all, msisdn-received, imei-received, imsi-received, custom-received, radius-request-received, radius-request-dropped, request-bad-secret-dropped, request-no-key-vap-dropped, request-malformed-dropped, request-ignored, radius-table-full, secret-not-configured-dropped, ha-standby-dropped, ipv6-prefix-length-mismatch, invalid-key, smp-created, smp-deleted, smp-mem-allocated, smp-mem-alloc-failed, smp-mem-freed, smp-in-rml, mem-allocated, mem-alloc-failed, mem-freed, ha-sync-create-sent, ha-sync-delete-sent, ha-sync-create-recv, ha-sync-delete-recv, acct-on-filters-full, acct-on-dup-request, ip-mismatch-delete, ip-add-race-drop, ha-sync-no-key-vap-dropped, inter-card-msg-fail-drop, radius-packets-redirected, radius-packets-redirect-fail-dropped, radius-packets-process-local, radius-packets-dropped-not-lo, radius-inter-card-dup-redir

attribute

Specification	
Type	*list*
Block object keys	

attribute-value

Description 'inside-ipv6-prefix': Framed IPv6 Prefix; 'inside-ip': Inside IP address; 'inside-ipv6': Inside IPv6 address; 'imei': International Mobile Equipment Identity (IMEI); 'imsi': International Mobile Subscriber Identity (IMSI); 'msisdn': Mobile Subscriber Integrated Services Digital Network-Number (MSISDN); 'custom1': Customized attribute 1; 'custom2': Customized attribute 2; 'custom3': Customized attribute 3;

Type: string

Supported Values: inside-ipv6-prefix, inside-ip, inside-ipv6, imei, imsi, msisdn, custom1, custom2, custom3, custom4, custom5, custom6

custom-number

Description RADIUS attribute number

Type: number

Range: 1-255

custom-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

name

Description Customized attribute name

Type: string

Maximum Length: 15 characters

Maximum Length: 1 characters

number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-length

Description '32': Prefix length 32; '48': Prefix length 48; '64': Prefix length 64; '80': Prefix length 80; '96': Prefix length 96; '112': Prefix length 112;

Type: string

Supported Values: 32, 48, 64, 80, 96, 112

prefix-number

Description RADIUS attribute number

Type: number

Range: 1-255

prefix-vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

value

Description 'hexadecimal': Type of attribute value is hexadecimal;

Type: string

Supported Values: hexadecimal

vendor

Description RADIUS vendor attribute information (RADIUS vendor ID)

Type: number

Range: 1-65535

stats data

	Counter	Size	Description
	secret-not-configured-dropped	8	RADIUS Secret Not Configured Dropped
	radius-request-dropped	8	RADIUS Request Dropped (Malformed Packet)
	imsi-received	8	IMSI Received
	invalid-key	8	Radius Request has Invalid Key Field
	request-bad-secret-dropped	8	RADIUS Request Bad Secret Dropped
	ha-standby-dropped	8	HA Standby Dropped
	custom-received	8	Custom attribute Received
	imei-received	8	IMEI Received
	request-no-key-vap-dropped	8	RADIUS Request No Key Attribute Dropped
	radius-table-full	8	RADIUS Request Dropped (Table Full)
	msisdn-received	8	MSISDN Received
	request-malformed-dropped	8	RADIUS Request Malformed Dropped
	request-ignored	8	RADIUS Request Ignored
	ipv6-prefix-length-mismatch	8	Framed IPV6 Prefix Length Mismatch
	radius-request-received	8	RADIUS Request Received

operational data

Specification	
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list_system-resources_bw-limit-cfg

Specification	
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

template-list_system-resources_concurrent-session-limit-cfg

Specification	
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

template-list_network-resources

Specification	
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *template-list_network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *template-list_network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *template-list_network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *template-list_network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *template-list_network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

template-list_network-resources_static-ipv6-route-cfg

Specification	
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_network-resources_object-group-clause-cfg

Specification	
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

template-list_network-resources_static-ipv4-route-cfg

Specification	
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

template-list_network-resources_static-arp-cfg

Specification	
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

template-list_network-resources_ipv4-acl-line-cfg

Specification	
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

template-list_network-resources_static-mac-cfg

Specification	
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

template-list_network-resources_ipv6-acl-line-cfg

Specification	
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

template-list_network-resources_static-neighbor-cfg

Specification	
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

template-list_network-resources_object-group-cfg

Specification	
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

template attributes

template-list

template-list is **JSON List** of *template attributes*

template-list : [

{ *template attributes* },

{ *template attributes* },

...

]

template attributes

app-resources

Description: app-resources is a **JSON Block**. Please see below for *app-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/app-resources*

name

Description Enter template name

Type: string

Maximum Length: 63 characters

Maximum Length: 1 characters

network-resources

Description: network-resources is a **JSON Block**. Please see below for *network-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/network-resources*

system-resources

Description: system-resources is a **JSON Block**. Please see below for *system-resources*

Type: Object

Refernce Object: */axapi/v3/system/resource-accounting/template/{name}/system-resources*

user-tag

Description Customized tag

Type: string

Format: string-rlx

Maximum Length: 127 characters

Maximum Length: 1 characters

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

app-resources

Specification	
Type	*object*

cache-template-cfg

Description: cache-template-cfg is a **JSON Block**. Please see below for *app-resources_cache-template-cfg*

Type: Object

client-ssl-template-cfg

Description: client-ssl-template-cfg is a **JSON Block**. Please see below for *app-resources_client-ssl-template-cfg*

Type: Object

conn-reuse-template-cfg

Description: conn-reuse-template-cfg is a **JSON Block**. Please see below for *app-resources_conn-reuse-template-cfg*

Type: Object

fast-tcp-template-cfg

Description: fast-tcp-template-cfg is a **JSON Block**. Please see below for *app-resources_fast-tcp-template-cfg*

Type: Object

fast-udp-template-cfg

Description: fast-udp-template-cfg is a **JSON Block**. Please see below for *app-resources_fast-udp-template-cfg*

Type: Object

fix-template-cfg

Description: fix-template-cfg is a **JSON Block**. Please see below for *app-resources_fix-template-cfg*

Type: Object

gslb-device-cfg

Description: gslb-device-cfg is a **JSON Block**. Please see below for *app-resources_gslb-device-cfg*

Type: Object

gslb-geo-location-cfg

Description: gslb-geo-location-cfg is a **JSON Block**. Please see below for *app-resources_gslb-geo-location-cfg*

Type: Object

gslb-ip-list-cfg

Description: gslb-ip-list-cfg is a **JSON Block**. Please see below for *app-resources_gslb-ip-list-cfg*

Type: Object

gslb-policy-cfg

Description: gslb-policy-cfg is a **JSON Block**. Please see below for *app-resources_gslb-policy-cfg*

Type: Object

gslb-service-cfg

Description: gslb-service-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-cfg*

Type: Object

gslb-service-ip-cfg

Description: gslb-service-ip-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-ip-cfg*

Type: Object

gslb-service-port-cfg

Description: gslb-service-port-cfg is a **JSON Block**. Please see below for *app-resources_gslb-service-port-cfg*

Type: Object

gslb-site-cfg

Description: gslb-site-cfg is a **JSON Block**. Please see below for *app-resources_gslb-site-cfg*

Type: Object

gslb-svc-group-cfg

Description: gslb-svc-group-cfg is a **JSON Block**. Please see below for *app-resources_gslb-svc-group-cfg*

Type: Object

gslb-template-cfg

Description: gslb-template-cfg is a **JSON Block**. Please see below for *app-resources_gslb-template-cfg*

Type: Object

gslb-zone-cfg

Description: gslb-zone-cfg is a **JSON Block**. Please see below for *app-resources_gslb-zone-cfg*

Type: Object

health-monitor-cfg

Description: health-monitor-cfg is a **JSON Block**. Please see below for *app-resources_health-monitor-cfg*

Type: Object

http-template-cfg

Description: http-template-cfg is a **JSON Block**. Please see below for *app-resources_http-template-cfg*

Type: Object

link-cost-template-cfg

Description: link-cost-template-cfg is a **JSON Block**. Please see below for *app-resources_link-cost-template-cfg*

Type: Object

persist-cookie-template-cfg

Description: persist-cookie-template-cfg is a **JSON Block**. Please see below for *app-resources_persist-cookie-template-cfg*

Type: Object

persist-srcip-template-cfg

Description: persist-srcip-template-cfg is a **JSON Block**. Please see below for *app-resources_persist-srcip-template-cfg*

Type: Object

proxy-template-cfg

Description: proxy-template-cfg is a **JSON Block**. Please see below for *app-resources_proxy-template-cfg*

Type: Object

real-port-cfg

Description: real-port-cfg is a **JSON Block**. Please see below for *app-resources_real-port-cfg*

Type: Object

real-server-cfg

Description: real-server-cfg is a **JSON Block**. Please see below for *app-resources_real-server-cfg*

Type: Object

server-ssl-template-cfg

Description: server-ssl-template-cfg is a **JSON Block**. Please see below for *app-resources_server-ssl-template-cfg*

Type: Object

service-group-cfg

Description: service-group-cfg is a **JSON Block**. Please see below for *app-resources_service-group-cfg*

Type: Object

stream-template-cfg

Description: stream-template-cfg is a **JSON Block**. Please see below for *app-resources_stream-template-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-cfg

Description: virtual-port-cfg is a **JSON Block**. Please see below for *app-resources_virtual-port-cfg*

Type: Object

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *app-resources_virtual-server-cfg*

Type: Object

app-resources_http-template-cfg

Specification	
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_server-ssl-template-cfg

Specification	
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-template-cfg

Specification	
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_virtual-server-cfg

Specification	
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-port-cfg

Specification	
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-site-cfg

Specification	
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_proxy-template-cfg

Specification	
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_real-server-cfg

Specification	
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_link-cost-template-cfg

Specification	
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_client-ssl-template-cfg

Specification	
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_health-monitor-cfg

Specification	
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

app-resources_gslb-zone-cfg

Specification	
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_conn-reuse-template-cfg

Specification	
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-policy-cfg

Specification	
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-cfg

Specification	
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-geo-location-cfg

Specification	
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_cache-template-cfg

Specification	
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_persist-cookie-template-cfg

Specification	
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fix-template-cfg

Specification	
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fast-tcp-template-cfg

Specification	
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_fast-udp-template-cfg

Specification	
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-service-ip-cfg

Specification	
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-svc-group-cfg

Specification	
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_virtual-port-cfg

Specification	
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_service-group-cfg

Specification	
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-device-cfg

Specification	
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_persist-srcip-template-cfg

Specification	
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_stream-template-cfg

Specification	
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_real-port-cfg

Specification	
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

app-resources_gslb-ip-list-cfg

Specification	
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

system-resources

Specification	
Type	*object*

bw-limit-cfg

Description: bw-limit-cfg is a **JSON Block**. Please see below for *system-resources_bw-limit-cfg*

Type: Object

concurrent-session-limit-cfg

Description: concurrent-session-limit-cfg is a **JSON Block**. Please see below for *system-resources_concurrent-session-limit-cfg*

Type: Object

fwcps-limit-cfg

Description: fwcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_fwcps-limit-cfg*

Type: Object

l4-session-limit-cfg

Description: l4-session-limit-cfg is a **JSON Block**. Please see below for *system-resources_l4-session-limit-cfg*

Type: Object

l4cps-limit-cfg

Description: l4cps-limit-cfg is a **JSON Block**. Please see below for *system-resources_l4cps-limit-cfg*

Type: Object

l7cps-limit-cfg

Description: l7cps-limit-cfg is a **JSON Block**. Please see below for *system-resources_l7cps-limit-cfg*

Type: Object

natcps-limit-cfg

Description: natcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_natcps-limit-cfg*

Type: Object

ssl-throughput-limit-cfg

Description: ssl-throughput-limit-cfg is a **JSON Block**. Please see below for *system-resources_ssl-throughput-limit-cfg*

Type: Object

sslcps-limit-cfg

Description: sslcps-limit-cfg is a **JSON Block**. Please see below for *system-resources_sslcps-limit-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

system-resources_l4-session-limit-cfg

Specification	
Type	*object*

l4-session-limit-max

Description Enter the l4 session limit in % (0.01% to 99.99%) (Enter a number from 0.01 to 99.99 (up to 2 digits precision))

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

l4-session-limit-min-guarantee

Description minimum guaranteed value in % (up to 2 digits precision) (Enter a number from 0.01 to 99.99)

Type: string

Maximum Length: 5 characters

Maximum Length: 1 characters

Default: 0

system-resources_l7cps-limit-cfg

Specification	
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

system-resources_l4cps-limit-cfg

Specification	
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_natcps-limit-cfg

Specification	
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_sslcps-limit-cfg

Specification	
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

system-resources_fwcps-limit-cfg

Specification	
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

system-resources_ssl-throughput-limit-cfg

Specification	
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-resources_bw-limit-cfg

Specification	
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

system-resources_concurrent-session-limit-cfg

Specification	
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

network-resources

Specification	
Type	*object*

ipv4-acl-line-cfg

Description: ipv4-acl-line-cfg is a **JSON Block**. Please see below for *network-resources_ipv4-acl-line-cfg*

Type: Object

ipv6-acl-line-cfg

Description: ipv6-acl-line-cfg is a **JSON Block**. Please see below for *network-resources_ipv6-acl-line-cfg*

Type: Object

object-group-cfg

Description: object-group-cfg is a **JSON Block**. Please see below for *network-resources_object-group-cfg*

Type: Object

object-group-clause-cfg

Description: object-group-clause-cfg is a **JSON Block**. Please see below for *network-resources_object-group-clause-cfg*

Type: Object

static-arp-cfg

Description: static-arp-cfg is a **JSON Block**. Please see below for *network-resources_static-arp-cfg*

Type: Object

static-ipv4-route-cfg

Description: static-ipv4-route-cfg is a **JSON Block**. Please see below for *network-resources_static-ipv4-route-cfg*

Type: Object

static-ipv6-route-cfg

Description: static-ipv6-route-cfg is a **JSON Block**. Please see below for *network-resources_static-ipv6-route-cfg*

Type: Object

static-mac-cfg

Description: static-mac-cfg is a **JSON Block**. Please see below for *network-resources_static-mac-cfg*

Type: Object

static-neighbor-cfg

Description: static-neighbor-cfg is a **JSON Block**. Please see below for *network-resources_static-neighbor-cfg*

Type: Object

threshold

Description Enter the threshold as a percentage (Threshold in percentage(default is 100%))

Type: number

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

network-resources_static-ipv6-route-cfg

Specification	
Type	*object*

static-ipv6-route-max

Description Enter the number of static ipv6 routes allowed (Static ipv6 routes (default is max-value))

Type: number

static-ipv6-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

network-resources_object-group-clause-cfg

Specification	
Type	*object*

object-group-clause-max

Description Enter the number of object group clauses allowed (Object group clauses (default is max-value))

Type: number

Range: 0-8192000

object-group-clause-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8192000

Default: 0

network-resources_static-ipv4-route-cfg

Specification	
Type	*object*

static-ipv4-route-max

Description Enter the number of static ipv4 routes allowed (Static ipv4 routes (default is max-value))

Type: number

static-ipv4-route-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

network-resources_static-arp-cfg

Specification	
Type	*object*

static-arp-max

Description Enter the number of static arp entries allowed (Static arp (default is max-value))

Type: number

Range: 0-128

static-arp-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

network-resources_ipv4-acl-line-cfg

Specification	
Type	*object*

ipv4-acl-line-max

Description Enter the number of ACL lines allowed (IPV4 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv4-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

network-resources_static-mac-cfg

Specification	
Type	*object*

static-mac-max

Description Enter the number of static MAC entries allowed (Static MACs (default is max-value))

Type: number

Range: 0-500

static-mac-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-500

Default: 0

network-resources_ipv6-acl-line-cfg

Specification	
Type	*object*

ipv6-acl-line-max

Description Enter the number of ACL lines allowed (IPV6 ACL lines (default is max-value))

Type: number

Range: 0-16000

ipv6-acl-line-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-16000

Default: 0

network-resources_static-neighbor-cfg

Specification	
Type	*object*

static-neighbor-max

Description Enter the number of static neighbor entries allowed (Static neighbors (default is max-value))

Type: number

Range: 0-128

static-neighbor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-128

Default: 0

network-resources_object-group-cfg

Specification	
Type	*object*

object-group-max

Description Enter the number of object groups allowed (Object group (default is max-value))

Type: number

Range: 0-8000

object-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-8000

Default: 0

2.99.56 system resource-accounting template app-resources

Enter the application resource limits

Range: 1-99

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

virtual-port-cfg

Description: virtual-port-cfg is a **JSON Block**. Please see below for *virtual-port-cfg*

Type: Object

virtual-server-cfg

Description: virtual-server-cfg is a **JSON Block**. Please see below for *virtual-server-cfg*

Type: Object

http-template-cfg

Specification	
Type	*object*

http-template-max

Description Enter the number of http-template allowed (http-template count (default is max-value))

Type: number

http-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

server-ssl-template-cfg

Specification	
Type	*object*

server-ssl-template-max

Description Enter the number of server-ssl-template allowed (server-ssl-template count (default is max-value))

Type: number

server-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-template-cfg

Specification	
Type	*object*

gslb-template-max

Description Enter the number of gslb-template allowed (gslb-template count (default is max-value))

Type: number

gslb-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

virtual-server-cfg

Specification	
Type	*object*

virtual-server-max

Description Enter the number of virtual-servers allowed (virtual-server count (default is max-value))

Type: number

virtual-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-port-cfg

Specification	
Type	*object*

gslb-service-port-max

Description Enter the number of gslb-service-port allowed (gslb-service-port count (default is max-value))

Type: number

gslb-service-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-site-cfg

Specification	
Type	*object*

gslb-site-max

Description Enter the number of gslb-site allowed (gslb-site count (default is max-value))

Type: number

gslb-site-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

proxy-template-cfg

Specification	
Type	*object*

proxy-template-max

Description Enter the number of proxy-template allowed (server-ssl-template count (default is max-value))

Type: number

proxy-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

real-server-cfg

Specification	
Type	*object*

real-server-max

Description Enter the number of real-servers allowed (real-server count (default is max-value))

Type: number

real-server-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

link-cost-template-cfg

Specification	
Type	*object*

link-cost-template-max

Description Enter the number of link-cost-template allowed (link-cost-template count (default is max-value))

Type: number

link-cost-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

client-ssl-template-cfg

Specification	
Type	*object*

client-ssl-template-max

Description Enter the number of client-ssl-template allowed (client-ssl-template count (default is max-value))

Type: number

client-ssl-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

health-monitor-cfg

Specification	
Type	*object*

health-monitor-max

Description Enter the number of health monitors allowed (health-monitor count (default is max-value))

Type: number

Range: 0-1023

health-monitor-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

Range: 0-1023

Default: 0

gslb-zone-cfg

Specification	
Type	*object*

gslb-zone-max

Description Enter the number of gslb-zone allowed (gslb-zone count (default is max-value))

Type: number

gslb-zone-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

conn-reuse-template-cfg

Specification	
Type	*object*

conn-reuse-template-max

Description Enter the number of conn-reuse-template allowed (conn-reuse-template count (default is max-value))

Type: number

conn-reuse-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-policy-cfg

Specification	
Type	*object*

gslb-policy-max

Description Enter the number of gslb-policy allowed (gslb-policy count (default is max-value))

Type: number

gslb-policy-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-cfg

Specification	
Type	*object*

gslb-service-max

Description Enter the number of gslb-service allowed (gslb-service count (default is max-value)

Type: number

gslb-service-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-geo-location-cfg

Specification	
Type	*object*

gslb-geo-location-max

Description Enter the number of gslb-geo-location allowed (gslb-geo-location count (default is max-value))

Type: number

gslb-geo-location-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

cache-template-cfg

Specification	
Type	*object*

cache-template-max

Description Enter the number of cache-template allowed (cache-template count (default is max-value))

Type: number

cache-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

persist-cookie-template-cfg

Specification	
Type	*object*

persist-cookie-template-max

Description Enter the number of persist-cookie-template allowed (persist-cookie-template count (default is max-value))

Type: number

persist-cookie-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fix-template-cfg

Specification	
Type	*object*

fix-template-max

Description Enter the number of fix-template allowed (fix-template count (default is max-value))

Type: number

fix-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fast-tcp-template-cfg

Specification	
Type	*object*

fast-tcp-template-max

Description Enter the number of fast-tcp-template allowed (fast-tcp-template count (default is max-value))

Type: number

fast-tcp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

fast-udp-template-cfg

Specification	
Type	*object*

fast-udp-template-max

Description Enter the number of fast-udp-template allowed (fast-udp-template count (default is max-value))

Type: number

fast-udp-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-service-ip-cfg

Specification	
Type	*object*

gslb-service-ip-max

Description Enter the number of gslb-service-ip allowed (gslb-service-ip count (default is max-value))

Type: number

gslb-service-ip-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-svc-group-cfg

Specification	
Type	*object*

gslb-svc-group-max

Description Enter the number of gslb-svc-group allowed (gslb-svc-group count (default is max-value))

Type: number

gslb-svc-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

virtual-port-cfg

Specification	
Type	*object*

virtual-port-max

Description Enter the number of virtual-port allowed (virtual-port count (default is max-value))

Type: number

virtual-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

service-group-cfg

Specification	
Type	*object*

service-group-max

Description Enter the number of service groups allowed (service-group count (default is max-value))

Type: number

service-group-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-device-cfg

Specification	
Type	*object*

gslb-device-max

Description Enter the number of gslb-device allowed (gslb-device count (default is max-value))

Type: number

gslb-device-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

persist-srcip-template-cfg

Specification	
Type	*object*

persist-srcip-template-max

Description Enter the number of persist-srcip-template allowed (persist-source-ip-template count (default is max-value))

Type: number

persist-srcip-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

stream-template-cfg

Specification	
Type	*object*

stream-template-max

Description Enter the number of stream-template allowed (server-ssl-template count (default is max-value))

Type: number

stream-template-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

real-port-cfg

Specification	
Type	*object*

real-port-max

Description Enter the number of real-ports allowed (real-port count (default is max-value))

Type: number

real-port-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

gslb-ip-list-cfg

Specification	
Type	*object*

gslb-ip-list-max

Description Enter the number of gslb-ip-list allowed (gslb-ip-list count (default is max-value))

Type: number

gslb-ip-list-min-guarantee

Description Minimum guaranteed value (Minimum guaranteed value)

Type: number

l7cps-limit-cfg

Specification	
Type	*object*

l7cps-limit-max

Description L7cps-limit (L7 cps limit (no limits applied by default))

Type: number

Range: 100-300000

l4cps-limit-cfg

Specification	
Type	*object*

l4cps-limit-max

Description Enter the L4 cps limit (L4 cps limit (no limits applied by default))

Type: number

Range: 100-1000000

natcps-limit-cfg

Specification	
Type	*object*

natcps-limit-max

Description Enter the Nat cps limit (NAT cps limit (no limits applied by default))

Type: number

Range: 100-1000000

sslcps-limit-cfg

Specification	
Type	*object*

sslcps-limit-max

Description Enter the SSL cps limit (SSL cps limit (no limits applied by default))

Type: number

Range: 100-300000

fwcps-limit-cfg

Specification	
Type	*object*

fwcps-limit-max

Description Enter the Firewall cps limit (Firewall cps limit (no limits applied by default))

Type: number

Range: 100-1000000

ssl-throughput-limit-cfg

Specification	
Type	*object*

ssl-throughput-limit-max

Description Enter the ssl throughput limit in mbps (SSL Througput limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

ssl-throughput-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

bw-limit-cfg

Specification	
Type	*object*

bw-limit-max

Description Enter the bandwidth limit in mbps (Bandwidth limit in Mbit/s (no limits applied by default))

Type: number

Range: 10-10000000

bw-limit-watermark-disable

Description Disable watermark (90% drop, keep existing sessions, drop new sessions)

Type: boolean

Supported Values: true, false, 1, 0

Default: 0

concurrent-session-limit-cfg

Specification	
Type	*object*

concurrent-session-limit-max

Description Enter the Concurrent Session limit (cps) (Concurrent-Session cps limit (no limits applied by default))

Type: number

2.99.59 system resource-usage

Configure System Resource Usage

resource-usage Specification

Type	*Configuration Resource*
Element Name	resource-usage
Element URI	/axapi/v3/system/resource-usage
Element Attributes	resource-usage_attributes
Operational Data URI	/axapi/v3/system/resource-usage/oper
Schema	`resource-usage schema`

Operations Allowed:

Create Object

POST

/axapi/v3/system/resource-usage

resource-usage attributes

```
POST /axapi/v3/system/resource-usage
Payload:
{
    "resource-usage": {
        "nat-pool-addr-count": 1,
        "visibility": {
            "monitored-entity-count": 1
        },
        "l4-session-count": 262144
    }
}
```

Get Object

GET

/axapi/v3/system/resource-usage

resource-usage attributes

Modify Object

POST

/axapi/v3/system/resource-usage

resource-usage attributes

Replace Object

PUT

/axapi/v3/system/resource-usage

resource-usage attributes

Delete Object

DELETE

/axapi/v3/system/resource-usage

resource-usage attributes

resource-usage attributes

aflex-table-entry-count

Description Total aFleX table entry in the system (Total aFlex entry in the system)

Type: number

auth-portal-html-file-size

Description Specify maximum html file size for each html page in auth portal (in KB)

Type: number

Range: 4-120

Default: 20

auth-portal-image-file-size

Description Specify maximum image file size for default portal (in KB)

Type: number

Range: 1-80

Default: 6

auth-session-count

Description Total auth sessions in the system

Type: number

authz-policy-number

Description Specify the maximum number of authorization policies

Type: number

class-list-ac-entry-count

Description Total entries for AC class-list

Type: number

class-list-entry-count

Description Total entries for class-list

Type: number

class-list-ipv6-addr-count

Description Total IPv6 addresses for class-list

Type: number

ipsec-sa-number

Description Specify the maximum number of IPsec SA

Type: number

l4-session-count

Description Total Sessions in the System

Type: number

max-aflex-authz-collection-number

Description Specify the maximum number of collections supported by aFleX authorization

Type: number

Range: 256-4096

Default: 512

max-aflex-file-size

Description Set maximum aFleX file size (Maximum file size in KBytes, default is 32K)

Type: number

Range: 16-256

Default: 32

nat-pool-addr-count

Description Total configurable NAT Pool addresses in the System

Type: number

radius-table-size

Description Total configurable CGNV6 RADIUS Table entries

Type: number

ram-cache-memory-limit

Description Specify the maximum memory used by ram cache

Type: number

ssl-context-memory

Description Total SSL context memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 256-16384

Default: 2048

ssl-dma-memory

Description Total SSL DMA memory needed in units of MB. Will be rounded to closest multiple of 2MB

Type: number

Range: 32-2048

Default: 256

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters

visibility

Description: visibility is a **JSON Block**. Please see below for *visibility*

Type: Object

Refernce Object: */axapi/v3/system/resource-usage/visibility*

waf-template-count

Description Total configurable WAF Templates in the System

Type: number

visibility

Specification	
Type	*object*

monitored-entity-count

Description Total number of monitored entities for visibility

Type: number

uuid

Description uuid of the object

Type: string

Maximum Length: 64 characters

Maximum Length: 1 characters
